PROCEEDINGS AND DEBATES OF THE 95th CONGRESS, FIRST SESSION

HOUSE OF REPRESENTATIVES—*Tuesday, February 8, 1977*

The House met at 12 o'clock noon.

Rabbi I. Usher Kirshblum, Jewish Center of Kew Gardens Hills, Flushing, N.Y., offered the following prayer:

Heavenly Father, before we begin our deliberations, we bow our heads in prayer to Thee. We thank Thee for the opportunity and privilege to serve our country. May Thy spirit of wisdom and understanding, of counsel and might, of knowledge of and reverence for Thee rest upon us always. May we always feel the emotions, think the thoughts, and perform the deeds that are befitting to us as Americans.

Help us keep our country true to the principles upon which she was founded, to her passion for freedom and democracy, and her love for the downtrodden and forlorn.

May hate, strife, and godlessness cease to divide the family of mankind so that justice and love may reign supreme in the world. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed without amendment resolutions of the House of the following titles:

H. Con. Res. 106. Concurrent resolution providing for an adjournment of the House from February 9 to February 16, 1977, and a recess of the Senate from February 11 to February 21, 1977; and

H.J. Res. 227. Joint resolution making urgent power supplemental appropriations for the Department of the Interior, Southwestern Power Administration for the fiscal year ending September 30, 1977, and for other purposes.

RABBI I. USHER KIRSHBLUM OF QUEENS, GUEST CHAPLAIN

(Mr. ROSENTHAL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROSENTHAL. Mr. Speaker, it is a great honor for me and for the people of my district that today's prayer was offered by Rabbi I. Usher Kirshblum of the Jewish Center of Kew Gardens Hills, Queens, N.Y.

Rabbi Kirshblum is serving his 31st year as spiritual leader of the Jewish Center of Kew Gardens Hills and as a leader of the Queens community. His synagogue is an active and respected focus of religious as well as secular activity.

A graduate of Brooklyn College, he was ordained by Dr. Stephen S. Wise of the Jewish Institute of Religion in 1944. He received an honorary doctor of divinity degree in 1971 from the Jewish Theological Seminary of America.

He is past president of the Queens Rabinical Assembly and of the Long Island Zionist Region. Six times he was a delegate to the World Zionist Congress in Jerusalem, in 1951, 1956, 1960, 1964, 1968, and 1972.

The Jewish National Fund has honored Rabbi Kirshblum by dedicatng a forest in his name in Israel, and in 1963 the Kew Gardens Hills chapter and lodge of B'nai B'rith named him Man of the Year.

He serves the Queens region of the National Conference of Christians and Jews as a member of its board of directors and cochairman of its religious advisory committee. He also is the current president of the Queens Interfaith Clergy Council.

In recognition of Rabbi Kirshblum's community leadership, Mayor Abraham Beame, like all New York mayors since William O'Dwyer, has reappointed him to the Queens Borough Public Library board of trustees. He is also a former president of the library.

Then Governor Rockefeller named Rabbi Kirshblum to the advisory committee of the Office for the Aging in 1971, a year after Mayor Lindsay appointed him to the American Revolutionary Bicentennial Committee. He also is a member of the Queens Committee for Juvenile Justice.

I wish to thank Rabbi Kirshblum for his prayer and for his appearance here today. Throughout his life, this dedicated man has given of himself fully and selflessly to his faith, to his congregation, and to his community. I am proud that I can call him not only my constituent but also my friend.

Mr. ADDABBO. Mr. Speaker, will the gentleman yield?

Mr. ROSENTHAL. I yield to my colleague from New York.

Mr. ADDABBO. Mr. Speaker, I wish also to commend Rabbi Kirshblum, who has done so much, as the gentleman in the well has pointed out, not only in spiritual matters in our community, but also for all our people no matter what their religion might be.

With his great warmth and feelings for people, he has made our community a better place in which to live.

NOTICE OF HEARINGS ON ALASKA GAS PIPELINE

(Mr. RONCALIO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RONCALIO. Mr. Speaker, I wish to announce upcoming oversight hearings before the Subcommittee on Indian Affairs and Public Lands of the Committee on Interior and Insular Affairs on the Alaska Natural Gas Transportation Act.

Last Congress we passed Public Law 94–586 which was to expedite a decision on the delivery of Alaskan natural gas to the U.S. markets. Under this law, the President is to recommend to Congress, this year, a route from Alaska to the lower 48 States. The purpose of this oversight hearing is for the members of the Interior Committee to be brought up to date on alternative routes so we may make an appropriate decision when called upon under the provisions of Public Law 94–586.

The hearing will be held in room 2359, Rayburn, on Thursday, February 17, at 9:45 a.m. Spokesmen for the three competing routes will be called to testify.

PERMISSION FOR COMMISSION ON ADMINISTRATIVE REVIEW TO HAVE UNTIL MIDNIGHT MONDAY, FEBRUARY 14, 1977, TO FILE A REPORT AND THAT THE SPEAKER BE AUTHORIZED TO ORDER THE REPORT PRINTED AS A HOUSE DOCUMENT

Mr. OBEY. Mr. Speaker, I ask unanimous consent that the Commission on Administrative Review have until midnight Monday, February 14, 1977, to file with the Speaker a report on financial ethics and that the Speaker be authorized to order the report printed as a House document.

The SPEAKER pro tempore (Mr. FOLEY). Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

TRAGIC AND SENSELESS MASSACRE OF SEVEN ROMAN CATHOLIC MISSIONARIES IN RHODESIA

(Mr. MARTIN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MARTIN. Mr. Speaker, this morning's news told of the tragic and senseless massacre of seven Roman Catholic missionaries in Rhodesia. One priest miraculously survived to be able to identify the murderers and report their apparent relationship to the nationalist movement in Rhodesia. This identity is contrary, however, to the fact that these missions have not been a factor in the racial strife in Rhodesia. The slain missionaries were not so much a logical political target, but a highly vulnerable and visible one.

Whether the timing was accidental or intended to coincide with the presence in Africa of our new United Nations Ambassador Andrew Young, it has paralyzed our Government's response. Our Ambassador may not perceive the villainy of Cuban militia in Angola but surely we can see the villainy here without waiting to see which side, if any, these murderers are on. The United States of America must not be silent, but should speak out with compassion for the victims and their families and supporters, and with firmness against the cowardly attack upon neutral and defenseless men and women of the church.

We must call upon both the Government of Rhodesia and the leaders of the nationalist movement to join together in a search for the murderers. In order that their infamy not advance their cause, whatever it be, they must be swiftly caught and brought to trial so that their true motivation can be exposed and rejected by all their neighbors. If there is one cause that should unite the people of Rhodesia, let this base crime be that uniting cause. Let white and black Rhodesians join hands and purposes, so that this senseless slaughter can have at least the virtue of unifying Rhodesians about the cause of justice.

SOCIAL SECURITY: ACTION NEEDED NOW

(Mr. CONABLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CONABLE. Mr. Speaker, the health of the social security system is declining every day. If it does not receive immediate attention, an unpleasant choice will soon have to be made between high-risk heroic measures or acquiescence to the eventual disintegration and breakdown of the system as we have known it.

Pressure to act promptly comes from several directions. The shortfall of the disability and the old age and survivors trust funds, the even more serious long-term actuarial imbalance and the probability that either equal rights amendment ratification or Supreme Court decisions piecemeal will require more equal treatment of men and women by the social security system all add urgency to the situation.

The answers to these issues are not simple. I hope to see serious consideration of these critical issues begin in the next few weeks, followed by timely action. The new administration should give the earliest attention to making its recommendations, since the decisions to be made are tough and will require the leverage of recent mandate to accomplish. Beyond that, our Ways and Means Committee should commit itself to a quick and thoughtful response. Other issues have nowhere near the urgency of this one.

CONGRESSMAN SAWYER PROPOSES BIPARTISAN HOUSE COMMISSION TO INVESTIGATE ALLEGED SOUTH KOREAN INFLUENCE

(Mr. SAWYER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SAWYER. Mr. Speaker, I am today introducing legislation to establish a bipartisan, independent House Commission with public membership to investigate the South Korean influence in congressional affairs.

I believe we owe the Nation a comprehensive and swift investigation to reestablish trust and confidence in the ability of the House of Representatives to provide its own housecleaning.

My proposal will allow that self-examination, and at the same time directly confronts the past failures which have resulted from the Congress investigating its own Members.

The resolution will establish a completely bipartisan Commission with 10 Members from the House of Representatives, 5 Democrats and 5 Republicans. In addition, it will allow five public members to insure that persons in position of public trust will be fully investigated. Too often in the past, such serious allegations have been swept under the rug and out of public scrutiny. I believe the seriousness of the matter demands this unique approach.

The Commission will be directed to make a thorough and complete investigation of attempts, successful or otherwise, by the South Korean Government, or representatives to illegitimately influence present and former Members of Congress. Following its investigation the Commission shall have 1 year to report to the House including legislation proposals, recommendations for administrative actions in the House, and other actions the Commission deems appropriate.

The entire congressional process has been mocked with the allegations of the potentially deepest corruption scandal ever present in the U.S. Congress. Yet, we as a body remain a sitting target because of the inaction and orchestrated diversion which has taken place to deeply bury the key which will unlock the closed door hiding the real truth and facts concerning alleged payoffs to House Members.

The need to conduct a prompt and full inquiry can wait no longer. I urge immediate passage of this proposal.

AIR CARRIER OPERATION OF FOREIGN REGISTERED AIRCRAFT

(Mr. MILFORD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MILFORD. Mr. Speaker, today I have introduced H.R. 3270 which will grant the Civil Aeronautics Board authority to permit through-plane interchange service conducted jointly by U.S. and foreign air carriers.

This change in our law was recommended in the U.S. International Air Transportation Policy of 1976 as a needed step to satisfy air transportation needs in the years ahead.

Most important, this bill will provide convenience and assistance to inland passengers who are traveling overseas by eliminating the necessity of changing planes—and often terminals or airports—at embarkation points.

The bill that I have introduced changes the provisions of section 1108(b) of the original Federal Aviation Act. This section was an old hanger-on from the protectionism and isolationism of the 1920's.

The proposed amendment to section 1108(b) would allow the Civil Aeronautics Board to decide whether a U.S. air carrier could operate a foreign registered aircraft to carry local domestic traffic from the inland city to the point of embarkation.

It is important to note that the foreign registered aircraft, which would be operated to an inland city, would be manned by American crews and operated totally within present CAB-granted route structures.

For example, if a domestic carrier is operating over an existing CAB-granted route from a large inland city to an embarkation point, he could apply to CAB to use a foreign registered aircraft on his domestic route—only from the inland city to the embarkation point. This would allow passengers going to foreign destinations to enjoy single plane service.

Finally, it is important to note that in any instance where a U.S. air carrier's use of foreign aircraft would be adverse to public interest, the CAB could prevent it. All cases involving U.S. air carrier operation of foreign registered aircraft would have to be approved by CAB.

Mr. Speaker, passage of this bill will greatly assist thousands of passengers moving from our large inland cities to foreign destinations, while making absolutely no negative impact on domestic air carriers.

A CALL FOR U.S. CONDEMNATION OF KILLINGS IN RHODESIA

(Mr. HYDE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HYDE. Mr. Speaker, I wish to state to the Members of the House that I have just checked the wire services, and to this minute, at 12:10 p.m., there has been no statement by our Government condemning the senseless slaughter of seven missionaries in Rhodesia.

I would hope that before the day is out someone in the State Department or the White House would find the words and the spirit to condemn in the most ringing terms one of the most brutal, senseless, and pointless acts of barbarism that I have ever heard of. It seems to me that the slaughter of missionaries who are taking care of the souls as well as the bodies of people of Rhodesia, people who need all the attention they can get, is something that deserves the condemnation of the civilized world.

There are many in this body who are very sensitive to infractions of human rights. I have seldom read of anything as barbarous or brutal as what happened over the weekend, and I hope that our Government, as the moral leader of the free world, will condemn this action and urge the Government of Rhodesia and the insurgents to relentlessly seek out the murderers and assassins and bring them to justice.

COMMUNICATION FROM THE SERGEANT AT ARMS OF THE HOUSE—SUBPENA DUCES TECUM IN GRAND JURY INVESTIGATION IN U.S. DISTRICT COURT FOR THE DISTRICT OF COLUMBIA

The SPEAKER pro tempore laid before the House the following communication from the Sergeant at Arms of the House of Representatives:

WASHINGTON, D.C.,
February 8, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: On January 26, 1977, I was served with the attached subpoena duces tecum (regarding possible violations of Title 18, United States Code, Sections 201 and 1951), issued by the United States District Court for the District of Columbia, together with the attached findings of the Court concerning the materiality and relevancy of the subpoened materials.

The subpoena commands me or my authorized representative to appear before the Grand Jury of the Court on January 31, 1977 and to testify and produce the aforesaid documents. Pursuant to the attached letter dated January 27, 1977, the Department of Justice was informed that, due to the administrative burden in responding to the subpoena within the limited time specified, and because of the difficulty involved in identifying certain documents named in the subpoena, we would be unable to comply with the subpoena. Subsequently, based on representations by representatives of the Department of Justice, an extension of time to respond was agreed to, and a letter confirming such extension is forthcoming.

Accordingly, I am transmitting said subpoena and findings of the court, together with my letter of January 27, 1977, for your consideration and the matter is presented to the House for such action as the House in its wisdom deems appropriate.

Sincerely,

KENNETH R. HARDING,
Sergeant at Arms,
House of Representatives.

The SPEAKER pro tempore. Pursuant to the provisions of House Resolution 10, without objection, the letter, subpena duces tecum, and the court order will be printed at this point in the RECORD.

There was no objection.

The material referred to is as follows:

JANUARY 27, 1977.

Mr. CRAIG M. BRADLEY,
Department of Justice, Washington, D.C.

DEAR MR. BRADLEY: As indicated in our telephone conversations of January 26, 1977 with a representative of the Public Integrity Section, due to the administrative burden involved in producing the named documents, we are unable to respond to the subpoena duces tecum received on January 26, 1977 commanding me to attend the grand jury on January 31, 1977 and to bring with me the aforesaid documents. Furthermore, the failure of the subpoena to describe certain records with sufficient particularity to permit reasonable identification raises a question concerning the compliance of the subpoena with the requirements of House Resolution 10.

Sincerely,

KENNETH R. HARDING,
Sergeant at Arms,
House of Representatives.

[U.S. District Court for the District of Columbia, Misc. 77-0013]

SUBPOENA DUCES TECUM

In re grand jury.

To: Honorable Kenneth R. Harding, Sergeant at Arms of the House of Representatives, Washington, D.C., or his authorized representative:

Bring with you: Certified copies of records of all unappropriated office accounts and all personal accounts maintained by you, for former Congressman Richard T. Hanna and Cornelius Gallagher for the period of January 1, 1970, to December 31, 1974, as to Hanna, and January 1, 1970, to December 31, 1972, as to Gallagher including copies of monthly statements, deposit slips and all cancelled checks in the amount of one thousand dollars ($1,000) or more.

You are hereby commanded to attend before the Grand Jury of this Court on Monday, the 31st day of January, 1977, at 10 a.m., to testify and produce the aforesaid documents on behalf of the United States, and not to depart the Grand Jury without leave of the Court or the United States Attorney.

Witness: this 14th day of January, 1977.

WILLIAM B. JONES,
Chief Judge, U.S. District Court for the District of Columbia.

[U.S. District Court for the District of Columbia, Misc. 77-0013]

FINDINGS OF COURT

In re grand jury.

Upon consideration of *in camera* disclosures made by representatives of the Public Integrity Section of the Criminal Division, Department of Justice, it is this 14 day of January, 1977,

Found, that papers, documentary evidence, and materials supoenaed under a subpoena duces tecum dated January 14, 1977, and addressed to the Honorable Kenneth R. Harding, Sergeant at Arms of the House of Representatives of the United States or his authorized representative, a facsimile of which is attached hereto, are necessary, material, and relevant to a pending Grand Jury investigation in this judicial district and in this Court for the promotion of justice.

Wherefore, the Court desires that the documentary evidence or certified copies thereof which are the subject of the subpoena duces tecum be supplied to its authorized representative and agent, Clerk of this Court James F. Davey, accompanied by Assistant United States Attorney Craig M. Bradley and/or Paul Michel of the Department of Justice as representatives of the proper party to this proceeding, to wit: the Federal Grand Jury, pursuant to said subpoena duces tecum.

WILLIAM B. JONES,
Chief Judge, U.S. District Court for the District of Columbia.

EXTENDING THE ENLISTMENT BONUS AUTHORITY

Mr. NICHOLS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 583) to amend chapter 5 of title 37, United States Code, to extend the special pay provisions for reenlistment and enlistment bonuses.

The Clerk read as follows:

H.R. 583

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That chapter 5 of title 37, United States Code, is amended by striking out "June 30, 1977" at the end of sections 308 and 308a, and inserting in place thereof "September 30, 1978".

The SPEAKER pro tempore. Is a second demanded?

Mr. MITCHELL of New York. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Alabama (Mr. NICHOLS) will be recognized for 20 minutes, and the gentleman from New York (Mr. MITCHELL) will be recognized for 20 minutes.

The Chair recognizes the gentleman from Alabama (Mr. NICHOLS).

Mr. NICHOLS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, H.R. 583 is an uncomplicated bill. It simply extends the current authority in the law for enlistment and reenlistment bonuses from June 30, 1977—the current termination date—to September 30, 1978.

Action on this bill is critical at this time in order to assure that young people who are being recruited now, but who will not actually come on active duty until after June 30 of this year, can be offered a bonus. These individuals recruited for this delayed enlistment pool are a very important segment in the All-Volunteer Force since these are the young people who will graduate from high school in June, join the military, and provide the quality recruits important to the make-up of each of the services. Without the authority to offer these bonuses, the services will be unable to meet their recruitment goals.

The authority that is being extended by this bill, which applies to enlisted personnel only, permits enlistment bonuses in an amount not to exceed $3,000, and reenlistment bonuses in an amount not to exceed $15,000.

In practice, enlistment bonuses do not exceed $2,500 and are offered only in the Army and the Marine Corps to attract individuals for the combat arms primarily, and to induce a commitment of at least 4 years of service. The enlistment bonus is offered in a few cases for scarce skills other than the combat arms.

As we all know, recruiting for combat-related skills is difficult. The bonus provides very essential assistance, as well as results in longer periods of service which saves money in training and travel costs.

The reenlistment bonus is offered by all of the services on a selective basis for

critical skills. This bonus is used to retain personnel in skill areas which are critically scarce and very expensive to train. An example of such a skill might be a nuclear powerplant operator in the Navy for which training costs are extremely high and capable personnel are in short supply.

The amount programed to be paid under this authority for the enlistment bonus is $53.5 million for fiscal year 1977 and $74.5 million for fiscal year 1978. The amounts paid for the reenlistment bonus will be $112.1 million for fiscal year 1977 and $162.3 million for fiscal year 1978. All of these amounts are included in the approved fiscal year 1977 Department of Defense budget and that requested for fiscal year 1978.

The bonus authority is an important reason for the success to date of the All-Volunteer Force. With the recent upturn in the economy, plus indications that young people are less inclined to enlist in the military, recruiting for all of the services has become increasingly difficult in the past year.

It is mandatory that we extend this authority now, so as not to contribute to these current difficulties.

I would also state that some form of permanent authority for these bonuses will be considered in detail this session by the Military Compensation Subcommittee, which I chair. At that time, any necessary changes in this authority can be addressed.

Mr. Speaker, I thank the leadership of the House for scheduling prompt action on this bill, and I strongly urge the House to support it.

Mr. MONTGOMERY. Mr. Speaker, will the gentleman yield?

Mr. NICHOLS. I am pleased to yield to my colleague, the gentleman from Mississippi (Mr. MONTGOMERY), a member of the committee.

Mr. MONTGOMERY. Mr. Speaker, I thank the gentleman for yielding.

I also would like to rise and say that I support this legislation. It certainly is needed.

I would like to speak to the gentleman from Alabama (Mr. NICHOLS) briefly about the problems that are arising in the National Guard and in the Reserves as far as recruiting is concerned. I believe that I am correct in pointing out that this legislation, would not cover Reservists and the National Guard; is that correct?

Mr. NICHOLS. The gentleman is correct. The intent of this bill, of course, only covers the enlisted men who are to be recruited hopefully this spring and those who are reenlisting when their term expires.

Mr. MONTGOMERY. One of the problems, as the chairman knows is that the National Guard and Reserves are now having a problem in their recruitment and the strengths of these units are falling off. We have been very fortunate over the years that the Air National Guard, the Army National Guard, and the Marine Reserves have been able to keep their strengths up. The Navy and Army Reserve strengths are down, but all of them are falling off now.

My concern is that I think we are going to have to come up with some kind of an incentive for the National Guard and Reserves. If we do not, the strengths are going to go down.

I would like to point out, Mr. Speaker, that I have a chart here that shows the importance of the Reserves and National Guard as far as the total force concept is concerned.

In the Air Guard and Air Force Reserve, 61 percent of all tactical airlift missions are assigned to the Air Guard and Air Reserve—61 percent of the missions of the entire Air Force.

Twenty-one percent of the strategic tankers are the responsibility of the Air Guard and Air Reserve. Thirty percent of the fighters that we have today, if this country were to be attacked, are supplied by the Air Guard and Air Force Reserves.

Forty percent of forward air control aircraft are supplied by the Air Guard and Reserve.

Forty-seven percent of the reconnaissance is supplied by the Air Guard and Reserves, and 60 percent of the interceptors, should some foreign country come into this country, are supplied by the Air Guard and Reserve.

If the bell sounded tomorrow and we had to move out our Army and move it to Europe, 52 percent of that Army would be made up of combat units of the Army Guard and support units of the Army Reserve. So we really do not have much choice and we had better take a hard look at incentives, such as educational incentives and reenlistment bonuses for the National Guard and Reserves. If we do not do so, we really will have a problem on our hands.

Mr. NICHOLS. Mr. Speaker, let me commend the gentleman from Mississippi (Mr. MONTGOMERY) for the long time service that he has rendered in the interest of the reserve forces of this country.

I am well aware, as the gentleman from Mississippi has so eloquently stated, of the shortfalls that we are now experiencing in our Reserve forces. I am also aware that proposals have been made that we might cure some of these shortfalls with some type of bonus arrangement. Let me assure the gentleman from Mississippi that if such legislation does indeed come before the committee, it will certainly be given sympathetic hearings.

Mr. MONTGOMERY. Mr. Speaker, I thank the gentleman.

Mr. MITCHELL of New York. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I strongly support H.R. 583. This bill will simply extend for a period of 15 months the current authority for payment of the selective enlistment and reenlistment bonuses to enlisted men of the Armed Forces.

I urge my colleagues to support this legislation as an essential tool for the use of the military in their efforts to recruit and retain a sufficient number of persons with the qualifications needed to maintain the strength of our Armed Forces at the level required for our national defense.

Simply stated, this bill will merely authorize the Department of Defense to continue to offer, after June 30, 1977, to qualified young people, the selective enlistment and reenlistment bonuses as now authorized by law. Following the expiration of the general authority to draft young men for service in the Armed Forces in 1971, the Congress enacted a number of laws to assist the military departments to meet their manpower requirements with volunteers. Among those laws was the authority to pay, on a selective basis, enlistment and reenlistment bonuses to aid in recruiting and retaining persons for service in critical skills. I emphasize the word selective, because the payment of both the bonus and the enlistment bonus are limited to persons who enlist or reenlist for service in a critical skill—including enlistments for service in the combat arms.

Mr. Speaker, I want to emphasize that the Armed Forces face a manpower problem in securing a sufficient number of individuals with the mental and physical qualifications to assimilate the kind of training required.

In this connection, the Department of Defense reports that the best indicator of the potential of young people to successfully complete the basic and specialized training for military service is a high school diploma. And, it is in recruiting high school graduates that the services have recently begun to experience difficulties.

Unless extended, the present law will expire on June 30, 1977. Unfortunately, the effect of the expiration of that authority is already being felt by the Army and Marine Corps. The most likely candidates for enlistment in the Armed Forces are those young people who are graduating from high school. The recruiters concentrate much of their attention on those young people who are in their last year of high school. The ability to assure qualified young people of an enlistment bonus, if following graduation they enlist in the Army or Marine Corps, is a highly effective recruiting inducement. However, at the present time, the recruiters are unable to offer that inducement.

A similar problem exists with regard to persons now in service who have a critical skill and whose enlistment expires in the months after June 30, 1977. The current uncertainty as to whether the selective reenlistment bonus will be available when their current term expires undoubtedly will cause some persons in critical skills to leave military service for employment in civilian life.

Mr. Speaker, in conclusion, I again urge my colleagues to vote in favor of H.R. 583.

Mr. KINDNESS. Mr. Speaker, will the gentleman yield for a question?

Mr. MITCHELL of New York. I certainly will yield to the gentleman.

Mr. KINDNESS. I thank the gentleman for yielding.

Would the gentleman please explain to us whether this same situation occurred 2 years ago, or roughly the same situation, where, as I recall it, the armed services actually ran out of funds for the selective reenlistment bonus before it was extended? Is that essentially correct?

Mr. MITCHELL of New York. I do not

have the history of what happened 2 years ago.

Mr. KINDNESS. If the gentleman would yield further for another question, I ran into some cases where men in specialty service, such as nuclear submarine service, just approximately 2 years ago faced a situation in which they reenlisted and then did not receive the bonus. It was represented to them that that was not a contractual commitment, that the funds were not there, that they were not authorized and were not appropriated by the Congress.

Perhaps as a result of our approaching this on a 2-year basis rather than on a permanent basis—I notice that it is intended that the committee will consider putting the program on a permanent basis later this year—is there any assurance that we are not going to have the same kind of situation occurring in which these people who have reenlisted are going to be disappointed and are not going to receive the selective reenlistment bonus?

Mr. MITCHELL of New York. What we are trying to do now, as I am sure the gentleman realizes, is to solve the problem in the short term. Right now we are not offering these young people what we would like to. We cannot promise them something that does not exist, and the time is fast evaporating before graduation. We are looking at the long range bill, and this is going to require long hearings and studies. I think what we have to do is to extend what is now in existence.

Mr. NICHOLS. Mr. Speaker, will the gentleman yield?

Mr. MITCHELL of New York. I yield to the gentleman from Alabama.

Mr. NICHOLS. I thank the gentleman for yielding.

I think the gentleman is referring to the variable reenlistment bonus that was replaced by the current law several years back. Let me state to him also that he had brought up the issue of court cases that he alludes to with reference to some naval petty officers who had filed cases.

It is my understanding that these cases are still under adjudication. One I believe has gone all the way to the Supreme Court. But let me assure the gentleman that this bill in no way will affect those court cases. The money is in the budget for it, both in this fiscal year and it is requested in fiscal year 1978.

I hope that in part replies to the gentleman's inquiries.

Mr. KINDNESS. Will the gentleman yield for a further question?

Mr. MITCHELL of New York. I yield to the gentleman from Ohio.

Mr. KINDNESS. Mr. Speaker, if I may address this question, on the time yielded, to the gentleman from Alabama, could the gentleman from Alabama tell us whether the cases other than those 30 CPO's would be affected? Is there money in the budget for them, too, depending on the outcome of the litigation? I understand there are others besides those 30, others who are not party to the litigation.

Mr. NICHOLS. I am advised that if the Government should lose these cases the money would have to come from the Treasury. There is no money appropriated for them. It would have to be appropriated I believe by separate legislation. That is my understanding.

Mr. KINDNESS. I thank the gentleman.

Mr. MITCHELL of New York. Mr. Speaker, in further response to the question, what we did a couple of years ago was cut out the variable reenlistment bonus which provides for 2-year extensions and we provided for the selective bonus for 3-year reenlistments. There was a problem in communications. Those men did not understand what was happening and so they took the case to the court. It is on its way to the Supreme Court. Before anything can be done on that, we will have to have the decision of the Supreme Court.

Mr. KINDNESS. I thank the gentleman.

Mr. MITCHELL of New York. Mr. Speaker, I have no further request for time and yield back the balance of my time.

Mr. NICHOLS. Mr. Speaker, I have no further request for time and yield back the balance of my time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Alabama that the House suspend the rules and pass the bill H.R. 583.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

WAIVING CERTAIN REQUIREMENTS OF FISHERY CONSERVATION AND MANAGEMENT ACT OF 1976

Mr. MURPHY of New York. Mr. Speaker, I move to suspend the rules and pass the joint resolution (H.J. Res 240) to give congressional approval to certain governing international fishery agreements negotiated in accordance with the Fishery Conservation and Management Act of 1976, and for other purposes, as amended.

The Clerk read as follows:

Whereas the Government of the United States of America and the Governments of the People's Republic of Bulgaria, the Socialist Republic of Romania, the Republic of China, the German Democratic Republic, the Union of Soviet Socialist Republics, and the Polish People's Republic have signed governing international fishery agreements for the conservation, optimum utilization, and rational management of fisheries subject to the exclusive fishery management jurisdiction of the United States under the Fishery Conservation and Management Act of 1976 (Public Law 94-265) (hereinafter referred to as the "Act"); and

Whereas the Act provides that after February 28, 1977, no foreign fishing is authorized within the fishery conservation zone, or for anadromous species or Continental Shelf fishery resources beyond the fishery conservation zone, unless fishing is authorized and conducted pursuant to a governing international fishery agreement; and

Whereas the Act also provides that no governing international fishery agreement shall become effective with respect to the United States before the close of the first 60 calendar days of continuous session of the Congress after the date on which the President transmits to the House of Representatives and to the Senate a document setting forth the text of such governing international agreement; and

Whereas the Act further provides that Congress may prohibit the entering into force and effect of any governing international fishery agreement by enactment of a joint resolution originating in either House of Congress during such 60-day period; and

Whereas, the sixty-day period will not elapse with respect to any governing international fishery agreement, referred to in the first clause of this preamble, before March 1, 1977, the date on which the fishery conservation zone of the United States takes effect; and

Whereas early congressional action on these governing international fishery agreements is necessary in order that fishing vessels of the foreign nations concerned may be permitted to fish in the fishery conservation zone after February 28, 1977, in compliance with such Act; and

Whereas these governing international fishery agreements *substantially* comply with the requirements relating to such agreements contained in section 201(c) of the Act: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That this joint resolution may be cited as the "Fishery Conservation Zone Transition Act".

SEC. 2. CONGRESSIONAL APPROVAL OF CERTAIN GOVERNING INTERNATIONAL FISHERY AGREEMENTS.

Notwithstanding section 203 of the Fishery Conservation and Management Act of 1976, the governing international fishery agreement between the Government of the United States of America and—

(1) the Government of the People's Republic of Bulgaria Concerning Fisheries Off the Coasts of the United States, as contained in the message to Congress from the President of the United States dated January 14, 1974;

(2) the Government of the Socialist Republic of Romania Concerning Fisheries Off the Coasts of the United States, as contained in the message to Congress from the President of the United States dated January 10, 1977;

(3) the Government of the Republic of China Concerning Fisheries Off the Coasts of the United States, as contained in the message to Congress from the President of the United States dated January 10, 1977;

(4) the Government of the German Democratic Republic Concerning Fisheries Off the Coasts of the United States, as contained in the message to Congress from the President of the United States dated January 10, 1977;

(5) the Government of the Union of Soviet Socialist Republics Concerning Fisheries Off the Coasts of the United States as contained in the message to Congress from the President of the United States dated January 10, 1977; and

(6) the Government of the Polish People's Republic Concerning Fisheries Off the Coasts of the United States, as contained in the message to Congress from the President of the United States dated September 16, 1976, is hereby approved by the Congress as a governing international fishery agreement for purposes of the Fishery Conservation and Management Act of 1976. Each such agreement shall enter into force and effect with respect to the United States on the date of the enactment of this joint resolution.

SEC. 3. AMENDMENTS TO FISHERY CONSERVATION AND MANAGEMENT ACT OF 1976.

The Fishery Conservation and Management Act of 1976 (16 U.S.C. 1801 et seq.) is amended—

(1) by adding immediately after section 205 the following new section:

"SEC. 206. TRANSITIONAL PROVISIONS.

"(a) DEFINITION.—For purposes of this section, the term 'governing international

fishery agreement' does not include any governing international fishery agreement other than a governing international fishery agreement approved by the Congress pursuant to section 2 of the Fishery Conservation Zone Transition Act, or pursuant to any amendment to such section 2 if the effective date of such amendment is not later than February 28, 1977.

"(b) ACTION BY COUNCILS.—Section 204(b)(5) shall not apply to any application submitted by a foreign nation pursuant to a governing international fishery agreement for permits authorizing fishing during 1977 by vessels of that nation within the fishery conservation zone or for anadromous species or Continental Shelf fishery resources beyond such zone, but each appropriate. Council may prepare and submit comments to the Secretary on such application—

"(1) if the application has been received by the Council on or before the date of the enactment of this section, within 7 days after such date; or

"(2) if the application is received by the Council from the Secretary of State after such date of enactment, within 7 days after the date on which the Council receives the application.

The provisions of the Federal Advisory Committee Act shall not apply to the actions of any Council in preparing such comments.

"(c) PERMITS.—Until May 1, 1977, the requirement in section 204(a) that foreign fishing vessels have on board a valid permit issued under section 204 shall not apply in the case of any foreign fishing vessel for which a permit is issued under an application to which subsection (b) applies. The failure of any such vessel to comply with such requirement before such date shall not be deemed to be a violation of section 307(1)(A).

"(d) PERMIT FEES.—Until May 1, 1977, the requirement in section 204(b)(11), regarding the payment of applicable fees before foreign fishing permits are issued, may be waived by the Secretary with respect to permits to be issued under any application to which subsection (b) applies if the Secretary is satisfied that the foreign nation which made the application will pay the applicable fees before such date. Any permit issued under the waiver provided by this subsection shall expire on May 1, 1977, if the Secretary does not receive on or before such date the applicable fees for the permit."; and

(2) by amending the table of contents by inserting immediately after

"Sec. 205. Import prohibitions."

the following:

"Sec. 206. Transitional provisions."

SEC. 4. REPEAL OF NORTHWEST ATLANTIC FISHERIES ACT OF 1950.

The Northwest Atlantic Fisheries Act of 1950 (16 U.S.C. 981–991) is repealed as of March 1, 1977.

The SPEAKER pro tempore. Is a second demanded?

Mr. FORSYTHE. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from New York (Mr. MURPHY) will be recognized for 20 minutes and the gentleman from New Jersey (Mr. FORSYTHE) will be recognized for 20 minminutes.

The Chair recognizes the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Speaker, I rise in strong support of the legislation and urge its prompt passage.

Mr. Speaker, in April of last year when the 200-Mile Fishery Zone Act came into force and effect, we gave notice to the world that effective March 1 of this year—which is now only 6 weeks away—that we are going to extend the fishery zone of the United States from 12 to 200 miles and that no foreign fishing could take place within this zone after that date except by permit.

Mr. Speaker, there have been a number of articles appearing in the news media indicating that a number of foreign countries have beefed up their fishing activities off our coast and are trying to take as much of our fishery resources as possible before they become regulated by the United States beginning in March.

In fact, at hearings held by my committee just yesterday on this legislation, we were advised that 141 vessels of 13 foreign nations have been observed by the Coast Guard off our North Atlantic coast since the first of the year fishing in what is known as the ICNAF regulatory area.

Mr. Speaker, this is quite an increase over the number of vessels that were observed in this same area 1 year ago.

Mr. Speaker, the 200-Mile Fishery Zone Act was not passed any too soon. In fact, it should have been passed several years ago when the best interest of our fisheries are considered. Because of the excessive fishing pressures on our offshore fisheries resources by some foreign vessels during the past years, many of our fisheries resources have become depleted and some even to the point of being endangered or threatened with extinction.

Mr. Speaker, it is time we gave our valuable fisheries resources the protection to which we are entitled. In fact, that is what this legislation is all about. It will not only allow those countries to continue fishing in our waters that have negotiated in good faith and entered into an agreement with us concerning their fishing activities to be carried out this year after March 1, but it will remove some of the stumbling blocks in the act for this year only that prevent an orderly enforcement of the act after that date.

The stumbling blocks I speak of are the 60-day congressional review period over agreements before they can come into effect and the 45-day council comment period. These provisions were included in the act for our own protection, but because of the difficulties in negotiating these agreements there is just not sufficient time remaining between now and March 1 to allow us to properly get our own house in order so that we can implement this act against foreign fishing. The only alternative at this point is to pass legislation that would delay the enforcement date until May, June, or July, and this Mr. Speaker, is something that we do not want to do. To take this course of action would make us the laughing stock of the world because we have put our neck on the line by telling the world that we are going to enforce this act come March 1.

Mr. Speaker, the only reasonable course of action to take is to pass House Joint Resolution 240 and remove the stumbling blocks created by our own doings and proceed to take those steps that will give this needed protection to our fisheries resources.

Mr. Speaker, I call on my colleagues to join me in the passage of this vitally needed legislation.

Mr. Speaker, at this point I yield to the chairman of the subcommittee, the gentleman from California (Mr. LEGGETT).

Mr. LEGGETT. Mr. Speaker, as I am sure the Members will recall, there was legislation passed in the last Congress that resulted in the enactment of Public Law 94–265, the Fishery Conservation and Management Act of 1976, better known as the 200-Mile Fishery Zone Act.

That act provides that no foreign fishing vessel shall be allowed to fish after March 1, 1977, within our 200-mile fishery zone unless the foreign nation concerned has signed a Governing International Fishery Agreement, GIFA, with the United States and has secured a permit for each of its fishing vessels planning to fish within our fishery zone. Because of the delay in obtaining GIFA's with foreign nations wishing to fish off our shores and because of the delay in transmitting the signed GIFA's to the Congress and applications pursuant thereto to the appropriate regional fishery management councils for comment, it now becomes necessary to pass legislation that would waive some of these requirements to the act if we intend to proceed to enforce this act with respect to foreign fishing within the zone come March 1.

House Joint Resolution 240 is designed to address this problem and at the same time it would allow those countries that have negotiated in good faith and have entered into GIFA's with the United States before the passage of this legislation to continue fishing within our waters after March 1 provided they comply with the other requirements of this act.

Mr. Speaker, briefly explained, House Joint Resolution 240 would set forth in its preamble the reasons for the passage of the legislation. In this regard, it would name the countries that have signed GIFA's with the United States. The countries named are Poland, Romania, Bulgaria, U.S.S.R., Taiwan, and East Germany. It would point out the administrative problems associated with the administration of the act such as the problem associated with the 60-day period allowed for the Congress to review such agreements before they could go into effect—which would mean that many of them could not go into effect until sometime in April or maybe even May—and the problem associated with the delay that would be caused by the 45-day comment period allowed the fishery management councils to review applications submitted pursuant to such signed GIFA's. It also would point out that in order to allow foreign fishing as of March 1 by those countries that have signed GIFA's, it will be necessary to take early congressional action to approve of such GIFA's and to remove the stumbling blocks provided by the act.

Section 2 of the legislation would give specific congressional approval to those six countries that have signed GIFA's

with the United States. I would like to make it clear to my colleagues that any country not named in the legislation today—such as Japan, Spain, and South Korea—those countries would have to comply fully with the requirements of the act and would not be able to take advantage of the shorter procedure provided by this legislation unless they are approved by subsequent acts of Congress.

Section 3 of the legislation would reduce the 45-day comment period for the regional councils and the public with respect to applications for permits submitted pursuant to such signed GIFA's and in lieu thereof it would allow such councils only 7 days, instead of 45 days, in which to make such comments.

In addition, section 3 of the legislation would extend from March 1 to May 1, the time in which such countries would have to get their permits onboard authorized vessels and it would authorize the Secretary of Commerce to allow foreign countries to extend from March 1 to May 1 the time in which such countries would be required to pay the applicable fees associated with the issuance of such permits, provided the Secretary satisfies himself such foreign country will pay such fees by that date.

Finally, Mr. Speaker, section 4 of the legislation would repeal the Northwest Atlantic Fisheries Act of 1950, the implementing legislation for the International Convention for the Northwest Atlantic Fisheries, since the United States withdrew from this convention effective December 31, 1976.

Mr. Speaker, the legislation has the strong support of the Departments of Commerce and State. In fact, Secretary of Commerce Kreps thinks it is imperative that this legislation be passed and on the desk of the President for signature tomorrow before we adjourn for a 5-day district work period. The legislation also has the strong support of the Committee on Merchant Marine and Fisheries, and we have been working closely with my colleagues on the Senate side and the Senate is ready to act on it just as soon as we can pass it and send it to them.

Mr. Speaker, I urge the prompt passage of the legislation.

Mr. FORSYTHE. Mr. Speaker, I yield myself 9 minutes.

Mr. Speaker, House Joint Resolution 240 is an extremely limited piece of legislation. This bill only attempts to insure that U.S. administrative procedures will not prevent the implementation of the Fishery Conservation and Management Act on March 1.

The bill before us today accomplishes five things: first, it expresses congressional approval of every governing international fishery agreement which has been submitted to the Congress for review; second, it reduces the time the regional fishery management councils have to comment on foreign permit applications to 7 days; third, it delays the date on which permits must be physically on board foreign fishing vessels until May 1; fourth, it delays until May 1 the requirement that foreign fishing vessels pay the required permit fee; and fifth, it repeals, effective March 1, the legislation implementing the International Convention for the Northwest Atlantic Fisheries from which the United States has now withdrawn.

Last week our committee staff was able to contact seven of the eight regional fishery management councils. Each of the councils contacted expressed their general support for legislation which would shorten, on a one-time special basis, the administrative review requirements of the Fishery Conservation and Management Act. Some of the councils expressed a desire to have a longer permit application review period than that provided for in House Joint Resolution 240. Other councils, however, indicated their willingness to accept a shorter comment period. House Joint Resolution 240, therefore, represents a reasonable compromise in this regard.

With respect to the governing international fishery agreements, each of the councils expressed their general approval of these documents and urged that they be approved. However, many of the councils expressed a concern that I and several members of the Merchant Marine and Fisheries Committee have—that is, that the method established for compensating U.S. fishermen whose vessels and gear are damaged by foreign fishing vessels is not in compliance with the spirit of the Fishery Conservation and Management Act. That act requires that each foreign nation agree to pay U.S. fishermen for damages caused by its vessels. In voting for this legislation, I envisioned that an administrative procedure to determine a foreign vessel's liability would be created. Appeals from determinations made pursuant to this administrative procedure would be to the appropriate Federal court.

Unfortunately, the governing international fishery agreements which have been transmitted to the Congress so far do not live up to my hopes and expectations. Three of these agreements provide for the establishment of a four-member claims board. Two members of the claims board will be foreign citizens and decisions of the board must be unanimous. If a fisherman is not satisfied after his complaint has been heard by the appropriate claims board, he may appeal to the courts. Two of these claims boards existed before our 200-mile act was passed and their existence is no improvement over the ineffective and cumbersome procedures of the past.

The remaining three governing international fishery agreements contain a simple statement that the foreign nation will compensate U.S. fishermen for damages caused by that nation's fishing vessels. With respect to these GIFA's, the National Marine Fisheries Service has not established any damage compensation procedures. Furthermore, the Service does not know when such procedures will be established. Therefore, an American fisherman whose gear or vessel has been damaged by foreign fishermen has no alternative but to file suit in the courts. Again, this is no change from the existing situation. It represents no improvement from the fishermen's viewpoint.

The central problem with both the claims boards and any administrative procedures, which the National Marine Fisheries Service eventually establishes, is that the U.S. fishermen must be able to prove which foreign vessel caused the damage. In the case of a lobsterman who places his pots on Monday and returns to pick them up in 5 days, such proof is impossible. In this situation no administrative procedures will help the fisherman, and too often that has been the case.

Mr. Speaker, the present situation is unacceptable. Therefore, I am investigating legislation which would establish a special fishermen's compensation fund from which fishermen could purchase no-fault damage insurance. Capital for the fund would be provided by participating fishermen, the National Marine Fisheries Service and those foreign nations fishing within the 200-mile zone. If a U.S. fisherman's gear or vessel was damaged, he would be able to collect from the fund on a no-fault basis. If the identity of the foreign vessel causing the damage could be established, that vessel would be required to reimburse the fund by the appropriate amount. It is my belief that legislation such as this will finally give effect to what the Congress intended when we enacted the Fishery Conservation and Management Act.

Notwithstanding these points, I believe it is essential that House Joint Resolution 240 be enacted. Only by approving this legislation can we insure that U.S. internal administrative procedures will not stand in the way of implementing our 200-mile act on March 1. However, I am quick to emphasize that the only purpose of this legislation is to solve the special transition problems associated with initially implementing the Fishery Conservation and Management Act.

Mr. CARTER. Mr. Speaker, will the gentleman yield?

Mr. FORSYTHE. I yield to the gentleman from Kentucky (Mr. CARTER).

Mr. CARTER. I thank the gentleman for yielding.

As I understand it, by law now we have established the 200-mile zone. This resolution here today would continue the permits of these different countries to fish within those zones; is that correct, or not?

Mr. FORSYTHE. That is not quite correct. I will tell my friend, the gentleman from Kentucky that.

The agreements we are approving today are agreements to insure that foreign fishermen abide by our conservation regulations. Permits for foreign fishing may be issued on the basis of established management plans. Foreign fishing quotas, the number of foreign boats allowed in the U.S. zone, are not contained in these agreements.

Mr. CARTER. If the gentleman will yield further, by agreement they can fish within the 200-mile zone off our coast; is that correct?

Mr. FORSYTHE. They can apply for a permit.

Mr. CARTER. Do we have the same right to apply for permits to fish off their coast?

Mr. FORSYTHE. If we had an interest in fishing, yes, this would apply.

Mr. CARTER. If the gentleman will yield further, I am particularly interested in Bulgaria, since it has a seacoast on the Black Sea. I think perhaps many of our fishermen would like to go over there and fish.

Does the gentleman think by any stretch of the imagination that our fishermen could obtain the right to fish on the Black Sea coast?

Mr. FORSYTHE. If we had fishermen who wanted to fish, and we were granting permits to Bulgaria to fish in our waters, I am sure it would be a question of quid pro quo. If they are going to fish in our waters and we want to fish in their waters, we would have a right to apply.

Mr. CARTER. We would have the right only to apply. Of course, we are going to give these permits to the different countries and we are going to continue to lose the fish that we have.

I am told by my good friend, the gentleman from Alaska, that fish have been almost exterminated in the sea between Alaska and Russia. Yet we are continuing this permit system. No doubt they will be granted, even to Bulgaria, which does not border on any ocean, to come within the 200-mile limit to fish.

Mr. FORSYTHE. The law provides that no permit may be issued to a foreign nation unless there is actually a surplus to the needs in the United States for those fish.

Mr. CARTER. As the distinguished gentleman well knows, if the gentleman will yield further, we do not have that surplus.

Mr. FORSYTHE. There are species that we do, sir.

Mr. CARTER. There might be a few. But I rather doubt that. We are told we lack the numbers and the supply has been diminished; it has almost been exhausted.

Mr. Speaker, I thank the distinguished gentleman from New Jersey (Mr. FORSYTHE) for yielding.

Mr. MURPHY of New York. Mr. Speaker, I yield 5 minutes to the gentleman from Texas (Mr. DE LA GARZA).

Mr. DE LA GARZA. Mr. Speaker, I must say to my colleagues in the House that I am compelled to oppose this joint resolution under suspension. Truthfully, I am not personally asking the Members to follow my lead, and I say that for reasons that I will mention later.

I opposed the initial legislation because I felt that it would have a disastrous effect on my congressional district on the gulf coast of Texas as related to other nations, and unfortunately and sadly, I have been proven correct. That has already happened.

My dissatisfaction also stems—and I would like to make this very clear—not with the nations mentioned in this agreement, because I have no quarrel with the nations that will benefit from this legislation, but, rather, with our State Deparment and our administrations, both the previous one and apparently the new administration. I am not satisfied that this is the right course to take at this point in time.

For several years now we have fought, argued, and eventually slowly prevailed in having congressional oversight and congressional input in this area, and the first thing we do here is to waive that congressional oversight and to waive that congressional input as it relates to this international fishery agreement. I am not satisfied that it is at all necessary, and I am quite alarmed by the language of the joint resolution. Let me quote what it says on page 2 of the joint resolution. I will ask my colleagues to listen to this:

> Whereas early congressional action on these governing international fishery agreements is necessary in order that fishing vessels of the foreign nations concerned may be permitted to fish in the fishery conservation zone. . . .

That is why we passed the bill for the 200-mile zone, so we could begin to keep these foreign vessels from coming in and depleting our fisheries. Granted there will be some form of control. Both sides have stated that there are problems because of stumbling blocks, but the stumbling blocks were not made by the Congress. If this has not been worked out, the reason it has not been worked out relates to the administration and the negotiators, with whom I am most unhappy to say the least. They have not done their job in my most humble opinion.

So why should we at the beginning of this session, when we are beginning to exert congressional input, start out by yielding congressional oversight because some money cannot be transferred? It is unbelievable that a grown person in the administration would give us the excuse that the Soviet Union cannot get hold of a few dollars and readily transmit them to the Government of the United States.

The gentleman from New Jersey (Mr. FORSYTHE) has mentioned this, and I agree with him wholeheartedly. I mentioned this at great length in the hearings on the initial legislation. There is no way really that an injured American fisherman can get compensation from a foreign vessel, and we are just being a little wishy-washy here about this. The gentleman from New Jersey (Mr. FORSYTHE) says he is going to introduce a resolution later to correct this.

They can come in and tear a fisherman's nets, and there is no way that he can get compensation. I understand now that the Secretary of Commerce is going to prohibit them from going in where we have stationary nets. This may well be a point to be considered.

However, my concern is that as a direct result of this legislation shrimp fishermen from Texas, Louisiana, and all along the gulf coast will not in 3 years be able to fish off the coast of neighboring nations. There will be no fishing, and yet here we are being asked to grant these privileges to foreign nations, and they say, "Well, let's let the foreign people come in. Let's make it easier for them."

Therefore, if they are damaged, all right. If they cannot pay us for the license right away, all right. So, too, if we do not have the necessary procedure by which to collect, all right.

The SPEAKER pro tempore. The time of the gentleman from Texas (Mr. DE LA GARZA) has expired.

Mr. MURPHY of New York. Mr. Speaker, I yield 2 additional minutes to the gentleman from Texas.

Mr. DE LA GARZA. To continue, Mr. Speaker, we are yielding, yielding, and yielding; and here before the Members stands the one who told them that this is going to harm my people. Again, with great regret, I say that I was correct: We have already been damaged.

Mr. CARTER. Mr. Speaker, will the gentleman yield?

Mr. DE LA GARZA. I yield to the gentleman from Kentucky.

Mr. CARTER. I thank the gentleman for yielding.

It must be our week to be good to the People's Republic of Bulgaria, to the Socialist Republic of Romania, and to the Union of Soviet Socialist Republics. I do not see why we should give in to them in any way or why we should continue to let them come within our 200-mile limit which was established by law, and about which my good friend in the well, the gentleman from Texas (Mr. DE LA GARZA), has spoken.

Mr. Speaker, this is a mistake of great magnitude, as I see it; and certainly I do not think we should pass this joint resolution today.

Mr. DE LA GARZA. Mr. Speaker, I thank the gentleman from Kentucky (Mr. CARTER) for his contribution.

Mr. Speaker, I will oppose this joint resolution, but as I said in the beginning, I will not necessarily ask my colleagues to follow me because I know that those from the Northeast feel that this is some protection for them. I do not think so, but it will do me no good at this point to ask them not to support the joint resolution, because of the possibility that it may yet help some. It cannot help my people. We have been hurt, but I have an understanding with the chairman and the other members of the committee that they will assist me wherever they can in order to see whether we may bring some semblance of equity to American fishermen before we worry about waiving rules in order to help foreign fishermen.

Mr. FORSYTHE. Mr. Speaker, I have no further requests for time.

Mr. MURPHY of New York. Mr. Speaker, I yield 3 minutes to the gentleman from Massachusetts (Mr. STUDDS).

Mr. STUDDS. Mr. Speaker, I rise in support of House Joint Resolution 240, albeit somewhat reluctantly. When this Congress first enacted Public Law 94–265, we established time periods in the act sufficient to provide full public discussion at every stage of the process by which permits are issued to foreign fishing vessels. Now we find ourselves less than 1 month away from the March 1 implementation date, and the time periods in the original law stand in the way of full implementation of the law's regulations and enforcement procedures over foreign fishing. Consequently, I believe it is necessary to alter these time periods and deadlines—for this year only—in or-

der to facilitate the full and speedy implementation of the act.

Next year the full procedures of the act—including development by the regional fishery management councils of management plans specifying the extent of foreign fishing, will be followed, and all the time periods specified in the original act will be observed.

My decision to support this joint resolution was made easier by yesterday's decision by Secretary of Commerce Kreps to modify the preliminary fishery management plans to incorporate additional provisions to protect our offshore lobster and other fixed gear fisheries from damage and interference by foreign fishing vessels, and by the decision of the Merchant Marine and Fisheries Committee to adopt my amendment repealing the Northwest Atlantic Fishery Act of 1950 as of March 1. That act is the domestic legislation implementing the International Convention for the Northwest Atlantic Fisheries, an international treaty from which the United States withdrew last December 31. Because the United States is no longer a party to this treaty, I believe repeal of the implementing legislation is crucial, so that there will be no doubt in anyone's mind what laws are to govern U.S. management of fish stocks after March 1 when the provisions of Public Law 94–265 take effect.

Mr. Speaker, adoption of this joint resolution will not solve all of the problems encountered in preparation for full implementation of our 200-mile fishery conservation zone on March 1. However, its passage will facilitate the transition to the new law, and will give us time to focus on the problems of establishing a more adequate procedure for reimbursement to U.S. fishermen for damage to gear and vessels caused by foreign fishermen, insuring that foreign vessels which violate conservation practices are punished by reductions of permitted catch in future years, and insuring that enforcement of the act is vigorous and strict.

Mr. Speaker, I should like to remind my colleagues of the original intent of the Congress in passing this statute.

I speak specifically of the concern of the gentleman from Kentucky (Mr. CARTER). As the gentleman knows, I was one of the principal authors of the statute enacting a 200-mile fishery zone. In doing so, it was the intent of this Congress that the protein resources within 200 miles of our shores should be available, first of all, to American fishermen; and secondly, in those instances where our scientists tell us that the capacity or desire of the American fishermen to take a particular species is less than the optimum sustainable yield of the species, that is, in those cases where our fishermen are physically unable or economically uninterested in surplus stocks that may safely be taken and still allow the full, natural regeneration of the species, that in those instances and in those instances alone would foreign nations be licensed to fish for the surplus.

Furthermore, Mr. Speaker, let me remind the gentleman of what has happened here. The gentleman will recall that the opposition to the 200-mile legislation in the last Congress came strongly from the Departments of State and Defense. I recall Members standing in the well of this House echoing arguments of the Defense Department, with predictions of confrontation on the high seas. There were even those who talked in terms of a nuclear Armageddon in the event that we should take this step.

In fact, Mr. Speaker, what we see in the six governing international fisheries agreements which are ratified by the Congress in this joint resolution is the acknowledgement by the very countries which the gentleman named, the Soviet Union, Bulgaria, Poland, and the others, of the lawful authority of the United States to extend our jurisdiction. What we have here is a ringing affirmation of the contention of the original supporters of the bill that those who proclaimed doom and gloom and confrontation when we were considering it were not correct.

The triumph represented here is that the Department of State has succeeded, as it was mandated to do under our 200-mile statute, in negotiating agreements with these countries—agreements in which they recognize the authority of the United States to exercise this jurisdiction and in which they agree to abide fully by the rules by which this legislation would be administered, that is, because of the statute.

May I say to the gentleman that while there are some accommodations in this bill, and I do not refer to accommodations with respect to fishery agreements with other countries, I refer to the shortening of certain time periods, nonetheless it represents an ultimate vindication of the gentleman from Kentucky and of the rest of us in this House when we acted to extend our jurisdiction.

Mr. CARTER. Mr. Speaker, if the gentleman will yield further, I would say, as my good friend the gentleman from Texas (Mr. DE LA GARZA) has mentioned, that shrimp are almost nonexistent in the gulf coast, as I understand it. I understand that the oil slicks in the area of the gentleman from Massachusetts may well deplete their fishing there, and yet we are enabling our country today to give rights to Romania and Bulgaria, countries who only have coasts on the Black Sea, to come over here and fish and we know that they are not going to give us the same rights in their areas.

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. MURPHY of New York. Mr. Speaker, I yield 2 additional minutes to the gentleman from Massachusetts.

Mr. STUDDS. Mr. Speaker, may I say to the gentleman from Kentucky that, would Heaven the United States had fishing vessels capable of getting to Bulgaria in the first place. Perhaps some day we will.

Mr. CARTER. I am not sure of that.

Mr. STUDDS. May I further say to the gentleman from Kentucky, we mandate, at least for our own fishermen, in the unlikely event that fishing vessels from Massachusetts, and the even less likely event that fishing vessels from Kentucky, want to fish off the area of Bulgaria and the Bulgarians say no to them, then we say no to them also.

Mr. CARTER. Kentucky is part of the United States of America.

Mr. STUDDS. I appreciate that.

Mr. CARTER. Bulgaria is not such a state. Of course, as part of the United States, we are speaking to them. It is true we do not have a seacoast in Kentucky, but we did profit from the shrimps which were provided at one time from the gulf coast. Also for the balance of the United States, fish have been depleted and almost exhausted, may I say to the gentleman, by overfishing by these very countries.

Mr. STUDDS. I appreciate that, but there will be no such fleets in domestic waters from now on. Insofar as the species that have been most raped, literally, by the foreign countries, cod, haddock, and flounder, in regard to these there will be absolutely no foreign fishing permitted because there is no surplus.

This is essential management legislation. It is our intention to guarantee a safe maximum harvest of protein for our fishermen and for all the people of the world.

Mr. CARTER. If the gentleman will yield still further, I would say the gentleman admits that we have lost cod, haddock, and flounder from the area the gentleman represents, or from the seacoasts there, and now with the 200-mile limit, for God's sakes, let us not go on and lose the rest of our fish in these areas.

Mr. STUDDS. The only reason we can say to the Russians and to the other countries, "You may not take this species," is precisely because of this legislation.

I urge adoption of the resolution.

The SPEAKER pro tempore. The time of the gentleman has again expired.

Mr. MURPHY of New York. Mr. Speaker, I might just conclude by saying that this basic act was signed into law by the previous administration. All we are doing in this legislation is waiving a 60-day review period and a 45-day comment period so that permits can be issued to the boats of those nations that have signed agreements with us.

Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. BRADEMAS) that the House suspend the rules and pass the joint resolution (H.J. Res. 240), as amended.

The question was taken.

Mr. CARTER. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 353, nays 35,

answered "present" 1, not voting 42, as follows:

Mr. Solarz with Mr. Young of Missouri.
Mr. Waxman with Mr. Rhodes.
Mr. Charles H. Wilson of California with Mr. Krueger.
Mr. Early with Mr. Gibbons.
Mr. Tonry with Mr. Dellums.
Mr. Mann with Mr. Gudger.
Mr. Nolan with Mr. Traxler.

So (two-thirds having voted in favor thereof) the rules were suspended and the joint resolution, as amended, was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. MURPHY of New York. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the joint resolution just agreed to.

The SPEAKER pro tempore (Mr. FOLEY). Is there objection to the request of the gentleman from New York?

There was no objection.

PERMISSION FOR COMMITTEE ON ARMED SERVICES TO FILE REPORT ON H.R. 694

Mr. STRATTON. Mr. Speaker, I ask unanimous consent that the Committee on Armed Services may have until midnight tonight to file a report on the bill H.R. 694.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

STATEMENT OF EXPENDITURES BY COMMITTEE ON STANDARDS OF OFFICIAL CONDUCT

Mr. FLYNT. Mr. Speaker, pursuant to the provisions of House Resolution 1260 of the 94th Congress, I submit for printing in the RECORD the following statement of expenditures by the Committee on Standards of Official Conduct from October 8, 1976, to January 3, 1977, and the total expenditures to date under provisions of that resolution:

Consultant fees:	
Investigation	$800.00
Legal	25,093.75
Members and staff travel	201.00
Miscellaneous and contingencies	374.55
Total Expenses for Period October 8, 1976 to January 3, 1977	26,469.30
Consultant fees:	
Investigation	35,600.00
Legal	41,751.52
Members and staff travel	1,649.88
Miscellaneous and contingencies	437.56
Total expenses to date	79,438.78

THE GASAHOL ALTERNATIVE FUEL RESEARCH ACT

(Mr. GLICKMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GLICKMAN. Mr. Speaker, today I introduce the Gasahol Alternative Fuel Research Act. It is a bill that would require the Energy Research and Development Administration—(ERDA)—to research the comprehensive and various uses of grain or grain products in the development and use of fuels.

During the recent floor debate on the Emergency Natural Gas Act of 1977, I noted that this legislation was not a panacea, that the winter and cold would be with us again, and that the Congress had the responsibility to lay the foundation for future generations to have adequate energy supplies.

My remarks concluded with the urging of Members of Congress to keep our minds open to the development and demonstration of new energy technologies and with the plea that the

necessary resources to accomplish their swift implementation be granted.

The Gasahol Alternative Fuel Research Act, while perhaps only a small step, is nonetheless significant.

The dramatic and continual rise in fossil fuel costs may well now provide the economic justification for hitherto higher priced alternatives. I believe that there exists substantial evidence that gasahol is a viable fuel alternative and that this bill offers the mandate for further and more comprehensive research.

Additionally, gasahol could be an important regional and agricultural fuel supply. Currently, the States of Illinois, Indiana, Iowa, Kansas, Kentucky, Missouri, Tennessee, and Texas are leading producers of grain alcohol.

Further, gasahol may have a positive effect on the now disastrous wheat prices—prices which hurt the American farmer, as well as the American consumer. Its production could alleviate, to some extent, this problem by more fully utilizing available resources.

The act does recognize the difficulties that lie ahead and questions that must be answered. For example, under this legislation, ERDA would be required to report an estimate of economic and environmental impact and of the extent to which human food resources and farm animal food resources would be reduced or deleted if these fuels were used in any significant manner.

Therefore, I urge that this Congress support extensive fuel research and development; support the need for new technologies and ideas; and support fuels from biomass of which this important legislation which I have introduced today is a component.

TO REQUIRE INTENT OF CONGRESS WITH RESPECT TO "PINPOINT DISASTER" PROGRAM

(Mr. SKUBITZ asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. SKUBITZ. Mr. Speaker, I am introducing today a bill which should not have been necessary. It should not have been necessary because the intent of Congress with respect to this matter is already clear. However, because the U.S. Office of Education has arbitrarily seen fit to disregard certain laws passed by the Congress—my legislation is very much necessary and should be immediately considered by the Education and Labor Committee and this body.

On January 2, 1968, the Elementary and Secondary Education Amendments of 1967 (Public Law 90-247) were envisions which authorized the Commissioner of Education to make loans to local elementary and secondary school educational agencies for the purpose of providing Federal "pinpoint disaster" assistance. A pinpoint disaster is one which is not so widespread over an area and of such a magnitude as to warrant a major disaster declaration by the President. The damage may occur as the result of a flood, hurricane, earthquake, storm, fire or any other catastrophe—except that it cannot have resulted from negligence or malicious action.

Not until November 17, 1976—almost 8 years after the passage of this legislation—did the Office of Education publish final regulations for the implementation of this program. Certainly it does take a reasonable amount of time to implement Federal programs. But 8 years is ridiculous.

It is interesting to note that the final implementation of this program came only after a school fire occurred at Canadian, Okla. This community is in the congressional district which was represented by former Speaker Carl Albert. Through the course of an investigation by Speaker Albert's staff of the programs available to assist the school in his community, he learned that the "pinpoint disaster" program had intentionally not been implemented by the Office of Education. It was only after the former Speaker requested a General Accounting Office investigation that the Office of Education finally began taking steps to implement the program.

Thus, on November 17, 1976—and again I repeat, almost 8 years after the act authorizing this assistance became law—the Office of Education published final regulations implementing the "pinpoint disaster" assistance program. However, the final regulations included the stipulation that only those schools where disaster had occurred on or after July 1, 1975, would be eligible for the program.

Mr. Speaker, the arbitrary selection of the July 1, 1975, implementation date is completely unjustified and can only be viewed as an usurpation of the legislative branch's powers by the Office of Education.

The arbitrary selection of the July 1, 1975, date means that the school district at Cedar Vale, Kans., a community in my congressional district that was hit by tornadoes the night of June 16, 1975, and whose high school building was severely damaged to the point of being condemned—will not be eligible for Federal assistance. Had the tornadoes struck only 15 days later, the community, according to the Office of Education's rules, would now be eligible to apply for assistance.

The community of Canadian, Okla., now represented in the House by Mr. WATKINS—and the community of Roanoke, Va., represented by Mr. BUTLER, are also denied eligibility for "pinpoint disaster" assistance because of the July 1, 1975, date. I want to thank the gentleman from Oklahoma and the gentleman from Virginia for their cosponsorship of this bill because it underscores that this matter cuts across party lines. I believe if several of my other colleagues will also check their records of damage to schools in their districts, they will find that they are similarly affected.

The bill I am introducing is a simple one. It does nothing other than provide that the "pinpoint disaster" program must be applicable to those schools which suffered such disasters between the period beginning January 2, 1968—the date of enactment of the "pinpoint disaster" assistance authorization—and before October 1, 1978—the date the program authorization expires.

Mr. Speaker, this legislation is only a restatement of what has already been enacted by the Congress, but without it—it appears the will of Congress may be thwarted. It is my hope the measure will receive the immediate attention it rightfully deserves.

STATEMENT AND RECOMMENDATIONS ADOPTED BY THE HOUSE REPUBLICAN TASK FORCE ON REFORM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. COUGHLIN) is recognized for 30 minutes.

Mr. COUGHLIN. Mr. Speaker, I am pleased to commend to my colleagues' attention the statement and recommendations adopted by the House Republican Task Force on Reform. As chairman of that task force, I was gratified by the diligence and conscientiousness of the task force members in formulating stringent yet realistic reforms to protect the taxpayers' interests in the House of Representatives. By endorsing strong provisions to open up both Government funds and personal finances to public scrutiny, the task force has demonstrated its firm commitment to effective reform of the House and to restoring a Congress in which the public can indeed have pride.

Very special thanks and recognition are warranted for the task force members.

Serving as ex officio members of the task force are House Minority Leader JOHN J. RHODES of Arizona; Conference Chairman JOHN B. ANDERSON of Illinois; Policy Committee Chairman DEL CLAWSON of California; and Research Committee Chairman BILL FRENZEL of Minnesota.

Task force members are WILLIAM L. ARMSTRONG of Colorado; ROBERT E. BAUMAN of Maryland; CALDWELL M. BUTLER of Virginia; JAMES C. CLEVELAND of New Hampshire; THOMAS B. EVANS, Jr. of Delaware; MILLICENT FENWICK of New Jersey; LOUIS FREY, Jr. of Florida; HENRY J. HYDE of Illinois; ROBERT W. KASTEN, Jr. of Wisconsin; JAMES A. S. LEACH of Iowa; DONALD J. MITCHELL of New York; W. HENSON MOORE of Louisiana; JOEL PRITCHARD of Washington; RALPH S. REGULA of Ohio; and WILLIAM A. STEIGER of Wisconsin.

The task force believes we owe it to the American people to enact reforms immediately and not to wait for 2 years, until the next Congress, to enact the necessary changes. It enacted very strong provisions providing for full accounting and public disclosure of the financial operations of Members and of committees. It provides for the burning of unofficial office accounts. It provides for a full disclosure of all gifts valued at more than $100. It provides for a full disclosure of dollar limitations on honoraria and the setting of a ceiling on outside earned in-

come. It provides stronger financial disclosure rules. It bans lame duck travel.

The task force's recommendations have been submitted to the House Commission on Administrative Review. We commend that Commission for the work that it is doing, and many of the recommendations of the task force are very similar to those before the Commission on Administrative Review. However, in four very specific ways, the recommendations of the task force go beyond the recommendations of that Commission.

First, the task force believes that the public is as interested in how public funds are spent as it is in the disclosure of personal finances.

Nothing in the recommendations currently before the Commission on Administrative Review provides for a full accounting and for an audit of both Members' and committees' expenditures of the taxpayers' funds.

Recent revelations have indicated the great abuses in this field.

The task force believes that accounting and auditing of the funds that are available to Members and to committees are a prime requirement both for the integrity of this House and for greater public confidence in us as an institution.

Second, the task force believes that these recommendations should be made effective immediately or as soon as possible. Many of the recommendations by the Commission on Administrative Review would not become effective until the beginning of the next Congress, delaying this unnecessarily, in our judgment.

Mr. BUTLER. Mr. Speaker, will the gentleman yield on that point?

Mr. COUGHLIN. I yield to the gentleman from Virginia.

Mr. BUTLER. Mr. Speaker, I wish to congratulate the gentleman from Pennsylvania (Mr. COUGHLIN) on the fine work he has done as chairman of this task force.

In reference to the recommendation and the timing of the recommendation, is there any real reason why all these reforms that are being proposed or that are about to be proposed by the Commission on Administrative Review cannot be implemented promptly?

Mr. COUGHLIN. Mr. Speaker, it would seem to me there would be no reason why they should not be promptly implemented. Certainly they should not be put off until the beginning of the next Congress.

Mr. BUTLER. Could the gentleman suggest an earlier date than the date of the beginning of the next Congress, some date that would meet the satisfaction of the Commission on Administrative Review, or does he suspect they are going to put them all off until the next Congress?

Mr. COUGHLIN. Well, it certainly smacks of the possibility of delaying real reform and putting it off until another Congress, and then perhaps they will put it off also to another Congress. However, we think this should be done immediately.

Mr. BUTLER. Mr. Speaker, I congratulate the gentleman for calling our attention to this glaring shortcoming concerning these recommendations we have heard about. I also call attention to the tremendous coverage that the press is giving this effort, and I am sure we will be reading about that tomorrow.

Mr. COUGHLIN. Mr. Speaker, I thank the gentleman from Virginia (Mr. BUTLER).

Mr. Speaker, the third area in which the task force differs from the Commission on Administrative Review is that we believe there should be no increase in Members' allowances as a result of the banning of unofficial office accounts. The recent consolidation of accounts has made available to Members substantially more funds than had been available previously. Certainly there should be adequate funds available to Members under the existing method of funding, and there should be no increase from the banning of office accounts.

Finally, the task force believes that more stringent regulations on limiting use of the frank should take place. The franking privilege is a privilege that assists incumbent Members of Congress. We believe that we should not be allowed mass mailings under the frank during a period 60 days before an election, and that the present 28-day limitation should be extended to 60 days.

We also believe that all mass mailings should be reported to the Clerk of the House, and that there should be a record of those mailings that would be open to public inspection so that the public would know how Members of Congress are using the franking privilege and whether Members in certain cases are abusing the franking privilege.

Mr. Speaker, on behalf of the task force on reform, I do want to submit our statement and our recommendations contained in that statement. The statement is as follows:

STATEMENT OF THE HOUSE REPUBLICAN TASK FORCE ON REFORM

It is no secret that the public's perception of the Congress is at an all-time low. The American people, disillusioned by the continuing accounts of scandal, question the very integrity of the legislative branch. The conflicts of interest, the misuse of public moneys, and the allegations of personal enrichment while in government service undermine the public faith.

The abuses of a few Members tar the reputations of all Members. Congress for too long has tolerated activities which skirt the boundaries of acceptable ethical behavior.

The Code of Official Conduct which governs the House of Representatives is an inadequate and deficient standard. The current financial disclosure rules conceal pertinent information. There is little accountability for public funds, much less effective auditing or enforcement provisions to ensure compliance with the law.

Congress must institute wideranging and comprehensive reforms. There can be no compromise of ethical principles in accounting for the taxpayers' money or disclosing potential conflicts of interest. There can be no justification for delay. This institution cannot ignore the public clamor, as well as the real need, for corrective measures.

Numerous reform suggestions have been offered by individual Members, party units, concerned public citizens and the press. Among the most recent are those advanced by a task force of the Commission on Administrative Review. Virtually all of these recommendations have been confined to Members' personal finances. Although the House Republican Task Force on Reform applauds the intent of these proposals, it recognizes that requiring only disclosure and limits on a Member's personal finances amounts to little more than a subterfuge. The primary concern must be the accountability of taxpayers' funds with the elimination of the widescale abuses still evident in the system of House allowances.

The House Republican Task Force on Reform has endorsed a specific agenda of reforms, including:

(1) full accounting and public disclosure of the financial and personnel operations of the House of Representatives;

(2) banning of all "unofficial" office accounts;

(3) full disclosure of all gifts valued at more than $100;

(4) full disclosure and lower dollar limits on honoraria;

(5) setting a $15,000 ceiling on outside earned income;

(6) stricter financial disclosure rules;

(7) banning lameduck travel;

(8) imposition of limitations on the use of the frank.

In adopting these recommendations, the Task Force sought a balanced and reasoned approach. To advocate restrictions and prohibitions which are unworkable serves no useful purpose.

The Task Force earnestly believes that the most effective remedy against unethical or financially questionable activities is the requirement of public disclosure. It also believes that the major thrust of public concern is accountability for public funds.

Real reform transcends the politics of party, personality and ideology. Time and again the Republicans have appealed to the Democratic Majority to join in a bi-partisan reform effort. The Democratic Majority, however, which for more than two decades has dominated the Congress, often demonstrates a lack of commitment to any fundamental change.

In 1974, the Democrats sidetracked a landmark overhaul of the committee system and endorsed a substitute plan which protected the existing power relationships. In 1975, the Democrats reinstituted the abuse of proxy voting while revoking a pledge for one-third minority staffing. In 1976, there were revelations of extensive irregularities corrupting the operation of House finances. Under the guise of reform, the Democrats established a consolidated account which is more prone to abuse than the system it replaced and voted down attempts at more comprehensive reform. At the beginning of 1977, the Democrats railroaded the adoption of the House Rules under a restricted debate, no-amendment procedure—a procedure which violated the very principles of representative democracy.

Obviously the House Majority has grown too comfortable with the prerogatives of power. Reform is now an urgent priority; it should not fall prey to the maneuverings of partisan advantage.

The House Republican Task Force urges that any consideration of reforms be conducted in the House under an open rule procedure. Full opportunity for debate and amendment is the best assurance for meaningful reform.

With the reputation of the House at stake, it is not the time to resort to closed rule procedures or the drafting of amendments behind the locked doors of party caucuses.

Authentic reform goes beyond simple alterations in the law or a rewriting of the ethics code. The Task Force therefore recommends that accompanying any new regu-

lations will be the adoption of effective enforcement mechanisms coupled with nonpartisan, systematic, and independent auditing procedures. If the Congress refuses to implement the necessary means to ensure compliance with the new standards, there will be no reform—only a futile exercise.

While the Task Force will be making further recommendations in other areas, it believes that a number of significant reforms can be considered immediately. It now specifically recommends that the following be promptly enacted by the House of Representatives:

HOUSE ALLOWANCES

Following the revelation of extensive abuses in the handling of House allowances in 1976, the Task Force offered specific recommendations to provide for greater congressional accountability and visability. Our proposals were ignored by the Democratic leadership and, in both 1976 and 1977, reform efforts were defeated under gag-rule procedures.

The end result was the development of a consolidated account which strengthens the power of incumbency and the sidetracking of any comprehensive accountability, disclosure and audit procedures to clear away allegations of impropriety and wrongdoing. The minor changes implemented in the last session of the 94th Congress were insufficient to eliminate defects inherent in the system. As a result, the Task Force restates our support for the following essential reforms:

1. Vote of the whole House each Session under an open rule on all Members' salaries and allowances. The present authority of the House Administration Committee to make cost-of-living changes in allowances at any time should be repealed.

2. Full disclosure for both Members and Committees of all personnel salaries and all expense accounts. This information would include both Committee and Member staff names, salaries, job descriptions and location of employment, as well as other expenditures by the Clerk on behalf of Committees or Members; and would be available for public inspection at the Office of the Clerk.

3. Full audit of all expense and personnel records. This audit should be conducted by an independent, outside agency under the supervision of a Select Bipartisan Committee. This Select Committee should have equal representation of Democrats and Republicans.

4. Thorough personnel system review by outside experts. Particular items for attention are the problems of committee empire-building and overstaffing.

5. Tough anti-nepotism disclosure and anti-nepotism rules. All information regarding the family relationship of Committee and personal staff to any Member would be available for public inspection at the Office of the Clerk.

UNOFFICIAL OFFICE ACCOUNTS

Some Members of Congress have created unofficial office accounts to pay for activities which are not covered by existing government allowances. These accounts finance a variety of political and office-related business—the entertainment of constituents, media tapings, subscriptions to newspapers and periodicals, Christmas card mailings, as well as augmenting the account allowances appropriated by the Congress. Such accounts are subsidized by individual and organization donations, honoraria, and personal funds; additionally, present law permits an officeholder to convert surplus campaign funds to his unofficial account.

Allegedly justified as a means to defray the necessary and legitimate expenses of holding office, these funds smack of favoritism and influence peddling and create an atmosphere which contributes to public cynicism. Guidelines for these funds are sorely lacking; no provisions exist for financial disclosure; no ceilings are imposed on the dollar amounts which can be permissibly contributed; and no restrictions are placed on the sources of income. Office accounts operate in a grey area of potential abuse—and too often appear to be transfusions of tainted money from well-heeled private contributors and special interests.

The Task Force recommends that the most proper avenue for reform is the banning of all "unofficial" accounts. No matter what controls are placed on these accounts; the potential for abuse remains; the elimination of these slush funds is a top priority and should be totally practicable in view of the expanded and consolidated allowances now in effect. Under no circumstances should House allowances be increased as a result of the elimination of these "unofficial" accounts.

If it is not possible to ban such accounts in their entirety, full disclosure is imperative. The lack of enforceable restrictions on such accounts prompted the Task Force to earlier propose that Congress do the following:

1. require full disclosure of the sources of all contributions to and the nature of all expenditures from such funds.

2. prohibit labor unions and corporations from contributing to these funds.

3. limit contributions to these funds to $1,000 per person.

To these limitations the Task Force would now add the requirement that the amount of donations as well as the sources be disclosed and that reports of account transactions be kept on file, open to public inspection, with the Clerk of the House.

HONORARIA

According to the House Rules, no Member can receive an honorarium for an appearance, speech or article which is "in excess of the usual and customary value for such services." The first monetary restrictions on honoraria were imposed by the Congress in the 1974 campaign finance law—no Member could accept an honorarium of more than $1,000 for any appearance, speech or article, nor could any Member receive more than $15,000 worth of honoraria in one year. These ceilings were raised from $1,000 to $2,000 and $15,000 to $25,000 in 1976. Currently, under House Rule 44, the sources of honoraria aggregating to $300 or more from a single source must be listed on the financial disclosure statements of House members.

Members who actively participate on the honoraria circuit of personal appearance and speaking engagements are often criticized as neglecting their official duties. Yet honoraria related activities can be an important factor in the interchange of ideas. The ability of articulate Members to present their views in a variety of forums serve to heighten the public's knowledge and improve the political debate on key issues of the moment.

The Task Force realizes that honoraria activities can serve as a beneficial method of facilitating the flow of information. However the present regulations which govern their receipt are defective and illogical. The disclosure rules afford no information as to specific amounts and only an incomplete listing of sources. The ceilings of $2,000 and $25,000 appear, to the Task Force, to be excessive.

As a remedy, the Task Force proposes:

1. The full disclosure of the sources of all honararia and the specific amounts received. This information would be made available to public inspection in the Office of the Clerk of the House.

2. A reduction in the amounts which can allowably be received—from $2,000 to $1,500 per individual appearance, speech or article; and from a yearly ceiling of $25,000 to $15,000.

3. Honoraria be included under the limitations on outside earned income recommended by the Task Force.

FINANCIAL DISCLOSURE

House Rule 44 governs the disclosure of financial interests by Members. Two reports are required—the first, which is available for public review, provides limited information concerning the sources of income and the identity of certain categories of liabilities and assets; the second, which is kept confidential, discloses the amounts of income from each source listed on the public report and the fair market value of business holdings, This second report is filed with the House Ethics Committee and can only be opened if examination of the information is deemed essential to an official investigation of the committee.

Such restricted disclosure merely reinforces public cynicsim and fosters the misperception of extensive conflicts of interests in the dispatch of legislative business. The Task Force believes that a Member's constituents have the right to be given a more honest appraisal of their representative's financial situation.

The Task Force supports the adoption of disclosure rules which would indicate:

1. the source and amount of each item of income which exceeds $100 in a calendar year.

2. the identity and category of value of each asset which has a value of over $1,000.

3. the identity of each liability owed.

4. the identity of any position as an officer, director, partner, advisor, or consultant of any business enterprise or partnership.

5. the transfer of assets from an officeholder to a spouse or dependents which have a value in excess of $1,000.

Whether an officeholder's disclosure requirements should be interpreted to include the financial activities of the spouse and dependents is a matter of serious debate. This extension is often justified as a means to prevent the improper transfer of assets, controlled by the officeholder, to the spouse and dependents, in order to avoid public disclosure. However, to require the reporting of items which are the sole property of the spouse and dependents and are in no way connected with the income of the officeholder is an invasion of privacy and may equally violate the confidentiality provisions of the Internal Revenue Code. In order to balance these conflicting concerns, the Task Force recommends that the financial disclosure requirements imposed on an officeholder not include the independent financial activities of a spouse and dependents, with the provision that any transfer of assets from an officeholder to a spouse or dependents in excess of $1,000 must be reported (proposal #5 above).

The Task Force supports the concept of requiring assets and liabilities to be reported in ranges: under $5,000; between $5,000 and $15,000; between $15,000 and $50,000; between $50,000 and $100,000; and greater than $100,000. The Task Force would additionally require a description of any contract or understanding regarding post-government employment. Finally, all disclosure reports should be filed with the Clerk of the House and be available for public inspection.

OUTSIDE INCOME

Supplementing congressional salaries with outside earned income is a common practice for many Members of the House of Representatives. However, the potential conflicts of interest and questions of impropriety which surround such income seriously concern the voting public. Although the Task Force has proposed the disclosure of the sources and amounts of each item of income which exceeds $100 in a calendar year, we believe that a specific limitation must be

placed on outside earned income to dispel the public's doubts.

The Task Force recommends that a ceiling of $15,000 be imposed on the amount of outside earned income which a Member can receive in a calendar year. This would serve as a first step in restoring confidence in this institution. Should the proposed Congressional pay raise be adopted, the Task Force would consider adjusting the outside earned income ceiling. The Task Force additionally proposes that honoraria be made subject to this limit. That is to say, a Member who receives $10,000 in honoraria in a calendar year would be allowed to earn only up to $5,000 more in outside earned income. We believe that such a restriction is fair and reasonable.

GIFTS

Investigative journalists often describe the multitude of gifts—new merchandise, free hunting and fishing excursions, dinners at expensive restaurants—which are offered to powerful Members of Congress. To the American citizen, the practice of giving gifts to elected representatives appears a corruption of the political process—an unsavory sidelight to lobbying and pressure-group tactics. Whether or not the public perception is accurate, it underscores a serious problem of public trust.

The House Rule (43, Clause 4) stipulating a Member should not accept a gift of "substantial value, directly or indirectly, from any person, organization, or corporation having a direct interest in legislation before the Congress" is ill-defined at best.

The Task Force recommends that the most acceptable course of action would be to require the full disclosure of any gifts, or aggregate of gifts from one source, valued at over $100, including the designation of source, the nature of the gift, and the amount of value. Records of gifts would be maintained in the Office of the Clerk and be available for public review.

LAMEDUCK TRAVEL

Following every general election, a procession of retiring and defeated Members travel abroad. Although the trips are justified as an extension of Congressional business, these excursions are perceived as unwarranted pleasure junkets taken at public expense. It is an abuse which infuriates hardworking, taxpaying Americans and which brings scorn and disrepute on the legislative branch.

The Task Force urges, therefore, that no lameduck travel be permitted after the general election or the adjournment sine die of Congress, whichever comes first.

FRANKING PRIVILEGE

Although justified as essential to the performance of a Member's official duties, the franking privilege is the foremost political weapon for incumbent self-promotion. The mass mailings, questionnaires, reports on legislation, and untold thousands of responses to constituent requests pour from Capitol Hill to the homes of America's voters. The cost of "free" mailing under the frank, is not inconsequential; for fiscal year 1976, the cost to the taxpayers amounted to over $38 million.

Even though the franking privilege dates back to the Continental Congress, standards regarding its usage have long been ill-defined. In 1973, Congress set forth guidelines on the types of mail Members could send under the frank while prohibiting mass mailings (of more than 500 pieces for the 28-day period preceding elections by Members who were candidates for re-election.

Last year the Task Force expressed concern over the potential for abuse of franked mass mailings and urged the adoption of reasonable limits on the privilege. Although the franking privilege was never meant to institutionalize the incumbency, it now serves this purpose.

The Task Force believes the following amendments to the franking statutes are a reasonable first step to qualify the power of the frank:

(1) require periodic reports to be filed with the Commission on Congressional Mailing Standards detailing number of mass mailings sent, times they were sent, and number of pieces in each mailing, together with copies of each mass mailing. All reports would be filed with the Clerk of the House and be available for public inspection.

(2) extend prohibition period on mass mailings sent prior to an election in which a Member is a candidate from 28 to 60 days. Subject to this provision, Members are restricted to no more than the equivalent of six mass mailings sent with a simplified form of address (postal patron) during any calendar year, and are restricted to no more than one mass mailing per household during any calendar month.

(3) require mass mailings to be sent at the most economical rate; generally that would be 3rd class, bulk rate.

(4) prohibit a Member of the House who is running for a state-wide office or office in an area larger than his Congressional District from sending mass mailings under personalized address outside of his Congressional District during the period of time that he is a candidate.

SAWYER URGES DEFEAT FOR PAY RAISE PROPOSAL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. SAWYER) is recognized for 5 minutes.

Mr. SAWYER. Mr. Speaker, a special ad hoc subcommittee on the House Committee on Post Office and Civil Service has been created to conduct hearings on February 7, 8, and 9, on the recommendation of the Commission on Executive, Legislative, and Judicial Salaries. I am totally opposed to the Commission's recommendation and I have today submitted the following statement to the ad hoc subcommittee:

STATEMENT OF CONGRESSMAN HAROLD S. SAWYER

The 95th Congress has within its power to take a hard-line stand against wasteful government spending and bring under control eroding public confidence in elected officials who seek to increase personal wealth at taxpayers expense.

The Commission on Executive, Legislative and Judicial Salaries has recommended salary increases for certain federal government employees, including Members of Congress. I am dead against the Commission's recommendation.

The recommended salary increase is clearly unethical, overcostly, and ill-advised during a time when we are calling for all the American people to make sacrifices in restoring stability and growth to the nation's struggling economy. To provide ourselves an increase of 28.9 percent, while limiting the increases in social security benefits to 5 percent, shows a callous disregard to the genuine human needs of our constituents.

Certainly each House member was clearly aware of the present salary for a Congressman when he decided to run for election or re-election this past November. Any person who did not feel that that salary was adequate, should have exercised other options at that time.

I urge the Ad Hoc Committee to immediately report a resolution of disapproval on the pay recommendations. This will once and for all allow every Member of the House the opportunity to stand up and be counted against this travesty on the American people.

Furthermore, I hope that the Congress would very soon eliminate this backdoor method of allowing Members to increase their own salaries. I intend to propose a change in the law to require the positive approval of the House and Senate before a pay raise proposal takes effect, instead of allowing it to become effective automatically unless either House vetoes it.

The ball is in our court. We can speak up and exercise fiscal restraint and responsibility by voting NO on the pay raise, or we can allow unwarranted compensation changes to result in our personal gain.

The sunshine in Congress will never be seen unless your Committee reports a resolution which will give Members the opportunity to publicly be heard. The decision rests in your hands.

MEDICARE MEDICAL EQUIPMENT REIMBURSEMENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Maryland (Mr. STEERS) is recognized for 5 minutes.

Mr. STEERS. Mr. Speaker, I am today introducing a bill to make more flexible the method of reimbursing medicare recipients for durable medical equipment.

Medicare law currently reimburses a recipient for the purchase of certain types of durable medical eequipment. However, the recipient, rather than being reimbursed in one payment for the entire amount of purchase, is reimbursed in small installments equal to the monthly amounts that would have been paid had the equipment been rented.

The reason for this method of repayment is understandable. Beneficiaries with long life expectancies who purchase equipment when their need is only of short duration could conceivably sell the equipment for profit.

However, in certain cases where projected duration of use is such that purchase would be more economical than renting, recipients should receive repayment for equipment in one lump sum. For instance, one of my constituents recently wrote:

As you will see from the enclosed notice, I bought a wheelchair on 30 September 1976 from Abbey Rents, Inc., for which I paid $147.50. Medicare B has informed me that they will reimburse me for the entire cost of the wheelchair, but that the reimbursement will be on the basis of monthly installments. Social Security laws require such a reimbursement to be made in installments.

. . . my difficulty is that I had to pay Abbey Rents the entire amount, but that I shall be reimbursed in "dribbles". My total monthly income is $332.40 paid as Disability Insurance by Social Security; the wheelchair cost over one-third of my total income. It was difficult for me to pay that cost then; it will be even more difficult for me to absorb that cost if I must do it in small installments, especially now that Thanksgiving and Christmas are approaching.

The bill I am introducing today would provide that the Secretary could authorize the purchase of equipment on a lump-sum payment basis if, on the basis of medical and other evidence, if it is found

that purchase of the equipment would be less costly or more practical and would impose less financial hardship on the beneficiary.

This bill is carefully worded to keep in check potential abuses while simultaneously authorizing the Secretary flexibility in payment schedules to serve the interests of economy and certain hardship cases.

The Health Subcommittee of the Ways and Means Committee which has jurisdiction over this matter has looked into the question of durable equipment reimbursements in the past and considers it a problem which should be addressed.

I am hopeful that the bill will receive consideration by that subcommittee in the near future.

LEGISLATION TO ESTABLISH A CONGRESSIONAL COMMISSION ON LEGISLATIVE-JUDICIAL RELATIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Minnesota (Mr. HAGEDORN) is recognized for 5 minutes.

Mr. HAGEDORN. Mr. Speaker, the past two decades have seen an enormous expansion in the role of the Federal judicial branch in our society. While due partly to the fact that Government generally has grown so rapidly during this period, much of the court's new role has come at the expense of the other two branches of the Federal Government, as well as of State and local governments. Courts have increasingly involved themselves in policymaking and administrative matters which have traditionally been the prerogatives of the legislative and executive branches.

There is no fine line at which we can say that a matter is legitimately within the scope of the legislative authority rather than the judicial one. It is clear, nevertheless, that much of what is going on in Federal trial and appellate courts today does not involve the determination of disputes of the type which have traditionally been determined in these forums. Prof. Abram Chayes of Harvard Law School has stated that—

> Perhaps the dominating characteristic of modern Federal litigation is that lawsuits do not arise out of disputes between private parties about private rights. Instead, the object of litigation is the vindication of constitutional or statutory policies.

In going on to describe what he refers to as the "public law model," Professor Chayes notes other characteristics of the new litigation which differ from traditional litigation:

> The party structure is sprawling and amorphous, subject to change over the course of the litigation. The traditional adversary relationship is suffused and intermixed with negotiating and mediating processes at every point. The judge is the dominant figure in organizing and guiding the case, and he draws for support not only on the parties and their counsel, but on a wide variety of outsiders—masters, experts, and oversight personnel. Most important the trial judge has increasingly become the creator and manager of complex forms of ongoing relief, which have widespread effects on persons not before the court and require the judge's continuing involvement in administration and implementation. School desegregation, employment discrimination, and prisoners' or inmates rights cases come readily to mind as avatars of this new form of litigation. But it would be mistaken to suppose that it is confined to these areas. Antitrust, securities fraud, and other aspects of the conduct of corporate business, bankruptcy and reorganizations, consumer fraud, housing discrimination, electoral reapportionment, environmental management—cases in all these fields display in varying degrees the features of public law litigation.

Courts, not the legislatures, have become the final arbiters of public policy in the areas of abortion, criminal punishment, legislative apportionment, labor law, environmental law, and zoning. They have dictated higher taxes and methods of financing to State legislatures, reorganized forms of local government, they have taken over the operation of entire school systems, and they have disrupted the lives of hundreds of thousands of schoolchildren and their families in pursuit of their own notions of racial balance. More recently, they have ordered USDA to continue spending funds for food stamps, and HEW to continue spending funds for nontherapeutic abortions, both despite the considered judgment of Congress.

Congress has taken a series of strong actions in recent years to reaffirm its authorities with respect to our executive branch. It has learned that powers once assumed are not readily yielded. I believe that it is time for Congress to consider equally strong action with respect to a judicial branch that increasingly knows no bounds. Simply by incanting that their decisions rested upon some exotic constitutional principle, they have been free to act as appellate legislative bodies to which the unfavorable decisions of Congress or the State legislatures can be taken.

Concern for what is happening to the balance of powers in our Government is shared by those who are in agreement with, and in disagreement with the substantive decisions themselves. Many recognize that these trends not only threaten the legislative branch, but that they also threaten the strength and integrity of the judiciary itself. In the words of Prof. Lon Fuller:

> When lawmaking functions are given to the judiciary, the courts are parasitic in the sense that they can effectively be carried out only by drawing on the legitimacy and moral force that courts have developed through the performance of their inherent function, adjudication according to the traditional conception.

There is some point at which such lawmaking ceases to be "parasitic," and at which it begins to taint even the proper moral authority of the courts.

The concern felt by many persons about increasing judicial activism stems also from the simple fact that courts are by their very nature unable to consider the same full range of facts and interests in rendering their decisions that legislatures are. Courts are exposed to narrowly framed controversies, usually representing extreme and untypical fact-patterns, and are sharply limited in their ability to weigh all relevant information. They are thus unable to legislate on the basis of information essential to good policymaking, and are further unable to engage in the give-and-take, and compromise of the legislative process essential to minimizing and smoothing over the differences and disagreements of various social groups.

As a first step toward addressing these basic problems, I and 20 other Members of Congress have introduced legislation which would establish a Congressional Commission on Legislative-Judicial Relations. The commission would be charged with studying basic issues involved in the apportionment of constitutionally delegated powers between the Federal legislative and judicial branches, and with suggesting approaches by which Congresss might fully assert its proper powers.

In particular, the commission would be required to assess the nature of congressional authority under article III, section 2, of the Constitution to regulate and make exceptions to the appellate jurisdiction of the Supreme Court. At least in part, I believe that Congress almost total reluctance to exercise this apparently clear authority in a significant way results from confusion as to the limits and extent of that authority.

As a step toward dealing with some of these questions, and focusing deserved attention on some of the increasingly dubious activities of the judiciary, the following resolution was introduced by me and 20 of my colleagues last week:

CONCURRENT RESOLUTION

Whereas our Government is one based upon separation of powers, with each of its branches being both limited by and able to limit the powers of the other branches;

Whereas the precise relationship between the branches of Government is constantly being affected by countless factors such as new court decisions, new legislative initiatives, and changing demands upon Government;

Whereas it has become necessary in recent years for the legislative branch to reassert its authority in several areas with respect to the executive branch as a result of factors which have had the cumulative effect of changing the relationship between these two branches;

Whereas there is growing concern among many citizens that a similar change in relationship has developed between the legislative and judicial branches in that the judicial branch has usurped, or has been delegated, traditional legislative branch prerogatives in such areas as legislative reapportionment, criminal law, abortion, the administration of school systems, and local government and the provision of social services, as well as in other areas;

Whereas this concern about the changing role of the judicial branch is felt both by those who agree with and those who disagree with the decisions reached by the courts in such substantive areas of the law;

Whereas there is growing concern that because the judicial branch, consisting of individuals appointed for life to their positions, is the least responsive branch of Government to the public, it is the inappropriate agency to decide questions in such substantive areas of the law;

Whereas the Congress may regulate the jurisdiction of lower Federal courts in conjunction with its authority under article III,

section 1, of the Constitution, to "ordain and establish" such courts;

Whereas article III, section 2, of the Constitution, states that Congress is empowered to make exceptions and issue regulations with respect to the appellate jurisdiction of the Supreme Court;

Whereas article II, section 2, of the Constitution, because the Congress has only rarely exercised its authority with respect to such appellate jurisdiction, is the subject of great uncertainty with respect to its scope and application;

Whereas a fuller understanding by Congress of article III, section 2, of the Constitution, may provide Congress with a useful mechanism by which to reassert its authority with respect to the judicial branch; and

Whereas Congress, while recognizing that the judicial branch itself is the final interpreter of the meaning of article III, section 2, of the Constitution, finds that the current lack of understanding by Congress of such meaning prevents Congress from exploring the potential legislative value of the provision: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring),

ESTABLISHMENT

SECTION 1. There is established in the Congress a commission to be known as the Commission on Legislative-Judicial Relations (hereinafter in this resolution referred to as the "Commission").

DUTIES

SEC. 2. The Commission shall conduct a comprehensive study of the balance of power between the legislative and judicial branches of the Government. Such study shall include—

(1) an analysis of that provision of article III, section 2, of the Constitution of the United States relating to the authority of the Congress to limit the appellate jurisdiction of the Supreme Court, including—

(A) an examination of the original intent of the drafters of the provision,

(B) a history of the implementation by the Congress and of the interpretation by the courts of the provision,

(C) a discussion of various contemporary opinions on the importance of the provision, and

(D) recommendations with respect to the manner in which the Congress could implement the provision should the Congress consider such implementation appropriate;

(2) analysis of the authority of the Congress to limit the jurisdiction of inferior Federal courts; and

(3) a consideration of alternative approaches which the Congress may take to correct any imbalance of power existing between the legislative and judicial branches.

MEMBERSHIP OF COMMISSION

SEC. 3. (a)(1) The Commission shall be composed of eighteen members as follows:

(A) Five Members of the House of Representatives to be appointed by the Speaker, not more than three of whom may be of the same political party.

(B) Five Members of the Senate to be appointed by the President of the Senate, not more than three of whom may be of the same political party.

(C) Four individuals who are not Members of Congress to be appointed by the Speaker from among persons whose background demonstrates an understanding of constitutional law and of intragovernmental relationships.

(D) Four individuals who are not Members of Congress to be appointed by the President of the Senate from among persons whose background demonstrates an understanding of constitutional law and of intragovernmental relationships.

(2) All initial appointments of the Commission shall be made not later than the end of the sixty-day period beginning on the date of the adoption of this resolution.

(b) The Commission shall elect one of its members as the Chairman and one of its members as the Vice Chairman.

(c) A vacancy in the Commission shall not affect the Commission's authority to act and shall be filled in the manner in which the original appointment was made.

(d) A majority of the members shall constitute a quorum for the transaction of business.

(e)(1) Except as provided in paragraph (3), members of the Commission who are Members of Congress shall serve without pay.

(2) Members of the Commission who are not Members of Congress shall each receive for each day during which they are engaged in the actual performance of duties vested in the Commission compensation at rates not to exceed the daily equivalent of the minimum annual rate of basic pay for grade GS–18 of the General Schedule.

(3) While away from their homes or regular places of business in the performance of services for the Commission, all members of the Commission shall be allowed travel expenses, including per diem in lieu of subsistence.

STAFF OF COMMISSION

SEC. 4. (a) The Commission may appoint and fix the pay of such staff personnel as the Commission considers necessary to carry out the duties of the Commission.

(b) The Commission may procure the temporary and intermittent services of experts and consultants.

POWERS OF COMMISSION

SEC. 5. (a) For purposes of carrying out its functions under this concurrent resolution, the Commission may hold such hearings, sit and act at such times and places, take such testimony, and receive such evidence, as the Commission considers necessary.

(b) The Commission may issue such rules with respect to its procedures as it considers necessary.

(c) The Commission shall keep a complete record of all hearings and meetings conducted by the Commission, and of all information received by the Commission.

REPORT

SEC. 6. Not later than the end of the one-year period beginning on the date on which all initial members of the Commission have been appointed, the Commission shall submit to the Congress a report containing the findings, conclusions, and recommendations of the Commission.

SEC. 7. The expenses of the Commission shall be paid from the contingent fund of the House of Representatives upon vouchers signed by the Chairman or Vice Chairman of the Commission.

TERMINATION

SEC. 8. The Commission shall cease to exist thirty days after submitting its report pursuant to section 6.

EFT COMMISSION'S REPORT A BOON OR A BOONDOGGLE TO CONSUMERS?

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, if the National Electronic Funds Transfer Commission's final report to Congress is not more substantial than material in previous meetings, the consumer may once again be low man on the totem pole.

While it seems some progress has been made by some of the Commission's committees, it is evident much is left up in the air.

At a recent meeting, the Supplier's Committee reported that in a year's time it has narrowed six areas of possible study down to three. Of the three areas, one deals with competition among big corporations such as IBM and A.T. & T. who might be potential suppliers of the electronic equipment. The head of the Supplier's Committee suggested a study be conducted in this area for the next 8 months—at a cost of $100,000—to determine whether small competitors would be hurt if these large corporations were allowed to supply the electronic equipment.

According to the last budget report from the Commission, $375,000 has been spent thus far. It seems to me that if studies such as the one suggested by the Supplier's Committee are continued, the Commission may end up being just an overpriced academic project with little practical value to the public.

I realize the difficult task before the Commission of making practical suggestions and predictions about such a technical and complicated area such as electronic funds transfer systems. However, not one substantial finding has emerged in a year from the Suppliers Committee. It took a year just to narrow down to three the areas of study. If this is an indication of the rate of progress, I hardly believe it can successfully conduct a conclusive study in the next 8 months.

Let me state again, I am aware of several noteworthy findings and contributions by several of the Commisison's committees. But when I hear of such last minute ploys to get frivolous studies funded at costs of $100,000, I wonder who is trying to pull the wool over whose eyes.

The original intent and purpose of the 2-year Commission was to make legislative recommendations for the benefit of industry and consumers.

It is my hope that the EFT Commission's final report to Congress next October will cover all the important issues. One issue of prime importance to me as the chairman of the Consumer Affairs Subcommittee, is the assurance of privacy to consumers. I have received countless letters lately from consumers who are deeply concerned and understandably suspicious about this electronic future in banking.

Since consumers have little control over whether they want electronic banking or not—it is apparently inevitable—my concern is that the Commission's report not leave consumer issues last in importance.

BARNARD URGES REJECTION OF FEDERAL PAY HIKE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Georgia (Mr. BARNARD) is recognized for 5 minutes.

Mr. BARNARD. Mr. Speaker, the arguments against substantial pay increases for top Federal officials are formidable ones.

The economy is only beginning to show signs of a stable recovery. Another bout with double-digit inflation could be ruinous. To achieve long-range stability and

prosperity, Americans at every level must be willing to make sacrifices. Our Federal budget must be kept in check and new spending programs postponed. Labor and management must exercise wage and price restraints for to do otherwise will render increases meaningless because of the inflationary impact on the value of our currency.

But how can Congress call upon others to make sacrifices if we are unwilling to tighten our own belts as well?

I realize that big pay raises for Members of Congress, Federal judges, and top-ranked Government officials are a legacy of the Ford administration's final budget. But I think we in the present Congress should act to reject this pay package. A 29-percent increase in our salaries simply is not justified at this time.

At a minimum, these raises will cost the taxpayer more than $100 million. But more importantly, such salary increases at the top levels of Government will set off a rippling effect—first within Government and later, I fear, throughout our economy.

For these reasons, I strongly oppose the pay raise package and hope to have the opportunity to vote against this proposal on the House floor. Surely we cannot deprive our constituents the right to know where we stand on this important issue.

LIE DETECTORS: UNRELIABLE AND AN INSIDIOUS INVASION OF PRIVACY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KOCH) is recognized for 10 minutes.

Mr. KOCH. Mr. Speaker, each year more than 200,000 persons are subjected to polygraph testing in preemployment and employment situations. Increasingly, businesses are utilizing lie detectors in an attempt to find a quick, inexpensive way to counter employee theft. While their use seems not to have decreased such theft, the subjection of employees to lie detectors has caused a whole host of problems. I fear that widespread use of lie detectors by employers could lead to wholesale infringement of the employee's right to privacy. As part of my legislative efforts in the area of privacy I have introduced H.R. 434.

The polygraph is not reliable. The House Committee on Government Operations concluded in March 1965, after extensive hearings that:

> There is no "lie detector," neither machine nor human. People have been deceived by a myth that a metal box in the hands of an investigator can detect truth or falsehood.

The committee reached the same conclusion in a January 1976, report to the House.

The use of the polygraph can only be compared to a test used by the early Chinese. The suspect was required to chew rice powder while being questioned. If the rice powder was dry when spit out, the man was condemned, on the premise that the tension of guilt supposedly dried up his salivary glands.

Exceptions to a prohibition on the use of polygraphs have been urged in cases clearly involving the Nation's security and in cases in which agencies can demonstrate in compelling terms their need for use of such devices for their law enforcement purposes and that such uses would not violate the fifth amendment or any other provision of the Constitution. These exceptions should not be allowed for two reasons.

First, the Central Intelligence Agency itself testified in 1974 that:

> . . . validity—or the degree to which polygraph charts measure what they purport to measure—has been a more difficult issue to evaluate. Satisfactory independent criteria for validating real life conditions are scarce, and the differences in polygraph subject attitudes between real life and laboratory conditions have prevented much headway through laboratory experiments. The data so far available have not been disappointing, but they are limited, and we still lack an appropriate scientific base for any conclusions.

Similarly a study conducted at the Massachusetts Institute of Technology concluded:

> There exists no public body of knowledge to support the enthusiastic claims of operators. There are no publications in reputable journals, no facts, no figures, tables, or graphs. In short, there is nothing to document the claims of accuracy or effectiveness except bald assertions.

As experts have testified before the House Foreign Operations and Government Information Subcommittee, given a physiological response under the polygraph test procedure, any of three inferences could be made: Either the subject was lying; or he was telling the truth but some emotional factor, such as anger or embarrassment, caused the reaction; or the response was generated by a neurotic precondition of the subject. In addition other less frequent factors possibly affecting the machine-measured replies are skin pigment and cultural differences in attitudes about values and morality.

The polygraph does not provide an objective yes-or-no answer. Rather, interpretation by the examiner of the squiggles recorded on a piece of paper is the essence of the process, making lie detecting a highly subjective business. Judgments about the subject's attitude and personality, about the composition of questions, and regarding the meanings of the machine's recordings are all made by the examiner.

The underlying assumption is that there is a proven relationship between lying and feelings of fear and anxiety. In reality, as Dearman and Smith stated in the May 1963, American Journal of Psychiatry:

> The polygraph technique only provides measures of various autonomic responses. The stimuli that elicit these responses, the intervening variables (constitutional predisposition, past learning, conscious and unconscious motivation, etc.) and the interpretations made of the resulting graphs are highly complex and are inferences made from more or less incomplete data.

Second, the use of the polygraph is an inherently insidious invasion of privacy. This was most clearly stated in *General American Transport Corporation* v. *United Steelworkers Local 1133*, 31 Lab. Arb. 355 (1958):

> If we admit such an encroachment upon the personal immunity of an individual where in principle can we stop? Suppose medical discovery in the future evolves a technique whereby the truth may infallibly be secured from a witness by trespassing his skull and testing the functions of the brain beneath. No one could contend that the witness could be forced against his will to undergo such a major operation at the imminent risk of his life, in order to secure evidence in a suit between private parties. How then can he be forced to undergo a less dangerous operation, and at what point shall the line be drawn? To my mind, it is not the degree of risk of life, health, or happiness which is the determining factor, but the fact of the invasion of the constitutional right to privacy.

Furthermore, there are no limits to the type of questions that can be asked, which often include sensitive areas, such as the employee's family background, sex life, political views, and personal relationships. Often a subject will blurt out embarrassing personal information irrelevant to the specific question, feeling that, if she or he does not offer this information, a "guilty" verdict will register.

I readily acknowledge that employee theft is a serious problem. But an October 1974 report of the New York State Bar Association has convinced me that only an absolute prohibition on the use of polygraphs can remove the subtle pressures of employer coercion.

The most effective way to control employee theft is not through use of the inaccurate polygraph but through a well-designed crime-prevention program. Key elements of such a program are making employees conscious of efforts to reduce crime-related losses, making pre-employment checks on prospective employees within the limits of the law, and covering security in initial training—emphasizing policy regarding prosecution of employees and reemphasis in periodic briefings. The Commerce Department, through its Division of Consumer Goods and Services, is willing and able to help business in this area. It has conducted a number of seminars throughout the country to help business combat employee theft.

The proceedings of these seminars are available from the Commerce Department in its series "Crimes Against Business." The Department has also published a large pamphlet on "Crime in Retailing," as well as an excellent source book, "Federal Government Sources on Crimes Against Business."

I would like to close by saying that as Senator Sam Ervin was the author of the original legislation of this type, I believe it would be a fitting tribute to him to have this bill passed. A more extensive discussion of the issues in this bill may be found in a November 1974, study by the staff of his Subcommittee on Constitutional Rights of the Senate Judiciary Committee.

A section-by-section analysis of H.R. 434 follows:

> Section 1. This section prohibits the executive departments and agencies from either permitting, requiring, or requesting that an employee or applicant for employment take a polygraph test. Failure to take a polygraph test may not be used to deny employment to an individual, or, with respect to an em-

ployee, to discharge, discipline, or deny promotion, or threaten such actions.

Section 2. This section applies the same prohibitions as section 1 to any person engaged in interstate commerce.

Section 3. Willful violation of the Act is a misdemeanor and subjects the violator to a fine of not more than $1,000 or imprisonment for not more than one year, or both.

Section 4. Any aggrieved person may bring a civil action in her or his own behalf, or in behalf as well of others similarly situated, in U.S. district court without regard to the amount of pecuniary injury and without regard to exhaustion of administrative remedies. Any employee organization, with the written consent of any aggrieved person, may bring an action on behalf of that person.

CONGRESSIONAL REFORM LONG OVERDUE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. PATTERSON) is recognized for 5 minutes.

Mr. PATTERSON of California. Mr. Speaker, today I wish to present to the House of Representatives my views on a matter of vital importance to all of us, that of financial accountability of Members of Congress. On February 7, I testified before the House Commission on Administrative Review urging my support for the recommendations of Congressman LEE HAMILTON's task force on accountability. I would like to share with you my testimony.

Financial accountability is by far one of the most necessary and long overdue reform measures which many of us have been advocating for a long time. I would hope that the majority of my colleagues are now committed to these reform principles and to implementing them as soon as possible.

The statement follows:

STATEMENT BEFORE THE HOUSE COMMISSION ON ADMINISTRATIVE REVIEW

Mr. Chairman and members of the commission, I appear before you today to offer my observations on the report of the task force on financial accountability chaired by our colleague, Congressman Lee Hamilton. In general the working papers prepared by the task force embodies the kind of long overdue reforms that I and many members of the House have been advancing since we first came to Congress.

If this commission and the House will adopt the recommendations of the Hamilton task force, we will have taken a major step toward restoring public confidence in this institution. Every Member of Congress has to be disturbed by the findings of the public opinion poll taken at the request of the commission. Disturbed, but hardly surprised. Over a long period of time we have lost the confidence of the American people. We cannot hope to deal effectively with the problems facing the Nation until we have regained that confidence. We cannot expect people to respond to the call we must make for sacrifices needed to cure our sick economy and deal with the energy crisis until we have shown ourselves to be responsible and accountable in detail for our actions as public officials and guardians of the public's business.

Of all the recommendations made by the Hamilton task force, those relating to financial disclosure and outside income are, in my opinion, the most critical. As a cosponsor of H.R. 1, I was pleased with the disclosure recommendations of the task force. The existing requirements are far from adequate to assure the public access to financial information about its elected representatives.

Like many of my colleagues, I have followed the practice of voluntarily disclosing my financial condition to the press in my district and to any constituent who requests that information. I welcome the formal disclosure vehicle suggested by the task force. I suggest, however, that we go a step beyond the requirement of filing a financial disclosure with the committee on standards of official conduct and require the chairman of that committee to publish all members' disclosure reports in the CONGRESSIONAL RECORD.

I fully support the task force recommendation on outside income, but with one amendment. The $500 per appearance limit for honoraria is appropriate, but I suggest that we also impose a $500 per year limit from any single source to ensure that the purpose of this rule is not circumvented.

I commend the commission and its task forces for their diligence, objectivity, and commitment to the restoration of public confidence in Congress. I hope that every member of the House will keep foremost in their minds that when people lose confidence on Congress they are dangerously close to losing representative government.

LEGISLATION TO PROVIDE MEDICARE COVERAGE FOR BREAST CANCER DETECTION

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from New York (Ms. HOLTZMAN) is recognized for 15 minutes.

Ms. HOLTZMAN. Mr. Speaker, every 15 minutes an American woman dies of breast cancer. The incidence of this disease has reached staggering proportions. Breast cancer is expected to strike about 1 in every 15 American women, and half of these women will die of the disease. A number of these deaths might be prevented by early detection of the cancer.

Today I am introducing a bill to provide medicare coverage for breast cancer detection. My bill will insure that every elderly woman, regardless of financial means, will be able to help protect herself against this disease.

Medicare coverage is not now available for preventive examinations even though the risk of breast cancer increases dramatically with age. Women between the ages of 60 and 70 are 10 times more likely to develop breast cancer than women of 30 and twice as likely as women of 40.

Without medicare coverage, many elderly women may not be able to afford examinations. Sixty percent of our elderly women live below the poverty level. For them, as well as others, medicare coverage for breast cancer detection may mean the difference between life and death.

Lives can be lengthened if breast cancer is detected early enough. Mammography and xeromammography are new tests that have proved effective for elderly people in the early detection of breast cancer. Physical examination by a physician is still one of the most useful diagnostic methods.

The bill I am introducing today would provide medicare coverage for one mammography and xeromammography per year and one physician's examination every 6 months.

I urge enactment of this bill. The text follows:

H.R. 3252

A bill to amend title XVIII of the Social Security Act to authorize payment under the supplementary medical insurance program for certain diagnostic tests and examinations given for the detection of breact cancer

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 1862(a)(7) of the Social Security Act is amended by inserting "(subject to the last sentence of this subsection)" after "routine physical checkups".

(b) Section 1862(a) of such Act is further amended by adding at the end thereof (after and below paragraph (13)) the following new sentence:

"Paragraph (7) shall not be applicable to expenses incurred for (i) a mammography or xeroradiomammography (given for the purpose of detecting breast cancer) if the individual receiving it has not undergone a similar procedure on a routine basis during the preceding twelve months, or (ii) a physical examination of the breast by a physician (given for such purpose) if the individual receiving it has not had such an examination on a routine basis during the preceding six months."

SEC. 2. The amendments made by the first section of this Act shall apply with respect to items and services furnished on or after the first day of the month following the month in which this Act is enacted.

THE WISDOM OF THE CONGRESSIONAL VETO

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. Moss) is recognized for 15 minutes.

Mr. MOSS. Mr. Speaker, the opinion that follows represents, in my judgment, a scholarly, a thorough, and a cogent addition to the dialog now going on in the Congress and among legal scholars as to the appropriate role of the Congress and of the Executive. It deals with the problem of blurring distinctions between two coordinate arms of the Government. I commend it to my colleagues.

It is my understanding that my colleague, the gentleman from Georgia, will be writing his response to Professor Davis in the next few days. I look forward to the opportunity of placing his comments in the CONGRESSIONAL RECORD to facilitate a balanced consideration of this important issue:

UNIVERSITY OF SAN DIEGO,
SCHOOL OF LAW,
November 24, 1976.

Hon. ELLIOTT H. LEVITAS,
Cannon House Office Building,
Washington, D.C.

DEAR CONGRESSMAN LEVITAS: Thank you for your cordial letter. I share your wish that we could have had opportunity for pursuing our discussion. If we had time, we could probably think together instead of asserting opposing conclusions.

You strongly assert in your letter that Congress "is the law-making body of our government." Of course it is. But our government could not operate if Congress were the only lawmaker. Most of the law that lawyers apply in their law offices is made by courts; main policies are made by legislative bodies; state and federal administrative agencies make a sizable share of our law.

In our brief oral exchange you denied my proposition that courts make most of our law. Several weeks ago, I spoke before the Federal Appellate Judges Conference on the

subject of judicial lawmaking. The heart of my presentation was my formulation of five limits on judicial lawmaking. The 48 judges of federal courts of appeals *assumed* that judges make law.

At the meeting where you and I had our few minutes together, I delivered the keynote address, in which I built on the foundation that nearly all administrative law is common law, that is, law made by courts in absence of controlling constitutional or statutory provision. The 300 lawyers, about two-thirds government lawyers, already knew that nearly all administrative law is judge-made law.

A few months ago a book of mine was published entitled Administrative Law of the Seventies. Its 750 pages are devoted entirely to law changes since 1970. About ninety-five percent of the law changes have come from the courts. You might look at the book and see.

As to the substantive law that is created by agencies, you might compare its quantity to the quantity of law created by Congress. The United States Code contains all statutes enacted since 1789 that are still in effect; the Code of Federal Regulations covers only three or four decades. Which is larger—the United States Code, or the Code of Federal Regulations? Do you think that the Code of Federal Regulations does not contain law?

Why does not Congress make the law embodied in the Code of Federal Regulations? I think the answer is mighty clear. Don't you?

I asked you, in our brief encounter, whether you see any more reason for congressional veto of administrative legislation than for congressional veto of judicial legislation. *I hope you will answer that question.* Your denial that we have judicial legislation is not a satisfactory answer, because that answer is contrary to the clear facts that are known to all judges and to all lawyers.

I have the greatest respect for politicians, who perform the indispensable function of translating democratic desires into statutory law. Politicians have a special kind of skill, which a democratic government has to rely upon. But I also have respect for professional and scientific people, who have an altogether different kind of skill, which is also indispensable. Successful government requires both kinds of skills. Those who have the one kind must be careful not to encroach improperly on the province of those who have the other kind. Keeping a balance between the two is both difficult and essential.

A democratic government is not one in which all law is made by a legislative body. *Our* democratic government is one in which most of the main outlines are made by the legislative body, but some of the main outlines and nearly all of the details are made by judges and by administrators.

As a Congressman, you surely know that the reason Congress does not make all our federal laws is that it can't. It lacks the capacity to do so, as I assume you are aware. You probably also know that the lack of capacity does not go merely to the great volume of detail that Congress cannot handle, but it also goes to the necessary division of functions between politicians and professional or scientific personnel.

No one who believes in democratic government and who knows American government doubts that politicians in Congress should ordinarily determine *the main* legislative policies. Yet the reality tends to be, unfortunately, that even that much is too much for Congress. Even such a large question as the question during the Nixon administration of whether and when we should have price and wage controls was too much for Congress to handle; Congress was simply helpless in the face of the problem. That is why it delegated the *whole* question of whether and when to the President, empowering the President in turn to create an agency to answer even the major questions, as well as the detail.

Some questions are better handled by professional people than by politicians. That is a main reason why Congress does not make all our federal law. And that reason is a very good reason. It is such a good reason that our government has always operated on the basis of it. It is such a good reason that every democratic government in world history has always operated on the basis of it.

Congressmen are specialists in sensing democratic desires and transforming them into legislation. I have a high appreciation for the accomplishments of Congressmen. But I would not choose a Congressman as such if I needed a surgical operation. Neither would I choose a Congressman—or all of Congress—to decide disputed questions of fact about whether X should be ordered to pay damages to Y. For the operation, I want a surgeon; for the damages case, I want a judge. For other problems I want qualified *professional* people, not elected representatives. And the plain fact is that our governmental system, largely created by Congress, does commit professional problems to professional people.

When the government has a question of nuclear physics, it does not turn the question over to architects or lawyers—or to elected representatives.

A growing proportion of problems that government must handle are even less appropriate for politicians than questions of nuclear physics. Many such problems about administrative rulemaking are so complex that one of the nation's most talented judges has recently complained in an especially astute article in the University of Pennsylvania Law Review that judges are deeply troubled by having to determine whether the administrative action is arbitrary or capricious, without having scientific advisers attached to the courts. But judges are struggling with such problems, doing the best they can, and in general I think what the judges are doing about such problems is pretty good. An inspiring example, in my opinion, is Ethyl Corp. v. Environmental Protection Agency, 241 F.2d 1 (CADC 1976), just published; the opinions fill 118 pages.

I think it would be legitimate for Congress through legislation to enact in general terms that the result of the Ethyl decision should be the opposite in the future, but I think it would be exceeding *bad government*, as well as unconstitutional, for Congress to change either the findings of fact by the EPA or the decision of the court. The Constitution explicitly forbids Congress to enact a bill of attainder, and the principle behind that prohibition has a rather broad application.

When the factual component of complex rulemaking has been worked over by appropriate professional people within an agency, and when findings have been made on the basis of a record that includes the results of the procedure of notice and written comments, I think it would be *atrocious government* if Congress, on the basis of political pressures, were to change the findings. And it would be even *worse government*, in my opinion, for a part of Congress to do so.

As we move toward the end of the twentieth century and as the tasks undertaken by government become more and more difficult to handle, because of both their quantity and their complexity, democratic government will require a continued delicate balance between the democratic or political element and the professional or scientific element. We are fortunate that these two main elements are in pretty good balance. Whether we can keep them in balance is an open question. If we fail, our government may move in the direction the government of India is now moving.

I think we may fail. One rather sure way to fail is by allowing a portion of Congress to decide questions that should be answered on the basis of an orderly record by professional and scientific personnel, with limited review by courts.

Your measure, in my opinion, is especially dangerous because it so clearly upsets the vital balance between the democratic or political element and the professional or scientific element.

Now, I do not say that Congress should have no control over administrative rulemaking. Congress can always legislate overall policies, whether or not it has to override a specialist agency. Congress also holds the purse strings. Appropriations committees know how to influence administrators with respect to their general policy directions, and agencies usually know how to protect their professional or scientific judgments from the wrong kind of interference by appropriations committees or other committees of Congress. The balance is tilted one way or the other at times on limited subjects, but on the whole a rather good balance has usually prevailed.

Administrative rules often have a factual ingredient, to which a policy judgment is added. To maintain a workable balance, Congress should seldom interfere with the factual ingredient, but it may properly substitute its views as to what the policy judgment should be. If your bill were limited to the policy judgment, and if it did not allow a part of Congress to do what the Constitution provides the whole Congress should do, I would not oppose.

I object to establishing a system under which (1) findings made by professional or scientific people may be set aside on the basis of political pressures, and (2) a part of Congress may make policy without following the constitutional process for enactment of a statute.

I understand the reasons in favor of the bill you are sponsoring, and I think those reasons are sound as they might be applied to some administrative rules. But my opinion is that those reasons are clearly unsound with respect to rules that are based on complex findings of fact that are made on an administrative record, where the findings have been worked over by appropriate professional or scientific people and where the findings are subject to judicial review.

Administrative rulemaking has become a mainstay of the American government. Maybe we have five times as much today as we had five years ago. Maybe we will have five times as much five years from now as we have today. No one knows any governmental device that might work better than administrative rulemaking for putting together the complexities of today's governmental tasks with the democratic principle. Congress must and does delegate its legislative power, because Congress knows of no other way to get the governmental tasks performed. The system based on delegation of the power of administrative rulemaking is working reasonably well, and we are gradually developing new ideas for making it work better.

The idea that a part of Congress, on the basis of political pressures, should set aside professional findings of fact based on a rulemaking record seems to me to be a threat to the American system of government, one of the most serious threats that have come to my attention during my lifetime. It seems to me especially dangerous because many in Congress may vote for it in order to gain advantage for themselves. Repealing it will be difficult for the same reason, even if the damage it does is devastating.

Although I realize that you probably have the votes, I have not given up hope. Those who agree with me still have a good many lines of defense—enough Congressmen may perceive the need to maintain the proper balance between politicians and professionals, the new President may veto and induce the country to understand the dangers to

the American system of government, the courts may quickly and firmly hold the measure unconstitutional (as I fully expect), and even if the measure becomes law a later Congress may realize the damaging effects and quickly repeal it.

Because you are acting in good faith, I hope you will give careful consideration to *the need for maintaining the delicate balance between the political element and the professional element in American government.*

Sincerely yours,

KENNETH CULP DAVIS.

THE RIGHT TO LIFE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. ZABLOCKI) is recognized for 5 minutes.

Mr. ZABLOCKI. Mr. Speaker, it is with a deep sense of responsibility and concern that I am introducing a resolution today calling for a constitutional amendment to preserve and safeguard man's basic right to life, including the life of the unborn.

The right to life is the most basic of all human rights. It is a fundamental tenet of our society and form of government that the state protect each of our lives until natural death occurs. Our very own Declaration of Independence written and approved nearly 200 years ago affirmed every individual's basic right to life:

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are Life. . . .

Yet, Mr. Speaker, on January 22, 1973, the Supreme Court in Wade and Bolton made a mockery of the right-to-life provision in the Declaration of Independence. It failed to offer the protection of the laws to this God-given and most basic human right.

Subsequently, we find ourselves in a society where abortion is becoming a common, everyday experience and where physicians and intellectuals freely discuss taking the lives of those whom they judge to be of no use to society.

Mr. Speaker, I, along with millions of our fellow Americans, am greatly distressed with this downward thrust of this interpretation of American laws protecting the sanctity of life.

Just last month over 44,000 people from all over the country marched in bitter cold in front of our Nation's Capitol to protest abortion and to demonstrate their support of man's basic right to life.

It is already clear that the Supreme Court decision of January 22, 1973, has led to excesses and abuses never intended or envisioned by proponents and supporters of the decision. Supreme Court Justice White astutely foresaw this development in his disagreement with the Supreme Court arbitrary decision on the value of life which makes the worth of a potential human being dependent upon being wanted by his or her mother. In his dissenting opinion, Justice White argued:

At the heart of this controversy are those recurring pregnancies that pose no danger whatsoever to the life or health of the mother but are nevertheless unwanted for any one or more of a variety of reasons—convenience, family planning, economic, dislike of children, the embarrassment of illegitimacy, etc. . . .

Mr. Speaker, unfortunately the most recent Supreme Court decision of July 1, 1976, overlooked this reasoning and stipulated that a husband may not veto a woman's decision to have an abortion, or a parent may not prohibit his or her child under 18 from having an abortion. Besides denying the basic right to life, this decision stripped husbands and parents of their respective rights in the determination of human life.

The fact is, human life irrespective of age, health, function or condition of dependency, guaranteed under our Constitution, must be preserved and protected. The unborn have long been held to have legal rights under the law. They have property rights. They may inherit property, family names, and in some societies, family titles. The rights to property have long been affirmed by the courts of this country. As such, they deserve to be safeguarded just as an adult is protected under existing laws governing homicides.

There is, of course, the difficult moral question which arises when the mother's life is seriously endangered by the continuation of pregnancy. In this case, it is clear that abortion may be permissible. We must remember, however, that abortion statutes are written to protect the unborn child—not to serve the whims of one or both parents, social planners, or popular faddists. Furthermore, the responsibility of saving the child should be equal to the responsibility of saving the mother in those cases where abortion is medically necessary.

This requirement is not arbitrary or vague in nature; rather, it serves a vitally clear and well-established purpose which is the protection of the civil rights of the unborn. The question most often raised by proponents of abortion is that the mother's civil rights should take precedence over the unborn child's, even to the point of killing the child. It is argued that each woman should have the final and only say with regard to her productive life. In Corkey against Edwards, the Court ruled that a great deal more was involved than the simple question of a woman's right not to bear children:

The basic distinction between a decision whether to bear children, which is made before conception and one which is made after conception, is that the first contemplates the creation of a new human organism but the latter contemplates the destruction of such an organism already created.

The right to life, especially for the unborn, must be reaffirmed and protected. In that spirit, Mr. Speaker, I offer the following resolution to restore this most basic human right and to insure that this right is recognized and safeguarded under the Constitution of the United States:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States within seven years from the date of its submission by the Congress:

SECTION 1. With respect to the right of life, the word "person", as used in this article and in the fifth and fourteenth articles of amendment to the Constitution of the United States, applies to all human beings, including their unborn offspring, at every stage of their biological development, irrespective of age, health, function, or condition of dependency.

SEC. 2. No unborn person shall be deprived of life by any person; provided, however, that nothing in this article shall prohibit a law permitting those medical procedures required to save the life of the mother when a reasonable medical certainty exists that continuation of pregnancy will cause the death of the mother, and requiring that person to make every reasonable effort, in keeping with good medical practice, to preserve the life of her unborn offspring.

CHANGING THE METHOD OF GRANTING CONGRESSIONAL PAY RAISES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Iowa (Mr. BEDELL) is recognized for 5 minutes.

Mr. BEDELL. Mr. Speaker, I have today introduced a bill to reform the process whereby Members of Congress get pay raises.

My bill would require a vote specifically approving such a raise rather than simply letting it go through unless opposed. Furthermore, such a raise would not take effect until the following Congress.

I believe that we have to take this step in order to restore the public's faith in us. The congressional sex scandals and charges of bribes and payoffs have damaged the image of this great body and I feel we must work hard to build that image back.

One of the best ways to do this is to reform the method of giving ourselves pay raises. I urge the Congress to bring this matter to a vote in the future so we can show the people that we have the courage to vote on the difficult issues, as we were elected to do.

EARTHQUAKE PREDICTIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. BROWN) is recognized for 10 minutes.

Mr. BROWN of California. Mr. Speaker, pending before the Congress is legislation that would accelerate our national effort to predict earthquakes. I have spoken about this legislation in the past and have noted the introduction in the House and the Senate of the Earthquake Hazards Reduction Act of 1977. In fact, the chairman of the Science, Research, and Technology Subcommittee of the Committee on Science and Technology, which has jurisdiction over H.R. 35, the earthquake bill, has announced his support of early action on this legislation. Mr. THORNTON and myself are now soliciting cosponsors for the Earthquake Hazards Reduction Act of 1977.

The importance of this legislation was emphasized yesterday by Dr. Robert Hamilton, Chief of the U.S. Geological Survey's Office of Earthquake Studies, in a speech here in Washington. Dr. Hamilton noted the success that the Chinese have had in earthquake prediction and the methodology used by the Chinese. The way to predict earthquakes is, ac-

cording to Dr. Hamilton, the deployment of large numbers of instruments and the observation of two or more phenomena associated with earthquakes. Obviously all of this instrumentation and observation takes money.

Since the Congress will have to address this question in the near future, I would like to recommend the speech by Dr. Hamilton to my colleagues for their background information.

PREDICTING EARTHQUAKES

(By Robert M. Hamilton, Chief, Office of Earthquake Studies, U.S. Geological Survey)

Early in the afternoon on February 4, 1975, public officials in a region of northeastern China warned the populace to move out of their houses because an earthquake was coming. That evening a magnitude 7.3 tremor struck and virtually destroyed many towns in the region. Were it not for the warning, tens-of-thousands of lives would have been lost. Instead the casualties were very light.

To keep this startling success in perspective, it should be noted that the Chinese had made predictions of earthquakes that never occurred, and that destructive earthquakes had occurred that were not predicted. Moreover, the successful prediction itself included a strong element of luck. But even after discounting the significance of the prediction, a very important, inescapable conclusion remains: many, many lives were saved by making a prediction that was based primarily on scientific data. This achievement represents an extremely significant milestone in the effort to predict earthquakes.

The passing of a milestone, however, does not mean that the journey is at an end or even that the destination is in sight. How did scientists reach the current level of understanding? Where do we go from here? What can the public expect. And where do the challenges lie? These are the questions about earthquake prediction that I will address tonight.

Before I start though let me point out exactly what I mean by "prediction." An earthquake prediction is a statement about the location, time and size of a future earthquake, together with an assessment of the uncertainty of each of those parameters.

So let's first take a look at earthquake prediction and see how it has developed.

The desire to predict natural phenomena, including natural disasters, is a basic instinct of humanity. In ancient cultures, ability to predict an eclipse of the Sun or Moon was a strong basis for power. The desire to understand, and through that understanding predict, is the challenge that motivates scientists. And the proclaimed ability to predict with secret and mystical methods is what guarantees the most blatant charlatan immediate access to the national news media for even the most vague of predictions.

Studies of earthquakes are a relatively new subject of scientific interest. In contrast with astronomy and mathematics, where important advances were made thousands of years ago, serious attempts to understand earthquakes began only in the last few hundred years. The descriptions of the great earthquake that struck Lisbon, Portugal in 1755 often are cited as a starting point. Throughout the 19th century, earthquake studies focused on accounts of earthquake effects, rather than their causes. It wasn't until the beginning of this century before the first scientific instruments for recording earthquakes were operating in any significant number.

Progress in predicting earthquakes has paralleled progress in the general study of earthquakes, i.e., seismology. Historic accounts of earthquakes include many references to strange phenomena perceived before shocks: strange animal behavior, lights in the night sky, sound of thunder or rumbling, wells overflowing, and water withdrawing from a harbor, to cite just a few. Despite skepticism of their veracity, these reports have persisted through the centuries.

By the middle of this century, scientists began to take the reports of earthquake precursors more seriously and several nations undertook research programs with earthquake prediction as a goal. Following a great earthquake in the Soviet Union in 1949, during which a village was buried by a landslide, the USSR launched a prediction program. By the early 1960s, they were able to report at an international conference in Europe some observations of startling and convincing geophysical anomalies preceding earthquakes. By 1965 Japan had started its prediction program.

The Chinese program started in 1966 through a curious combination of circumstances. In March of that year two strong earthquakes struck the Hsingtai region, which lies several hundred miles south of Peking. The casualties, although unknown to us, were certainly very heavy. The Chinese leaders were very responsive to the disaster because of the heavy death toll, and because great natural disasters are said to herald a change in leadership in China. 1966 was also the year of the beginning of the Cultural Revolution in China. Out of this situation there emerged a national commitment to learn to predict earthquakes wherein the scientists would come down from their ivory towers to "serve the people"—the motto of the cultural revolution—and the bureaucrats, soldiers and peasants would join together in a crusade against the ravages of earthquakes. Although the rhetoric surrounding the Chinese effort sounds overblown to cynical American ears, in practice the Chinese effort toward prediction was massive, well-organized, and comprehensive. I'll say more of this later.

In the U.S. before 1960 seismology was regarded by some as a curious aspect of geology involving the operation of Rube Goldberg-type instruments in cobweb-filled tunnels. The need to learn to tell the difference between earthquakes and underground nuclear explosions—a basic requirement for any test ban treaty—brought seismology into the modern world with a substantial infusion of funds. The successful solution of most aspects of this problem, however, left seismologists with a vastly increased understanding of earthquakes and of the possibilities of prediction, but with a steadily diminishing capability to pursue the ideas owing to a wind up in the nuclear explosion detection and discrimination program.

The 1964 earthquake in Alaska stimulated interest in prediction, but no funds. The 1971 earthquake in San Fernando yielded increased funding at a level that would allow prototype development of techniques for prediction. The President's Budget published last month includes provisions for a major expansion in the prediction effort. If Congress approves a major national effort toward prediction could be starting this year.

Now let's look at some of the science that provides the basis for our current ideas about earthquake prediction.

The basis for earthquake prediction lies in an understanding of the large-scale deformations that shape this planet. It has long been recognized that earthquakes are closely linked with mountain ranges, volcanoes, ocean trenches and continental margins.

The major breakthrough in understanding the reason for these associations, however, came only about a decade ago. Increased exploration of the ocean floor during the 1950's had revealed existence of oceanic mountain ranges. (Slide) It was also found that paralleling these ranges are magnetic stripes of normally and reversely magnetized rocks in the crust of the ocean floor, i.e., a magnetic compass carried away from the crest of an oceanic mountain range would alternately point down and then up.

Piecing these findings together with detailed information on the Earth's seismicity (Slide), which shows a remarkably close correlation with the mountain range crest, scientists developed a dynamic model of the Earth.

In the model (Slide), material from the hot interior of the Earth rises beneath the oceanic mountain ranges and intrudes into the oceanic crust or extrudes onto its surface, thereby generating new crust. As the new crust is formed it moves away from the ridge axis and cools. When it cools, the rocks acquire permanent magnetization with the orientation of the current magnetic field. This field reverses its direction now and then, which explains the magnetic stripes.

Since new crust is steadily being formed and is moving out as an essentially rigid plate to cover more area of the Earth, and the Earth has only a fixed amount of area, something has to give. What gives is that where plates collide one of them overrides the other. The one that is overridden sinks into the hot interior of the Earth and melts. The lighter fraction of the melt can rise to form a volcano.

The plates of the Earth are relatively few in number—about a half dozen of them cover most of the Earth (Slide). Where the plates pull apart, scrape past each other, or collide, stresses are caused in the rocks. When the stresses are too great for the strength of the rock, the rock slips. This slip can occur gradually or suddenly. If it occurs suddenly, the Earth shudders and an earthquake results.

One of the places on the Earth where plates are moving past each other is the San Andreas fault in California (Slide). That fault divides the Pacific Plate from the North American Plate. Movement across the fault is occurring at the rate of about two inches a year. (Slides)

The problem of earthquake prediction is that: As the stresses build up in the crust and the strength of the rocks is reached, is there any premonitory signal that warns of when the sudden slip is about to occur? An analogy is that of bending a stick. At first the deformation goes smoothly, but as failure is approached cracking noises begin to occur that warn that the stick will soon break.

The same type of phenomenon occurs in the laboratory when a rock is squeezed. As the rock specimen nears failure, it slides bulge and small cracks open in its interior. As failure proceeds, the cracks close and the rock disintegrates.

If one measures certain properties of the rock specimen one finds many clear anomalies prior to failure. For example, as the cracks open in the rock, the electrical resistivity drops; then as the cracks close it rises again. A similar variation is observed in the velocity of vibrations, or seismic waves, traversing the rock.

Another type of precursor is release of gas that is trapped in the crystal lattice of a rock. The cracking increases the rate of gas diffusion out of the rock.

Thus a rock exhibits a wide range of precusory phenomena as it is broken: deformation, cracking (small earthquakes), variations in electrical, magnetic and seismic properties, and gas emanation.

Having established that it is possible to predict failure of rocks in the laboratory, we must next consider whether we can do the same on a larger scale. In other words, is the rock experiment a valid analogy for a large earthquake? Or put another way, do earthquakes, which may involve large areas of the Earth's crust, exhibit precursors similar to those observed for a squeezed rock specimen.

Let's look at some of the earthquake precusors that have been reported; (Slides)

1. Land uplift at Niigata, Japan.
2. Electrical resistivity in the USSR.
3. Seismic wave velocity in the USSR.
4. Magnetic and tilt anomalies in the U.S.

These are but a few of the numerous examples of precursors that can be cited. The problem with these observations is that they are fragmentary. By that I mean that for a given earthquake we are lucky to have a single observation of one type of precursor. We have very few cases where a precursory phenomenon is observed on two or more instruments of a particular type or where two or more phenomena are observed for a single arthquake. Consequently the observational data for developing a theoretical basis for earthquake prediction are extremely weak.

The strategy of earthquake prediction, therefore, is to deploy large numbers of instruments and to conduct extensive geodetic surveys in order to "trap" an earthquake. The best place to trap an earthquake is where they occur most frequently. A related strategy, especially for trapping a great earthquake, is to concentrate studies on a so-called "seismic gap."

A seismic gap is a section of a plate boundary where a great earthquake has not occurred in a long time, but where adjacent sections of the boundary have broken more recently. Since the stresses have steadily built up on the unbroken seismic gap owing to plate movement and have not been released, it is considered likely that a great earthquake will occur there sooner than elsewhere. Several seismic gaps have been identified in the world (Slide) including the sections of the San Andreas fault that last broke in 1857 and 1906.

Let's return now to the case of the successful Chinese prediction of the earthquake on February 4, 1975, and review the sequence of events that led up to the prediction. You will see that their approach to the prediction problem follows the strategy I have outlined.

The Chinese divide the development of a prediction into four phases: long-term, middle-term, short-term, and imminent.

The long-term phase involves the identification of an area where an earthquake is considered to be likely based on an assessment of seismic history and geologic setting. Recognition of a seismic gap would, for example, constitute a long-term prediction.

The middle-term phase of a prediction would be entered when an anomoly is detected in the area, but where the anomaly does not indicate anything about the imminence of the shock. Land uplift is an example of such an anomaly.

The short-term phase is entered when several types of phenomena are exhibiting changes with time that suggest that conditions are building for a shock.

The imminent phase occurs when the variations are such that experience or theory suggests fault slip is about to occur.

The Chinese developed their long-term prediction in 1970 on the basis of a migration in the seismicity and a small seismic gap (Slide). Subsequently, a relevelling of the region was carried out tiltmeters were installed at two observatories, geomagnetic observations were started at one observatory, and geophysical personnel in the region were increased from several tens to about 300.

By 1974 it had been found that two faults in the region were active, that the Liaotung Peninsula had uplifted and tilted to the northwest, that there was a significant increase in the number of small earthquakes, and that there was a change in the magnetic field.

These observations led the scientists to predict an earthquake of magnitude 5 to 6 for 1 to 2 years hence. This would be a middle-term prediction.

At this stage the Party and Revolutionary Committees became involved in a major way. Information and preparedness campaigns were organized. Several thousand observation posts manned by non-professional people were established to monitor electric currents in the ground, water level and radon gas in wells, the magnetic field, and animal behavior.

Late in 1974, numerous anomalies in these phenomena were reported. In December there was a swarm of earthquakes that led to earthquake preparedness information being given to each family.

In early January, 1975, the trend of ground tilt was observed to reverse at one station. This anomaly and others led to a prediction of a magnitude 5.5 to 6 shock in the first 6 months of 1975. This was the short-term prediction.

The imminent prediction developed rapidly On February 1 a swarm of small earthquakes began in an area where they had not been seen before. The swarm built up through the next two days culminating in a magnitude 4.8 shock early on February 4. A calm followed, which was interpreted to be a prelude to the big earthquake.

At 2:30 pm on February 4 a general warning was issued to move outside and take other precautions. At 7:36 pm the earthquake struck.

In the U.S. we have not yet had a situation that entirely parallels the Chinese experience. A situation is developing, however, that bears some resemblance to the early stakes of the Chinese case.

I mentioned earlier that southern California is the location of a seismic gap that last broke in 1857. Within the last year it has become known that the land in the region of the gap has risen in a somewhat jerky fashion about a foot over the last 15 years. (Slide) The significance of the uplift is not clear. Such uplifts sometimes precede earthquakes, as occurred in 1964 at Niigata, Japan, for example. Associated with the uplift in southern California, however, there has been horizontal shearing of the region as revealed by geodetic surveying which would seem to confirm that the uplift is earthquake related.

Late last summer the Federal government became sufficiently concerned about the uplift that it provided about $2M to undertake monitoring of the region. New instrumentation is currently being installed there and new surveys are being undertaken. It is our expectation that the coming of any great earthquake in the region will be heralded by some of the anomalies I have discussed.

The presence of the uplift and its implications for the Los Angeles region have brought scientists and public officials face to face with several very difficult issues.

On the one hand, as demonstrated by the Chinese experience, a successful earthquake prediction can greatly reduce earthquake casualties. Estimates of deaths in the Los Angeles region from a great earthquake exceed 10,000, without including the catastrophic losses that could occur from a dam failure or major fire. With a prediction accurate to within a few days, people could stay at home, except for those housed in structures especially vulnerable to collapse, and the death toll could be reduced by a large percentage.

A successful prediction can also reduce property losses. A relatively simple action like putting straps on hot water heaters to prevent toppling could prevent a fire. Leaving glassware in boxes on shelves in stores could reduce losses of inventory from breakage, which constitutes a surprisingly large part of earthquake losses.

More costly actions include removal or strengthening of hazardous structures. An accurate prediction could focus such an undertaking in the most vulnerable area and thereby reduce the costs from a regional attack on hazardous structures.

On the other hand, there are some costs to be paid in issuing earthquake predictions and recent studies have indicated that unless government acts effectively the costs could be high.

To quote from a recently published study by J. Eugene Haas and Dennis S. Mileti at the Institute of Behavioral Sciences, University of Colorado:

"The potential socioeconomic impacts [of an earthquake prediction] may be far-reaching. If earthquake insurance is unavailable, property values, at least for certain types of buildings, could fall sharply. Mortgage availability is likely to be affected. If the previousy anticipated growth in property tax revenues fails to materialize, the public services provided by the city and county will have to be decreased. If higher unemployment and concern about the future lead to lowered retail sales, sales tax revenues will decline, thus further curtailing the provision of public services."

Haas and Mileti go on to point out, though:

"None of these potential negative trends need become reality, however, if government, business and community leaders make thoughful decisions in advance of the prediction of a damaging earthquake."

So where do the challenges in earthquake prediction lie?

For the geologists and seismologists they lie in learning how to recognize earthquake precursors, translating those observations into a prediction, and responsibly communicating that information to the public with a clear assessment of the uncertainties involved.

For the engineer: To develop techniques for identifying the vulnerable structures in an earthquake targeted area and providing a way to remedy hazardous conditions.

For the sociologist and economist: To anticipate public reaction to predictions and suggest actions that could maximize the benefits and minimize the costs.

For the political leaders and government officials: To develop adequate plans for disaster preparedness and relief and to warn the public of the appropriate actions to take based on a prediction.

And for the news media: To communicate prediction and warning information to the public in a responsible way so that a rational response to an earthquake threat is encouraged.

Those of us involved in the earthquake prediction program find these challenges to be exciting. We look forward to the next decades during which we have high hopes of solving the major problems in developing a useful earthquake prediction capability.

CONGRESSIONAL PAY RAISE

The SPEAKER pro tempore (Mr. FOLEY). Under a previous order of the House, the gentleman from Kentucky (Mr. MAZZOLI) is recognized for 5 minutes.

Mr. MAZZOLI. Mr. Speaker, I have stated many times my feelings that: First, the congressional pay raise question is an entirely separate issue from the question of tighter congressional ethics; second, Members of Congress must be divorced from other Federal officials for the purpose of considering pay raises; and, third, the congressional cost-of-living adjustments scheduled to be ordered this October should be repealed and all future salary increases for Members of the House and Senate should be granted only after a recorded, public vote.

I have introduced legislation designed to achieve all those goals. Many other proposals have been introduced which also seek to alter the current system of granting pay raises to Members of Congress.

But, it now appears likely that the House will not act on these proposals,

but will—as provided under present law—permit the pay raises to take effect by default, as it were.

Yet, despite the public statements and proclamations, Congress still has not adopted a stiff code of ethics.

Everyone had been led to believe that the code of ethics would at least go hand in hand with the pay raise, and maybe even precede it.

But, now it seems the pay raise will precede the adoption of a code of ethics. This leaves the ultimate adoption of a loophole-free code in limbo because we are about to strip the sugar—of a pay raise—from the bitter will—of a stiff code of ethics. We are about to eat the carrot and put the stick back into the closet.

If, Mr. Speaker, we are determined to take a pay raise without casting a public vote on the issue, then seemliness, propriety, and decency require us, at the very least, to delay the pay increase until we place on the books a tight, tough code of ethics.

Mrs. FENWICK. Mr. Speaker, will the gentleman yield?

Mr. MAZZOLI. I am happy to yield to the gentlewoman from New Jersey.

Mrs. FENWICK. Mr. Speaker, I thank the gentleman for yielding.

I would like to associate myself with his remarks.

Mr. MAZZOLI. Mr. Speaker, I thank the gentlewoman from New Jersey.

We have been associated in some good causes in the past, and I think that this is another one of our good causes.

Mrs. FENWICK. So do I, Mr. Speaker, and I thank the gentleman.

SCHOOL BREAKFAST PROGRAM

(Ms. HOLTZMAN asked and was given permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Ms. HOLTZMAN. Mr. Speaker, I have today introduced legislation that will prevent a State from imposing the school breakfast program on local schools, unless the State is willing to pay any additional costs incurred by schools as a result of the program.

The school breakfast program was intended to encourage States to make available breakfast programs for local schools. A school which finds that a breakfast program is needed in order to insure adequate nutrition for its children can apply for and receive Federal funding.

Schools are reimbursed for the program on a per-meal basis. Thus, schools which have large numbers of eligible children who wish to participate receive substantial funding and have an incentive to operate a breakfast program. In schools where student interest in the program is low, the per-meal reimbursement is not sufficient to cover overhead costs; that is, opening the school early, rescheduling bus timetables, paying additional staff. In other words, where the program is needed, schools receive adequate funding to operate it; where the program is unnecessary, schools are discouraged from participation because of the reimbursement formula.

This system of incentives and disincentives breaks down, however, when a State requires schools to operate the program regardless of the number of students who wish to participate. In that case those schools with small numbers of children participating will incur large overhead costs, far in excess of their reimbursement for the breakfast program. These added costs will come out of local education budgets.

This will be the situation in New York State next year. State law requires all schools in cities of 125,000 population or more to operate the breakfast program if they conduct a school lunch program. As many as 695 of New York City's elementary and junior high schools may not be able to meet the program's costs out of their reimbursement. These unreimbursed costs may exceed $1 million citywide, and will have to come out of the already crippled local education budget. The cities of Yonkers and Buffalo anticipate similar problems.

My bill will prevent local school districts from having to take funds away from their education budgets in order to pay for the school breakfast program. It provides that if a State requires a local school to operate the breakfast program, the State must meet the full cost of the program in that school.

Congress clearly intended the school breakfast program to help in the education of children, not to detract from it. My bill will assist in this worthy effort. It will not prevent a State from mandating a breakfast program in schools where it believes that such a program is needed. The bill will assure, however, that the breakfast program does not operate at the expense of the schools' ability to educate children.

STATEMENT OF THE HONORABLE CHARLES B. BENNETT UPON INTRODUCTION OF THE CONFLICT OF INTEREST BILL

(Mr. BENNETT asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BENNETT. Mr. Speaker, I am today introducing a bill to amend the Defense Production Act of 1950 to halt a subtle type of conflict of interest that has plagued the Federal Government for many years. My bill would prohibit any former Federal employee who participated in a contract formulation from employment with anyone who has a direct interest in the contract, for a period of 2 years. The prohibition would be extended to 5 years in a case in which the job sought by the former Federal employee was created, supported or subsidized by Federal revenues under a procurement contract in which he had participated.

This legislation is similar to a bill I first introduced in 1951, and I believe this type of conflict of interest legislaton is needed today more than ever. Mr. REUSS, Mr. MOORHEAD, and Mr. MITCHELL of Maryland have joined with me in introducing this legislation and I am hopeful that this will be a priority enactment for the 95th Congress.

The bill covers former Federal officers or employees who, during their last 3 years of employment with the Government, participated in any procurement contract. Former officers or employees who violate the employment prohibitions established in this bill would be subject to a maximum fine of $5,000 and/or a maximum prison sentence of 1 year. Anyone employing a former Federal employee in violation of this legislation would be subject to a maximum fine of $25,000 and/or a maximum prison sentence of 1 year.

The bill would also establish a three-member Conflict of Interest Review Board. The Chairman of the Civil Service Commission would serve as chairman of the Board with the Attorney General and the Comptroller General serving as members. This Board would provide a central coordinating authority in the executive branch to provide for consistent application of the law throughout the Federal Government. The Board would also issue advisory opinions to individuals who are not sure whether they fall under the prohibitions in this legislation.

In addition, the bill establishes a reporting requirement for former Federal employees accepting employment with companies having contracts with their former agency and for persons leaving private contracting agencies to come to work for the Government. This provision is identical to disclosure requirements already in effect for NASA and Defense Department personnel.

It should be stressed that this legislation does not prohibit all private employment for contracting officers and employees leaving the Government. The prohibitions apply in those particular cases where the employee wants to go to work for a company with a direct interest in a contract in which that employee participated. The employee would not be barred from taking employment with other companies.

I certainly do not believe that all Federal contracting officers fall prey to this type of conflict of interest. But these employees surely realize that contract decisions they make for the Government today could lead to lucrative employment with the contracting company tomorrow. For some, this temptation may be too great to bear. The purpose of this legislation is to remove that temptation and thereby eliminate the possibility of conflict of interest situations occurring.

The need for legislation to deal with this kind of conflict of interest has long been apparent. In 1956, a report on the inquiry into aircraft production costs and profits stated:

> The presence of retired military personnel on payrolls, fresh from the "opposite side of the desk" creates a doubtful atmosphere . . . companies whose business is so closely interwoven with the military establishment ought to lean over backward so that no suggestion of favoritism, influence or "old school tie" could be read into their conduct.

In 1962, Congress enacted a Federal conflict-of-interest law but time has shown us that stronger legislation is needed. For example, in 1970 a blue ribbon defense panel known as the Fitzhugh commission provided documented evidence that anticipation of a lucrative job can have a significant effect on a procurement official's decisions.

In 1975, the Council on Economic Priorities released a report providing evi-

dence that many former Defense Department employees have gone to work for military contracts after playing an active part in negotiating defense contracts with those same contractors. It was reported that 27 percent of the employees who left the Defense Department to take positions with military contractors were working in conflict of interest situations.

The need is clear and the time for action is now. President Carter has shown his interest in the subject by requiring pledges from his top level appointees that they will steer clear of possible conflict of interest situations in their post-Government employment.

Senator PROXMIRE, who has long been an advocate for stronger conflict of interest laws, is today introducing identical legislation in the Senate. As chairman of the Senate Banking Committee, he has promised to hold hearings on this legislation in the near future.

There has never been a better climate for this ethical reform and I am hopeful that my colleagues in the House will support this vital conflict of interest legislation.

The bill follows:

H.R. 3222

A bill to amend the Defense Production Act of 1950, as amended

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Defense Production Act Amendments of 1977".

SEC. 2. Insert immediately after Title VII the following new title:

"TITLE VIII—CONDUCT OF GOVERNMENT PERSONNEL

"SEC. 801. (a) As used in this Act the term—

"(1) 'Contracting officer' means any employee of the United States, the independent agencies thereof, or the government of the District of Columbia who by virtue of his position or appointment in accordance with applicable agency regulations is authorized to solicit or select sources of supply, or describe requirements for, enter into, award, modify, terminate, administer, or make determinations or findings with respect to, any contract, or to otherwise exercise any part of such authority;

"(2) 'Compensation' includes any payment, gift, benefit, reward, favor, gratuity, or employment valued in excess of $50 at prevailing market price;

"(3) 'Contractor' is any person, partnership, corporation or agency thereof other than the United States, the independent agencies thereof, or the District of Columbia, who offers, negotiates, agrees, or otherwise contracts to supply the United States, the independent agencies thereof, or the District of Columbia, with goods, services, or supplies, and any parent, subsidiary, or affiliate thereof

"(4) 'Procurement contract' is any agreement by which the United States, the independent agencies thereof or the District of Columbia purchase, lease, or otherwise engage in the acquisition of supplies, services or other materiel, to include such agreements as: orders for the procurement of services or supplies; awards, notices of awards; contracts of fixed price, incentive contracts, and cost and cost-plus-a-fixed-fee contracts; contracts providing for the issuance of job orders, task orders, or task letters thereunder; letter contracts and purchase orders; or any supplemental agreement with respect to any of the foregoing.

"(b) No contracting officer, while so employed, shall accept compensation from any contractor without prior written permission of the standards of conduct counsellor for his employing department or agency. Nothing in this subsection shall prohibit the acceptance of such compensation as is specifically authorized by departmental or agency directive or regulation.

"(c) No contracting officer who, during the last three years of his employment by the United States government, engaged, officially or unofficially, in duties of his office in regard to any procurement contract shall accept compensation from any contractor receiving funds under such contract for a period of two years following his employment with the United States, the independent agencies thereof, or the District of Columbia.

"(d) No contracting officer who, during the last three years of his employment by the United States Government, engaged, officially or unofficially, in duties of his office in regard to any procurement contract shall accept compensation from any employment which was created, supported, or subsidized by Federal revenues under such procurement contract until the expiration of five years following such contracting officer's termination of employment with the United States, the independent agencies thereof, or the District of Columbia.

"(e) No contracting officer, while so employed, who engaged, officially or unofficially, in duties of his office in regard to any procurement contract shall own, possess or control, directly or indirectly, jointly or severally, any stock, stock option, or other like financial holding, in any contractor who has been affected by such action. In any instance where such contracting officer may be called on to deal in an official capacity with a matter which would affect a contractor in which he holds such financial interest, he shall promptly dispose of such financial holding or formally disqualify himself from any dealings in such matter. Written notice of such disposal or disqualification shall be provided by such contracting officer to the Conflict of Interest Review Board.

"(f) Whoever violates this section shall be guilty of a felony, and shall be fined not more than $5,000 or imprisoned for not more than 1 year, or both.

"(g) Whoever offers, tenders, or grants any compensation to any contracting officer, the acceptance of which would result in a violation by such contractor of this section, shall be guilty of a felony and shall be fined not more than $25,000 and imprisoned for not more than 1 year, or both.

"SEC. 802. (a) There is established a Conflict of Interest Review Board, which shall review compliance by contracting officers with this Act. The Board shall consist of the Chairman of the United States Civil Service Commission, who shall act as Chairman of the Board, the Attorney General of the United States, and the Comptroller General of the United States.

"(b) The Board shall have the power to appoint, fix the compensation of, and remove an executive secretary and three additional staff members without regard to chapter 51, subchapters III and VI of chapter 53, and chapter 75 of Title 5, United States Code, and those provisions of such title relating to the appointment in the competitive service. The executive secretary and the three additional staff members may be paid compensation at rates not to exceed the rate prescribed for levels IV and V of the Federal Executive Salary Schedule, respectively.

"(c) The Board is not authorized to appoint or utilize the services of advisory committees, or to employ consultants for the fulfillment of its responsibilities. Nothing herein shall prohibit the temporary employment of clerical assistants or the solicitation or acceptance of advice from outside parties.

"(d) All departments and agencies of the government are authorized to cooperate with the Board and to furnish information, appropriate personnel with or without reimbursement, and such financial and other assistance as may be agreed to between the Board and the department or agency concerned.

"(e) (1) Any person who is offered compensation that might place him in violation of subsections (c) or (d) of Section 801 of this Act, prior to the acceptance of such compensation, may apply to the Board for advice on the applicability of this Act to such compensation. The Board is authorized, upon such application, to review such proposed compensation and to issue advisory opinions stating whether such compensation would result in a violation of the intent of this Act, provided that such action shall be accomplished after:

"(A) Appropriate notice is provided in the Federal Register not less than 10 working days before the Board is to meet to consider such application;

"(B) Interested parties are permitted, upon written request, to present testimony relating to the issuance of such advisory opinion; and

"(C) The Board shall inform Congress, and provide notice in the Federal Register, within thirty days after the issuance of any advisory opinion, describing—

"(i) The name of the applicant for such advisory opinion;

"(ii) The contractor from which such applicant intends to accept compensation;

"(iii) The duties of such applicant during the last three years of his employment as a contracting officer;

"(iv) Any official responsibilities such applicant exercised with regard to any procurement contract in which an interest is or was retained by the contractor which proposes to provide such compensation;

"(v) A description by a representative of the contractor, based upon testimony delivered to the Board, of the complete terms and conditions of the proposed compensation, including any prospective services that such applicant will perform on behalf of the contractor;

"(vi) A statement of the findings of fact and opinion which led the Board to conclude that such compensation would or would not offend the intent of this Act.

"(2) The Board is authorized to issue a statement of findings of fact and opinion along with an advisory opinion finding that the proposed compensation would not violate the intent of this Act if—

"(A) The involvement of the applicant in a procurement contract otherwise described in this Act was so remote or inconsequential that it could have had no significant effect on the procurement contract in question;

"(B) The involvement of the contractor in such procurement contract was remote or inconsequential; or

"(C) The national interest requires that, the prohibitions of this Act notwithstanding, such applicant should be allowed to accept such compensation.

"(f) There shall be available to any person as a defense in any criminal or civil case brought for violation of this Act that—

"(1) The Board was in unanimous agreement, as expressed in a properly issued advisory opinion, that such compensation would not violate the intent of this Act; and

"(2) Such person fully complied, without alteration, with the understanding of circumstances as expressed by the Board in its statement of findings of fact and advisory opinion, and with any additional guidance or suggestions proposed by the Board.

"(g) In furtherance of the duties and responsibilities described in this Act, the Board is authorized to require, by subpoena or

otherwise (to be issued under the signature of the Chairman, or, in his absence, another Board member designated by him) the attendance of such witnesses and the production of such books, papers, and documents as it may require, and to administer such oaths, and to take such testimony as it may deem necessary.

"(h) All such meetings to consider applications for an advisory opinion on the applicability of Section 801 of this Act shall be open to the public, and a verbatim transcription of all such meetings and all other deliberations of the Board shall be available for public inspection during regular working hours at the offices of the Board.

"(i) The Chairman of the Board is required to promptly report to the Attorney General, and to provide such assistance as may be required, whenever the Board shall learn of an action which appears to involve a violation of this Act or any other federal law. The Attorney General shall report to the Chairman of the Board and to the Congress on the disposition of any such case.

"(j) The Chairman shall review all agency programs to assure that all positions subject to the provisions of Section 801 of this Act are identified, and that all persons subject to these provisions are provided adequate notice of such prohibitions and restrictions.

"(k) The Board is authorized to develop and promulgate appropriate regulations to implement this Act.

"(l) The Board shall report to the Congress, on an annual basis, its activities, deliberations, and investigations, and shall recommend such legislative or regulatory actions as it deems appropriate to promote high ethical standards for government employees.

"(m) There are authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act.

SEC. 803. (a) As used in this section,

"(1) The term 'former Government employee' means any former employee of the United States, including consultants or part-time employees, whose salary rate at any time during the three-year period immediately preceding the termination of his last employment with the United States was equal to or greater than the minimum salary rate at such time for positions in Grade GS–13;

"(2) The term 'contracts awarded' includes the net dollar amount of modifications to, and the exercise of options under, such contracts excluding all transactions amounting to less than $10,000 each;

"(3) The term 'agency' refers to any executive department or independent agency of the United States;

"(4) The term 'Government contractor' refers to any entity receiving contract awards from a Government agency, or any subsidiary, parent company, or affiliate thereof;

"(b) Under regulations prescribed by the head of each agency:

"(1) Any former Government employee who during any fiscal year,

"(A) was employed by or served as a consultant or otherwise to a Government contractor for any period of time,

"(B) represented any Government contractor at any hearing, trial, appeal, or other action in which the United States was a party and which involved services and materials provided or to be provided to the United States by such contractor, or

"(C) represented any such contractor in any transaction with the United States involving services or materials provided or to be provided to the United States by such contractor,

shall file with the chairman of the Conflict of Interest Review Board, in such form as the Chairman may prescribe, not later than February 15 of the next succeeding fiscal year, a report containing the following information:

"(1) His name and address.

"(2) The name and address of the government contractor by whom he was employed or whom he served as a consultant or otherwise.

"(3) The title of the position held by him with the government contractor.

"(4) A description of his duties and the work performed by him for the government contractor.

"(5) His grade, level, or salary rate while employed by the United States.

"(6) A description of his duties and the work performed by him while on active duty or while employed by the United States during the three-year period immediately preceding the termination of his employment with the United States.

"(7) A description of any work performed by him in connection with any United States government contract while employed by the United States, if the government contractor by whom he is employed is providing substantial services or materials for such contract, or is negotiating or bidding to provide substantial services or materials for such contract.

"(8) The date on which his employment with the United States was terminated, and the date on which his employment, as an employee, consultant, or otherwise with the government contractor began and, if no longer employed by such government contractor, the date on which such employment with such government contractor terminated.

"(9) Such other pertinent information as the Chairman of the Conflict of Interest Review Board may require.

"(2) Any employee of the United States, including consultants or part-time employees, who was previously employed by or served as a consultant or otherwise to a government contractor in any fiscal year, and whose salary rate with the United States Government is equal to or greater than the minimum salary rate for positions in grade GS–13, shall file with the Chairman of the Conflict of Interest Review Board, in such form and manner and at such times as the Chairman may prescribe, not later than February 15 of the next succeeding fiscal year, a report containing the following information:

"(A) His name and address.

"(B) The title of his position with the United States Government.

"(C) A description of his duties with the United States.

"(D) The name and address of the government contractor by whom he was employed or whom he served as a consultant or otherwise.

"(E) The title of his position with such government contractor.

"(F) A description of his duties and the work performed by him for the government contractor.

"(G) The date on which his employment as a consultant or otherwise with such contractor terminated and the date on which his employment as a consultant or otherwise with the United States began.

"(H) Such other pertinent information as the Chairman of the Conflict of Interest Review Board may require.

"(c)(1) No former Government employee shall be required to file a report under this section for any fiscal year in which he was employed by or served as a consultant or otherwise to a Government contractor if the total amount of contracts awarded to such contractor by the agency by which he was formerly employed did not total at least $1,000,000 or 1 per centum of the total contract awards made by such agency; and no employee of the United States shall be required to file a report under this section for any year in which the contracts, awarded by the agency by which he is employed to the contractor by which he was formerly employed, did not total at least $1,000,000 or 1 per centum of the total contract awards made by such agency.

"(2) No former government employee shall be required to file a report under this section for any fiscal year on account of employment with or services performed for the United States if such employment was terminated three years or more prior to the beginning of such fiscal year; and no employee of the United States shall be required to file a report under this section on account of employment with or services performed for a government contractor if such employment was terminated or such services were performed three years or more prior to the effective date of his employment with the United States.

"(3) No former government employee shall be required to file a report under this section for any fiscal year during which he was employed by or served as a consultant or otherwise to a government contractor at a salary rate of less than $20,000 per year; and no employee of the United States, including consultants or part-time employees, shall be required to file a report under this section if, during his prior employment with a government contractor, his salary rate did not exceed $20,000 per year.

"(d)(1) The Chairman of the Conflict of Interest Review Board shall, not later than March 31 of each year, file with the President of the Senate and the Speaker of the House of Representatives a report containing a list of the names of persons who have filed reports with him for the preceding fiscal year pursuant to subsections (b)(1) and (b)(2) of this section. The Chairman shall include after each name so much information as he deems appropriate and shall list the names of such persons under the government contractor for whom they worked or for whom they performed services.

"(2) The Chairman of the Conflict of Interest Review Board shall review each report filed with him for the preceding fiscal year pursuant to subsections (b)(1) and (b)(2) of this section, and shall report not later than March 31 of each year, to the President of the Senate and the Speaker of the House of Representatives, on the disposition of any instances which appear to involve a violation of Sec. 801 of this Act or any other provisions of federal law.

"(3) The Chairman of the Conflict of Interest Review Board shall review and approve plans developed by the head of each agency to assure that procedures are developed which assure that each person subject to the reporting requirement of subsection (b)(1) and (b)(2) of this section is made aware of these requirements.

"(4) The Chairman of the Conflict of Interest Review Board shall undertake a continuous review to determine that all persons subject to the reporting requirement of subsections (b)(1) and (b)(2) of this section are in compliance with these requirements, and shall report not later than March 31 of each year to the President of the Senate and the Speaker of the House of Representatives, on his efforts to assure compliance with these reporting requirements.

"(e) Any former government employee whose employment with or services for a government contractor terminated during any fiscal year shall be required to file a report pursuant to subsection (b)(1) of this section for such year if he would otherwise be required to file under this section; and any person whose employment with or services to the United States terminated during any fiscal year shall be required to file a report pursuant to subsection (b)(2) of this section for such year if he would otherwise be required to file under this section.

"(f) The Chairman of the Conflict of Interest Review Board shall maintain a file containing the information filed with him pursuant to subsections (b)(1) and (b)(2) of this section and such file shall be open for public inspection at all times during the regular workday.

"(g) Any person who fails to comply with the filing requirements of this section shall be guilty of a misdemeanor and shall, upon conviction thereof, be punished by not more than six months in prison or a fine of not more than $1,000, or both.

"(h) No person shall be required to file a report pursuant to this section for any fiscal year prior to the fiscal year 1977."

CHEMICAL WEAPONS ARMS CONTROL

(Mr. SCHULZE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHULZE. Mr. Speaker, the new administration has energetically committed itself to a very noble purpose—the elimination of all nuclear weapons from the Earth. Despite the optimism of the new President, I have my own doubts about the accomplishment of this objective in the near future. While most people undoubtedly would like to see this elimination become a reality, the problem of how to do it is very complex. It is my belief that it would be better to direct any initial disarmament measures at a smaller, less crucial target—such as chemical weapons.

Last June, I was appointed by the distinguished former Speaker of the House to serve as a congressional advisor to the Conference of the Committee on Disarmament, CCD. It was an honor for me to have been selected as the only first term Member of the U.S. delegation.

Shortly after my appointment, I traveled to Geneva to attend a session of the Conference and to gain a first hand knowledge of the function of the CCD and of the problems associated with arms control. Of particular interest to me was the negotiations being conducted on the question of controlling chemical weapons.

When I returned to Washington, I decided to investigate this matter of chemical weapons and warfare further. As a result of a long and tedious examination of the problems associated with chemical weapons, I am, today, introducing a resolution which I hope will add additional stimulus to the CCD negotiations and bring a rapid conclusion of the talks with the final result being a comprehensive chemical weapons treaty.

My resolution would in effect place the world community of nations on notice that an effective and comprehensive treaty banning the development, production, and stockpiling of chemical weapons is of the highest priority in the question of arms control and disarmament. Further, my resolution would require the United States to reduce a specified amount of chemical agent stockpile over a defined period of time as a symbol of U.S. determination to see this treaty become a reality. Finally, my resolution would challenge the other major chemical weapons power to do the same.

CHEMICAL WARFARE—AN UNGLAMOROUS HISTORY

Exactly when man first decided to use chemical or biological weapons against his fellow man is not known but there are historical accounts dating back to the time of the conflicts between Sparta and Athens which indicate that this form of warfare was practiced. In this instance, Spartan soldiers would burn wood treated with sulfur and pitch to create a poisonous cloud of sulfur dioxide which was used to smoke enemy troops out of defensive positions.

Other instances of poisoned daggers, diseased animal carcasses, and poisoned water and food supplies have appeared in many military accounts.

There can be no doubt, however, that the use of chemical weapons took a dramatic turn for the worse on the fateful date of April 22, 1915, at the Belgium village of Vijfluege near Ypres when the German army introduced chemical weapons to the battlefield.

In an April 17, 1975, article in the British journal, New Scientist, Dr. Robert Jones describes the first modern use of gas warfare:

> The day was a fine one in the immediate vicinity of Ypres. At 5 pm, men in forward positions heard a light hissing noise from the direction of the German trenches. Within 15 minutes, no less than 168 tons of chlorine had been released along a front extending about four miles. A light wind of 3–4 mph bore the wall-like cloud towards trenches manned by British, Canadian, French, and Algerian troops. Distant observers spoke of a low greenish mist "such as seen over water meadows on a frosty night". The deadly gas brought horror and confusion into the ranks of the allies.

Dr. Jones also reported:

> More chlorine was discharged on an adjoining sector of the front on April 24, this time against Canadian troops. The allied position was simultaneously bombarded with shells filled with Lachrymators. Much uncertainty exists over the numbers of victims; the figures most quoted are 15,000 casualties, of whom 5,000 died during or soon after the attacks.

In a book entitled, "Chemicals in War," by A. M. Prentis, the following list of gas casualties in World War I emphasizes the results of the new weapon.

Country and Battle Casualties Due to Gas

	Nonfatal injuries	*Deaths*
Russia	419,340	56,000
France	182,000	8,000
Britain	180,697	8,109
Norway	55,373	4,627
Austria	97,000	3,000
U.S	71,345	1,462
Germany	191,000	9,000
Others	9,000	1,000
Total	1,205,655	91,198

If this total of over 1 million casualties from gas alone is not somewhat chilling, consider the effects the gas had on those it was used against.

Again, from the account of Dr. Jones on the advance of German troops through the lines of Allied trenches:

> Tenanted only by the dead garrisons, whose blackened faces, contorted figures, and lips fringed with blood and foam from their bursting lungs, showed the agonies in which they had died. Men exposed to lower doses sense a burning of the throat and feelings of suffocation, and cough repeatedly. The main effect of the gas is to cause the secretion of massive quantities of a frothy fluid into the airspaces of the lungs. As the fluid builds up, lack of oxygen induces feelings of weakness, fatigue, lassitude, and headache. Medical examination can detect bubbling noises within the chest. The body temperature begins to fall . . . The fluid coughed up became greenish and purulent; the pulse becomes weak and rapid, while respirations become shallow and fast . . . Breathing becomes intensely difficult, and death may follow in two days.

Mr. Speaker, I included this rather gruesome description of the effects of gas warfare because no method of conducting war evoke such feelings of horror and revulsion as the use of chemicals.

That horror and revulsion was recognized even by the perpetrators of the action. As one German eyewitness wrote:

> I am not pleased with the idea of poisoning men. Of course, the entire world will rage at it first and then imitate us.

Perhaps at the time, no one would have taken this author's warning seriously. However, one need only read the accounts of the Japanese tactics in China, the Italian campaigns in Ethiopia, or the Egyptian involvement in Yemen, to realize that chemicals were still considered viable weapons of war despite the outrage following World War I.

CHEMICAL AND BIOLOGICAL WEAPONS—THE ATTEMPT TO CONTROL

As war-weary veterans returned home after World War I coughing and experiencing numerous respiratory complications, their relatives and friends became outraged and began a worldwide campaign to eliminate the use of poison gas in war.

Public objections to the use of chemicals was not necessarily a result of the First World War. As early as 1899, 27 nations signed the Hague Gas Declaration agreeing to "abstain from the use of projectiles the sole purpose of which is the diffusion of asphyxiating or deleterious gases." Of course, the lack of total support for this agreement became obvious only a few years later.

Certainly, the experiences of using gas in World War I brought about the largest outcry for control. The Versailles Treaty drafted in 1919 sought to outlaw the use of chemical weapons but merely prohibited the defeated powers from manufacturing such weapons.

In 1921, the question of chemical warfare was introduced to the Washington Naval Conference. Gen. John J. Pershing, who was advising the Naval board, introduced a proposal to ban chemical warfare. Although the measure was subsequently embodied in article 5 of the Conference and agreed to by the United States and several other nations, the French refusal to sign it blocked its becoming law.

Perhaps the most notable treaty involving chemical and biological weapons was written in the form of the Geneva Protocal of 1925. However important this treaty was, it only prevented the first "use" of such weapons in war and did not provide for the total prohibition of these weapons.

Despite these noble attempts to control chemical weapons before, and especially after, World War I, the major powers did set out to develop and im-

prove upon chemical weapons. The British in the 1920's improved upon mustard gas which was introduced during the war. As World War II approached, the Germans perfected what soon become known as "nerve agents," because they brought quick death as they attacked the central nervous system. But even the Germans were too afraid of the consequences to test their new found weapon.

President Roosevelt undoubtedly hearing from his military experts that the Germans had developed the capability of using such weapons issued a statement in 1943 which summed up the feelings of many people throughout the world regarding the use of chemical weapons. He stated:

I have been loath to believe that any nation, even our present enemies, could or would be willing to loose upon mankind such terrible and inhuman weapons." ". . . use of such weapons has been outlawed by the general opinion of civilized mankind. This country has not used them, and I hope that we never will be compelled to use them.

Throughout his statement, the President continually described the use of chemical weapons in terms such as, "desperate and barbarous"; "inhumane"; and "crimes."

During the post-World War II period very little was heard about chemical and biological weapons until both the United States and the Soviet Union, in the 1962 Eighteen-Nation Disarmament Committee, submitted plans for disarmament that included the elimination of chemical and biological weapons.

In 1969, a review of U.S. policy and programs regarding chemical and biological warfare was ordered. On November 25, 1969, the President declared that the United States "unilaterally renounced first use of lethal or incapacitating chemical agents and weapons, and unconditionally renounces all methods of biological warfare."

In 1975, former President Ford signed instruments of ratification for the Biological Weapons Convention thus concluding another chapter in CB weapons control.

CHEMICAL WEAPONS TODAY

Chemical weapons today present many more problems than in the past. Modern lethal chemicals employ the nerve gases first developed by the Germans during World War II. These agents are much more deadly than the poison gases used in World War I. They kill instantly by attacking the nervous system. They can be developed and stockpiled in larger quantities than before. And, they can be filled into weapons such as; mines, artillery shells, bombs, rockets, and aircraft spray systems.

The United States and Soviet Union, today, possess the largest stockpiles of chemical weapons. Other nations which perhaps do not possess stockpiles of their own, do have experience or knowledge in the use of chemical agents. Still other nations know the details of the chemistry of chemical agent production and can obtain the capability to do so rather simply.

All of these together pose the danger of chemical weapons proliferation and the consequent potential of use as conflicts break out and escalate.

The practicality of chemical weapons in an age of nuclear weapons is very suspect. For nations like the United States and the Soviet Union, the potential use of such weapons is somewhat academic. In any European conflict, it is highly unlikely that chemicals would provide any real tactical advantage to either side. Use of these weapons against an unprotected enemy would be devastating.

However, both the United States and Soviets possess good defensive equipment and are trained in the defense against chemical use. While chemicals would force both armies into cumbersome protective clothing and rather limited defensive postures, neither side would suffer a great tactical loss. While many will argue that chemicals could be used against rear areas with relative ease and with little effort on the part of either belligerent, the combat mission of these areas would not be halted. Still another argument which implies that both nations could resort to chemical weapons as a middle step before a nuclear exchange is suspect indeed. Chemical weapons would only slow a rapid advance by one side, perhaps, long enough to give the disadvantaged side the time needed to decide whether or not to use nuclear weapons. But, a nation forced into that type of situation could not possibly hope that a mere chemical attack would stop the onslaught.

The problem of chemical weapons should also be considered beyond the capabilities of the two superpowers. In many smaller nations, chemical defenses and medical protection are inadequate to protect both the population and the armed forces. To these nations, the obtaining of such weapons may be seen as a necessary deterrent.

Chemical weapons could also be procured or produced by nonnuclear nations to provide a capability to attack neighboring urban centers to force an opponent to capitulate before the real fighting begins. This particular example highlights the problem of nonmilitary casualties. Although it may be possible in a war to protect innocent men, women, and children from conventional bombs, chemical agents have no limits nor do they discriminate between soldiers and civilians. It is impossible to calculate the amount of unnecessary suffering chemical agents would cause these innocent victims.

Finally, chemicals can be secured by international terrorist groups which could produce devastating results throughout the world.

CHEMICAL WEAPONS CONTROL—A PROPOSAL

I think it is apparent that chemical weapons present more of a menace for the world than they ever could provide a tactical military advantage for those who possess them. Because chemical weapons are easier to produce, hide, and use than any other weapon, it becomes even more critical that we establish a realistic approach to chemical weapons control.

Currently, the United States is participating in the chemical weapons negotiations being conducted by the Conference of the Committee on Disarmament—CCD. These negotiations have been going on for several years, and while several proposals have been put forth on the control and reduction of these weapons, the problem of verification of the destruction of stockpiled chemicals has resulted in only some small measure of progress being achieved.

There is a way, however, that the logjam can be broken and the path toward chemical weapons control cleared. This can only be done if the United States takes the leadership and sets an example for the world to demonstrate that we are indeed concerned over the future of chemical arms control, and are willing to take measures to show our sincerity in seeking an international ban on these weapons.

An ancient Chinese proverb states: "A thousand mile journey begins with one step." I believe that the destruction of chemical weapons may just be that one step toward a peaceful world. It is for this reason that I am introducing a resolution demanding immediate action on chemical weapons.

My resolution consists of five parts, no one of which can be effective alone in stimulating a chemical weapons treaty.

The first provision is for the United States to place a 3-year moratorium on the production and stockpiling of new chemical agents including the binary agents, and on the construction of facilities and equipment related to the production of these agents.

The United States has not, since 1969, produced any lethal chemical weapons nor do the services plan to produce any more nerve or mustard agents in the future. However, the question of binary weapons has recently become a very realistic alternative for the armed services. The binary weapons are essentially two nonlethal weapons which would be produced, stored, and shipped separately. They only become lethal weapons when they combine at some point during their flight to a target. The Army does not plan to ask for appropriations for these weapons this year. However, the fact that the binaries are environmentally safe and can solve the transportation and storage problems which plague today's lethal chemicals, would indicate that we have not heard the last of this new concept.

Despite the obvious advantages of these weapons, the banning of the production of binaries and their associated facilities will have an important diplomatic impact on the nations watching this development. If the United States decides to produce binaries, it certainly will be translated as an upgrading of our current stockpile. No nation could seriously believe that we were sincere in searching for an international treaty banning such weapons if we merely throw out obsolete weapons and replace them with new, improved ones. Also, the construction of new facilities or the modernization of existing ones to handle future binary production, would only be viewed as the preliminary step toward a new round of chemical stockpiling.

The second provision of my resolution involves a 3-year plan to destroy up to 3,000 tons of existing bulk mustard gas.

According to officials in the Defense Department and the State Department, a large portion of our mustard gas stockpile is in bulk—or liquid—form. According to these officials, in a "90-day" war in Europe, none of this bulk could be placed into munition form and delivered to the battlefield. In fact, it would take almost 2 years to place all of the existing bulk chemicals in usable form.

Mr. Speaker, I cannot imagine why the United States is spending so much money to store chemical agents which have absolutely no tactical value whatsoever.

I do not mean to say that our chemical stockpile has no value. I do believe as do the services, that the greatest deterrent to the use of chemical weapons is for a nation to possess a strong retaliatory capability. However, if a war broke out in Europe next week, or next month, in which chemicals were used, our retaliatory power would be no greater than it is today. The destruction of 3,000 tons of bulk mustard, as I am proposing, simply will not alter our capabilities to retaliate nor affect the Soviet Union's warfighting strategy.

I have been assured by the people at Defense that the destruction of 3,000 tons of mustard can be accomplished within the 3-year time period I suggested provided the problems of transport of the agent and the necessary financial matters can be resolved.

The third provision of my resolution calls for an onsite inspection of the chemical destruction process by invited guests and/or groups. This onsite inspection would not necessarily involve the actual testing of destroyed agent but could include a written explanation of the process and a tour of the destruction facility. Again, I have been informed by Defense officials that they would see no real problem with this type of inspection as far as security is concerned.

The question of who would be invited to review the destruction process and facility is an important one. Perhaps the best group to invite would be a delegation from the CCD itself. This certainly would add credibility to the U.S. program.

However, there are other groups such as the Pugwash Society which has labored long and hard for a chemical weapons treaty which should not be ignored. There are other concerned international organizations which could be invited to inspect the destruction. Perhaps the best solution would be to invite several groups in order to gain a wider range of world opinion in support of our program.

The fourth provision of my resolution would include a challenge to the other major chemical power to initiate the same type of reductions over the same period of time and under similar conditions as the one called for in the United States. This would be the least our opponents could go to indicate their sincerety in seeking an international treaty banning chemical weapons. Along with this, the United States would call on the Third World nations to refrain from seeking the introduction of chemical weapons into their arsenals.

This is an important step toward chemical arms control because it places the other smaller nations of the world on notice that they will support the U.S. program and actively seek the rapid conclusion of a treaty.

This is especially important as concerns the Soviet Union. For years, the Soviets have voiced their support for a ban on chemical weapons. They have made numerous proposals at the CCD and have made additional comments at other occasions on the importance of such an agreement. Yet, we know that Soviet chemical warfare capabilities have been on the increase. We know that they have large stockpiles of chemical agents. That they have assigned large numbers of troops to chemical units and have actively trained their forces in the uses and defenses against chemical warfare. How can these two known factors—Soviet chemical buildup and public calls for control—exist at the same time. One of these has to be of lesser concern to the Soviet. My proposal intends to find out.

The final provision of my resolution includes a plea to the world body to urge the members of the CCD to rapidly conclude an international treaty banning the manufacture and possession of lethal chemical weapons by all nations. This treaty should seek the complete prohibition of the development, production, acquisition, stockpiling or transfer of chemical warfare agents and munitions. It should also provide for the destruction of existing stocks and production facilities in a phased manner over a specified period of time. In this respect, there must be provided a process of verification of the disposal of stocks and facilities through independent, international procedures. And finally, the treaty must establish an international mechanism for investigating suspicious activities, including provisions for challenge and onsite inspections.

CONCLUSION

Mr. Speaker, today we live, and are wholly involved, in a world of independent nations, many of which have interdependent economic interests combined with intense fears, jealousies, and animosities.

Some nations seek the territory of others; some seek the destruction of political and social orders; and still others seek to control the behavior of nations through coercion and intimidation.

As long as there is a potential for conflict, the hope for global security depends on our ability to make violence futile and counterproductive as a method of resolving international disputes.

There appears, however, no way to eliminate war. It has been tried, but even with the best of intentions, success has been elusive. Arms control, therefore, seems to be the only viable alternative. This process must center on regulating the weapons and sizes of military forces. By this action, we can hope to reduce the level of violence which accompanies war, and also reduce the risk of escalation to the major conflagration level.

Arms control demands commitment to an unending task. Our efforts must be aimed at reducing both the likelihood of war and the likelihood that certain weapons might be used if wars occur.

Arms control has been a major objective of U.S. policy since the earliest days of our Nation. Whether it was the signing of the Rush-Bagot agreements in 1817, or the Antiballistic Missile System Treaty in 1972, the United States has consistently sought significant approaches to arms control and disarmament.

In fact, we in the Congress can take some pride in the role we have played in this question. It may be recalled, that in 1961, the Congress took a giant step toward advancing the American contribution to arms control when it established the Arms Control and Disarmament Agency, ACDA. Since that time, ACDA has continually pursued the many avenues of arms control.

In fact, the optimism shared by many Americans for a better and safer world is expressed in the Agency's charter which reads:

> An ultimate goal of the United States is a world which is free from the scourge of war and the dangers and burdens of armaments; in which the use of force has been subordinated to the rule of law; and in which international adjustments to a changing world are achieved peacefully.

Mr. Speaker, I do not believe that any other major military power on Earth can claim such a sense of dedication to the objectives of arms control.

Although this measure which I am introducing could be taken by skeptics as being too idealistic, I believe that sometimes, arms control or disarmament measures, taken by a single nation can encourage the movement toward global arms control and disarmament.

I believe that my resolution will, in no way, jeopardize U.S. security or retaliatory capability. If, at the end of the suggested time span, no satisfactory accord or treaty has been reached and/or unilateral efforts on a worldwide basis are not progressing in a meaningful manner, the United States will cease destroying its stockpile and reevaluate its position based on conditions then prevailing.

The good of mankind cannot be served by the continuance of an uncontrollable arms race. Something must be done, however slight, to begin to turn words into action in the field of arms control and disarmament. I believe that my resolution will be seen as a positive step toward meaningful arms control.

PRINTING OF RULES OF THE COMMITTEE ON ARMED SERVICES

Mr. PRICE. Mr. Speaker, in accordance with clause 2(a) of rule XI of the Rules of the House of Representatives, I submit herewith for printing in the CONGRESSIONAL RECORD the rules of the Committee on Armed Services which were adopted by the committee in open session on Thursday, January 27, 1977:

RULES FOR THE COMMITTEE ON ARMED SERVICES FOR THE 95TH CONGRESS

1. The Committee on Armed Services will meet every Tuesday at 10:00 a.m., and at such other times as may be fixed by the Chairman or by the written request of members of the committee, pursuant to House Rule XI, Clause 2(c).

A Tuesday meeting of the committee may be dispensed with by the Chairman, but such action may be reversed by a written request of a majority of the members.

2. A member may vote by special proxy, which must be in writing, shall assert that

the member is absent on official business or is otherwise unable to be present at the meeting of the committee, shall designate the person who is to execute the proxy authorization, and shall be limited to a specific measure or matter and any amendments or motions pertaining thereto. A member may authorize a general proxy only for motions to recess, adjourn or procedural matters. Each proxy to be effective shall be signed by the member assigning his or her vote and shall contain the date and time of day that the proxy is signed. Proxies may not be counted for a quorum. A proxy may be used in subcommittee or full committee. All proxies must be filed with the staff director and be available for inspection at any time.

3. A rollcall of the members may be had upon the request of five or more members present or, in the case of subcommittees, on the request of one-fifth of a majority.

4. (a) The Committee on Armed Services of the House of Representatives shall be organized to consist of the following standing subcommittees:

"The Intelligence and Military Application of Nuclear Energy Subcommittee" which shall have legislative jurisdiction over the military application of nuclear energy, including research and development related thereto; intelligence matters related to national security; and related oversight. The subcommittee also has oversight responsibilities with regard to international arms control and disarmament.

"The Seapower and Strategic and Critical Materials Subcommittee" which shall have legislative jurisdiction over procurement and construction of naval vessels; sealift; antisubmarine warfare; disposal of naval vessels; strategic and critical materials necessary for the national defense; naval petroleum reserves; and related legislative oversight.

"The Investigations Subcommittee" which shall have legislative jurisdiction over Armed Services Procurement Regulations and related procurement matters; organization of the Department of Defense, including proposed reorganizations; commissaries and exchanges, clubs and related nonappropriated funds activities of the Armed Forces; and related legislative oversight; and investigative authority in relation to the committee's general oversight responsibilities.

"The Research and Development Subcommittee" which shall have legislative jurisdiction over annual authorization for research and development; airlift; and related oversight.

"The Military Installations and Facilities Subcommittee" which shall have legislative jurisdiction over military construction; real estate acquisitions and disposals; housing and support facilities; base closures; real estate generally; Civil Defense; and related legislative oversight.

"The Military Personnel Subcommittee" which shall have legislative jurisdiction over authorized strengths; active-duty and reserve training; recruiting; Reserve Officers' Training Corps; Selective Service; military justice; enlistments and separations; awards; academies; human relations; medical care; and related legislative oversight.

"The Military Compensation Subcommittee" which shall have legislative jurisdiction over pay and allowances; promotion; retirement; and related legislative oversight.

(b) The Chairman shall refer legislation and other matters to the subcommittee of appropriate jurisdiction within two weeks unless, by a majority vote of the members of the full committee, consideration is to be by the full committee.

(c) The chairman of a standing subcommittee may designate a panel of such subcommittee to inquire into and take testimony on a specific matter within the jurisdiction of that subcommittee and to report to the subcommittee for further reference to the full committee as may be appropriate.

(d) The Chairman of the full committee, with approval of a majority of the members voting, a majority of the committee being present, shall have authority to discharge a subcommittee from consideration of any bill, resolution, or other matter referred thereto and have such measure or matter considered by the full committee.

(e) The full committee, and all subcommittees, may require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memorandums, papers, and documents as it deems necessary. Any such subpena may be authorized and issued by the committee, or subcommittee, in the conduct of any investigation or a series of investigations or activities, only when authorized by a majority of the members voting, a majority being present. The power to authorize and issue subpenas under this rule may be delegated to the Chairman of the committee pursuant to such rules and under such limitations as the committee may prescribe. Authorized subpenas shall be signed by the Chairman of the committee or by any member designated by the committee.

(f) The Chairman of the committee, or any member designated by the Chairman, may administer oaths to any witness.

(g) Chairmen of standing subcommittees who sit on a second subcommittee shall rank behind other members serving on that subcommittee as their primary subcommittee assignment.

5. Reports and recommendations of a subcommittee shall not be considered by the full committee until after the intervention of three calendar days from the time the report is approved by the subcommittee and printed hearings thereon are available to the members, except that this rule may be waived by a majority vote of a quorum of the committee.

6. Bills shall be taken up for hearing only when called by the Chairman of the full committee or subcommittee, or by a majority vote of a quorum of the full committee or a subcommittee. A majority of the full committee or subcommittee shall constitute a quorum for reporting or tabling a measure or recommendation. A quorum for the purpose of taking testimony and receiving evidence by either the full committee or any subcommittee shall be not less than two. A quorum for taking any other action shall be not less than one-third of the members of the full committee or subcommittee, unless otherwise indicated in the committee rules.

7. Any prepared statement to be presented by a witness to the committee or a subcommittee shall be submitted to the committee at least 48 hours in advance of presentation and shall be distributed to all members of the committee or subcommittee at least 24 hours in advance of delivery. If a prepared statement contains security information bearing a classification of secret or higher, the statement shall be made available in the committee room to all members of the committee at least 24 hours in advance of delivery; however, no such statement shall be removed from the committee offices. The requirement of this rule may be waived upon a majority vote of the full committee or any subcommittee, a quorum being present.

All national security information bearing a classification of secret or higher which has been received by the committee or a subcommittee of the Committee on Armed Services shall be deemed to have been received by the committee in executive session and shall be given appropriate safekeeping.

The Chairman of the full committee shall, with the approval of the full committee, establish such procedures as in his judgment may be necessary to prevent the unauthorized disclosure of any national security information received by the committee classified as secret or higher. Such procedures shall, however, ensure access to this information by any member of the committee or any other member of the House of Representatives who has requested the opportunity to review such material.

8. When a witness is before the committee, members of the committee may put questions to the witness only when they have been recognized by the Chairman for that purpose.

9. Members of the committee who so desire shall have not to exceed five minutes to interrogate each witness until such time as each member has had an opportunity to interrogate such witness; thereafter, additional time for questioning witnesses by members is discretionary with the Chairman.

10. Questions put to witnesses before the committee shall be pertinent to the bill or other subject matter that may be before the committee for consideration.

11. The time any one member may address the committee on any bill, motion or other matter under consideration by the committee shall not exceed five minutes, and then only when he has been recognized by the Chairman, except that this time limit may be exceeded by unanimous consent. Any member, upon request, shall be recognized for not to exceed five minutes to address the committee on behalf of an amendment which he has offered to any pending bill or resolution.

12. No private bill will be reported by the committee if there are two or more dissenting votes. Private bills so rejected by the committee will not be reconsidered during the same Congress unless new evidence sufficient to justify a new hearing has been presented to the Congress.

(13) (a) Each committee or subcommittee meeting for the transaction of business, including the markup of legislation, shall be open to the public except when the committee or subcommittee, in open session and with a majority being present, determines by rollcall vote that all or part of the remainder of the meeting on that day shall be closed to the public: *Provided, however,* That no person other than members of the committee and/or subcommittee and such congressional staff and such departmental representatives as they may authorize shall be present at any business or markup session which has been closed to the public.

(b) Each hearing conducted by the full committee or subcommittee shall be open to the public except when the full committee or subcommittee, in open session and with a majority present, determines by rollcall vote that all or part of the remainder of that hearing on that day shall be closed to the public because disclosure of testimony, evidence, or other matters to be considered would endanger the national security or would violate any law or rule of the House of Representatives. No member may be excluded from nonparticipatory attendance at any hearing of the full committee or subcommittee, unless the House of Representatives shall by majority vote authorize the full committee or subcommittee, for purposes of a particular series of hearings on a particular article of legislation or on a particular subject of investigation, to close its meetings to members by the same procedures designated in this rule for closing hearings to the public: *Provided, however,* That the full committee or the subcommittee may by the same procedure vote to close one subsequent day of hearing.

(c) The full committee and each subcommittee shall make public announcement of the date, place and subject matter of the full committee or subcommittee hearing at least one week before the commencement of the hearing. However, if the full committee or subcommittee determines that there is good cause to begin the hearing sooner, it shall make the announcement at the earliest possible date. Any announcement made under this subparagraph shall be promptly published in the Daily Digest.

(d) The full committee and each subcommittee shall, insofar as is practicable, require each witness who is to appear before it to file with the committee (in advance of his or her appearance) a written statement of the proposed testimony and to limit the oral

presentation at such appearance to a brief summary of his or her argument.

(e) No point of order shall lie with respect to any measure reported by the full committee or any subcommittee on the ground that hearings on such measure were not conducted in accordance with the provisions of the Committee Rules; except that a point of order on that ground may be made by any member of the full committee or subcommittee which reported the measure if, in the full committee or subcommittee, such point of order was (A) timely made and (B) improperly overruled or not properly considered.

14. If, at any time of approval of any measure or matter by the committee, any member of the committee gives timely notice of intention to file supplemental, minority, or additional views, that member shall be entitled to not less than three calendar days (excluding Saturdays, Sundays, and legal holidays) in which to file such views, in writing and signed by that member, with the staff director of the committee. All such views so filed by one or more members of the committee shall be included within, and shall be a part of, the report filed by the committee with respect to that measure or matter.

15. The result of each rollcall in any meeting of the committee shall be made available by the committee for inspection by the public at reasonable times in the offices of the committee. Information so available for public inspection shall include a description of the amendment, motion, order, or other proposition and the name of each member voting for and each member voting against such amendment, motion, order, or proposition, and whether by proxy or in person, and the names of those members present but not voting. With respect to each record vote by the committee on each motion to report any bill or resolution of public character, the total number of votes cast for, and the total number of votes cast against, the reporting of such bill or resolution shall be included in the committee report.

16. The attendance records of members at committee meetings (including subcommittee meetings) shall be available for public inspection in the offices of the committee.

17. The staffing of the full committee and the standing subcommittees shall be subject to the appropriate rules of the House of Representatives, including, among other things, the provisions of Rule XI, Clause 5(d).

RULES OF PROCEDURE, COMMITTEE ON THE JUDICIARY, 95TH CONGRESS

(Mr. RODINO asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RODINO. Mr. Speaker, on Thursday of last week the Judiciary Committee adopted its Rules of Procedure for the 95th Congress. Pursuant to clause 2 of rule XI, I am pleased to submit them for publication in the RECORD:

RULES OF PROCEDURE, COMMITTEE ON THE JUDICIARY, 95TH CONGRESS

(Adopted February 3, 1977)

RULE I

The Rules of the House of Representatives are the rules of the Committee on the Judiciary and its subcommittees with the following specific additions thereto.

RULE II. COMMITTEE MEETINGS

(a) The regular meeting day of the Committee on the Judiciary for the conduct of its business shall be on Tuesday of each week while the Congress is in session.

(b) Additional meetings may be called by the Chairman and a regular meeting of the Committee may be dispensed with when, in the judgment of the Chairman, there is no need therefor.

(c) At least 24 hours (excluding Saturdays, Sundays, and legal holidays) before each scheduled Committee meeting, each Member of the Committee shall be furnished a list of the bill(s) and subject(s) to be considered and/or acted upon at the meeting. Bills or subjects not listed shall be subject to a point of order unless their consideration is agreed to by a two-thirds vote of the Committee.

(d) Committee and subcommittee meetings for the transaction of business, i.e., meetings other than those held for the purpose of taking testimony, shall be open to the public except when the Committee or subcommittees, by majority vote, determine otherwise.

(e) Every motion made to the Committee and entertained by the Chairman shall be reduced to writing upon the demand of any Member, and a copy made available to each Member present.

(f) In all subcommittee proceedings where a vote on a motion to report a bill to the full Committee results in a tie, such bill shall be reported to the full Committee without recommendation.

(g) For purposes of taking any action at a meeting of the full Committee or any subcommittee thereof, a quorum shall be constituted by the presence of not less than one-third of the Members of the Committee or subcommittee, except that a full majority of the Members of the Committee or subcommittee shall constitute a quorum for purposes of reporting a measure or recommendation from the Committee or subcommittee, closing a meeting to the public, or authorizing the issuance of a subpoena.

(h) A complete transcript shall be made of any full Committee meeting, or any portion thereof, upon the request of any Member of the Committee made before the close of business of the preceding day, excluding Saturdays, Sundays, and legal holidays.

RULE III. HEARINGS

(a) The Committee or any subcommittee shall make public announcement of the date, place and subject matter of any hearing to be conducted by it on any measure or matter at least 1 week before the commencement of that hearing, unless the Committee or the subcommittee before which such hearing is scheduled, determines that there is good cause to begin such hearing at an earlier date, in which event it shall make public announcement at the earliest possible date.

(b) Committee and subcommittee hearings shall be open to the public except when the Committee or subcommittee, by majority vote, determine otherwise.

(c) For purposes of taking testimony and receiving evidence before any subcommittee, a quorum shall be constituted by the presence of two Members. For purposes of taking testimony and receiving evidence before the full Committee, a quorum shall be constituted by the presence of 10 Members.

(d) In the course of any hearing each Member shall be allowed 5 minutes for the interrogation of a witness until such time as each Member who so desires has had an opportunity to question the witness.

RULE IV. PROXY VOTING

A vote by any Member of the Committee with respect to any measure or matter being considered in the Committee or in subcommittee may be cast as proxy if the proxy authorization is in writing, asserts that the Member is absent on official business or is otherwise unable to be present at the meeting of the Committee, designates the person who is to execute the proxy authorization, and is limited to a specific measure or matter and any amendments or motion pertaining thereto; except that a Member may authorize a general proxy for motions to recess, adjourn or other procedural matters. Each proxy to be effective shall be signed by the Member assigning his or her vote and shall contain the date and time that the proxy is signed. Proxies may not be counted for a quorum.

RULE V. BROADCASTING

(a) Whenever any hearing or meeting conducted by the Committee or any subcommittee is open to the public, the Committee or subcommittee, as the case may be, may permit that hearing or meeting to be covered, in whole or in part, by television broadcast, radio broadcast, and still photography, or by any of such methods of coverage, under the following rules:

(1) If the television or radio coverage of the hearing or meeting is to be presented to the public as live coverage, that coverage shall be conducted and presented without commercial sponsorship.

(2) No witness served with a subpoena by the Committee or subcommittee, as the case may be, shall be required against his will to be photographed at any hearing or meeting or to give evidence or testimony while the broadcasting of that hearing or meeting, by radio or television, is being conducted. At the request of any such witness who does not wish to be subjected to radio, television, or still photography coverage, all lenses shall be covered and all microphones used for coverage turned off.

(3) Not more than four television cameras, operating from fixed positions, shall be permitted in a hearing room. The allocation among the television media of the positions of the number of television cameras permitted in a hearing room shall be in accordance with fair and equitable procedures devised by the Executive Committee of the Radio and Television Correspondents' Galleries.

(4) Television cameras shall be placed so as not to obstruct in any way the space between any witness giving evidence or testimony and any Member of the Committee or subcommittee, as the case may be, or the visibility of that witness and that Member to each other.

(5) Television cameras shall not be placed in positions which obstruct unnecessarily the coverage of the hearing or meeting by other media.

(6) Equipment necessary for coverage by the television and radio media shall not be installed in, or removed from, the hearing room while the Committee or subcommittee, as the case may be, is in session.

(7) Floodlights, spotlights, and flashguns shall not be used in providing any method of coverage of the hearing or meeting, except that the television media may install additional lighting in the hearing room, without cost to the Government, in order to raise the ambient lighting level in the hearing room to the lowest level necessary to provide adequate television coverage of the hearing at the then current state of the art of television coverage.

(8) Not more than five press photographers shall be permitted to cover a hearing or meeting by still photography. In the selection of these photographers, preference shall be given to photographers from Associated Press Photos and United Press International Newspictures. If request is made by more than five of the media for coverage of the hearing by still photography, that coverage shall be made on the basis of a fair and equitable pool arrangement devised by the Standing Committee of Press Photographers.

(9) Photographers shall not position themselves, at any time during the course of the hearing or meeting, between the witness table and the Members of the Committee or subcommittee, as the case may be.

(10) Photographers shall not place them-

selves in positions which obstruct unnecessarily the coverage of the hearing or meeting by the other media.

(11) Personnel providing coverage by the television and radio media shall be then currently accredited to the Radio and Television Correspondents' Galleries.

(12) Personnel providing coverage by still photography shall be then currently accredited to the Press Photographers' Gallery.

(13) Personnel providing coverage by the television and radio media and by still photography shall conduct themselves and their coverage activities in an orderly and unobtrusive manner.

(b) Subcommittees may authorize the broadcasting or photographing of any of their public hearings or meetings without the specific permission of the Committee.

RULE VI. STANDING SUBCOMMITTEES

There shall be the following seven standing subcommittees of the Committee on the Judiciary as follows:

(a) Subcommittee on Immigration, Citizenship, and International Law: Immigration and Naturalization, Treaties and International Agreements, Passports, Admiralty and appropriate oversight.

(b) Subcommittee on Administrative Law and Governmental Relations: Administrative Law, Claims against the United States, Public Contract Law, Relations between States and appropriate oversight.

(c) Subcommittee on Courts, Civil Liberties, and the Administration of Justice: U.S. Attorneys and U.S. Marshals, Courts, Judicial Ethics, Prisons, Paroles, Patents, Trademarks, Copyrights and appropriate oversight.

(d) Subcommittee on Civil and Constitutional Rights: Civil Rights and Liberties, Bankruptcy and appropriate oversight.

(e) Subcommittee on Monopolies and Commercial Law: Antitrust, Judgeships, Economic Regulation generally and appropriate oversight.

(f) Subcommittee on Crime: Prevention of Crime, Problems of Criminal Offenders and appropriate oversight.

(g) Subcommittee on Criminal Justice: Federal Criminal Code, Rules of Criminal Procedure, Rules of Civil Procedure and appropriate oversight.

RULE VII. POWERS AND DUTIES OF SUBCOMMITTEES

Each subcommittee is authorized to meet, hold hearings, receive evidence, and report to the full Committee on all matters referred to it or under its jurisdiction. Subcommittee chairmen shall set dates for hearings and meetings of their respective subcommittees after consultation with the chairman and other subcommittee chairmen with a view toward avoiding simultaneous scheduling of full Committee and subcommittee meetings or hearings whenever possible.

RULE VIII. NON-LEGISLATIVE REPORTS

No report of the Committee or a subcommittee which does not accompany a measure or matter for consideration by the House shall be published unless all Members of the Committee or subcommittee issuing the report shall have been apprised of such report and been given the opportunity to give notice of intention to file supplemental, additional, or dissenting views as part of the report. In no case shall the time in which to file such views be less than three calendar days (excluding Saturdays, Sundays, and legal holidays).

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. CORMAN (at the request of Mr. WRIGHT), for today, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. CORCORAN of Illinois), to revise and extend their remarks, and to include extraneous matter:)

Mr. SAWYER, for 5 minutes, today.
Mr. STEERS, for 5 minutes, today.
Mr. HAGEDORN, for 5 minutes, today.

(The following Members (at the request of Mr. VOLKMER) and to revise and extend their remarks and include extraneous matter:)

Mr. ANNUNZIO, for 5 minutes, today.
Mr. GONZALEZ, for 5 minutes, today.
Mr. BARNARD, for 5 minutes, today.
Mr. KOCH, for 10 minutes, today.
Mr. PATTERSON of California, for 5 minutes, today.
Ms. HOLTZMAN, for 15 minutes, today.
Mr. MOSS, for 15 minutes, today.
Mr. ZABLOCKI, for 5 minutes, today.
Mr. BEDELL, for 5 minutes, today.
Mr. BROWN of California, for 10 minutes, today.
Mr. MAZZOLI, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. CORCORAN of Illinois) and to include extraneous matter:)

Mr. SAWYER.
Mr. SARASIN.
Mr. HYDE in two instances.
Mr. STEERS in two instances.
Mr. BURGENER.
Mr. SKUBITZ.
Mr. WYDLER.
Mr. WHITEHURST.
Mr. DERWINSKI in two instances.
Mr. HAGEDORN.
Mr. FINDLEY.
Mr. STEIGER.
Mr. GOLDWATER in two instances.
Mr. ABDNOR in four instances.
Mr. LAGOMARSINO in two instances.
Mr. MARTIN.

(The following Members (at the request of Mr. VOLKMER) and to include extraneous matter:)

Mr. GONZALEZ in three instances.
Mr. ANDERSON of California in three instances.
Mr. TRAXLER in two instances.
Mr. MAZZOLI.
Mrs. BURKE of California.
Mr. MOORHEAD of Pennsylvania.
Mr. DELANEY.
Mr. LONG of Maryland.
Mr. FLORIO.
Mr. JACOBS in two instances.
Mr. HAMILTON in two instances.
Mrs. COLLINS of Illinois.
Mr. BALDUS.
Mr. BOLAND.
Mr. APPLEGATE.
Mr. STUDDS.
Mr. FORD of Tennessee.
Mr. REUSS in two instances.
Mr. COTTER.
Mr. GEPHARDT.
Mr. WAXMAN.
Mr. FUQUA in five instances.
Mr. FRASER.
Mr. MURPHY of Pennsylvania.
Mr. ZABLOCKI.
Mr. MCDONALD in three instances.
Mr. ASPIN in five instances.
Mr. MOAKLEY in two instances.
Mr. DOWNEY.
Mrs. SCHROEDER.
Mr. PICKLE in five instances.
Mr. RISENHOOVER.
Mr. JONES of Oklahoma.
Miss OAKAR.
Mr. BRADEMAS.
Mr. BAUCUS.

ENROLLED JOINT RESOLUTION SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a joint resolution of the House of the following title, which was thereupon signed by the Speaker:

H.J. Res. 227. Joint resolution making urgent power supplemental appropriations for the Department of the Interior, Southwestern Power Administration for the fiscal year ending September 30, 1977, and for other purposes.

ADJOURNMENT

Mr. MAZZOLI. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 38 minutes p.m.), under its previous order, the House adjourned until tomorrow, February 9, 1977, at 11 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

689. A letter from the Director, Office of Management and Budget, Executive Office of the President, transmitting further information to accompany the previously submitted report (Executive Communication No. 403) on the reapportionment of the appropriation to the Southwestern Power Administration for operation and maintenance for fiscal year 1977, pursuant to section 3679(e)(2) of the Revised Statutes, as amended; to the Committee on Appropriations.

690. A letter from the Director, Office of Management and Budget, Executive Office of the President, transmitting a report that various appropriations for fiscal year 1977 have been apportioned on a basis which indicates a necessity for a supplemental estimate of appropriation, in order to permit payment of pay increases granted pursuant to law, pursuant to section 3679(e(2) of the Revised Statutes, as amended; to the Committee on Appropriations.

691. A letter from the Assistant Secretary of Defense (Comptroller), transmitting certification that during the transition quarter no use was made of funds appropriated in the Defense Appropriation Act, 1976, or the Military Construction Appropriation Act, 1976, to make payments under contracts in a foreign country except where it was determined that the use of foreign currencies was not feasible, pursuant to sections 734 and 109 of the respective acts; to the Committee on Appropriations.

692. A letter from the Assistant Secretary of the Navy (Installations and Logistics), transmitting notice of the proposed transfer

of the obsolete guided missile cruiser ex-*Little Rock* (ex CG–4) and the destroyer ex-*The Sullivans* (ex DD–537) to the City of Buffalo, N.Y., pursuant to 10 U.S.C. 7308(c); to the Committee on Armed Services.

693. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 1–221, to transfer the approval of taxicab insurance rates from the Council to the Superintendent of Insurance, pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

694. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 1–222, to correct and abate nuisances on private property; and for other purposes, pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

695. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 1–223, to protect the habitability of rental units subject to notices to vacate, and for other purposes, pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

696. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 1–224, to authorize the Mayor of the District of Columbia to operate a program of resocialization furloughs for the residents of the institutions and facilities of the District of Columbia government operated by the District of Columbia Department of Corrections, and for other purposes, pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

697. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of the corrected enrollment of Council Act No. 1–225, to amend laws of the Council affecting elections and Latino community development; and for other purposes, pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

698. A letter from the Secretary of the Interior, transmitting a report on activities carried out by the Geographical Survey during calendar yoar 1976 in areas outside the national domain, pursuant to section 2 of Public Law 87–626, as amended [43 U.S.C. 31 (c)]; to the Committee on Interior and Insular Affairs.

699. A letter from the Chairman, Indian Claims Commission, transmitting the final determination of the Commission in Docket No. 342–G, *The Seneca Nation of Indians*, v. *The United States of America, Defendant*, pursuant to section 21 of the Indian Claims Commission Act; to the Committee on Interior and Insular Affairs.

700. A letter from the Chairman, Civil Aeronautics Board, transmitting a report on laws and regulations administered by the Board which require, permit, or induce the inefficient use of energy, pursuant to section 382(a)(3) of Public Law 94–163; jointly to the Committees on Interstate and Foreign Commerce and Public Works and Transportation.

701. A letter from the Deputy Comptroller General of the United States, transmitting a draft of proposed legislation to repeal sections 3478 and 3479 of the Revised Statutes (31 U.S.C. 204 and 205), which impose a requirement upon persons prosecuting claims, either as attorney or on their own account, to take the oath of allegiance and to support the Constitution of the United States; to the Committee on the Judiciary.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. SISK: Committee on Rules. House Resolution 252. Resolution to authorize and direct the Committee on Standards of Official Conduct to determine whether Members of the House, their immediate families, or their associates accepted anything of value, directly or indirectly, from the Government of the Republic of Korea or representatives thereof; with amendments (Rept. No. 95–10). Referred to the House Calendar.

Mr. LONG of Louisiana: Committee on Rules. House Resolution 270. A resolution providing for the consideration of H.R. 692. A bill to amend the Small Business Act and the Small Business Investment Act of 1958 to increase loan authorization and surety bond guarantee authority; and to improve the disaster assistance, certificate of competency, and small business set-aside programs (Rept. No. 95–11). Referred to the House Calendar.

Mr. GIAIMO: Committee on the Budget. House Concurrent Resolution 110. Concurrent resolution revising the congressional budget for the U.S. Government for the fiscal year 1977 (Rept. No. 95–12). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BEDELL:

H.R. 3221. A bill to revise the method by which adjustments in the pay for Members of Congress are approved and to provide that any such adjustment shall take effect at the beginning of the Congress next following the Congress in which they are so approved; to the Committee on Post Office and Civil Service.

By Mr. BENNETT (for himself, Mr. REUSS, Mr. MOORHEAD of Pennsylvania, and Mr. MITCHELL of Maryland):

H.R. 3222. A bill to amend the Defense Production Act of 1950, as amended; jointly, to the Committees on Banking, Finance and Urban Affairs, and Government Operations.

By Mr. BURGENER:

H.R. 3223. A bill to amend title 38 of the United States Code so as to provide that public or private retirement, annuity, or endowment payments (including monthly social security insurance benefits) shall not be included in computing annual income for the purpose of determining eligibility for pension under chapter 15 of that title; to the Committee on Veterans' Affairs.

By Mr. COCHRAN of Mississippi (for himself and Mr. BEARD of Tennessee):

H.R. 3224. A bill appropriating funds for construction of the Natchez Trace Parkway; to the Committee on Appropriations.

By Mr. COHEN (for himself, Mr. ANDREWS of North Dakota, Mr. EILBERG, Mrs. FENWICK, Mr. FISH, Mr. GLICKMAN, Mr. HOWARD, Mr. KREBS, Mr. LEHMAN, Mr. LENT, Mr. MAZZOLI, Ms. MIKULSKI, Mr. MINETA, Mr. MOORHEAD of California, Mr. ROE, Mr. ROSENTHAL, Mr. ROYBAL, Mr. SIMON, Mr. BRODHEAD, Mr. FRASER, Mr. CORNWELL, Mr. CORRADA, Mr. DUNCAN of Oregon, Mr. HORTON, and Mr. QUIE):

H.R. 3225. A bill to amend title 38 of the United States Code in order to provide that the fees payable to agents or attorneys who represent veterans in allowed claims under the veterans laws shall be paid by the Administrator rather than deducted from amounts awarded under the claims; to the Committee on Veterans' Affairs.

By Mr. COHEN (for himself, Mr. JENRETTE, Mr. MIKVA, Mr. MITCHELL of New York, Mr. CHARLES WILSON of Texas, Mr. WAXMAN, and Mr. BADILLO):

H.R. 3226. A bill to amend title 38 of the United States Code in order to provide that the fees payable to agents or attorneys who represent veterans in allowed claims under the veterans laws shall be paid by the Administrator rather than deducted from amounts awarded under the claims; to the Committee on Veterans' Affairs.

By Mr. COHEN (for himself, Mr. ANDREWS of North Dakota, Mr. EILBERG, Mrs. FENWICK, Mr. FISH, Mr. GLICKMAN, Mr. HOWARD, Mr. KREBS, Mr. LEHMAN, Mr. LENT, Mr. MAZZOLI, Ms. MIKULSKI, Mr. MINETA, Mr. MOORHEAD of California, Mr. ROE, Mr. ROSENTHAL, Mr. ROYBAL, Mr. SIMON, Mr. BRODHEAD, Mr. FRASER, Mr. CORNWELL, Mr. CORRADA, Mr. DUNCAN of Oregon, Mr. HORTON, and Mr. QUIE):

H.R. 3227. A bill to amend title II of the Social Security Act to provide that attorneys' fees allowed in administrative or judicial proceedings under that title (or under title XVIII of such act), in cases where the claimants are successful, shall be paid by the Secretary of Health, Education, and Welfare rather than deducted from the amounts awarded claimants; to the Committee on Ways and Means.

By Mr. COHEN (for himself, Mr. JENRETTE, Mr. MIKVA, Mr. MITCHELL of New York, Mr. CHARLES WILSON of Texas, Mr. WAXMAN, and Mr. BADILLO):

H.R. 3228. A bill to amend title II of the Social Security Act to provide that attorneys' fees allowed in administrative or judicial proceedings under that title (or under title XVIII of such act), in cases where the claimants are successful, shall be paid by the Secretary of Heath, Education, and Welfare rather than deducted from the amounts awarded claimants; to the Committee on Ways and Means.

By Mr. COHEN (for himself, Mr. ANDERSON of California, Mr. ANDERSON of Illinois, Mr. BADILLO, Mr. BEARD of Rhode Island, Mrs. COLLINS of Illinois, Mr. CONTE, Mr. DODD, Mr. EDGAR, Mr. FUQUA, Mr. GLICKMAN, Mr. GOODLING, Mr. HARKIN, Mr. KOCH, Mr. KREBS, Mr. LEACH, Mr. LEHMAN, Mr. LENT, Mr. MAGUIRE, Mr. MCKINNEY, Ms. MIKULSKI, Mr. MITCHELL of Maryland, Mr. MOAKLEY, Mr. MOORHEAD of California, and Mr. MURPHY of Illinois):

H.R. 3229. A bill to amend the Social Security Act to direct the Secretary of Health, Education, and Welfare to develop standards relating to the rights of patients in certain medical facilities; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. COHEN (for himself, Mr. PRESSLER, Mr. RICHMOND, Mr. ROE, Mr. SCHEUER, Mr. SIMON, Mr. STOKES, Mr. STUDDS, Mr. TRIBLE, Mr. WAXMAN, Mr. WEISS, Mr. CHARLES WILSON of Texas, Mr. SARASIN, and Mr. FREY):

H.R. 3230. A bill to amend the Social Security Act to direct the Secretary of Health, Education, and Welfare to develop standards relating to the rights of patients in certain medical facilities; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. COHEN (for himself, Mr. BADILLO, Mr. BEARD of Rhode Island, Mrs. COLLINS of Illinois, Mr. FISH, Mr. KOCH, Mr. JENRETTE, Mr. LEHMAN, Mr. MCKINNEY, Mr. MOORHEAD of California, Mr. ROE, Mr. WEISS, Mr. YOUNG of Florida, Mr. BAUCUS, Mr. SARASIN, and Mr. MIKVA):

H.R. 3231. A bill to provide for quality assurance and utilization contract in home health care under the medicare, medicaid, and social services programs in accordance with a plan to be developed by a commission specifically established for that purpose; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. COHEN (for himself, Mr. BADILLO, Mr. BEARD of Rhode Island, Mrs. COLLINS of Illinois, Mrs. FENWICK, Mr. HARKINS, Mr. LEACH, Mr. LEHMAN, Mr. MCKINNEY, Mr. MOAKLEY, Mr. MOORHEAD of California, Mr. ROE, Mr. RICHMOND, Mr. STOKES, Mr. YOUNG of Florida, Mrs. MEYNER, and Mr. MIKVA):

H.R. 3232. A bill to impose conditions upon the right of certain institutions and organizations to require transfers of property or cash payments from aged individuals in return for the provision of continuing care to such individuals; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. CORNWELL:

H.R. 3233. A bill to amend title 38 of the United States Code to require that Veterans' Administration benefit checks be mailed in time for delivery before the regularly scheduled delivery day whenever that day falls on a Saturday, Sunday, or legal holiday; to the Committee on Veterans' Affairs.

H. Res. 267. Resolution to establish a Commission on South Korean Influence in Congressional Affairs; to the Committee on Rules.

By Mr. SCHULZE:

H. Res. 268. Resolution concerning the use and possession of lethal chemicals and weapons; jointly, to the Committees on Armed Services and International Relations.

By Mr. WOLFF (for himself, and Mr. BURKE of Florida):

H. Res. 269. Resolution to provide funding for the Select Committee on Narcotics Abuse and Control; to the Committee on House Administration.

MEMORIALS

Under clause 4 of rule XXII:

11. The SPEAKER presented a memorial of the Legislature of the State of Idaho, relative to the proposed designation of a grizzly bear critical habitat in Idaho, which was referred to the Committee on Merchant Marine and Fisheries.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. DOWNEY:

H.R. 3307. A bill for the relief of Anthony Casamento; to the Committee on Armed Services.

By Mr. GOODLING:

H.R. 3308. A bill for the relief of Sigurd Thorsteinsson; to the Committee on the Judiciary.

H.R. 3309. A bill for the relief of Ulrich L. Peters; to the Committee on the Judiciary.

By Mr. HEFTEL:

H.R. 3310. A bill for the relief of Librado Perez; to the Committee on the Judiciary.

By Mr. JACOBS:

H.R. 3311. A bill for the relief of Midwest Cruises, Inc.; to the Committee on Merchant Marine and Fisheries.

By Mr. ROGERS (by request):

H.R. 3312. A bill for the relief of Lt. Col. Donald E. Weurz, U.S. Army; to the Committee on the Judiciary.

By Mr. ROUSSELOT:

H.R. 3313. A bill for the relief of Mark Charles Mieir and Liane Maria Mieir; to the Committee on the Judiciary.

By Mr. TAYLOR:

H.R. 3314. A bill for the relief of Tri-State Motor Transit Co.; to the Committee on the Judiciary.

By Mr. WEAVER:

H.R. 3315. A bill for the relief of Gunther Griffel; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

42. By the SPEAKER: Petition of Gail E. Crooks, White Plains, Md., and others, relative to the proposed congressional pay increase; to the Committee on Post Office and Civil Service.

43. Also, petition of Benjamin G. Nicasio, Bangin-Agoncillo, Batangas, Philippines, relative to his veteran's educational benefits; to the Committee on Veterans' Affairs.

EXTENSIONS OF REMARKS

YOU CAN STILL REJECT AN OSHA INSPECTION

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1977

Mr. HANSEN. Mr. Speaker, American businessmen and farmers should continue to refuse to waive their constitutional rights and reject inspections by OSHA. A Supreme Court order of February 3 granted OSHA the authority to temporarily continue inspections in all areas of the Nation, but the judgment does not prevent each individual from rejecting an OSHA inspection based on Federal court precedent set in Federal courts in Idaho, Texas, Ohio, New Mexico, and Georgia as well as State courts in Maryland, Kentucky, Oregon, Alaska, and Utah.

The order handed down by Associate Justice William H. Rehnquist in response to an application by the U.S. Department of Labor stated:

I now grant in full the Government's request for a stay of the three-judge court order as it affects persons other than the respondent (Barlow's, Inc.).

The Court further pointed out, "The proposed stay will not affect the respondent in any way * * *"

Justice Rehnquist contends that—

In such a situation, where the decision of the District Court has invalidated a part of an Act of Congress, I think that the Act of Congress, presumptively constitutional as are all such Acts, should remain in effect pending a final decision on the merits by this Court.

This decision means that the OSHA inspector can still knock but, like Bill Barlow, the businessman and farmer can refuse to let him in on fourth amendment grounds. The fact remains that OSHA's inspection provisions have been declared unconstitutional in the District of Idaho and that fact has not been changed for anyone willing to assert his rights. Truely Mr. Speaker, only the meek shall inherit the OSHA inspection.

A copy of Justice Rehnquist's decision follows:

JUSTICE REHNQUIST'S DECISION

Mr. JUSTICE REHNQUIST, Circuit Justice.

The Solicitor General, on behalf of the Secretary of Labor, applies for a partial stay of an injunction issued by a three-judge District Court in the District of Idaho. That court held that § 8(a) of the Occupational Health and Safety Act, 29 U.S.C. § 657(a), allowing warrantless entry and inspection of work places for OSHA violations, is in conflict with the Fourth Amendment of the United States Constitution, and enjoined further searches by the Secretary's representative pursuant to that section. The Government does not seek a stay of the order insofar as it protects the respondent from future searches, but only as it protects persons not party to this suit. On January 25, 1977, I granted a stay of the order to the extent that the order restrains the applicant's conduct outside of the District of Idaho.

Upon consideration of the response subsequently filed, I now grant in full the Government's request for a stay of the three-judge court order as it affects persons other than the respondent. On the merits of the Fourth Amendment question, the District Court relied on our decisions in *Camara* v. *Municipal Court*, 387 U.S. 523 (1967), and *See* v. *Seattle*, 387 U.S. 541 (1967). The Government relies on our decisions in *Colonnade Catering Corp.* v. *United States*, 397 U.S. 72 (1970) and *United States* v. *Biswell*, 406 U.S. 311 (1972) to urge a contrary result. The proposed stay will not affect the respondent in any way, and there are no equities weighing against it which may be asserted by persons actually before the Court. In such a situation, where the decision of the District Court has invalidated a part of an Act of Congress, I think that the Act of Congress, presumptively constitutional as are all such Acts, should remain in effect pending a final decision on the merits by this Court.

The Government's application for a stay is accordingly granted pending the timely filing of a notice of appeal and jurisdictional statement, and the disposition of the same by this Court.

EMERGENCY NATURAL GAS ACT

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1977

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, the events of the past week, climaxed by last Wednesday's action of the Congress resulting in passage of the Emergency Natural Gas Act, document the almost frightening state of unpreparedness for such emergencies in which we live. It should be clear to all Members of the Congress that we cannot long continue to function if our policy is no policy until an emergency or a crisis occurs. This has happened to us before, and we have been lucky enough to emerge with only slight damage to our economy. We may be lucky again and escape with only minimal bad effects and with our spirit and our hopes still in place. It is still too early to tell.

I find it distressing to learn that had this situation involved a clear threat to our national security, all of the time-tested capacity of the Defense Production Act could have been called upon by President Carter. The need to give priority treatment to priority needs could have been met. The necessary allocation of materials, including fuel, could have been made. The mechanisms for Government cooperation with business, industry, and labor capable of making our state of unpreparedness over into preparedness would have sprung into action immediately.

Mr. Speaker, such steps were not taken because we do not have a policy enabling the President or any agency of Government to meet such domestic economic production needs threatened by such emergencies as the natural gas shortage head-on. Moreover, we are not able to invoke the terms of the Defense Production Act even under such cata-

strophic conditions as are evidenced by the current energy crisis.

Consider the nature of the following:

As many as 2 to 2.5 million unemployed—an estimated 1 million in the State of Ohio alone.

The Nation now faces a $5 billion fuel bill, if not higher.

No one knows, nor is it probable that we ever will know what has actually been lost in terms of industrial production.

The President's chief economic adviser compares that item to a "tax increase," and concedes it may have blunted the front edge of the President's economic stimulus package sufficient to require revision.

Mr. Speaker, we do not have a policy to deal with this type of emergency—with this type of economic production crisis.

We do not have such a policy, but we need one very badly.

It is my intention to file legislation designed to deal with these types of economic conditions later this month.

This legislation will emphasize the need to provide essentially the same capacity to handle domestic economic crises and emergencies as can be provided for defense needs through the terms of the Defense Production Act.

It will be aimed at providing the necessary authority to act in time to protect the Nation's productive capacity to meet essential economic needs before they build up to massive industrial cutbacks and a domino-like trend toward layoffs of workers.

Just as we must always be able to protect the Nation's industrial capacity if we are to meet our defense needs so I believe we must protect our productive capacity to meet continual domestic economic needs. This legislation would intend to do just that.

If we can mobilize our resources to meet defense emergencies, so we also ought to be able to mobilize our resources to avert economic disasters brought on by such events as dominate today's news.

We need a capacity to act before the fact of crisis. Only in this way can we assure ourselves of continued economic stability.

Mr. Speaker, it would be my intention, upon introduction of this legislation, to initiate hearings on its provisions before the Subcommittee on Economic Stabilization of the House Committee on Banking, Finance and Urban Affairs.

CONGRESSIONAL OVERSIGHT OF BASE REALIGNMENTS

HON. WILLIAM S. COHEN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1977

Mr. COHEN. Mr. Speaker, today, I am introducing legislation which establishes permanent procedures for congressional oversight of major base closures and reductions. Nearly 40 Representatives have already joined me in cosponsoring this proposal.

This legislation would require the Department of Defense to submit detailed budgetary, economic, strategic, and environmental studies to the House and Senate Armed Services Committees prior to implementing a closure or major reduction of a domestic base. The bill applies to any Defense Department proposal to close a military installation or to reduce the authorized level of civilian personnel at a base by more than 1,000 persons, or 50 percent, whichever is smaller.

Under the provisions of the legislation, the Department would be required to notify the House and Senate Armed Services Committees that a military installation is a candidate for a closure or a significant reduction. If the Department were to decide to proceed with the realignment, the Secretary would have to provide the Committee with detailed studies—including estimates of unemployment compensation benefits, manpower retraining and relocation expenses, and military construction and rehabilitation costs—60 days before the reduction or closure could be carried out.

As many of my colleagues will recall, last year Congress amended the military construction bill to require these studies for base realignments during fiscal year 1977. My bill would continue these requirements beyond the end of the fiscal year, when they presently would expire.

We need this permanent legislation to enhance congressional oversight of base realignments and to insure that the socio-economic and strategic impact of these actions is more fully assessed by the Department of Defense. The bill would also provide affected communities with more time to adjust to the economic blow of a reduction or closure.

In the past, the Defense Department has frequently failed to adequately justify base realignments, which have a significant impact on the Federal budget, our national defense, and affected communities. Far too often, base closures and reductions have ended up costing the taxpayers more than they allegedly saved. This bill simply requires the Department of Defense to prove its case and will protect affected communities against arbitrary closures and reductions.

My own experience in dealing with the Air Force on the proposed reduction of Loring Air Force Base in Limestone, Maine, has underscored congressional wisdom in demanding increased accountability for military actions. Let me review the history of the proposed reduction of Loring, which will illustrate why this legislation is needed.

Last spring, the Maine delegation was advised that Loring was a candidate for an overall 81 percent reduction in manpower. Loss of these jobs would have a severe effect on northern Maine, an agricultural area which already has an unemployment rate of over 12 percent. Even more devastating, however, would be the ripple effect this cutback would have on local businesses which have sprung up in the area during the past 30 years to meet the needs of the base.

In light of the severe economic impact which the reduction of Loring would have on the State of Maine, the Maine delegation, working with the Governor and concerned citizens, has tried to determine why Loring was selected for reduction. We have asked if other uses for Loring, either by the Air Force or by one of the other services, have been considered. To date, we have recived no satisfactory response to either question.

We have asked if there has been a change in our national defense policy which has made the manned bomber obsolete. We have asked why Loring, the closest base to the Soviet Union, is no longer vital to our national security. And we have asked the Air Force to explain how it proposes to save $23 million by deactivating the base.

In the time that has elapsed since the preliminary decision to reduce Loring was announced last March, we have tried to secure answers to these and other questions, but to no avail.

Recently, the Air Force agreed to completely redo the draft environmental impact statement on Loring required by the National Environmental Policy Act. Hearings held in November in Maine clearly demonstrated that the first DEIS was riddled with inaccuracies, distortions, and omissions and needed significant revisions. Let me cite a conspicuous example. Most of the data in the original report was calculated using all of Aroostook County as the impact area, instead of the local labor market. Using Aroostook, which covers an area larger than Connecticut and Rhode Island combined, had the effect of diluting the socio-economic impact. Only after considerable pressure from the Maine Delegation and concerned citizens in Aroostook County did the Air Force finally agree to revise the report using the proper data base.

The people of Maine ask only that they be treated fairly, and this legislation will help insure that they are. If, in fact, the proposed reduction would result in significant savings, and if, in fact, Loring is no longer necessary for our national defense, the people of Maine will accept that decision because we have no other choice. What we ask is a full explanation and justification of the proposed reduction. This legislation would provide that explanation by requiring the Air Force to justify its case before the appropriate House and Senate Committees. The studies required by my bill will answer the many questions raised by the Maine Delegation and the people of Maine. They will tell us what the true cost of deactivating Loring will be in terms of increased unemployment, manpower retraining and relocation costs, military construction and increased Federal assistance to the affected communities. This bill will help insure that national security takes precedence in deciding questions of base closures and reductions and will help protect communities against arbitrary actions by the Pentagon.

To date, the following list of 37 Members have cosponsored this legislation:

Mr. Akaka, Mr. Baucus, Mr. Bauman, Mr. Boland, Mr. Clay, Mr. Cleveland, Mr. Eilberg, Mr. Emery, Mr. Fascell, Mr. Gilman, Mr. Glickman, Mr. Hannaford, Mr. Harris.

Mr. Horton, Mr. Howard, Mr. Hughes, Mr. Ichord, Mr. Lagomarsino, Mr. Leach, Mr. LeFante, Mr. Mazzoli, Mr. McEwen, Mr. Mineta, Mr. Moakley, Mr. Murphy.

Mr. Panetta, Mr. Richmond, Mr. Roe, Mr. Roybal, Mr. Ruppe, Mr. Scheuer, Mr. Skelton, Mr. Stratton, Mr. Walker, Mr. Wilson of California, Mr. Won Pat, and Mr. Ertel.

If you wish to join us in cosponsoring this bill, please contact Susan Collins of my staff at extension 56306.

DR. THOMAS WALSH

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. MOAKLEY. Mr. Speaker, a fine man and dear neighbor, Thomas F. Walsh, D.D.S., died recently of a fatal heart attack in South Boston, after treating a patient in his office on Friday, November 12, 1976. At 73, he left behind a spotless personal reputation and commendable record of solid citizenry in my district, and I wish to take this opportunity to announce publicly my respect and admiration for this honorable man.

Dr. Walsh was born and raised in South Boston. He attended South Boston High School, and once gained wide public recognition by breaking the world's schoolboy record for the high jump in a meet in which he was representing this institution. Later, he graduated from Boston College and Tufts University predental programs and went on to take his degree in dentistry from Tufts Dental School in 1929. Dr. Walsh then began his practice which was to last 47 years, becoming in the process, a figure both respected and loved by his patients and peers. In the words of the Boston Globe, he became "well known in the community for his devotion to his patients."

During this period, life was not completely serene for Dr. Walsh. Duty called, and he traveled to the Pacific to serve as a lieutenant commander on the U.S. Navy carrier, the *Wasp*. After World War II, his readjustment to civilian life also called for a change, and Dr. Walsh made a fresh start in Milton. His wife, Jeanette (Grushey), eventually presented him with four children, three girls and a boy, so for the next 11 years, Dr. Walsh worked hard to provide his family with the kind of care he thought they deserved. Then, in 1961, he moved back to the scenes of his childhood in South Boston and again developed a practice of devoted clientele.

Dr. Walsh continued his valuable work until the day he died. At 73, he was as intelligent, dedicated, and kindhearted as he was at the beginning of his career. He and his wife had watched their offspring grow and create lives of their own, just as their children watched them become respected, valued members of the South Boston community.

This short story marks the quiet dignity of an independent businessman, responsible parent and concerned citizen, which fills my memories of Thomas Walsh will hopefully become apparent to my listeners. Dr. Walsh was a credit to South Boston and, I feel, worthy of a poignant farewell from all of us who knew him.

MINNOWS OR MILLIONS?

HON. MARILYN LLOYD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mrs. LLOYD. Mr. Speaker the TVA Tellico Dam project has recently been ordered halted by the Sixth Circuit Court of Appeals for the purpose of protecting the snail darter, a tiny minnow-like fish which has been placed on the endangered species list. The decision to halt the project was made for lack of a definitive ruling on what should be the fate of the snail darter.

I would like to share with my colleagues a recent editorial by Editor Norman Bradley in the Chattanooga Times addressing this issue which demands immediate attention when energy is such a scarce and necessary commodity:

MINNOWS OR MILLIONS?

Some experts have concluded that the snail darter, a tiny minnow-like fish, would become extinct if its present sandy-bottom river habitat were covered by the reservoir to be created behind the Tellico Dam. Other experts disagree. Nonetheless, the snail darter has been officially placed on the endangered species list.

Finding no discretionary leeway in the statute safeguarding endangered species, the Sixth Circuit Court of Appeals has ordered TVA to halt the very last stages of bringing the $100 million project into the service of the valley. The dam has been completed; all that remains is to close it and create the huge storage capacity behind it.

We are in no position to argue legalities with the learned judges of the appellate court. We can point out what practicalities are involved in the decision.

In the midst of the worst energy crisis in the nation's history, the completion of a project that would add approximately 200 million kilowatt hours of electric power to the available supply has been summarily halted at the last moment.

On the verge of the flood season, which may be more severe this year than usual, essential water storage capacity has been denied TVA in its flood control program. Estimates are that the project, had it been in use at the time of the St. Patrick's Day floods here a few years ago, could have saved Chattanooga alone $23 million in high water damages.

The applicable statutes were not in existence when TVA began planning and then construction of the Tellico project more than a decade ago. The court specifically said the agency had not acted in bad faith in undertaking the program and expending $100 million on it since. Indeed, the judges praised TVA for its efforts to find the snail darter a new home in the Hiwassee River where, incidentally, the creature's reproduction cycle has been at least tentatively established.

We do not see the equity, or even the necessity, for halting a massive project of public benefit on the basis of saving the snail darter. But apparently the statute contains no means by which the public interest or investment can be weighed in the balance.

The remedy lies in appealing the decision, which is time consuming; in legislative relief through congressional exemption of the project; or in administering action removing the snail darter from the endangered species list. We hope each will be pursued and that one will prove quickly effective. Energy is needed more than the snail darter which may well be quite suited for living elsewhere.

QUEBEC: A PROBLEM FOR CANADA AND THE UNITED STATES

HON. JOHN J. LaFALCE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. LAFALCE. Mr. Speaker, the possibility of the separation of the province of Quebec from the Canadian nation poses difficult and sensitive problems, both for Canada and the United States. Just a few weeks ago, Rene Levesque, the Premier of the Canadian Province of Quebec, was in New York to speak at the Economic Club. He explained why he thinks Quebec should be an independent nation and how it could be a good investment for U.S. dollars.

I personally look with great alarm at the possibility of a separate Quebec. Canada is our most important trading partner, one of our strongest allies, a partner in the future development of North America, and we should not overlook or underestimate the consequences to the United States of what is now transpiring in Canada.

James Reston, in an article which appeared in the New York Times, Wednesday, January 26, 1977, comments eloquently on the delicate questions posed for Canadian-American relations. I would like to take this opportunity to share his thoughts with you:

QUEBEC'S CHALLENGE TO THE UNITED STATES

(By James Reston)

The Premier of the Canadian Province of Quebec, René Lévesque, was in New York yesterday explaining to the Economic Club why he thinks Quebec should be an independent nation and a good investment for U.S. money. He suggests some scary problems.

He is one of the most intelligent and eloquent visitors we've had around here for quite a while, but his political objective—a separate sovereign Quebec nation on our New England border, and his hope of raising American capital to demonstrate its economic viability and thus promote its separation from the Canadian Union—raises such difficult and delicate questions that one almost hesitates to discuss them.

Some things, however, may be said without offense. The political controversy between René Lévesque and Prime Minister Pierre Elliot Trudeau, the Prime Minister of Canada, over relations between the provinces and the central Government in Ottawa, is none of our business. And the Government in Washington is being meticulously careful, even in private conversations, to avoid even the appearance of intervention in Canadian affairs.

René Lévesque made a very good speech. He was candid that the prime objective of his party was "political sovereignty." He said: "We believe we are a nation, with all the essential requirements: a clearly defined territory, our own history, a common language and culture, a collective will to live together and maintain a national identity."

He was also very appealing and clever in his historical analogies between Quebec and the original thirteen American colonies. His ancestors, he said, were among the greatest discoverers, missionaries and fur traders, the first white men to explore North America as far as the Rockies and Louisiana.

"Independence for Quebec, therefore," he insisted, "now appears as normal, I might say almost as inevitable, as it was for the American states of two hundred years ago. . . . In my opinion, the important question . . . is not whether Quebec will become independent, nor indeed when it will happen, but how. . . . In due time, Quebecers can be expected to take full charge of their own political affairs. . . ."

There is something in Mr. Lévesque's historical analogy, but not much. The thirteen American colonies tried the separatist route of independent commonwealths, tied loosely together, as he suggests a customs union with Ottawa, but it was a spectacular failure in the American Articles of Confederation, and had to be scrapped and followed by a more perfect union centered on the Federal capital and not on the states.

No doubt Canada is different, but since Mr. Lévesque has come down to New York and raised these nostalgic, historic points and invited us to invest in the sovereignty of Quebec as an independent nation, maybe we have to remind him that we have been experimenting with the narrow concept of states' rights since Appomattox, and after a hundred years, are just beginning to go the other way and bring the American South into the Union under Jimmy Carter. His timing here was not very good.

In fact, the idea is beginning to get through to state legislatures along the St. Lawrence and the Great Lakes that they have to form regional compacts to deal with their common problems with one another and with Canada, just as the states have to deal with Mexico and its eight million illegal aliens in the United States. Even the powerful nation-state centered on Washington cannot really deal with the integrity of its money, the pollution of the atmosphere, or the security of its airways—except on a worldwide basis.

Accordingly, New York has heard this eloquent and yearning voice out of Quebec City with admiration—because he speaks so well and is so earnest—but with regret. The melody of separatism, like the longing of the Scots and the Welsh for independence, seems a little out of date and almost tragic.

The guess here is that Prime Minister Lévesque has misjudged the Economic Club of New York, the city bankers, like David Rockefeller, the multi-national corporations, and even the press, though he has been a brilliant journalist.

They are all having to deal with a different world. They all want to make money as usual, but the notion of a separate Quebec, breaking off from Ottawa, the possibility of a divided Canada, is not the sort of thing they are likely to invest in over the long run, even if they might fiddle with making profits in Quebec for the rest of the decade.

What Mr. Lévesque, bright and eloquent as he is, has apparently misunderstood is that the United States believes in Canada. It even loves its neighbor, and is startled by the thought that Canada might break down into squabbling states, even if some of them wanted to join the American Republic.

President Carter understood this point a little late. He sent Vice President Mondale to Europe and Japan, and arranged for Secretary of State Vance to go to the Middle East and Moscow in February or March. But only late in the agenda for the next couple of months did he invite Prime Minister Trudeau of Canada and the new President of Mexico, José Lopez Portillo, to come to Washington.

It is high time, for Canada, and not Europe or Japan, is our most important trading partner. And the eight million illegal aliens from Mexico present a most serious social and economic problem. Quebec, the Rio Grande, and Panama may be the most critical foreign questions for President Carter in the next four years.

PAY RAISE BREEDS CYNICISM

HON. DOUGLAS WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. WALGREN. Mr. Speaker, there are few more important issues before the Congress than how to restore public confidence in the manner in which elected officials discharge their trust. The pending pay raise for Congress threatens public respect for the Congress, first, because it comes when times are hard for many of our people, and, second, because the method of avoiding a vote on the issue breeds cynicism.

Relatively highpaid Government officials, particularly Congressmen, must be the first to set the example of forgoing increases in their salaries because costs are rising if we expect anyone else in the country to make a similar sacrifice.

The following editorial by Mr. John Troan of the Pittsburgh Press reflects the views of many of my constituents toward this question. I want to recommend this editorial to my colleagues:

[From the Pittsburgh Press, Jan. 16, 1977]

EDITORIAL BY JOHN TROAN

The focus in Washington this week will be on the new President. For this week Jimmy Carter will be inaugurated as the 39th President of the United States.

But we should keep our eyes also on the new Congress. For less than two weeks after taking office, many members of Congress are already itching for a pay raise.

I find this incredible. But unless the voters back home start raising royal hell, it will become inevitable.

Now it is perfectly natural for anybody to want higher pay. And Congress is full of anybodies.

But nobody is forced to run for Congress. So if the folks who were elected to Congress just 79 days ago felt the pay was too low, why did they fight so hard for these jobs in the first place?

Actually, congressmen already make pretty good money. We have 535 of them—100 in the U.S. Senate and 435 in the House of Representatives—and each now draws a salary of $44,625 a year. Which comes to almost $860 a week.

On top of this they enjoy more fringe benefits than a picnic ant: Free medical care in some of the finest hospitals in America, free mailing privileges, free travel to many parts of the world, big expense allowances, long weekends, even longer vacations (the senators have already set aside 8½ weeks for themselves between now and Labor Day), and pensions fit for princes. Plus et cetera, et al and et seq.

And yet they want more. At least many of them do.

Last week, for instance, Robert C. Byrd of West Virginia, the Democrats' new Senate chief, said the pay of all congressmen should be increased to $57,500 a year. That equals more than $1,100 a week.

This figure, representing a 29 per cent raise, has been recommended by a payjacking outfit called the Quadrennial Commission. This is Washington's counterpart to Pennsylvania's Commonwealth Compensation Commission, which fulfills a similar self-serving role for our lawmakers in Harrisburg. Indeed, Congress conceived the money-grabbing monster and our legislators in Harrisburg merely adopted it.

The recommendation of the Quadrennial Commission, along with a slew of other proposed raises ranging up to 45 percent, was sent to President Ford last month. He must decide, no later than tomorrow, whether to approve all or part of these proposals. He is reported ready to recommend the congressional pay raise.

Congress then will have 30 days to vote down what Mr. Ford proposes. But if Congress decides merely to sit and wait, the raises will take effect automatically.

A number of reasons have been offered in support of a pay hike for congressmen. Most of them boil down to one argument: Their salaries have not kept pace with inflation.

That's probably true. But the congressmen themselves are responsible for much of the inflation because they keep spending more money than the federal government takes in. So why should they be rewarded for something that is their own fault?

As I see it, there's only one word to describe any congressman's desire for a raise of $12,875 a year, which is more than the total income of half of his constituents.

The word is greed.

TRAFFICKING IN CHILDREN

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. ABDNOR. Mr. Speaker, shocking headlines in Washington newspapers in recent weeks have drawn the attention of many of us to the growing scandal of "black market babies." Indeed, the buying and selling of children has become bigger and bigger business. That this problem is not confined to the metropolitan areas and along our seacoasts is indicated in this report from my home State of South Dakota where the Secretary of Social Service has stated his concern about a "grey market." The broad scope of the scandal has prompted me to join with my colleague, Hon. HENRY HYDE, in sponsoring legislation to prohibit the sale of children in interstate and foreign commerce.

South Dakota's concern is illustrated in the following article:

GREY MARKET FOUND IN STATE ADOPTIONS

"South Dakota has a grey market in adoptions and it's hurting South Dakota children and families," according to Orvall Westby, Secretary of South Dakota Social Services (DSS).

Westby says DSS has been studying the situation for several months and "It is apparent that the state needs to tighten legislation in order to safeguard the child, adoptive parents and biological parents involved in adoption."

State DSS adoption program specialist Louise Zokan believes that about 50 adoptions in South Dakota are handled independently of any established adoption agency, public or private, each year. In addition there have been 11 out-of-state independent adoptions that have been discovered and Zokan adds she doesn't know how many other illegal placements have been made out of South Dakota.

"The greatest danger in independent adoption," she says, "is that there is not legal assurance that proper procedures have been observed.

"The state law," she notes, "does not now guarantee that the privacy of the adoptive child, parents and biological parents will be protected. Adoptive parents may have no

real assurance that parental rights have been served or that biological parents will not have access to information which could help them get their child back."

Zokan also emphasizes that children adopted through the grey market process cannot be assured that when they reach adulthood they will be able to discover any information about their own lives.

"There have been cases where adopted persons have come to us in search of information they needed to apply for a job or to enroll in their tribe. We have had nothing to give them because they were adopted through the independent process and information was neither safeguarded nor preserved.

"Furthermore, we suspect third parties are making money selling babies right here in South Dakota.

"Potential adoptive parents considering grey market adoptions through such third parties—usually doctors or lawyers—should know that such adoptions carry no guarantee that the child's social and medical background will be given, or if it is given, that the history will be accurate," Zokan warns.

"Third party adoptions have a potential of hiding such serious pieces of information as the child's chances of having heredity diseases. We have known of cases where adoptive children have developed serious medical problems about which parents could have been forewarned if complete social and medical information would have been available as it is in an approved agency adoption."

According to Westby, the department is proposing a remedy to improve South Dakota adoption law. For more information, write Department of Social Services Adoption Program, State Office Building, Pierre, S.D. 57501.

CATHOLIC SCHOOL WEEK

HON. JEROME A. AMBRO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. AMBRO. Mr. Speaker, Sunday marked the beginning of National Catholic School Week, a period set aside each year in recognition of the tremendous contributions to the Nation of our coast-to-coast Catholic parochial education system.

I would like to bring to the attention of my colleagues the fact that there are now almost 4 million American students receiving their educations in schools that are primarily supported by thousands of Roman Catholic dioceses, as well as hundreds of private parochial schools.

The current Catholic school system, which now provides education for young men and women starting with kindergarten right through doctoral degrees, was formally established by the National Council of Bishops meeting in Baltimore in 1948. The bishops set as a matter of church policy that every parish should provide for the education of their young people.

I doubt even those visionary prelates could have foreseen an educational system on a scale as grand as the one that has grown with the Nation during the past 129 years.

In 1975, 2,576,000 students attended 8,484 Catholic elementary schools. There were 895,000 teenagers in 1,618 diocesan and private Catholic high schools and 432,000 men and women in Catholic colleges and universities.

These schools are holding exhibits, projects, seminars, and other events all week long commemorating the great achievements of this massive educational system. Supported by millions of Catholics and staffed by thousands of selfless religious and lay teachers, Catholic schools have always been recognized for the excellence of their academic standards.

The list of the millions of Americans who have benefited from this educational network is far too lengthy to single out individual people. There is not one area that has not felt the impact of these Americans. Their contributions have been made in the arts and humanities, the sciences, politics, the military, business, and the clergy.

Largely supported by private donations and other contributions the Catholic schools have earned their place in our cultural and historical heritage. They richly deserve the recognition and appreciation of a grateful nation.

CANADA HELPS OUT DURING GAS SHORTAGE

HON. CARDISS COLLINS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mrs. COLLINS of Illinois. Mr. Speaker, the record-breaking cold spell that has left so much of the midwestern and eastern portions of the Nation shivering for weeks on end has brought little to cheer about. With its raging winds, freezing snows and general unpleasantness, this winter of our discontent has resulted in low temperatures, high unemployment and not enough natural gas.

With so much to be bleak about, I am happy to be able to share with my colleagues a small silver lining in this big, snowy cloud. I commend to my fellow Members the following editorial printed in the February 2 issue of the Chicago Tribune which thanks our Canadian neighbors for sharing some of their gas with us.

The article follows:

GOOD NEIGHBOR

Neighboring countries, like teenage brothers, have a way of playing up their differences and playing down the degree of harmony between them. Which probably explains the succession of mini-crises in Canadian-American relations [over such things as oil exports, meat inspection, magazine ownership, and auto parts]—together with the fact that none of them seem to affect the basic good relations between the two peoples.

So in order to keep things in perspective, it is worth noting what Canada and Canadians have done to help Americans cope with their cold winter. The Canadian National Energy Board has persuaded utilities in eastern Canada to reduce their consumption of natural gas so as to allow Trans-Canada Pipelines to pump an emergency ration of 250 million cubic feet a day into our mid-Atlantic states. The transfusion will continue until March 19.

An emergency license has also been given for the export of 50,000 barrels of fuel oil to the Detroit Edison Company, and Ontario power plants have reduced their voltage so as to send electricity into Michigan.

We note these things not because they are exceptional, but because they are so normal as to be overlooked, and they work both ways. This winter, luckily for Americans, the Canadians are showing that they know what it is like to be cold.

THE RAID ON ENTEBBE

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. BINGHAM. Mr. Speaker, I read in the Jewish Weekly-American Examiner from the week of February 6–12, 1977 of the most remarkable story that lies behind the dramatic Israeli rescue mission at Entebbee this past July 4. David C. Gross has written of a heartening aspect of the Entebbe mission that has not been portrayed on either of the television specials. This tale recounts how one of the hostages was released with the non-Jews, and then bravely participated in the raid itself, barely 3 days later. This man was of invaluable assistance to the Israelis as he meticulously reconstructed the details of the area in which the hostages were held at Entebbe. I am sure readers of the RECORD will find this revealing account of one hostage's involvement with the raid on Entebbe most interesting:

ENTEBBE HOSTAGE BECAME RESCUER; LEFT PARIS AND JOINED ISRAELI MISSION

(By David C. Gross)

One of the members of the medical teams that accompanied the Israeli rescue mission to Uganda was himself a hostage in Entebbe and managed to brief Israeli military officials on the layout of the building where more than 100 Jews were being held captive by Arab and German terrorists.

Despite the production of a number of stirring films about the miracle rescue of the hostages, some details of the operation must still remain secret—as must the name of the individual involved. For reasons of security, the identification of the principal character in this true epic of our times must remain unrevealed.

He is a physician, born and reared in America, who served in the U.S. forces with distinction. About ten years ago he went on Aliyah, and lives today with his wife and two daughters in central Israel, where he practices medicine both in civilian life and, during his reserve periods, with the Israel armed forces.

He is tall, lean, handsome. When he talks of Israel, it is with deep love and dedication. Last June he drove to Lod airport to board a plane for Paris, where he was to catch a connecting flight to New York. It was a combination professional and personal trip. He had left all arrangements to his travel agent, and when he arrived at the airport he was annoyed to learn that he was scheduled to fly Air France to Paris, with a stopover in Athens. He always insisted on El Al flights, believing that the Israel Airline's security was the best. However, there was no time for a transfer, and he climbed aboard.

It was, of course, the same plane that we are now all so familiar with. He, along with all the other passengers and crew members, were hijacked, after a Libyan refueling stop, to Uganda. He says that the thoughts that raced through his mind included profound

concern for his wife and children, concern for some of the older hostages, and deep hatred for the German terrorists who held them captive. But he was, after all, a doctor, and was permitted to provide some medical help to some of the more ill passengers, with the support and medicine of the Ugandan doctor who was permitted to enter the airport building where the hostages were held.

HELD DUAL CITIZENSHIP

One other thought raced through his mind as he worked: he held dual citizenship, that of the United States and of Israel. How would the terrorists regard him? He had thrown his American passport into the bag when the hijackers demanded that the passengers surrender their papers, managing to hid his Israeli document. Althought he felt it was an act of "betrayal" to his fellow Israelis, he also sensed that it was, tactically, the wiser thing to do. He kept himself busy during those first difficut days, trying as hard as he knew how not to show his profound hatred for the German terrorists. As a former American military officer stationed in Germany, he had visited Auschwitz. The memory was a permanent scar seared into his memory.

And then, the day of "selektzia" came—when the Israelis and the Jews from other countries were separated from the non-Jews and those holding U.S. passports. The latter were allowed to leave Entebbe and fly to Paris. Tears still brim in his eyes as this courageous young doctor tells it: "It was the hardest thing I ever did in my life—to walk away from my fellow Jews, from the Israelis, and to join the Paris-bound, about-to-be-freed hostages. I forced myself to walk that short distance to the waiting plane, while my heart beat like a tom tom and my face was covered with cold sweat."

On the plane to Paris, he took paper and pencil and made notes of everything he could remember of the Entebbe set-up. He talked with other passengers, and obtained additional details. He knew intuitively that back in Israel, the military must be planning a rescue operation, and believed his notes would be invaluable.

No sooner had the plane touched down in Paris than this physican made his way to Israeli officials at the airport, speaking quickly and softly in Hebrew, and within a matter of an hour he was back on a plane, bound for Tel Aviv. Word was passed to his family that he was safe, and a request was made that he be allowed to devote at least the next 24 hours to briefing the Israeli military on everything he remembered and had taken notes on. His wife, after the first shock of relief and disbelief, readily agreed.

WANTED TO GO BACK

And for the next two days this former hostage from Entebbe told the Israeli rescue teams everything that he could—but only after he had exacted a promise from them that he was to be included in the rescue mission. Exhausted by his nightmare experience, he nevertheless knew that if he did not personally participate in the lifesaving mission, he could never live with himself again.

The information that he supplied was invaluable. He had, in addition to medical training, military experience, and he could detail aspects of the terrorists' set-up that a civilian could easily have overlooked. He was also a skilled doctor and knew that after a day's rest, he would be fit and ready to join the medical teams that would accompany the mission.

And so, on that fateful Sabbath afternoon when the squadron of Israeli planes flew in utmost secrecy out of Israel toward Africa for the purpose of *pikuach nefesh*—saving lives—one member of the medical teams was himself a victim-hostage of that terrorist hijacking, who will always be grateful that fate decreed that he would be placed in a position to help save his fellow Jews.

He says today that the experience only strengthened his conviction that in this world, in this day and age, Jews can depend only on themselves. He cannot forget his visit to Auschwitz nor the bloodthirsty threats of the German terrorists. He also speaks with great admiration for the French crew, and with utter disdain for the French Government.

Surely, on Tu B'Shvat this year, he will take his two daughters to a nearby field and plant tree saplings . . . and surely they will grow and flourish.

THE BUDGET BRIGADE: EXPENSIVE SAVINGS

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. LAGOMARSINO. Mr. Speaker, in the January issue of Sea Power magazine, appeared an editorial that beckons our close attention here in Congress. "The Budget Brigade: Expensive Savings," by Dewitt James Griffin, raises fundamental questions about the approach some Members of this body are taking with regard to our military budget and the growing threat of unionization of our Armed Forces. Mr. Griffin's article follows:

[From Sea Power magazine, January 1977]

THE BUDGET BRIGADE: EXPENSIVE SAVINGS

(By Dewitt James Griffin)

"Penny-wise and pound-foolish."

There are few Americans who don't recognize this adage that was handed down from our English forefathers as descriptive of an action that might offer a short term solution to a problem but in the long run would do more harm than good. Yet there are times we wonder if those few Americans who *don't* recognize its meaning aren't for the most part assigned the responsibilities of preparing those portions of the annual defense budget that pertain to personnel and related expenditures.

During this last year in particular, quite a number of surveys by people and organizations in and out of government have established clearly the fact that the principal reasons for a disturbing trend toward unionism among younger officers and enlisted men in particular has been their concern over the steady erosion of fringe benefits for those in uniform. They see unionism as a means of halting that trend, particularly since the current administration has taken the lead in proposing certain actions that diminish certain of these benefits, and liberal members of Congress have indicated they'll lead the assault on still others. Unfortunately, the concern expressed by those younger officers and enlisted men is well justified.

To us, it would appear sensible for our budget planners, given the information cited above, to give a little extra consideration to any actions they might be planning which would hold down expenditures, but which also would impact adversely upon morale by whittling away at benefits. And to most men and women that *would* appear sensible—but not to our budget planners, apparently! For, despite the fact that last year Congress overrode a proposal by the administration to phase out appropriated-fund support for commissaries, the administration reportedly is going to come right back with the same proposal, in the next fiscal year's budget. It seemingly matters not that this proposal was overwhelmingly opposed by not only our men and women in uniform and their dependents, but also by every association and organization—including this one—which supports strong forces for the defense of our country, and was also overridden by both Houses of Congress.

An uninformed questioner might well ask: What possible connection is there between strong defense forces and a desire by the government to save us taxpayers a few bucks by reducing the expenditure of appropriated funds for something like commissaries? Perhaps the best way to begin to answer that question is to cite an example of something those sworn to protect our country and us can never attain. Just before Christmas, in a Washington paper, there appeared a story about some of the "extras" that were given to employees around the country by their parent organizations. But it also observed that the huge Boeing Company, which employs thousands of people, would shut down its operations completely 23 December and would reopen 3 January *as part of a union contract!*

What our armed services can never attain—if we want them *always* to be ready, that is—is a 10-day holiday at Christmas as part of a union contract. Nor can they aspire to time-and-a-half for overtime or double time on Sundays, or a fixed number of holidays, or bonuses at Christmas or any other time. But what they *should* be able to attain is the assurance of adequate pay, of competent medical care readily available for themselves and their families, and some compensation for the sacrifices that we routinely call upon them to make. That doesn't seem too much to ask.

Yet what they are receiving is a continued battle over pay, a challenge to their retirement system, dwindling medical care, and almost unceasing attacks on fringe benefits. And the intelligent young man or woman whom we must recruit today to maintain nuclear power plants, and operate and repair sensitive electronic equipment, and keep jet aircraft in the air is also smart enough to perceive when he isn't receiving the full support of either the administration in power or the Congress. So, by the time he's served a couple of hitches, he's perfectly capable of concluding that the skills he acquired in uniform can be used well in the civilian economy, that the union he joins might even give him more benefits than he would receive in the service, and that he could stay home, and in one place, with a happier wife and children. And out he goes!

The Navy estimates it takes $45,950 to recruit and train an adequate replacement for an electronic technician getting out at the end of a four-year tour of duty. There aren't any figures immediately available for the pro rata saving to be gained by eliminating appropriated-fund support of commissaries. But we'd be willing to wager that the cost of training replacements for those men and women who decide to leave the service because of disillusionment and dissatisfaction over lack of support far exceeds what might be gained by this ill-conceived proposal of the administration or others like it that may be placed before Congress by their elected representatives.

As taxpayers we applaud any wise action aimed at reducing government expenditures. But also as taxpayers we deplore actions whose ostensible purpose is to save us money, but which also contribute to lowered morale, reduced productivity, increased personnel turbulence, skyrocketing training costs, and, because of excessive personnel turnover, a degradation of readiness. And, in the long run, spending more money than those actions had hoped to save in the first place!

Accordingly, we heartily recommend that budgeteers take another look at their proposed actions, and in the meantime listen to those who have the responsibility for commanding our forces. For those leaders can

recognize the correlation between morale and support, and dollars and readiness. We doubt that our budgeteers do. It's high time they did!

AMENDMENT TO INTERNAL REVENUE CODE

HON. JAMES R. JONES

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. JONES of Oklahoma. I introduced yesterday a bill to amend the Internal Revenue Code of 1954 to exempt fraternal charitable organizations from classification as a private foundation by clarifying their status under section 509 of the Internal Revenue Code. This bill is generally a counterpart of H.R. 5815, introduced April 9, 1975 in the 94th Congress and S. 3342, also introduced in the 94th Congress.

The private foundation provisions of the Internal Revenue Code apply generally to charitable organizations which are exempt from Federal income tax and to which contributions are deductible. Under the law, a charitable organization described in section 501(c)(3) of the Code is presumed to be a private foundation unless it falls within one or more of the specific exceptions to foundation classification and, through the ruling or judicial process, rebuts the presumption. In any case, a section 501(c)(3) organization supported entirely by its endowment is treated as a private foundation unless it could be considered a church, hospital, school, medical research organization or a so-called support organization for any one of the foregoing types of public institutions.

Additionally, an endowed charitable organization, carrying on proper charitable activities but supported only by its endowment, but which is operated, supervised or controlled by or in connection with a civic league or social welfare organization described in section 501(c)(4) of the code, or a labor, agricultural or horticultural organization described in section 501(c)(5) of the code, or a business league, chamber of commerce or board of trade described in section 501(c)(6) of the code is also excluded from private foundation classification. What reason is there to exempt a charitable organization which is supervised or controlled by social welfare organizations, labor unions or business leagues from private foundation classification? The justification is clear. As noted in pertinent tax committee reports from 1969, exemption from foundation classification for support organizations is justified by the public nature of the parent or supported organization and its relationship to the charitable organization. The public nature of the organizations in control of the charity makes them sufficiently responsive to the public interest. Thus, the control and supervision of the supporting organization by the parent means that the supporting organization is likewise responsive to the public interest.

For many years, the Internal Revenue Service recognized that fraternal organizations and societies were promoting social welfare by reason of their charitable fraternal and benevolent activities for the benefit of the community. These organizations may also qualify for exemption as a fraternal society described in section 501(c)(8) or 501(c)(10) of the code depending, for example, on the existence of an insurance plan for members and whether they are treated as domestic organizations. It is a generally recognized principle of tax law that an exempt organization, depending on the facts and circumstances, may be described in more than one subsection of section 501(c) and that these provisions are ordinarily not thought to be mutually exclusive. In 1975, the Internal Revenue Service revoked this ruling leaving the status of many fraternal charities in doubt as to their status under the private foundation rules.

Even if a fraternal society, because of its lack of community activities could not be considered a social welfare unit, it is wrong to differentiate between charities controlled by such societies and charities controlled by labor unions or trade associations. Both types of charities should not be subject to the rules of chapter 42 since the public interest does not require those taxes to be applied to them. The abuses present in the personal and private foundations are not found in these types of publicly supervised or publicly controlled charities. Fraternal charities provide direct services such as orphanages, old age homes, or scholarships.

They are not grantmaking and certainly are not family controlled foundations subject to the type of undue influence which originally led to the enactment of these foundation excise taxes. Similarly, fraternal charities are not created nor operated to perpetuate family control over wealth or the family business, or as an estate planning tool for the rich. This bill would clearly establish, without regard to Internal Revenue Service ruling policies, the right of fraternal charities to be exempt from foundation taxes. Thus, the tax laws no longer discriminate against fraternal charities in the manner it does today against those charities whose societies have not previously qualified as social welfare organizations.

The Treasury Department, in the 93d Congress, supported enactment of the provision. Oral and written testimony was received on this provision during the general tax reform hearings in 1973 by the House Committee on Ways and Means. A written statement in support of the provision was furnished the Committee on Finance in April of last year during its consideration of tax reform. This bill would be of great assistance to a number of Masonic charities organizations located throughout the United States and in particular, to the Sand Springs Home of Sand Springs, Okla. Sand Springs Home is an orphanage and widows colony created in 1908 whose original endowment continues to provide all the necessary support for its charitable activities. Its orphanage accepts appointees from the Oklahoma district courts and it files accountings with the courts on the assets or income of the children in its care during their stay at Sand Springs. The Grand Lodge of the Masons of Oklahoma, a fraternal society, controls the Sand Springs Home, and only persons selected by the Grand Lodge may sit on the board of trustees of the Sand Springs Home. A majority of the Sand Springs Home board are former grand masters of the Oklahoma Lodge and all trustees are members of the Oklahoma Grand Lodge.

I urge my colleagues in the House to give this bill favorable consideration in this Congress.

TRIBUTE TO DICK CLARK

HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. GOLDWATER. Mr. Speaker, this past Friday, February 4, one of my fellow Californians celebrated the 25th anniversary of his television program, "American Bandstand."

That Californian, and former Philadelphian, is of course Dick Clark.

Dick's name has been synonymous with the music of our young people, and with the image they presented on his show: funloving, wholesome, and very American.

Those of us who have followed Dick's career over the years have been impressed with the high standards he has set for those associated with his shows, and it is refreshing to note that his kind of programing can be unhesitatingly recommended to young people for viewing. This, unfortunately, is in marked contrast to many of the programs young people watch on television today.

Dick Clark was a pioneer in the early days of television; not only did he star young people as the central attraction of his show, but he had the courage—some say audacity—to introduce rock and roll to the viewing public. Rock and roll music, which is part and parcel of the American experience today, was a controversial subject when Dick first telecast "American Bandstand." Furthermore, almost all famous popular music artists during the past 25 years made their television debut on Dick's shows; many now have their own television series and specials.

I take great pleasure in saluting Dick Clark and "American Bandstand" on this important anniversary. Here's hoping that teenagers in the year 2002—just 25 years from now—will still have an "American Bandstand" to watch and dance by.

SITE OF THE BREEDER REACTOR PLANT

HON. MARILYN LLOYD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mrs. LLOYD of Tennessee. Mr. Speaker, I would like to include in the CONGRESSIONAL RECORD the remarks of the Honorable A. K. Bissell, mayor of the city of Oak Ridge, Tenn., stating the desire of Oak Ridge to remain the site of the Clinch River breeder reactor plant and offering the strong endorsement of the city for the project. I hope that the other Members will find his remarks to be of interest:

REMARKS BY A. K. BISSELL, MAYOR OF THE CITY OF OAK RIDGE

In earlier remarks I expressed the view of the city of Oak Ridge in regard to the need for fair and adequate compensation from the Federal Government for the socio-economic impact of Federal facilities in Oak Ridge and the surrounding area.

Today for the record I would like to comment on behalf of Oak Ridge and other subjects which are not matters of dollars and cents, but matters of national need and how Oak Ridge views nuclear power and the Clinch River Breeder Reactor Plant in particular.

The Oak Ridge position remains clear and straight-forward: We not only accept and endorse the breeder reactor demonstration plant, but we are enthusiastic advocates. While we are concerned about the project's impact on our city services, we are certain that the project itself will be safe and play a vital role in meeting our Nation's future energy needs.

Our distinguished Congresswoman Marilyn Lloyd expressed it very well recently. "These frigid mornings of the winter of 1977 tell us all too chillingly of the consequences of inadequate energy. We simply must develop our options wisely, and for the forseeable future the answer lies in conservation, coal, and nuclear power. Beyond 2000 only the breeder offers a safe possibility for success for being the long-term assured, safe, and reasonably economical energy resource this Nation so urgently needs."

And that is the reason for my statement today. Independent of our differences on matters which can be worked out, all of us in the city government—indeed all of the community leaders with whom I have discussed the subject—are strongly for the breeder project because we are citizens.

We in public life recognize all too well that adequate energy means jobs, and inadequate energy means chaos. The breeder offers this nation a chance to regain energy self-sufficiency not within my lifetime, gentlemen, but within those of my children and their children. There are other hopes, solar and fusion among them. And we certainly must work on all options, but my technical friends and colleagues tell me the breeder has by far the highest probability for success within this century. Clinch River must continue as rapidly as our systems permit.

I am not a scientist, engineer, or technical man. However, I have lived for more than 33 years in a community that has made history many times in developing the peaceful atom. There are problems which remain, to be sure, but those problems are far smaller than those which have been solved. And where would this nation have been during the past three months without nuclear power? Plants operated efficiently across the country while the inadequacy of other options mired our country in a frozen futility which would have been a disaster without nuclear power. TVA's Brown's Ferry nuclear facilities provided some 15% of the power in Tennessee, for example.

We in Oak Ridge cannot say strongly enough that we are for the breeder reactor and, indeed, for nuclear power in general. A major hope is that we might be the site of the proposed Exxon reprocessing plant.

This strong support is based partly on dollars and benefit to the community. I make no excuse for this. Good clean industry is a plus for any community, and the nuclear industry is among the nation's best in safety and overall contributions to a community. Our citizens in Oak Ridge who work for nuclear facilities are well-educated and public-spirited, an asset to our overall community.

But the city's support is also motivated by another important factor—knowledge. We understand nuclear power. Our technical leaders know that a successfully developed breeder reactor will save this nation billions of dollars, a saving that ultimately will benefit every man, woman, and child in this country.

Sometimes you have to see things to believe them. I have seen the uranium-238 supply which is a by-product of the uranium enriching process. If used in breeder reactors, this material could be converted into nuclear fuel which would provide the equivalent energy (at the present rate of use) of 400 years of oil or 700 years of coal. It has been calculated that at present day coal prices, this resource which is already mined and refined is worth some $20 trillion. And the total estimated cost of the overall breeder development program, including some $2 billion for Clinch River, is only $10 to $12 billion.

JOSEPH LONGO—HEROISM: ALIVE IN AMERICA

HON. RONALD A. SARASIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. SARASIN. Mr. Speaker, has cynicism taken hold in America? Have we all become isolated within ourselves, either afraid to become involved or simply disinterested in the tragedies that can befall our fellow citizens?

Perhaps for some in this country, the answer is "Yes." Fortunately, though, the majority of Americans still possess the quality of courage that can manifest itself in heroism, in risking one's own life so that another might live.

Several months go, the heroic potential of one of my constituents, Mr. Joseph Longo of Waterbury, Conn., was brought to the fore. Coming upon an automobile, overturned and burning as a result of an accident, Mr. Longo cast aside all concern for himself to rush to the aid of the trapped driver. He pulled the 24-year-old man to safety and within moments watched the vehicle become engulfed in the flames that quickly destroyed it.

What motivates a man to engage in such a selfless act of human decency and concern? For Mr. Longo, "it was the screams, the awful cries that made me realize that I had to do something." Through Mr. Longo's bravery, a tragedy was averted and a young life spared. Imagine for a moment what type of life we all might have if we followed Mr. Longo's example, responding to the suffering and cries of anguish of our fellow Americans.

Mr. Longo is indeed one of Connecticut's heroes, an individual whose example is well worth emulating.

A PAY HIKE QUIZ

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mrs. SCHROEDER. Mr. Speaker, as the House adjourns for the week with the pay hikes for top Federal officials on its back burner, I want to be sure that all my colleagues have a copy of my short quiz on the pay hike. Anyone who can answer all its questions without blushing, in my opinion, is ready for the increases.

The quiz follows:

FIFTEEN QUESTIONS ON THE PETERSON COMMISSION PAY HIKE REPORT

QUESTIONS: MULTIPLE CHOICE

1. The proposed pay hike for Federal officials will cost about $130 million this year. This is about as much money as the Federal government will spend in the same time:

(a) In the State of Wyoming.

(b) In California and Massachusetts for Aid to Families with Dependent Children.

2. The lifetime salary of a Federal judge replaces the need for retirement income. If a judge had to purchase an annuity to pay for his/her retirement, this annuity would cost:

(a) $750,000 to $1,000,000.

(b) $250,000.

(c) $45,000.

3. A top official moving to D.C. receives:

(a) No relocation allowance.

(b) Up to 50% of his expenses reimbursed through the Federal tax deduction for moving expenses.

4. The Peterson Commission's estimate for the cost of the pay hike ($130 million) does not include:

(a) The costs of the government contribution to retirement on behalf of Executive and Legislative Branch personnel.

(b) The unfunded pension liability caused by the much higher pension payments with contributions paid at much lower rates by Executive and Legislative personnel who retire after the effective date of the pay raise.

(c) The additional costs which will be added into the scheduled 6.5% cost-of-living pay increase.

5. $13,000 is equivalent to:

(a) The average Peterson Commission pay hike.

(b) The average income of a family of four living in the United States.

(c) The average net worth at death of a U.S. citizen after a lifetime of work.

6. Federal civilian employees leave the Federal government at:

(a) Twice the rate that people leave the private sector work force.

(b) The same rate as they leave the private work force.

(c) Half the rate they leave the private work force.

QUESTIONS: TRUE OR FALSE

1. Since 1967, the average Social Security recipient's monthly check has skyrocketed

from $89.75 to $217.47. In the same time, salaries for Members of Congress, Federal judges, and high level bureaucrats have only gone up 50%. These top officials need a pay hike this year to keep ahead of Social Security beneficiaries.

2. A family of 4 can live comfortably in the Washington, D.C., area on $16,000 per year.

3. The Federal pay hike will each cost as much as the value of all anthracite coal produced in the U.S. in 1975.

4. If a Federal judge works 20 years and retires at full pay, never paying for his retirement, his/her salary is equivalent to 20 years employment at a salary of $80,000 per year, having purchased a retirement annuity amounting to $42,000 per year.

5. Federal law prohibits the children of top U.S. officials from working or borrowing money to help with college expenses.

6. It costs $5,000 to $6,0000 per year to educate a child in a private college and this is out of the reach of people, such as top Federal officials, who only make more than 95% of U.S. wage earners.

7. The pay hike for top executive policy makers are needed in order to assure that they will stay after President Carter leaves office.

8. The 1969 increase in supergrade salaries, which were designed to remove the "compression" of salaries in the top grades directly preceeded the largest exodus of supergraders ever to leave the government in one year.

9. Since 1969, 10% of the added civilian work force has been in the supergrade ranks.

ANSWERS

Multiple Choice

1. Each of a and b amount to about $130 million per year, the Peterson Commission estimate of the costs of its pay hike proposal.

2. (a) A $42,000 annuity with survivor benefits would cost in this range if purchased in the private sector.

3. (b) The Internal Revenue Code provides healthy deductions for moving expenses not covered by employer reimbursement.

4. All of the answers are true. The true cost may reach $200 million per year.

5. All of the answers are true.

True or False

1. False. The base on which percentages are figured must always be examined. In this case, the increase for the average Social Security recipient, although over 100% in the last ten years, still places the recipient below the national poverty line. On the other hand, the average top official continues to top out the poverty line after less than a month's work each year.

2. True. (Commerce Department figures).

3. True. (Commerce Department figures).

4. True. See multiple choice question No. 4.

5. False.

6. False.

7. False. Although the Peterson Commission argues that high level political employees will stay into the next Administration if paid more, the facts are that new administrations tend to replace top officials.

8. True. Fiscal Year 1970, which occurred right after the last pay hike, saw the exodus of 550 supergrade employees from the work force. Oddly enough, Fiscal Year 1969, which occurred before the pay hike, saw the addition of more supergraders (523) than had been added before.

9. True. The net increase in Federal white collar civilian employees since 1969 has been 5,000. Of these, over 500 have been added in the GS 16–18 ranks.

OPPOSITION TO THE PROPOSED PAY RAISE FOR MEMBERS OF CONGRESS

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Ms. OAKAR. Mr. Speaker, today I am appearing before the House Ad Hoc Subcommittee on Presidential Pay Raise Recommendations to express my strong opposition to the proposal now pending before the House to raise the pay of Members of Congress.

Yesterday I returned to Washington from my district in Cleveland, Ohio. While in Cleveland I spoke with some of the 50,000 Greater Clevelanders who, until last month, were working and earning a living, but who are now jobless because of the natural gas shortage. Many of these men and women may not see another paycheck until warmer weather returns in April.

Frankly, Mr. Speaker, I cannot think of a worse time than this for Congress to raise its pay. For these workers in Cleveland and throughout the Northeast, President Carter's call last week for restraint and sacrifice is not an option to which they can respond as they please. Sacrifice has been forced upon them. For this reason it is somewhat incredible that the proposal before us today is not one that calls for sacrifice on our part, but rather is one that would grant us greater comforts. I can tell you, Mr. Speaker, that if Congress succeeds in raising its pay, we will gain the contempt of these workers, and that contempt will be richly deserved.

It is not the current economic crisis alone which argues against the proposed pay raise now before us. I direct my colleagues' attention to page 3 of last Friday's Washington Post. In the far left column is an article entitled, "House Leaders Pave Way for Big Pay Raise," and right next to it is an article about the work of the House Commission on Administrative Review entitled, "Congress Rates Ninth in Poll on Ethics." I would suggest, Mr. Speaker, that there may well be a causal relationship between the items reported in these articles. Congress cannot, in my view, gain the respect of the public until it stops playing "hidden ball" tricks such as we are now seeing on the pay raise.

I call it a hidden ball trick, because the raise might go into effect without the House even having a chance to vote on it. Much of the time remaining for the House to, under the law as it now stands, pass a resolution disapproving the raise will be taken up by the 6-day recess that begins later this week. Is not it convenient that the ball carrier for the pay raise will just about make it to the goal line when all the Congressmen are hard at work back in their districts?

Really, Mr. Speaker, this is not the way to restore public trust in Congress. If we feel we deserve a pay increase, we ought to have the courage to say so publicly, and to vote publicly on the issue. To accomplish this, the law passed last year which ties Members of Congress into the procedure which grants automatic increases to Federal workers must be repealed. Second, whether economic times are good or bad, I do not think there should be any pay increase until there is a strict code of ethics in force for both the House and the Senate, including a definite limit on outside earned income. I intend to offer legislation to achieve both of these purposes, I urge that the resolution to disapprove the pending pay raise be approved by the subcommittee, and that it be sent to the full House of Representatives for a vote.

EVALUATING COMPENSATORY EDUCATION

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. BRADEMAS. Mr. Speaker, the Education Amendments of 1974 (Public Law 93–380), directed the National Institute of Education to conduct a comprehensive 3-year study of compensatory education, including compensatory programs supported under authority of title I of the Elementary and Secondary Education Act of 1965.

As you know, Mr. Speaker, title I was enacted with overwhelming support in the 89th Congress with the assistance of a great champion of education, President Lyndon B. Johnson, and it is the largest program of Federal aid to elementary and secondary education. This year over $2 billion in title I funds are being spent to improve the education of educationally disadvantaged students in school districts serving concentrations of children from low-income families.

Mr. Speaker, when in 1974 those of us who served on the Committee on Education and Labor considered extending title I, we were frustrated by the lack of reliable information to assist us in answering the problems with which we wrestled. We were unable, for example, accurately to analyze all of the effects of changing the definition of poverty employed in the formula used to allocate title I funds to school districts.

We were also distressed to find that dependable evaluations of the effectiveness of compensatory education programs were not available.

As a consequence, Congress approved section 821 of the 1974 amendments, a section which I sponsored with the support of the gentleman from Kentucky, the distinguished chairman of the Committee on Education and Labor, Mr. PERKINS, as well as of the gentleman from Minnesota (Mr. QUIE), the distinguished ranking minority member of the committee.

Specifically, Mr. Speaker, section 821 instructed NIE to conduct a study of compensatory programs which study would:

Examine the fundamental purposes and effectiveness of compensatory education programs;

Analyze the ways of identifying children in greatest need of compensatory education;

Consider alternative ways of meeting these children's needs; and

Consider the feasibility, costs, and consequences of alternative means of distributing Federal compensatory education funds.

Mr. Speaker, as the sponsor of the legislation which created the NIE in 1972 as well as of the provisions authorizing this study, I am pleased to report that a preliminary report on the study is now available from NIE.

As required by the legislation, NIE has submitted an interim report on the progress of its work which will be followed by reports this September as well as in September 1978.

The interim report includes analyses based upon a nationally representative survey of compensatory education programs as well as a complete description of other research now underway which will be reported upon in NIE's subsequent reports. The interim report promises to provide us in the 95th Congress the type of data which my colleagues in the 93d so sorely lacked.

Mr. Speaker, the studies being conducted by NIE are essential to all those concerned with the educational needs of children in our society.

Mr. Speaker, at this point in the RECORD I include a summary of the interim report of the National Institute of Education:

EVALUATING COMPENSATORY EDUCATION: SUMMARY

FIRST INTERIM REPORT OBJECTIVES

This interim report is the first of three requested by Congress. A second interim report is due in September 1977, and the final report will be presented in September 1978. This report has two objectives. The first is to provide Congress with a complete description of NIE's strategy in responding to the mandate. Therefore, the report provides a comprehensive account of what is being studied and what information will be provided in the second interim and final reports.

The second objective is to present new data from the NIE National Survey of Compensatory Education, a representative survey of Title I school districts. Because there were no available national data on the current delivery of compensatory education services when the study began, the Survey of Compensatory Education was one of the first projects commissioned by NIE. The survey was designed to provide information on the nature of compensatory services funded by Title I and State compensatory education programs and on the characteristics of students receiving these services.

RESEARCH STRATEGY

The provisions of Section 821 can be seen as including two major requests from Congress. The first requires NIE to assess the current effectiveness of compensatory education programs in meeting their fundamental purposes, and the second charges NIE with an examination of alternative methods by which the effectiveness of compensatory programs might be improved. This report describes how the Institute's research strategy combines these two requests. It also discusses (1) the fundamental purposes of compensatory education programs and (2) the manner in which the Institute is assessing the effectiveness of current programs and the consequences of possible changes.

To identify the fundamental purposes of compensatory education, NIE studied the provisions of Title I and its various amendments, accompanying House and Senate reports, and Congressional debates. Those sources indicated that Title I of the Elementary and Secondary Education Act had three fundamental purposes:

To provide financial assistance to school districts in relation to their numbers of low-income children and, within those school districts, to schools with the greatest numbers of low-income students

To fund special services for low-achieving children in the poorest schools

To contribute to the cognitive, emotional, social, or physical development of participating students

NIE's strategy for assessing compensatory education programs begins with the recognition that the program has several purposes. It differs from the early national evaluations of Title I, which considered only the third fundamental purpose—contributing to children's development—and often rendered judgments on the efficacy of the program without acounting for the diverse ways in which Local Education Agencies (LEAs) had implemented it. The research is designed to provide clear information about what Title I is accomplishing toward achievement of each fundamental purpose and to examine the feasibility and effects of alternative ways of organizing Title I.

To obtain these kinds of information the Institute is conducting research on all aspects of the program. Studies cover the processes by which Title I allocates funds, delivers services, and helps students, and also include research on the ways in which Federal, State, and local administration determines what the program will be in practice.

The overall study consists of 35 research projects, organized into the four areas of funds allocation, compensatory services, student development, and administration. The major research questions addressed in each area are summarized below.

Funds allocation

NIE's research examines the effects of current procedures for distributing compensatory funds and assesses the implications of alternative allocation methods. The research on current procedures will indicate how actual allocation patterns correspond to Title I's fundamental purpose of providing additional money to low-income districts and schools. It will also show how Title I grants affect both the overall distribution of educational expenditures among LEAs and the level of educational spending within LEAs.

The work on alternative funds allocation procedures examines two issues that were prominent in the 1974 Congressional debates: (1) possible changes in the definition of poverty to be used in the funding formula; and (2) a possible change from poverty to achievement as the eligibility criterion for allocating Title I funds. As part of the research on achievement criteria, NIE has implemented experimental projects in 13 school districts which will serve as demonstrations of the effects of changing from poverty to achievement criteria in the selection of eligible schools within districts. NIE is also examining the feasibility of allocating funds to States and districts based on achievement criteria.

Compensatory services

The National Survey of Compensatory Education, referred to earlier, is the major data collection effort through which NIE is examining Title I's achievement of its second purpose, i.e., to provide special services to selected children. The first results of the survey are summarized in Chapter III. Results are reported on (1) the scope of compensatory education; (2) the range of services provided with the Title I funds; (3) the characteristics of the students receiving compensatory services; and (4) the characteristics of compensatory instruction.

Student development

Research in this area addresses the third of Title I's fundamental purposes, i.e., to contribute to children's overall development. The research is designed to provide information on one of the most crucial questions in the area of student development, that of identifying which characteristics of compensatory instructional services are most likely to increase pupils' reading and mathematics achievement. The research also will examine the prevalence of these characteristics in current compensatoy education programs and indicate how their adoption can be promoted by the way a Federal compensatory program is designed and administered. The studies focus on four features of instruction which appear to be especially important in determining children's learning; i.e., individualized instruction, instructional setting, time spent in instruction, and teacher training. The major research examining the relationship of these variables to student achievement is the Instructional Dimensions Study which includes 12,000 1st and 3d grade students in 440 classrooms.

Administration

Research in this area will provide information on the Federal, State, and local administration of Title I. Although improving educational administration is not one of the fundamental purposes of Title I, it is clearly a major factor in determining whether the program serves the intended purposes. NIE's research has three major objectives: (1) to describe the process by which administrators transform the provisions of the Title I statute and appropriations into educational services; (2) to identify, to the extent possible, the factors that affect the way in which the Title I program has been implemented; and (3) to determine whether and in what ways Congress may be able to influence local Title I services through efforts to modify administrative practices. Specifically, research projects focus on Federal administration; State and local administration; Parental Advisory Council (PAC) involvement with LEA decisionmaking; and administration in rural schools.

FINDINGS FROM THE NIE SURVEY OF COMPENSATORY EDUCATION

A national random sample of Title I school districts, which include some grades in the range from kindergarten through 8th grade, was selected for the NIE Survey. Data were obtained from interviews conducted during the 1975–76 school year with State and district administrators, school principals, regular classroom and compensatory education teachers, and PAC chairpersons. The figures reported represent national estimates based on the data from the sampled districts. Statements made about the characteristics of "compensatory education" students, teachers, or services refer to Title I- and/or State-funded compensatory programs. Where the information represents Title I only, it is so indicated. The remainder of this summary presents some of the survey's principal findings.

The scope of compensatory education

During the 1975–76 school year, Title I represented 3 percent of total national expenditures for public elementary and secondary education; and State compensatory education programs, 1 percent. Of the Nation's school districts, 90 percent received Title I funds.

Compensatory programs involve many public school students and teachers. From the survey data, it is estimated that in Title I districts:

An average of 90 percent of the schools classified by LEAs as eligible receive Title I funds.

An average of 57 percent of the children

classified by LEAs as eligible participate in Title I programs.

Approximately 5.9 million public school students in grades K–8 receive Title I or State-funded compensatory education services. This is 19.5 percent of all public school children enrolled in those grades.

An estimated 116,218 nonpublic school students or approximately 5 percent of the total enrollment in nonpublic schools receive Title I-funded compensatory services.

Of all public elementary school teachers in 1975–76, an estimated 111,087, or 9.5 percent of the total, were involved for some portion of their time in providing compensatory education instruction.

According to data from district applications, Title I funds paid the salaries of an estimated 8 percent of the elementary school teachers in these districts.

Title I funds paid the salaries of an estimated 54 percent of all teachers' aides in Title I districts.

The range of services provided with title I funds

The services provided with Title I funds are quite diverse and vary to some extent with the economic status of the school districts that receive them. From preliminary analyses, based on Title I applications, it appears that:

The national average share of the Title I budget spent on instructional services is 76 percent. However, when districts are classified by economic status (average family income), lower income districts spend 20 percent less of their Title I budget than wealthier districts on instructional services.

The national average share of the Title I instructional budget spent on reading is 53 percent.

The national average share of the Title I instructional budget spent on mathematics is 19 percent.

The national average share of the Title I instructional budget spent on language is 10 percent.

The budgeted national average Title I expenditure per pupil participating in the program is $347. For instructional services, the budgeted national average Title I expenditure per participant is $263.[1]

Title I districts use these funds to finance a variety of instructional and support services. Some instructional services are provided by 98 percent of the districts. Some support services are offered by 59 percent, and a large percentage of Title I districts fund more than one compensatory service. From the survey, it is estimated that:

69 percent of Title I districts use Title I funds for reading.

45 percent of these districts use Title I funds for mathematics.

38 percent use Title I funds to support preschool/kindergarten readiness programs.

30 percent provide instruction in language arts.

28 percent provide resource centers, and 21 percent support libraries.

20 percent provide medical and dental services.

The characteristics of students receiving services

Students in Title I districts appear to be concentrated in grades 1–6, with similar proportions in each of these grades; very few are in junior or senior high school. There is a significantly higher concentration of minority group children among compensatory education students than in total enrollment in Title I districts. It is estimated that:

54 percent of compensatory education students are White, compared to 75 percent of total enrollment.

34 percent of compensatory education students are Black, compared to 19 percent of total enrollment.

10 percent of compensatory education students are Spanish surnamed, compared to 5 percent of total enrollment.

Not all of the compensatory education services mentioned above are delivered to all compensatory education students. It is estimated that the following proportion of compensatory education students receive compensatory instruction in the subjects listed below:

50 percent receive compensatory instruction in reading.

44 percent receive compensatory instruction in mathematics.

35 percent receive compensatory instruction in language arts.

14 percent receive compensatory instruction in social/cultural studies.

12 percent receive compensatory instruction in science.

5 percent receive compensatory instruction in special education/learning disabilities.

3 percent receive compensatory instruction in English as a second language.

The characteristics of compensatory instruction

Many compensatory education students receive instruction in more than one subject matter area; the average amount of time spent in compensatory instruction is 5½ hours per week. This is an average of 25 percent of the total time available for learning.

Remedial reading, mathematics, and language arts are the three subjects most often provided to compensatory education students. The following features characterize compensatory instruction in these subjects. Based on the survey it is estimated that:

85 percent of the compensatory education students in reading, 66 percent of those in mathematics, and 63 percent of those in language arts programs receive this instruction outside their regular classrooms.

The average size of the class in which compensatory education students receive compensatory instruction is 9 students for reading and 14 students for language arts and mathematics.

The amount of time spent in compensatory education classes is approximately 4 hours per week for reading and language arts, and 3 hours per week for mathematics.

Further analyses of the data from the survey and interpretations of the findings will be presented in the second interim report.

[1] The amount actually spent per pupil may be somewhat less. Estimates of the number of students receiving services based on teacher counts suggest that the applications may underestimate the number of students served. In further analyses, the budget data will be corrected for any underestimates in the number of participants.

FARMERS AS INNOCENT VICTIMS

HON. JOHN KREBS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. KREBS. Mr. Speaker, I am introducing today a proposal which would authorize the Secretary of Agriculture to make emergency loans in an area if he determines that a labor dispute, in which farmers are not participants, results in losses in production or sales of agricultural products.

During last summer's brief cannery strike in California, which occurred at the peak of the harvest season, agricultural producers were unable to deliver their crops to processing plants and suffered disastrous losses. The entire apricot crop was lost and over 200,000 tons of tomatoes and 75,000 tons of peaches rotted during the work stoppage. It will take years for many producers to recover their enormous losses, which presently are not covered by the emergency loan provisions of the Consolidated Farm and Rural Development Act (7 U.S.C.A. 1961). These emergency loans, administered by the Farmers Home Administration—FmHA—of the Department of Agriculture, are available only in the case of natural disasters.

The bill would allow farmers, ranchers, and aquaculture operators to obtain loans at the same terms as those available for victims of natural disasters. A 5 percent per annum rate is charged for loans covering actual losses.

It should be clearly understood that this legislation does not seek to undermine the rights of either labor or management. The bill seeks only to protect the innocent producers who are not parties to labor disputes, but who, nevertheless, suffer the consequences.

OAK RIDGE SUPPORTS CLINCH RIVER BREEDER REACTOR

HON. MARILYN LLOYD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mrs. LLOYD of Tennessee. Mr. Speaker, recently there has been some discussion in the press about possible alternative sites for the Clinch River project. Although project leaders inform me that such consideration is normal for any nuclear powerplant, I wanted to state several points for the record.

First, Tennessee is pleased and happy to have the Nation's first large-scale demonstration breeder sited at Oak Ridge, Tenn. Our citizens, particularly in this area, understand nuclear technology, recognize that development of the breeder is essential to keeping our few energy options open, and are proud to have this historic project right where it is.

These frigid mornings of the winter of 1977 tell us all too chillingly of the consequences of inadequate energy. We simply must develop our options wisely, and for the foreseeable future the answer lies in conservation, coal, and nuclear power. Beyond 2000 only the breeder reactor offers a strong possibility of success for being the long-term assured, safe, and reasonably economical energy resource this Nation so urgently needs.

National needs for the breeder and Tennessee preferences aside, there are compelling reasons not to change the site of the Clinch River project. After 4 years of aggressive and nonrelenting effort, a firm partnership of Government and electric power industry have forged the team that can make the demonstration breeder a reality in the mid-1980's—in time to make the economic and other

evaluations crucial to deciding on whether the technology can and should be applied broadly in this country.

Transfer to another site with the same project goals would mean 3 to 4 years delay, a cost of hundreds of millions of dollars, and an unacceptable reduction in our odds for meeting future energy needs in a timely way.

There is no doubt the Nation needs more energy—to sustain jobs and services for our people and to provide hope for those who have not yet reaped the full benefit of America's high quality of life. The breeder is the key to developing nuclear power as part of our overall energy requirement; and only siting the breeder demonstration plant on the Clinch River site will meet the timing and utility objectives which are essential for the breeder to become a real energy option.

TACKLING THE POSTAL DILEMMA

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. ABDNOR. Mr. Speaker, like it or not, Congress is going to be forced to come up with some solutions to the continuing crisis facing the U.S. Postal Service. In the middle of March we will be receiving a report from the Commission on Postal Service which we asked for last year. What they will recommend remains to be seen, but in my testimony before them January 24, I pointed out some things I believe they should take into consideration. These are also points the entire Congress should consider as we prepare to act upon that report.

The testimony follows:

STATEMENT OF HONORABLE JAMES ABDNOR

Distinguished members of the Commission, I am pleased to have the opportunity to appear before you today on behalf of my constituents in South Dakota. I am especially pleased to testify before you because of the unique attention given by South Dakotans to the Postal Service. No other issue so touches each of my constituents as does this. To help you appreciate the perspective I bring to this testimony, allow me to sketch most briefly factors conditioning the views of South Dakotans.

While my count is only approximate because of the lack of recent data, there are some 391 post offices in South Dakota. Of that number, only 115 are what were once classified as first and second class post offices. That is, some 70 percent of South Dakota post offices are third and fourth class offices. It is not uncommon to have a post office serving less than a dozen families. This is to be expected in a state with a total population less than that within the 10 mile square enclosing Washington, D.C. South Dakota, a state some 200 miles wide and 400 miles long, has only nine people, on the average, living on each square mile.

I cite these statistics for one purpose—to establish the context within which South Dakotans view postal service. First and foremost, the postal service is a vital and needed form of communication in South Dakota, as it is for all Americans. But the small post office is more than that. Often, it is a center of community life: the symbol of that community. And, it likewise is each community's center of identification with the outside world, as well as to itself.

As we realize that the small town post office not only is considered, but frequently IS, the center of the community, it is little wonder people react quickly when there is a threat to remove the post office. For a state such as mine, I think you already know that that reaction can be very strong, for the post offices in rural America represent more than a service. They represent an institution which is a vital part of the daily lives of the people in these areas.

This is a consideration which was recognized in the Postal Reorganization Act of 1970. Public Law 91–374 stipulates in part:

"The Postal Service shall provide a maximum degree of effective and regular postal service to rural area communities and small towns where post offices are non-sustaining. No small post office shall be closed because of a deficit, it being the specific intent of the Congress that effective postal services be assured to the residents of both urban and rural communities."

This provision really explains why there was such outrage from many of my constituents when the prospect of post office closure was raised in the General Accounting Office report of 1975. The promise of equal or improved service was and is inadequate. South Dakotans and all rural Americans were faced with the prospect of losing—in all to many instances—their communities. I remind this Commission that this was a threat considered by patrons at 70 percent of the offices in South Dakota.

It would seem obvious that the above provision in the original legislation is at odds with the stipulated objective of making the Postal Service self-sufficient. And, I will join with countless others who will testify before you in saying that the Postal Service IS a public service providing a necessary structure of communication for the country. It may be, by definition and by structure, dependent upon government subsidization. And it would be easy for me, in defense of small rural post offices, which admittedly are a small factor in the larger picture of postal reform, to stop here knowing that my constituents' interests will be protected under the general banner of "service first" and economy later. Yet, I suggest we go beyond this slogan and inquire into its meaning for rural America and the future of postal service to those citizens.

I am certain my constituents share my interest in economy in government, including the postal service. The problem confronting the Postal Service, and which naturally has an impact on rural post offices, is a problem of economics. The Postal Service continues to be highly labor intensive. I know this Commission will spend a good deal of its energy on this issue and the question of mechanization. I note it here to make the point that 85 percent of postal expenses are for employees, most of whom are represented by powerful unions. Only postmasters and supervisors are not included under the national labor agreement of the Postal Service.

Included in recent contracts are "no-layoff" provisions, maintaining this relative structure of postal expense. This together with the constraints imposed on postal rates, apparently is being taken by many sources to mean that post office closings remain as one of the few avenues possible for reducing the deficit.

In fact, indication of this appeared recently in an Associated Press article in which the executive director of the Commission is quoted as saying there are only "three unpleasant alternatives" available to the Commission in its search for ways to help the Postal Service out of its financial difficulties.

Following is the thrust of the main points of the article which appeared in the January 7, 1977, issue of the Huron (S.D.) *Daily Plainsmen:*

"Those three possible recommendations were listed Thursday as more increases in postal rates, heavier subsidies of the U.S. mail by taxpayers or serious reductions in service.

" 'There is no fourth alternative,' said David Minton, executive director of the new Commission on Postal Service."

Mr. Chairman, I submit there is a fourth alternative, and that is to give careful examination to the present compensation provisions which, as I noted earlier, constitute approximately 85 percent of postal costs.

I do not subscribe to the theory that "everything must continue to go up," when it comes to wages and salaries. I believe careful examination can and ought to be given by all entities of government to the massive outlays which are being made to personnel

We have, for example, coming before Congress another wage increase proposal—this one for Members of Congress and the top echelon of Executive and Judicial branches of government.

What is wrong with saying: "Hold your horses! Let's think about stabilizing and holding the line for a while instead of always saying we've got to pay more"?

Somewhere and sometime we must say "enough is enough!" There is no way in the world to stop inflation and these spiraling increases in the costs of living we have all experienced unless we stop the great pump primer in the first place: the continually escalating increase in wages and salaries.

I am not calling for the Postal Service—or any other branch of government—to reduce wages to a previous level. What I am saying is let's hold the line. (And, I think the first place we should do it is in Congress by rejecting the Presidential Commission request for Executive and Congressional salary increases.)

I think the contract reached by the Postal Service certainly can stand review because of the built-in escalation which resulted.

One item in the National Labor Agreement which has caused administrative problems for some of our small town South Dakota postmasters is the requirement that a part-time clerk has to be paid for a minimum of two hours when called in to work. There are many times when these postmasters could use a part-time clerk for one hour in the morning and one hour in the afternoon, but it is not often they have two consecutive hours of work for a part-time clerk.

This is one example of why I believe the Commission on Postal Service should include in its consideration the National Labor Agreement with a view to recommending items which should be given attention in the negotiations between Postal Service representatives and postal employee union representatives when the next contract is under consideration.

If 85 percent of the Postal Service annual budget is for pay, with little or no possibility of reduction, and if an additional five percent or so of the annual budget is for energy, with the likelihood of increasing prices, it is obvious that the financial problem of the Postal Service cannot possibly be solved by making savings in the remaining small percentage of the budget outlays.

This is the fallacy, I believe, of the widely heralded GAO report.

GAO suggested that some $100 million could be saved annually by closing some 12,000 rural post offices. The same month a new National Labor Agreement was negotiated covering, as I noted earlier, all postal employees except postmasters and supervisors. Since then, base pay raises for each covered employee have aggregated $900 and cost-of-living adjustments have added another $624 per year. Take these increases, multiply them by the 600,000 covered employees, and you have a $914 million hike in postal expenses in a year and a half!

While $100 million a year is no small savings, its significance dwindles when you find that it amounts to only about a sixth of the increase in labor costs in a single year. And it dwindles even more when the number of people relying on their post office for more than efficient communication is considered.

There is another threat here, however. Obviously, any organization must deal with larger problems first. This Commission undoubtedly will consider more pressing problems with greater urgency. The social convenience of Americans living in rural areas may seem like a small matter when the cost involved amounts to but three or four percent of the annual deficit. The threat is that rural Americans may suffer because of the smallness of their problem from the national perspective. Where economics weighed against them under the "pay-as-you-go" mandate of the 1970 act, I fear their smallness relative to the other problems may weigh against them in any restructuring effort.

Along with my constituents, I am relying on this Commission to represent their interests among the clashing of great issues. Compared to other problems, the survival of a small post office with but several dozen patrons must seem insignificant. It is critical, however, to those citizens. This commission will be the best hope they have to ensure continued operation of their post offices, and, in some cases, survival of their communities.

A non-South Dakotan who had heard of my comments to the Commission through a radio broadcast wrote me as follows:

"I agree with you wholeheartedly that something should be done to keep the Postal Service from closing down rural post offices across the United States. I work for the Postal Serivce and it seems to me the problem lies within. Management is at fault from the top to Class 'A' offices.

"The Postal Service is painting a different picture for the public than what is to be seen. A. Why is the UPS making money just on Parcel Post and the PO can't? B. Why has the UPS done away with the Parcel Post machines and the PO is still using them? C. Why is PO claiming to be in the black all of a sudden when for years it's been in the red? Politics?

"D. Why is a postmaster of a Class A office making approximately $22,000 a year doing bargaining unit work and not doing his management work? The same goes for the assistant making about $18,000. They are sending men home for the day who have approximately $11,000 to $13,000 a year income. There is an overload of top level personnel in the Postal Service.

"E. Why doesn't the Postal Service return to Congress control or to the Civil Service Commission so the Postal Service can be controlled in manpower waste, material waste, wage control, postage rate, etc.? The public would be happier paying less postage and the other postal expense coming from tax money.

"F. Why are Special Delivery letters and packages not being given the service as was paid for?

"G. Why is service being cut and rates raised? Flexible substitutes can't even be guaranteed forty hours a week.

Mr. Adnor, I'm hoping you and your colleagues can change the Postal system back to a U.S. Postal Service and not a money-making business as it is now. It should be as the armed forces, by serving the people, being controlled by Congress or the Civil Service commission."

Mr. Speaker, in their January 27, 1977, edition the Wall Street Journal discussed the Postal Service dilemma and some of the factors compounding it. Their comments, too, merit attention:

POSTAL SERVICE FACES LOSS OF INDEPENDENCE; MOVE LIKELY THIS YEAR—COURT RULING, CARTER PLEDGE AND COMMISSION'S WORK POINT TO MAJOR CHANGES—ANOTHER PROFITABLE QUARTER

(By Walter Mossberg)

WASHINGTON.—That steady money-loser, the U.S. Postal Service, will report soon that for the second consecutive quarter its operations show a surplus.

It is the best financial news for the Postal Service in its six-year history. But all the other news for the agency is bad—so bad that the service is closer than ever to extinction as an independent agency. It appears likely, in fact, that Congress and the new President will reassert some direct control over it this year.

Lawmakers increasingly dissatisfied with the Postal Service seem ready, at the least, to restore the presidential power of appointing the Postmaster General and to reclaim some congressional authority over postal budgets and rates.

For mail users, a congressional takeover of rate-setting procedures probably would mean a slowing of the escalation of postal rates, which have approximately doubled since the Postal Service began in 1971. (It cost six cents to mail a letter back then, compared with 13 cents now. But those same mail users would still feel the burden of mounting postal costs—in the form of higher postal subsidies that Congress presumably would appropriate.

PRESERVING THE POPULAR

A congressional takeover would probably also result in preservation of some politically popular services, such as small rural post offices, which the 14-billion-dollar Postal Service wants to eliminate because they are uneconomic.

Postal officials, as well as major mail users, agree that the political environment is changing drastically, and that a legislative overhaul appears on the way.

"It's going to be a grim year for the Postal Service, says Timothy May, a postal lawyer for Reader's Digest and some other major mailers. A postal official adds: "Some of the major constituencies—the mailers, the unions and others—may be ready to throw in the towel on postal reorganization."

Events pointing toward major changes include the following:

A surprising ruling by a three-judge federal appeals court last month. The court not only ruled that the service had been using illegal methods to set postal rates; it also suggested that it soon may order a rollback of first-class rates and an increase in the rates for business mail. Responding to this ruling, worried business mailers are seeking major congressional revisions in the law under which postal rates are established.

The work of a study commission that is due to tell Congress by March 15 how the Postal Service should be reshaped. The commission is expected to raise fundamental questions about the rate-setting methods of the agency.

The campaign pledge by Jimmy Carter to try to make the Postmaster General a presidential appointee once more. During the campaign, Mr. Carter derided the Postal Service as "a Republican experiment," and since the election some of his aides have been preparing postal-policy options for his consideration.

POWERS OF THE BOARD

Under legislation passed in 1970, the service is run by a presidentially named nine-member board of governors, which has the power to hire and fire the Postmaster General. The governors may also change postal rates, subject only to review by a five-member Postal Rate Commission.

The governors and Postmaster General Benjamin Franklin Ballar want to preserve this system; they think it would have performed better if it hadn't been for the inflation of the 1970s. All they want Congress to change is the law's subsidy arrangement, which provides the service with annual federal grants until 1984, when the agency is required to break even.

Currently, the Postal Service gets a lump-sum appropriation of $1.6 billion. The agency argues that it needs much more than that each year if it is to provide several money-losing services that Congress insists on; such services include twice-a-day business deliveries and the maintenance of those rural post offices. Postal officials want Congress to list such uneconomic services in a "public service" category and simply give the agency sufficient funds to finance them.

But defenders of the current postal system aren't in good shape. For one thing, the congressional postal committees, which have been friendly to the service, are in disarray. Both committees have new chairmen this year, and the Senate panel may even be abolished as part of a Senate reorganization plan. Furthermore, Mr. Ballar is risking the enmity of the new President by passing the word that he won't resign with the changing of administrations—partly, he explains, because it is important to demonstrate the agency's independence.

SURPLUSES WON'T HELP

The new budget surpluses won't help, either. It appears that the service rolled up a profit in the last quarter of at least $50 million to add to the $15 million surplus it produced in the summer quarter. "They're going to have a hard time explaining to people that they had a surplus but still need billions in new subsidies," says John Burzio, a lawyer for the Magazine Publishers Association.

Mr. Ballar says the surpluses result from unexpected increases in mail volume and the elimination of 50,000 postal jobs in recent years. But he insists the surpluses don't alter the long-term, pessimistic view, which assumes future pay increases, an expected long-term decline in mail volume, and continuing inflation.

The service is likely to ask the rate panel for another increase before the year is out. If granted, it would push first-class postage to 16 cents or 17 cents an ounce in 1978—provided that the court's threat of a rate rollback is forestalled. If rates are rolled back, postal finances could become total chaos, thus forcing Congress to act.

A few months ago, postal officials hoped this would be the year when Congress finally agreed to provide enough of a subsidy to make the Postal Service function effectively. That hope was bolstered last year when Congress gave the agency an extra $1 billion and set up the special study commission to recommend further steps.

But now it appears that instead of returning from Capitol Hill this year with lots more money, the service will be lucky to come back in one piece. A top postal official, talking more glumly than ever, says, "We can save the system, but we've only got six months to do it."

Postal officials see some reasons for hope. It is possible that Congress, facing other pressing problems, may not want to plunge into the complexities of postal organization this year. Further, the Carter transition team recently has passed the word that Mr. Carter's campaign statements may not represent his final policies on the Postal Service.

But postal officials acknowledge that the service is in a newly precarious position, especially because of the recent federal appeals court ruling.

The court noted that the 1970 law called

for charging users of each class of mail for all costs incurred by that class, plus a proportional amount of the fixed overhead costs that couldn't reasonably be attributed to any one class. But the service, the court found, had deliberately allocated too much of the cost to those mailers—largely senders of first-class mail—who had no real alternative but to use the Postal Service.

The specific case had been brought by greeting-card makers as a challenge to the method the service had used in raising first-class rates to 10 cents from 8 cents. The court ruled that the method used had been illegal, but granted no legal remedy because the 10-cent rate being challenged isn't in effect any longer. But the decision noted that a nearly identical challenge to the current 13-cent rate is pending before the same court. The court hinted that when that case is decided it may order revisions in the rates. Such revision almost certainly would cut rates for letter mail, while providing sharp increases in rates for advertising matter, magazines, newspapers, books and many other items.

To head off that possibility, the publishers' lobbyists have begun moving to get Congress to reverse the court by revising the 1970 law's section on how rates are set. "We'd have backed a simple subsidy bill, but this court decision is catastrophic," says Mr. May, the Reader's Digest lawyer. "Now, nothing the Congress will do on subsidies means a thing unless they reverse that ruling."

One big publisher has decided to greatly expand its use of private carriers, circumventing the post offices. "The mailers have usually gone along with Ballar," says a postal expert in Congress, "but now they're going to be focusing much more on saving themselves."

The court ruling also poses a problem for postal unions—the most potent lobbying force among the postal interest groups. "The unions have always tried to keep things under control, to avoid reopening the law too much, because they're dreadfully fearful something might happen to their collective-bargaining rights," saye James LaPenta, vice president of the mail handlers' union.

But now, he adds, "we may have to do something this year, or we'll wind up with collective bargaining but no employer to bargain with." He favors bringing the service back under political control by eliminating the rate commission and making the Postmaster General a presidential appointee. The AFL–CIO, worried about postal increases on union publications, agrees.

The court ruling has affected the deliberations of the congressional study commission, too. David Minton, the commission's executive director, says, "We'll direct much more of our attention toward the problem of rate-making, now that the court has ruled. The ruling will virtually assure that Congress will reexamine the rate-making issue." He sees the possibility of "a complete reexamination of the whole 1970 law."

It long has been assumed that Congress would be unwilling to resume the old practice of setting rates by law. But since 1970 many new members have been elected to Congress who can't recall the intense and nettlesome lobbying over postal-rate bills. "There's a lot of new sentiment to get Congress back involved in running the service in some way—maybe not on a day-to-day basis, but in some way," says Mr. Burzio of the Magazine Publishers Association.

Robert Malsom, a Carter aide studying postal policy, says, "The important question is whether the service is going to continue to be locked into the schizophrenic legal language that requires it to break even and also requires it to provide a public service."

THE POLITICS OF CHROME

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. BAUMAN. Mr. Speaker, about this time during the beginning of each new Congress, just as most other Americans are putting away their campaign gear, a small group of others are only now putting theirs on. The buttons they wear read, "Stop Rhodesian Chrome," and this particular pressure group makes it their cause to repeal the Byrd amendment which permits reciprocal trade with other nations.

These people who complain about the Byrd amendment seem to have always been with us, and hopefully they always will be with us, because it would be as strategically dangerous as it would be economically foolish to actually repeal the law which permits us to buy Rhodesian chrome. Sentimentalists in foreign policy look at the imperfections we see in the Smith government and hold that we should not let our dollars travel there. Yet to trade with a country, to give it something it wants for something we want even more, is hardly to vote approval of its regime, or we would stop buying beans from Colombia, spices from India or glass from Poland. Moreover, particularly so in the Rhodesian case, our trade helps to raise the general level of their economy, bringing prosperity to people regardless of race or creed.

In the past, the only alternative to purchasing chrome from Rhodesia has been to buy it instead at a higher price from the Soviet Union, hardly one of the world's more liberal regimes. While recent technology has only this year enabled a few other countries to produce chrome at Rhodesia's price levels using South Africa's low-sulfur process. Rhodesia remains our primary source of relatively inexpensive chrome.

The Sunday News American of Baltimore published an editorial in its February 6 edition which addresses these points in its characteristically lucid way and I offer it for the RECORD. I hope that my colleagues think long and hard before any effort to repeal the Byrd amendment is given any serious consideration.

[From the Baltimore Sunday News American, Feb. 6, 1977]

A STRANGE MORALITY

Hard-left activists and their dupes in Congress are mounting a new drive for repeal of the 1971 Byrd Amendment, under which this country imports chrome from Rhodesia in disregard of United Nations sanctions. Few Americans realize how serious a threat to the national security is involved, or how such a repeal would help the Soviet Union.

They certainly should—and it is high time congressional dupes quit falling for the activist argument that the United States is a disgrace for continuing to do business with a racist government in defiance of world opinion. Just about the whole world has been hypocritically and quietly ignoring the UN embargo on Rhodesian exports. Only the U.S. has been honest and candid about its actions.

The Byrd Amendment was enacted out of vital necessity. Chromite ore of metallurgical grade is a strategic material, absolutely essential in the manufacture of special steels used in a wide variety of armaments. Although Rhodesia has 67.3 per cent of the world's dwindling chrome resources, of which we have none domestically, Soviet Russia to date has been our major supplier.

In 1975, for example, the U.S. bought 17.5 per cent of its metallurgical grade chromite from Rhodesia and 49 per cent from Russia. The rest of our imports came from a variety of other countries, including 14 per cent from Turkey. What this boils down to is one all-important fact, namely that the U.S. simply could not manage its chrome problem if deprived of both Rhodesian and Russian supplies.

This is precisely what could happen if the stalemated Rhodesian talks erupt into full-scale racial war and, as in Angola, a Marxist government emerges as the result of Soviet-Cuban backing. Thereafter, U.S. chrome supplies would be almost wholly dependent on Kremlin policies.

What this would mean in the event of a direct, non-atomic military showdown with our ideological arch enemy is obvious. And it should be equally obvious that virtual control of the Rhodesian chrome mines at the very least would give the Soviets a powerful new weapon for use against us in other conflicts. In the Korean war, it should be noted, Moscow seriously hampered the U.S. by cutting off its own chrome supplies to us.

The drive for repeal of the Byrd Amendment—a drive incidentally supported by our new UN ambassador, Andrew Young—is as ironic as it is menacing to the national security. It is a strange kind of American morality that can ignore that security in condemning the U.S. for trading with Rhodesia while seeing nothing wrong with buying from the Soviet Union Communists, bosses of the most repressive long-time regime in the world today.

POLISH-AMERICAN COMMEMORATION

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. DELANEY. Mr. Speaker, February 12 has been the birthday of many great men in our Nation's history—among them none greater than Gen. Thaddeus Kosciusko of our Continental Army.

Kosciusko came to our shores from his native Poland in 1776, on his own initiative and at his own expense, to join the Revolutionary cause as a colonel of Army Engineers. He distinguished himself in the Carolinas and in the battles of New York and Yorktown and engineered the fortifications at West Point now the site of the U.S. Military Academy. As Gen. Nathaniel Greene, commander of the Southern campaign wrote:

I can liken to nothing his zeal in the public service, and in the solution of important problems; nothing could have been more helpful than his judgement, vigilance, and diligence. He was fearless of every danger. He never manifested desires or claims to himself, and never let opportunity pass of calling attention to and recommending the merits of others.

At the close of the War for Independence, Congress granted Kosciusko the rights and privileges of American citi-

zenship and commissioned him a brigadier general.

The people of my congressional district are proud to have a bridge named in memory of this Polish-American patriot, spanning the border between Brooklyn and Queens as does the friendship between the people of our country and those of his native land.

Kosciusko's struggle on behalf of the common folk of Poland after the partition of 1792 reminds us of the abiding aspirations for freedom and liberty voiced by the Polish people.

It is with deep feeling that I salute Kosciusko's "sons and daughters" in America living under the banner of liberty which he helped to unfurl and that I pray for Poland's own national liberation.

AWARDED THE PRIME MINISTER'S MEDAL OF THE STATE OF ISRAEL

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. WAXMAN. Mr. Speaker, Mr. Harry Groman, a distinguished citizen of Los Angeles, will be awarded the Prime Minister's Medal of the State of Israel at the annual Salute to the Business and Financial Communities of Los Angeles. This Tribute Dinner Dance, on behalf of State of Israel Bonds, will be held on Sunday, February 27 at the Century Plaza Hotel. I am gratified to be able to bring to the attention of the Members the many accomplishments of this exemplary American. His concerns for his fellow men are well known to leaders in finance, industry, government, education, and religious endeavors.

Until 1938, Harry Groman held positions with State and local government agencies. Since then he has been involved in a number of businesses connected with real estate and mortuaries, serving on many clubs and committees having to do with the maintenance of high standards in his fields of endeavor. However, it is Harry Groman's involvement with community service which leads us to do honor to him and his lovely wife, Peggy Jean.

Harry Groman is former president of the Sunair Home for Asthmatic Children, a trustee of the City of Hope, vice president of the Jewish National Fund, and is an active member of numerous organizations, among which are the Criterion Club, Eastern Star Ionic Chapter, Jewish Big Brothers Association, Jewish Home for the Aged, Westwood Shrine Club, and Alan Catain Leukemia Fund. Mr. Groman is also a director of the Variety International Boys' Club and Variety Club Tent 25, and participates actively in the Footprinters and Forresters, the Los Angeles Jewish Community Federation Council, the American Jewish Committee, and several Shrine Clubs. He is a charter member of Moose Lodge No. 29. A number of synagogues also claim Harry Groman's membership.

We must recognize Mr. Groman also for his philanthropy: a campsite to the Jewish Community, a bungalow to Camp Hess Kramer, a classroom to Hillel Academy in Los Angeles, a community social room at the Farband Community Center in Dimona, Israel, a room at Mt. Sinai Hospital, and athletic equipment to the Israeli Army. Together with Mr. William Tamkin, he gave land and buildings to the Sunair Home for Asthmatic Children. He has established the Groman mortuaries rabbinical loan fund at Hebrew Union College and planted 2 miles of trees in Israel near the Gaza Strip. In memory of William Tamkin, Mr. Groman has contributed laboratories to the Massachusetts Institute of Technology, Boston, Mass. He has shared so much with so many that it is impossible to enumerate all of his generous gifts and contributions. Because of the equality of his achievements in the service of his fellow men and women, I ask the Members to join me in paying tribute to this most valued citizen, Harry Groman.

TRIBUTE TO RAYMOND J. PITTS

Hon. Yvonne Brathwaite Burke

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mrs. BURKE of California. Mr. Speaker, I direct my colleagues' attention in honor of a very distinguished Californian who is retiring after a lifetime of dedicated service in the field of education. Mr. Raymond J. Pitts, dean of academic affairs within the Office of the Chancellor of the California Community Colleges, has served the citizens of the State of California and the California State system of public education with the utmost loyalty and dedication.

Mr. Pitts initiated his career in public education as an instructor in the State Teachers and Agricultural College in Forsyth, Ga., in 1933, after graduating cum laude with a bachelor of arts degree in mathematics from Talladega College; and he received his master of arts degree in mathematics and his doctor of philosophy degree in education and mathematics from the University of Michigan, and engaged in postgraduate studies at the University of California at Los Angeles and the Claremont School of graduate studies.

Since coming to California as a mathematics instructor at Los Angeles City College in 1957, he has served in such distinguished capacities as director for the mathematics project for the Santa Barbara County Schools, and administrator with the Center for Coordinated Education at the University of California at Santa Barbara, the research and teacher education project of the California State Department of Education Office of Compensatory Education, the instructional development and services program of the San Francisco Unified School District, and the program approval branch of the Teacher Preparation and Licensing Commission of the State of California.

Because of his sensitivity to the human dimensions of educational administration and his ability to resolve human conflicts in educational settings, Mr. Pitts was very successful in developing and determining the role and the function of instructional programs in the California community colleges, the California State university colleges, and the University of California.

He has further distinguished himself as president of the National Institute of Science, treasurer of the Beta Kappa Chi Honorary Scientific Society, and member of numerous advisory committees in the State of California on mathematics education, teacher education and higher education.

In commendation for his outstanding record of dedicated and highly effective service to the people of the State of California over the past 20 years, I ask my colleagues to join me in saluting Raymond J. Pitts upon the occasion of his retirement for the excellent leadership abilities he has provided in the field of public education.

THE RAISE CONGRESS DOES NOT NEED

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. ABDNOR. Mr. Speaker, the conduct of the 95th Congress concerning the pay raise it is about to get is little short of hypocritical. How we can justify telling the folks back home how much we oppose the raise, and then not have the courage to vote on the raise, I will never know.

My thoughts on the pay raise are summarized in the weekly newscolumn I sent to newspapers in my State last week, and in the statement I am submitting before the House Office and Civil Service Subcommittee on pay raises:

[News release from Congressman JAMES ABDNOR]

BUDDIES SAVING THE PAY HIKE

The silence on Capitol Hill concerning the proposed pay raise for Congressmen and other federal workers is almost deafening! As a matter of fact, it is so quiet it almost leads one to believe that a kind of "buddy system" has been worked out to make certain the automatic raise goes into effect Feb. 18.

The only way the pay hike WON'T go into effect is if either the House or Senate specifically votes it down. I have joined in sponsoring the needed resolution to DISAPPROVE the raise, but you can't even get anyone to talk about it, much less hold a committee meeting so the resolution can get to the floor. There are, perhaps, four dozen or so of us openly on record against the raise, which is not many when you need over 200 votes in the House or 50 in the Senate—If you get a chance to vote at all. Moreover, the pay raise proposal was submitted by the outgoing Ford administration with the apparent blessing of the incoming Carter administration.

The conspiracy of silence is amazing! How these people can justify giving themselves a $13,000 pay raise, I can't figure out. Many people back home are not earning all year what the Congress may get in a raise.

Then you hear justification of a pay raise through tighter regulations—something like "pay me more and I'll behave better." This is utter nonsense! Honest Congressmen will be

honest Congressmen regardless of their pay. Those who yield to temptation are going to be no less susceptible if they are paid more.

We need two things: a vote on the resolution of disapproval which has been introduced but needs committee action, and we're having little luck getting such a meeting.

We also need reform of the way we get salary hikes, a battle I have fought since I came to Congress. My bill would require a vote on every salary proposal so all Members would be on record "for" or "against."

It's a battle we appear to be losing, thanks to the "buddy system."

STATEMENT BEFORE THE HOUSE POST OFFICE AND CIVIL SERVICE SUBCOMMITTEE ON PAY RAISES, FEBRUARY 9, 1977

Mr. Chairman: I will be brief.

The pay raise is wrong!

The way we go about giving ourselves a pay raise is wrong!

We all tell the folks back home how wrong it is!

But despite all our words, all we're going to do to correct this wrong is hold these hearings "for the record," as the invitation to testify noted.

Mr. Chairman, since it is clear the leadership intends to do nothing more, even this charade of a hearing is wrong!

VOICE OF THE 500-MILE RACE

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. JACOBS. Mr. Speaker, Indianapolis is more than just a little proud of Sid Collins, the voice of the 500-mile race, for more than just a few reasons.

I am sure that Sid Collin's friends all over the country will be happy to read of his deliverance:

LUCKY TO BE VOICE OF "500"

(By Thomas R. Keating)

Being "the Voice" of the Indianapolis '500' for the past quarter century has brought WIBC's Sid Collins fame and fortune.

And now, to his way of thinking at least, it also may have saved him from being paralyzed.

Shortly before last year's race, Collins started experiencing severe pains in his legs.

He consulted not one, but three different doctors and their diagnoses were pretty much the same—simple muscle problems that exercise would correct.

"I did what they told me, but instead of getting better, the pain got worse," Collins explained "In fact, it was almost unbearable at one point.

"At the race last year, a physician from St. Louis named Harlan Hunter saw me limping around and asked what the problem was," Collins continued.

"When I told him my symptoms and what the other doctors had prescribed, Dr. Hunter disagreed and suggested I see a neurosurgeon."

Collins took this advice and entered a hospital last June for a series of tests which quickly disclosed that a disc in his neck was pressing against his spine and had been for some time, causing the leg pains.

If left unattended, complete paralysis was all but certain in a matter of months, maybe weeks.

Surgery, in the form of a spinal disc fusion, was ordered immediately.

If this wasn't bad enough, there was more news that was really a shock.

The message was that to perform the operation, surgeons had to enter the neck from the front. This meant literally cutting open his throat, delicately avoiding the larynx and other vital organs by millimeters to reach the spine.

To anyone, this would be a frightening prospect. To a man whose career was built on being the Voice of the '500,' it was potentially the end of the world.

The operation, however, was a success, and for the last six months Collins has been working his legs back into shape.

A limp is still present, and it takes him half an hour to reach the top of the Speedway tower for his broadcast, but he says the condition is only temporary and he feels fine, although a little bewildered by some who practice medical science.

"Three doctors for five months tell me I have a slight muscle problem and then a doctor walks out of the Speedway crowd and tells me what's wrong," Collins concluded.

"If I hadn't been associated with the Speedway, I probably would have gone along and eventually been paralyzed. I'm a very lucky man."

GEPHARDT DEPLORES DIXON REMARK

HON. RICHARD A. GEPHARDT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. GEPHARDT. Mr. Speaker, I rise to state my revulsion at the recent statement by Federal Trade Commissioner Paul Rand Dixon regarding consumer advocate Ralph Nader. Despite Mr. Dixon's apology to the National Association of Arab-Americans and later, with prodding, to Mr. Nader himself, Mr. Dixon has demonstrated very poor judgment and a sense of prejudice which should never be exhibited by a public official.

As one St. Louisan has written:

Mr. Dixon's use of offensive, obscene language against Ralph Nader was a disgusting exhibition. Mr. Dixon's deliberate ethnic slur against Mr. Nader was unforgivable.

The conduct of Mr. Dixon after his reprehensive tirade proved him to be a part of the arrogant elite we thought had been cleansed from the Washington scene.

I implore you to take immediate steps to remove this person from our government. In doing so, you will prove to all Americans their faith and trust in their representatives is preserved.

Commissioner Dixon may remain in office despite his unfortunate remark. President Carter does not have the authority to fire him, although he could ask Mr. Dixon to resign in the interest of the public good. My distinguished colleague from New York, Representative KOCH, has introduced an impeachment resolution, which is the method by which commissioners can be removed from office. I have not signed such a resolution, for I feel Mr. Dixon will suffer more personally having this statement on his public record than he would if he was removed from the public eye.

I agree, however, that public officials must be prevented from displaying their vile, personal, and racial biases in their official capacities. The so-called Watergate tapes recorded an ugly segment of such prejudice in our highest elected official, the President. Former Agriculture Secretary, Earl L. Butz, and General George S. Brown indicated to the American people that similar racial and religious bigotry existed in the Cabinet and in the highest levels of our military establishment. Paul Rand Dixon brings public service to an even lower level. Thus, it is my fervent hope that President Carter, with the advice and consent of the Senate and the concern of the Congress, will return a sense of morality to our public servants, be they elected, appointed, or career oriented, so that comments like Mr. Dixon's will never be heard again. Within our roots as a nation of many peoples, the decay of prejudice has existed, but within those same roots lies the possibility for a new order in which all of our people, of any race, religion, national origin, sex, or age, will be treated equally, fairly, and honorably.

HEARINGS ON PROPOSED EXTENSION OF THE LIBRARY SERVICES AND CONSTRUCTION ACT

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. BRADEMAS. Mr. Speaker, on Wednesday, February 16, 1977, the Subcommittee on Select Education, which I have the honor to chair, of the Education and Labor Committee will hear testimony on proposals to extend and amend the Library Services and Construction Act, LSCA.

This measure, which was initially passed in 1964, has been very important in extending library service to special groups such as the handicapped, the aging, the hospitalized, the bilingual, and the disadvantaged, both rural and urban.

The Library Services and Construction Act also emphasizes assistance to metropolitan libraries that serve as regional resource centers.

LSCA matching grants have as well enabled communities throughout the country to build new libraries and remodel outdated ones, and the program has also promoted cooperation between cities and States in the library field.

Mr. Speaker, among the witnesses scheduled to testify before the subcommittee on February 16 will be the Honorable JACK BRINKLEY of Georgia and representatives of the following agencies and organizations:

Office of Libraries and Learning Resources, U.S. Office of Education, Department of Health, Education, and Welfare;

National Commission on Libraries and Information Science;

American Library Association;

Urban Libraries Council;

National Citizens Emergency Committee to Save Our Public Libraries;

And other public witnesses.

The hearing will take place at 9:30 a.m. in room 2261 of the Rayburn House Office Building.

VETERANS' BENEFITS PASS-THROUGH BILL

HON. HAROLD E. FORD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. FORD of Tennessee. Mr. Speaker, I rise today to reintroduce H.R. 904, the Veterans' Benefits Pass-Through bill which I introduced on January 4. As I stated in the RECORD on January 4, the need for this legislation is critical—of the nearly 5,470,000 persons receiving veterans' pension benefits, about 80 percent receive social security as well. Many of these people rely on these two benefits as their sole means of support.

To help people on fixed incomes cope with inflation, social security periodically grants a cost-of-living increase. For a person also receiving veterans' pension benefits, however, this cost-of-living increase is seen as an increase in income, and the Veterans' Administration cuts that person's veterans' benefits by an amount that effectively offsets it. We thereby single out the veteran from those on fixed incomes and discriminate against him and his family. This procedure is a windfall to the Veterans' Administration which allows the Federal Government to give money with one hand but take it away with the other.

I am pleased and encouraged by the broad bipartisan support I have received for this bill. On January 11 my distinguished colleague, Mr. MOAKLEY, rose before this body to endorse the bill and urge its support. I am also delighted that Mr. CONTE has expressed his desire to work with me on the bill on the Republican side. So far I have received the cosponsorship of 83 Members—68 Democrats and 15 Republicans, including 7 members of the Veterans' Affairs Committee.

The veterans' service organizations have given the bill overwhelming support. Among those groups favoring the bill are the AMVETS, the Veterans of Foreign Wars, the Veterans of World War I of the United States of America, the Blinded Veterans' Association, the National Association of Concerned Veterans, the American Legion, the United Spanish War Veterans, the Retired Officers' Association, the Catholic War Veterans, and the National Black Veterans' Organization. Mr. Joseph J. Palaia, National Commander of the Catholic War Veterans, sent me a copy of a memorandum he sent to his membership explaining the bill and urging his members to write to their Congressmen and Senators to show their support. At their 77th National Convention from August 13 through 20, 1976, the Veterans of Foreign Wars passed resolutions 677, 604, and 660 dealing with this very problem. Similarly, the American Legion at its 1976 convention expressed concern that its members have adequate pension adjustments to cover increases in the cost of living.

Mr. Speaker, I would like to take this opportunity to go on record as supporting this bill 100 percent. If the need comes to petition the Veterans' Affairs Committee to hold hearings on this bill, I am prepared to wage this campaign. The veterans of this country have too long been treated like second-class citizens because of this procedure, which was probably never meant to be, and it is time we corrected the inequity. I once again urge my colleagues to strongly support this legislation to guarantee that increases in social security benefits will be passed through to veterans' pension recipients.

VIETNAMESE FLEE, THEN FIND NO ONE WANTS THEM

HON. TOM HAGEDORN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. HAGEDORN. Mr. Speaker, it further reflects the lack of purpose of the United Nations that there has been so little controversy attending the application for admission to this body by the Socialist Republic of Vietnam. Nearly 2 years after the fall of South Vietnam, hundreds of refugees risk their lives every month in efforts to leave this country. This, of course, fails to include the tens of thousands of Vietnamese who have reportedly been massacred during that time, and the hundreds of thousands who have been forced from their homes into "reeducation" camps. Despite this, "our last best hope for peace" has enthusiastically welcomed this nation to its ranks, "world opinion" is suddenly nowhere to be seen, and our own country prepares to establish "normal" relations with this nation once they have accounted for our MIA's. As tragic is the human cost of communism in Vietnam, even more tragic in my opinion is the absence of response by the West. That nations purporting to call themselves free can ignore the agony, and refuse to assist the few who have successfully fled Vietnam is a tragedy of the greatest proportions. I would like to call to the attention of my colleagues the following article by Barry Kramer in the Wall Street Journal of November 22, 1976.

THE HOMELESS: VIETNAMESE RISK DEATH TO FLEE, AND THEN FIND NO ONE WANTS THEM—SOME WAIT ON A THAI BEACH; EXODUS REFLECTS TROUBLES OF HANOI WITH THE SOUTH—SHIPS THAT PASS AND SEE NOT

(By Barry Kramer)

SONGKHLA, THAILAND.—The 15 small wooden Vietnamese fishing boats that are lined up along the beach look too picturesque to be part of an unfolding human drama.

On the beach live more than 350 Vietnamese refugees who arrived here aboard the boats after fleeing their native land. They laze about now, listening to Thai rock music blaring from radios, waiting to learn if they will be allowed sanctuary anywhere in the world.

Some older women prepare food over charcoal braziers, while boys clad in black loincloths take pots and pans and scoop water out of large clay jugs for a morning shower. But mostly they wait, frustrated and bored, and afraid that the Thais will order them to leave or, worse, send them back to Vietnam.

The refugees were on the losing side of the Vietnam war. Most of the men were South Vietnamese businessmen, property owners, bureaucrats or military officers. Eighteen months after the fall of Saigon to the Communists, hundreds of them still risk death each month to flee Vietnam in flimsy, unseaworthy fishing craft like those lining the shore at Songkhla and other beaches on the Gulf of Thailand.

MANY ATTEMPTS FAIL

There is more working against such attempts than the unpredictable, often stormy sea. Many Vietnamese have been arrested—and some have been killed, the refugees report—while attempting escape. Perhaps one-third to two-thirds of those who try don't make it. The Hanoi radio talks glowingly of the heroism of marine police who catch would-be escapees. Communist patrol boats, refugees say, don't hesitate to shoot fleeing vessels out of the water and leave their passengers to drown.

Those Vietnamese who do escape find that the welcome mat is no longer out. Nation after Asian nation—in particular Singapore, Malaysia, Hong Kong, the Philippines and Japan—tells all but a few of the Vietnamese to go elsewhere. There are many reasons—Hong Kong says it simply doesn't have any room—but the main reason is assumed to be that no one wants to antagonize Hanoi. If any refugees are let in, it is only after the United Nations has promised to find them homes in other countries. Some escape boats have even been towed back out to sea, the refugees still aboard, still searching.

Worse yet, there are reports that some cargo ships have callously ignored sinking craft and the pleas for help of their Vietnamese passengers, although most ships still adhere to the law of the sea and assist anyone in distress. The cargo-ship captains know that if they pick up the Vietnamese, they may be unable to unload them in any of their ports of call.

A Burmese ship that rescued 90 Vietnamese wasn't allowed to dock at Hong Kong for more than a month. A Japanese ship wandered the seas for 16,000 miles and 64 days, from Singapore to Yemen to Japan, trying to get someone to accept the 31 Vietnamese it had rescued from the South China Sea. In both cases, the Vietnamese were eventually allowed to land.

FLOW REFLECTS CONFLICTS

The new flow of refugees by sea from Vietnam—between 1,500 and 2,000 so far this year—reflects the difficulties that the Communist ideologues are having with large elements of the South Vietnamese population. Observers say that earlier Communist attempts at persuasion have given way to force and terror.

"They are having a classic Marxist-Leninist revolution in South Vietnam," says one Vietnam watcher. "They are choking off the bourgeoisie harder than they ever did in the North."

Property is being confiscated. The new government has imposed a business-profits tax of 80% to 100%, aimed mainly at the South's many Chinese entrepreneurs. Most former high-level bureaucrats and military officers, hundreds of thousands of them, have been forced into camps. These are described as re-education centers by the government, as concentration camps by those who have escaped from them.

Under a Hanoi policy of reducing the population of South Vietnam's swollen cities, millions of South Vietnamese are being forced out of the cities to live in "new economic zones." Refugees say many of these

zones are uncleared jungle lacking such elementary resources as drinking water, health facilities or roads.

A MATTER OF PRIORITIES

Vietnamese who have fled the country say they became convinced that even harsher measures were in store after most foreigners including journalists and missionaries, were ordered out of the South. These Vietnamese felt that foreign "eyes and ears" had provided some insurance against harsh repression.

"You can't have a freewheeling South; it would contaminate the North," one Southeast Asian diplomat says in explaining the new Communist leaders' moves against South Vietnam's moneyed class. "Priority No. 1 is the Lao Dong (Communist) Party," he says, "and neither the economy nor the public welfare will be allowed to get in the way."

Vietnam has been completely under Communist rule since April 1975, when the U.S.-backed regime in South Vietnam collapsed. Last July the country was reunited as the Socialist Republic of Vietnam with one capital, Hanoi.

The Hanoi government tries hard to cut off the escapes, which must be embarrassing to it. According to the refugees, the possession of maps, compasses and other navigational aids has been outlawed (at least one boat made it to Songkhla using a small, inaccurate airline giveaway map); many motorized fishing boats have been confiscated; fishing licenses are hard to get; block associations have been set up to control the population, and meetings of three or more persons are reason enough for arrest.

These efforts are undermined, the refugees say, by corruption among Communist officials. Travel permits, ocean fishing licenses, even weapons, reportedly can be bought. For the right amount of gold, it is said, some Communist officials even collaborate with escapees.

While the Thais grumble a good deal about the Vietnamese who seek haven on their soil, and threaten to forbid entry, Thailand has nonetheless taken in more Indochinese refugees than any other nation except the U.S. More than 100,000 Vietnamese, Cambodians and Laotians have come to this country. Many of them walked across the borders from Cambodia and Laos in the early days of Communist control when Communist border measures were less effective. (There is no common border between Vietnam and Thailand.) At least 72,000 still remain, not counting 70,000 or so unwanted Vietnamese who have been in northeast Thailand for decades.

The U.S. has accepted 150,000 Indochina refugees, most of them Vietnamese, but the number won't go any higher unless Congress eases restrictions. "Congress thinks that if you're overseas, you must be a bum," says one American official here who would like the U.S. to provide sanctuary for more Vietnamese.

United Nations officials, saddled with the task of finding homes for the refugees, are trying to "internationalize" the problem. France has taken close to 10,000 of the refugees. Holland, Australia, Norway and other countries have taken smaller numbers.

"We're telling the Thais that we're hoping the U.S. quota will go up," one UN official says. "Meanwhile, we're using up solutions rapidly." He adds:

"One day, the Thais will realize that many of these refugees aren't going to be accepted anywhere. What will they do then? We don't know."

Before the recent military takeover in Thailand, former Foreign Minister Bhichai Rattakul was quoted as saying that if their countries didn't accept the Vietnamese, Thailand would forcibly repatriate them. Of course, he said, Vietnam would first have to "guarantee" the safety of the returnees.

To the Thais, the Vietnamese are an alien presence. Many Thais openly express hate for all Vietnamese; anti-Vietnamese riots broke out earlier this year in the northeast, Thailand's most economically depressed area. Thailand's former civilian government, like most governments in Southeast Asia, was careful not to antagonize Hanoi by accepting the refugees too eagerly and thereby encouraging more of them to flee.

THE FLIGHT OF DAO VAN KY

But still they come, against great odds. Take, for example, Dao Van Ky, a former noncommissioned officer in the South Vietnamese Navy. Mr. Ky fled from Vietnam in a 30-foot boat last June 1 along with 30 other persons, including his wife and three children. Another 30-foot boat, with 60 persons aboard, slipped out of Vung Tau that same night.

Two nights later, a larger boat, a fishing vessel, pulled alongside the two smaller ones. The fishermen asked where the two boats were headed. People on Mr. Ky's boat shouted back, "We're looking for freedom."

"We didn't know that they were actually Vietcong," Mr. Ky says, until the "fishermen" pulled out M–16 rifles and other weapons and forced everyone to board the larger vessel.

At 2 o'clock the next morning, the escapees offered one of their guards a bribe of gold in exchange for his M–16. He proved receptive. In fact, he and another guard joined the flight. In the ensuing battle, the rest of the Vietcong were either killed or thrown overboard. The 92 refugees then piloted the larger boat to Songkhla.

Another harrowing experience is related by Ba Tuyet, former chief of Vietnamese personnel at Saigon's Tan Son Nhut Airport. Miss Tuyet fled on a tiny boat jammed with 22 persons, mostly women and children. The boat was the smallest of three that left Binh Tuy Province northeast of Saigon last Aug. 1.

Miss Tuyet told interviewers she had been planning her escape since before the fall of Saigon. She said her fiance, a physician, was forced to drop out of the plot because he was being shadowed too closely by government agents and didn't want to endanger the others. The escape had to be aborted twice, once when the moon was too bright, once when the tide was too low.

PASSING A CHECKPOINT

The boats first had to pass a government checkpoint at a river exit to the sea. The women and children were hidden below in fish storage tanks, the children having been given sleeping pills before the trip began. "We were very frightened at the checkpoint," Miss Tuyet says. "At first, those in the fish compartments cried silently because they thought they had been caught."

But fishermen on deck had established a pattern of night fishing previously, and the guards waved them on without searching the boat. Sometime that night Miss Tuyet's boat lost contact with the two others. This was a particularly unhappy occurrence: The other boats had all the food and supplies. The only cargo on Miss Tuyet's boat was gold; the refugees had planned to use it to pay the operators of a larger boat that was supposed to meet all three smaller boats far at sea.

The rendezvous never took place, however, and Miss Tuyet's boat continued sailing for 32 hours into the South China Sea.

After dark on the second day at sea, the refugees saw the first of five large merchant ships that were to pass them by. In the dark, they could just make out the first letter—M—of the ship's name as the large gray vessel pulled alongside their boat. They could see people looking down on them, but the crew on the larger vessel ignored their pleas for help and the big ship moved on.

The next day, as the refugees were running low on food and on drinking water, and as their boat was taking on water in rough seas faster than they could bail it out, four more ships came close but appeared to intentionally ignore their distress signals.

They had given up hope when, on the morning of Aug. 5, a Norwegian freighter picked them up. Norway has taken full responsibility for all those aboard and is paying their Bangkok hotel bills until they can be relocated.

Other refugees also report troubled journeys. One group says it approached an oil-drilling platform in the Gulf of Thailand but workers on the platform pulled up the ladder and waved them away.

"UNDERGROUND RAILROAD"

In addition to the group escapes from Vietnam, diplomatic sources report a thriving, well-organized "underground railroad" operated by ethnic Chinese organizations in Thailand. For a fee, usually about $6,000, these organizations will smuggle out a Vietnamese of Chinese extraction. Half the fee is said to go to the Thai fishing boat that makes the trip while the rest is used to bribe officials in Vietnam—and Thai officials so that they won't make trouble for the new arrival.

But refugees who come on their own, and who are placed in camps to await resettlement, must worry whether they will be accepted anywhere, and whether the Thai government will carry out its threats to repatriate them. The new military government that took over Thailand Oct. 6 appears ready to take a less obsequious line toward Hanoi, but its attitude toward the refugees still isn't known.

Not knowing what will become of him leaves Nguyen Thanh Dung ill at ease. But he has even more than that to worry about.

Mr. Dung, a former Saigon military officer who says he worked with American intelligence, paid in gold for two boats so that he and his wife and child could escape. He escaped on one of the boats, his family on the other. The boats were supposed to rendezvous at sea, but they didn't.

"I've been here for two months and I have no idea where my family is," Mr. Dung tells a visitor at Songkhla. "I get very homesick for them. Sometimes I am like a crazy man without them."

His anguish is visible as he pleads, "Can't you help me find them?"

ENERGY PRIORITIES

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. MOAKLEY. Mr. Speaker, Congressman TOM HARKIN of Iowa did this Chamber a great service by making us aware of a disturbing fact. He presented former President Ford's proposed budget for fiscal year 1978 on energy, research, development, and demonstration.

I was shocked to see that the proposal included cuts in the percentage spending on both solar energy and energy conservation. Equally shocking was learning that the proposed increase for nuclear energy funding, which is $498 million, is greater than the combined monetary ex-

penditures planned on solar energy and energy conservation, $465 million.

It is my hope that President Carter will reverse these trends in his revised budget before we find ourselves too dependent on nuclear power. For I believe that America's best hope for a workable energy policy is the combined effort of massive energy conservation and the development of our most abundant energy resource, the Sun.

CONGRESSMEN URGE WARNKE REJECTION

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. McDONALD. Mr. Speaker, a number of Members of Congress have joined with me in a letter to Senator JOHN J. SPARKMAN, chairman of the Senate Committee on Foreign Relations, urging that the Senate reject the nomination of Paul C. Warnke as Director of the Arms Control and Disarmament Agency.

Mr. Warnke has been a spokesman for the extreme proponents of U.S. disarmament and was responsible for setting in motion the chain of events which allowed Daniel Ellsberg to steal the Pentagon papers. Furthermore, Mr. Warnke regarded those documents as nothing which could endanger our national security, although the full text of top secret coded material was included.

The text of the letter setting forth the reasons we urge Mr. Warnke's rejection follows:

FEBRUARY 7, 1977.

Hon. JOHN J. SPARKMAN,
Chairman, Committee on Foreign Relations, Dirksen Senate Office Building.

DEAR MR. CHAIRMAN: This letter is to urge you and the members of the Senate Foreign Relations Committee to reject the nomination of Paul Warnke as director of the Arms Control and Disarmament Agency.

As the United States Military Posture for Fiscal Year 1978, issued by General George Brown, Chairman of the Joint Chiefs of Staff, clearly shows, since 1971 the Soviets have been ahead of us in operational strategic offensive delivery vehicles. In addition they are ahead of us in operational strategic offensive throw-weight at this time, and will be further ahead of us by the end of Fiscal Year 1982. As General Brown's report states, "The United States is expected to off-set partially this Soviet advantage by retaining a lead in bomber payload and by deployment of our new heavier MX ICBM in 1983."

In regard to Europe, an area most vulnerable to attack, the House Armed Services Committee was told by the Department of the Army, "Our forces in Europe are outnumbered—not grossly, but significantly—by our adversaries, and the types of weapons being amassed by the Warsaw Pact seem plainly attack-oriented."

For decades, a Soviet conventional attack against the West has been deterred by our nuclear superiority. That advantage is rapidly being lost. From his own statements made in recent years Paul Warnke is clearly undisturbed by this situation. He would, in fact, further weaken our defense structure.

In *Foreign Policy* magazine, Spring, 1975, Mr. Warnke wrote: "The proposition that we must remain ahead of the Soviet Union in most, if not all, perceivable elements of military power is the second fallacy that inflates defense spending."

An October 1976 interview with Mr. Warnke states: "The former Pentagon official advocated a significant departure from previous U.S. nuclear policy in suggesting that Washington specifically announce it has no intention of launching a strategic first strike against the Soviet Union *under any circumstances.*" (emphasis added).

This interview was published in the International Bulletin (10/22/76).

For a number of years, Mr. Warnke has been a member of the Board of Advisors of the Center for Defense Information, a group that, like Warnke, has advocated unilateral cuts in defense spending. The Center for Defense Information, and its parent body the Fund for Peace have been in close contact with the World Peace Council, a Moscow directed movement which advocates the disarmament of the West as well as support for terrorist groups.

Since 1975 Mr. Warnke has been a registered agent of the Government of Algeria (Registration No. 2564—Clifford, Warnke, Glass, McIlwain & Finney). It is understood that Mr. Warnke and his firm served that government for a period of time before registering. The Government of Algeria has been a public supporter of terrorist groups including the Palestinian Liberation Organization, and the Black Liberation Army which was involved in murderous attacks in the United States.

Mr. Warnke has shown a lack of concern for the protection of highly classified government documents. He set in motion the chain of events that allowed Daniel Ellsberg to steal the Pentagon Papers.

On December 18, 1968, Paul Warnke, Morton H. Halperin and Leslie Gelb presented a set of the Pentagon Papers to the Rand Corporation for storage with the understanding that at least two of them would have to approve the use of the Papers by anyone. On March 3, 1969, Gelb and Halperin authorized the release of the Papers to Daniel Ellsberg. Ellsberg, of course, later released them in violation of the security classification.

On May 16, 1973, while testifying before the United States Senate, Ellsberg, before taking the oath, stated that Warnke, Halperin and Gelb were not involved in his theft of the Papers. No one had asked him the question, but he indicated that he felt the government believed that the three were involved with him. Later, after Senator Strom Thurmond insisted that he be put under oath, he did not discuss this matter.

The New York Times of June 24, 1971, quoted Mr. Warnke as saying that "In his view, none of the material published so far could endanger the national security." This was in reference to the Times publication of the Pentagon Papers which included full text copies of top secret cable traffic between the State Department and our embassies in Vietnam and the Philippines. A hostile foreign intelligence service monitoring our code transmissions could use these clear texts to aid them in breaking our codes.

We urge this committee to reject Mr. Warnke's nomination and that the text of this letter be included in the committee's hearing record.

Sincerely,

Larry P. McDonald, Doug Barnard, (D.-Ga); Billy L. Evans, (D-Ga.); Robert Sikes, (D.-Fla.); Richard Ichord, (D.-Missouri); Jack Brinkley, (D.-Ga.); Dawson Mathis, (D.-Ga.); G. V. Montgomery, (D.-Miss.); Dan Daniel, (D.-Va.); Bill Nichols, (D.-Ala.).

MAKE ME TAKE IT

HON. JOE SKUBITZ

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. SKUBITZ. Mr. Speaker, we are once more engaged in what sometimes seems to have become the great biennial debate over a pay raise. That salary increase has prompted much editorial comment about the Congress, just as it has in the past. However, I would like to draw the attention of my esteemed colleagues to one editorial which might enlighten, and lighten, the present controversy. For those who might have missed this editorial quoting TIM LEE CARTER, our friend and colleague from the State of beautiful women, fast horses, and, obviously, great yarns, I enclose the text for their edification:

[From the Wall Street Journal, Feb. 4, 1977]

MAKE ME TAKE IT

After due deliberation, the Senate refused the other day to block pay increases for members of Congress. The salary boost isn't home free yet, but unless the lawmakers decide they are not deserving of more money, the increases will take effect on Feb. 20.

We have supported pay increases for federal judges and top civil servants, who have lagged in take-home pay, and since the price of lifting these maximums is a raise for Congress we have even been tolerant of that. But the hypocrisy of the process is becoming a bit tiresome. While Congressmen obviously feel down deep in their hearts that they are entitled to more money (the pay increase will raise them to $57,500 from $44,600) they do not feel equally strongly that anyone should know their views on the subject. That's why the Senate leadership would not allow a roll call vote on Senator James Allen's resolution to disallow the pay raise. Since the Senate refusal was actually on a resolution to table the Allen amendment, rather than on the amendment itself, those who voted to table can now deny that they ever voted to increase their own salaries. The underlying notion that the public is fooled by such charades is the worst feature of the game.

It reminds us of a story told by Rep. Tim Lee Carter (R. Ky.) last summer when the pay raise issue was getting one of its periodic debates in Congress:

An old Kentuckian who thought he was crossing into the great beyond motioned his wife to his bedside. "Mary," he whispered, "you remember that old trunk in the basement? There is a quart of bourbon, fine old bourbon, in it. Go down and get it."

He told her to fill his glass with finely crushed ice, to bruise some mint, and to stir it in the glass, with just a pinch of sugar. Then he told her to pour the bourbon liberally over the concoction and to decorate it with sprigs of mint, then to set it aside until frost formed on the outside of the glass.

"And then, Mary," grasped the old man, his voice now all but extinct, "bring it up here to me and when you bring it in here, Mary, no matter what I do or say, make me take it."

In the same valiant tradition of that fighting Kentuckian, the Congress of the United States appears ready to force itself to take the bitter medicine of a pay raise of almost 30%.

BUTZ A GREAT SECRETARY OF AGRICULTURE

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. FINDLEY. Mr. Speaker, a little over 5 years ago the U.S. Senate was debating the confirmation of Dr. Earl L. Butz as Secretary of Agriculture. At that time I took the floor of this House to point out that—

President Nixon could search the country wide and not find a man better qualified for the position.

Today I rise again to say a few words about the superb service Dr. Butz rendered during the years he served at the helm of USDA.

Prior to the time he retired from the Cabinet in October 1976, Mr. Butz worked tirelessly and effectively to promote American agriculture, to keep the United States the world's best fed Nation, to improve farm income, to strengthen rural America, to minimize Federal encroachment into farming, and to expand and keep open form export markets. He successfully sought to convey to farmer and consumer alike the wisdom of the market system as the most effective means of obtaining an abundance of high quality food for consumers and acceptable income for farmers.

Few Americans have contributed as much toward the achievement of these worthy objectives, in my opinion, as Earl Butz.

During the Butz years as USDA, net farm income jumped from $14.6 billion in 1971 to an annual average of $28.5 billion during the 3-year period ending in 1975; exports of farm commodities grew from $7.8 billion in 1971 to better than $22 billion during each of the last 2 years; Federal payments to farmers sank from 21.6 percent of farm net income in 1971 to only slightly over 3 percent in 1975; and the loss of farms during those years slowed to a trickle—slowed from a loss of over 100,000 farms a year in the mid-1960's to an average of less than 20,000 during each of the past 3 years.

Total U.S. production of food and fiber, meanwhile, during the Butz years as Secretary of Agriculture, increased more than 10 percent; more young people entered agriculture; and the long, costly net migration of millions of rural people to big cities in search of employment was reversed. More people are now moving to rural areas than are moving to large cities.

Earl Butz, more than any other person, helped to create and maintain this new climate. He fought hard against governmental programs aimed at cutting back production, curbing exports, controlling large carryover supplies of farm commodities, and placing price support props at a level high enough to cause farmers to produce for them rather than markets.

Secretary Butz vigorously defended management of land use and agricultural production by farmers.

Immensely popular among farmers, Butz was revered by them for many reasons. They felt he had their interests at heart. He was their most effective spokesman. "Here is a man," they said, "able and willing to tell effectively our story, a man who fights to protect our well-being and progress."

Farmers have enjoyed a new sense of self-esteem and importance as a result of Secretary Butz. They enjoyed his quick wit, his capacity to laugh at himself, and his hatred of waste, unnecessary regulation, and featherbedding. They admired his loyalty to the President and America. They respected his ideals and his sincerity. They cherished their new freedom to assume the responsibility for their own future. Most farmers agree with one newspaper's editorial sizeup of Mr. Butz when it said last year:

Pound for pound, he's the best man in the Cabinet.

Butz probably acquired his love for agriculture and his respect for USDA in early associations. He was born and raised on a Noble County, Ind., farm, attended Purdue University's agricultural college, met his wife, the former Mary Emma Powell of North Carolina, at a Washington 4–H Club conference, and spent all of his life in various facets of agricultural life. His pride in USDA ran deep. He often described the Department in terms first used by President Lincoln in 1862. Lincoln called USDA "The People's Department."

Back in 1971, Mr. Speaker, I quoted a letter written to the Honorable HERMAN TALMADGE, chairman of the Senate Committee on Agriculture and Forestry, supporting the confirmation of Mr. Butz, with this observation:

I am sure that Dr. Butz will fill the position with great honor, devotion, skill and success, advancing the interests of all Americans and especially farmers.

He was a true friend of both the farmer and the consumer.

Earl Butz' resignation brought to an end the term of the greatest Secretary of Agriculture in American history.

LACK OF U.S. GOVERNMENT OUTRAGE TO MURDERED MISSIONARIES DEPLORABLE

HON. JAMES G. MARTIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. MARTIN. Mr. Speaker, I take this opportunity to extend remarks made in the well earlier this afternoon, to point out to the House that as of 1:35 p.m. today, at the time of this writing, our Government has not yet found the words to express our national condemnation for those who murdered seven Roman Catholic missionaries in Rhodesia. No public word of outrage has yet been spoken by our Ambassador to the United Nations.

It seems to me that we should not hesitate to urge all the people of Rhodesia to join together, transcending their political differences, to track down and bring to trial those who would murder defenseless men and women. Their motives, if any, need the exposure of public trials so that their cause not be served by this villainy. Surely our Government can endorse that principle without jeopardy to our emerging and fragile diplomatic relations.

A BILL TO RAISE THE MILLER ACT BONDING CEILING

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, on Monday, I introduced legislation to remedy a problem that has been growing in recent years.

I am speaking about the inability of small and minority businessmen to effectively bid for Government contracts because of outdated Federal bonding requirements.

Because of a provision in the 1935 Miller Act, small and minority businessmen—and I am talking now primarily of building contractors—must secure insurance company bonding when seeking a Federal contract of more than $2,000.

While the need for surety protection is a valid one, the $2,000 ceiling is ridiculously low and not only hurts the small businessman but it means loads of paperwork, far out of proportion to the payment received, for insurance companies.

I propose to raise the $2,000 to $50,000.

This would mean that bonds will not be required on Federal contracts of less than $50,000.

Small and minority businessmen, perfectly capable of performing quality services, oftentimes cannot get surety bonds for reasons unrelated to their professional ability. It becomes a vicious cycle. Without bonding you cannot get work. Without work you do not have the building record that will encourage an insurance company to bond you. And on and on.

What I am trying to do with my legislation is to cut through the heart of this problem, at least as far as contracts let by the Federal Government.

By raising that $2,000 limit to $50,000 I am merely bringing up to date a statute that has unintentionally barred small and minority contractors from competing for Federal contracts.

I do not for a moment think that this bill is the solution that small and minority contractors are seeking to their bonding woes, but it is a step long overdue in guaranteeing that the Federal Government does not put unnecessary obstacles in their path to growth.

THE ALL VOLUNTEER FORCE—CURRENT STATUS AND PROSPECTS

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. STEIGER. Mr. Speaker, increasingly, there are signs that the Nation may be hearing a debate on the success of the All Volunteer military force and the possible need for a return to the draft, or perhaps establishment of mandatory national service.

Initial statements on these questions have shown there is much misunderstanding and misinformation on the status of the Volunteer Army. Fortunately, there is an excellent document which offers some very good insights into today's military force.

"The All Volunteer Force—Current Status and Prospects" was prepared by Defense Department officials late last year as a transition paper for the incoming Carter administration. Because of its importance, I will be placing the entire document in the CONGRESSIONAL RECORD over the next several days.

This initial segment contains several key points. These include:

Successful implementation of the All Volunteer Force by the military services reflects a major management achievements;

All services met or exceeded their recruiting goals in fiscal year 1976, while at the same time maintaining high accession quality;

The All Volunteer Force is remarkably representative of the American public as a whole; and

With committed, competent and flexible leadership, the volunteer army's success to date can be sustained in the future.

The first portion of the report follows. It includes a table of contents, executive summary and historical summary of the Volunteer Force.

THE ALL VOLUNTEER FORCE: CURRENT STATUS AND PROSPECTS

TABLE OF CONTENTS

Chapter and title

1.—Executive Summary.
2.—Historical Summary of AVF Planning.
3.—Current Status of the Active Force: Quantity, Quality, and Attrition.
4.—Representation: Income, Region, Women, and Race.
5.—Sustainment Issues: Reserves, Pay Comparability and Benefits, and Cost of the AVF.
6.—Future Prospects: Supply and Demand, and Impact of Unemployment.
7.—Sustainment Strategy.
8.—Alternatives to the AVF: The AVF, and Seven Alternatives to the AVF.

CHAPTER 1—EXECUTIVE SUMMARY

The successful implementation of the AVF by the military services reflects a major management achievement. The challenge of voluntarily enlisting over 400,000 people (the equivalent of one out of three qualified and available male youths) into the DoD on an annual basis has been successfully met.

All Services met or exceeded their recruiting goals in FY 1976. At the same time accession quality continues to remain high by historical standards.

Initial fears of creating a non-representative military force were not justified. The AVF is remarkably representative with respect to income and geographic region, women are entering the Service in greater numbers, and the black percentage of DoD enlisted accessions has decreased since FY 1974, while showing only moderate growth in the Army.

However, several problems challenge the future management of the AVF. The current shortfalls in the Reserve Components are serious and current trends indicate even greater manning problems in the future. Other key issues concern pay comparability, benefits and the management of AVF costs.

Analysis of the future prospects of the AVF reveals a declining youth population and possible improvements in civilian employment which could increase the difficulty of recruiting in the FY 1979–FY 1989 period. However, management options exist to meet this situation.

Two possible approaches to the sustainment of the AVF are the requirements approach and the market approach. The requirements approach sets specific quality standards and determines desired mixes in accession input. The market approach assumes that the Services will recruit whatever quality "the market will bear." In reality, a mixture of both approaches is being utilized today.

There are several alternatives to the AVF including mandatory national service and the draft. However, the disadvantages of these options appear to outweigh their advantages.

In conclusion, the AVF has been successful and can be sustained in the future through committed, competent and flexible leadership.

CHAPTER 2—HISTORICAL SUMMARY OF AVF PLANNING

October 1968: Presidential candidate Richard Nixon promises to move toward an ALL VOLUNTEER FORCE (AVF) when the Vietnam War is over.

March 1969: Appointment of the President's Commission on an All Volunteer Force under the chairmanship of the Honorable Thomas S. Gates, Jr.

April 1969: Appointment of the Defense Department Project Volunteer Committee to develop a program to move to an All Volunteer Force.

December 1969: Lottery draft begins.

February 1970: In its report to the President, the Commission on the All Volunteer Force recommends immediate entry level pay raises for military personnel and the end of the draft by June 1971.

March 1970: National Security Council decision to set aside $3.5 billion in FY 1973 funds to move toward a volunteer force.

April 1970: President announces the Administration's decisions to seek military pay raises and an extension of the draft beyond July 1971, and to move toward ending the draft.

August 1970: Project Volunteer Committee reports to the Secretary of Defense recommending a program to obtain an All Volunteer Force.

December 1970: Secretary Laird approves $1.5 billion Project Volunteer program for FY 1972.

January 1971: President sends to Congress legislation to increase military pay, to reform the draft, and to extend the draft until July 1973.

March 1971: Army begins paid radio/TV recruitment advertising campaign.

September 1971: Congress enacts Public Law 92–129, which extends draft for two years, ends undergraduate deferments, and provides substantial increase in entry pay for military.

May 1972: Ground Combat Enlistment Bonus initiated in Army and Marine Corps.

September 1972: Congress passes Uniform Services Health Professions Revitalization Act of 1972, authorizing medical university for the Services and increasing medical scholarships.

December 1972: Last draft call is issued.

January 1973: Vietnam peace agreement signed in Paris. Secretary Laird announces an end to draft calls, six months prior to expiration of authority.

January 1973: Medical Task Force appointed to prepare detailed plan for achieving All Volunteer Health Force.

May 1974: Congress passes Uniform Services Medical Officers Incentive Pay Act.

May 1974: Congress passes Armed Forces Personnel Bonus Revision Act of 1974, dropping limiting language on enlistment bonuses.

EQUITY IN SOCIAL SECURITY FOR INDIVIDUALS AND FAMILIES

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. FRASER. Mr. Speaker, today I am introducing along with my colleague from Kansas, Congresswoman MARTHA KEYS, legislation to bring equity to the social security system. Since its beginning in 1935, the social security system has grown to become the most successful and most complex Federal program in our Nation's history. Today, millions of Americans depend on social security not only as a retirement plan, but also as their disability, health and life insurance plans.

Our proposal, The Equity in Social Security for Individuals and Families Act, is primarily a new system for social security recordkeeping that will consider the earnings of a husband and wife jointly and then credit each annually with an equal portion of earnings in covered employment. Under this system both spouses develop their own earnings records on the basis of family income. Gaps in coverage that often occur in the current system when one spouse or the other spends time out of covered employment, will no longer occur under our proposal if at least one spouse is continuously working in covered employment: his or her earnings would be credited to both accounts.

A homemaker who divorces would have an earnings record from the work history of a covered spouse to take with him or her from the marriage into a new life situation. Our proposal also benefits workers who have been penalized by discriminatory features of our labor market: they will not suffer the same penalty in retirement benefits if earnings are considered jointly in a marriage.

The bill we are introducing is identical to H.R. 14119 and H.R. 15710 introduced in the 94th Congress. However, we are examining recommendations that could improve the proposal. Whatever changes are made will preserve the intent of the bill: to provide a new recordkeeping system that will give the maximum number of adult Americans their own social security records on which to collect benefits in their own right.

Following is a series of 4 articles which recently appeared in Sylvia Porter's nationally syndicated "Your Money's

Worth" which describe both the problem of social security coverage for women in general and our proposal specifically as an approach that would resolve many of these problems. We hope that in the coming months our colleagues will join us in this effort to improve the social security system and give our ideas a good hearing.

[From the Washington Star, Jan. 31, 1977]

SOCIAL SECURITY AND WOMEN

(By Sylvia Porter)

Over the past 40 years in which our Social Security System has been repeatedly modernized into a patchwork of amendments to the original law and court decisions, not one basic change has taken into account the changing role of women in the American economy.

Not one amendment has focused on the fundamental shifts that have occurred in U.S. family relationships and lifestyles.

Not one law or court decision has challenged the stereotypes which the framers of Social Security law built into the law because those were the stereotypes in which they believed.

Of course, giving the dependents of women workers the full rights enjoyed by the dependents of male workers is desirable and long, long overdue. But much more fundamental is the need to recognize that you—the American woman of 1977—do not fit neatly into either the category of lifelong housewife or lifelong earner.

An overwhelming 90 percent of all women work outside the home for pay during at least some part of their lives. More than 45 percent—almost half—of our paid workforce today consists of women. A full 60 percent of all women working for pay are married and are half of a working couple.

Since the 1940 census (following the enactment of Social Security legislation), the proportion of women in every age group in the work force has soared. Among women 35 to 44, it has doubled; among middle-aged women 45 to 64, it has jumped 2½ times; among women 65 and over, the number working for pay has more than quadrupled.

The trend born in the 1930s became increasingly powerful after World War II, when women, who had been actively recruited to replace men called up for service and to meet defense industry requirements, wanted to continue working.

Other forces since then have added strength to the development, called "the single most outstanding phenomenon of our century," by labor market expert and Columbia University professor, Eli Ginsberg.

Among them: College attendance and women's desire for careers; the move toward later marriages; the steady decline in the birthrate since 1957; growing acceptance of childless marriages; rising divorce rates; greater longevity; the family's need or desire for two incomes, not just among the poor, but among families wanting to send their children to college or to maintain what has become known as a "middle class" lifestyle.

Yet, despite all the lip service paid to equality for women in the workforce, disproportionate numbers are still in low-paying jobs. Nearly two-thirds of full-time, year-round woman workers in 1972 earned less than $7,000 a year, while more than three-quarters of full-time, year-round male workers earned more than $7,000. And male workers generally do not have their working careers—and their Social Security records—interrupted because of family responsibilities (having children).

A woman will work after she leaves school until she drops out of the labor force to have children. She may return to work when the children are of school age, or earlier—or later. Or she may become divorced. (One of every three marriages now ends in divorce and, in 1975, the number of divorces in the United States passed the million landmark.)

A housewife's services for her family (maid, cook, laundress, child-rearer, etc.) are not considered "work" for Social Security purposes. (The Social Security Administration itself put the average economic value of a housewife at $4,705 in 1972, however.)

A woman's absences from the paid labor force means that there will be blanks in her Social Security record. The effect is to reduce the average earnings that will be the basis for figuring any retired worker benefits due her in the future.

While the average monthly Social Security benefit of male retired workers totaled $229 in June 1976, the comparable figure for retired women workers was $182—and this despite a benefit formula weighted in favor of low-income workers.

Women will continue to receive lower Social Security retirement benefits than men, a recent Social Security report says. "Only if some proposal to 'fill in' the gaps in women's earnings records is adopted will this situation change."

[From the Washington Star, Feb. 1, 1977]

SOCIAL SECURITY TREATS WOMEN INEQUITABLY

(By Sylvia Porter)

The framers of the Social Security law in the 1930s built into it the stereotypes with which they were familiar. There was the male family head—the breadwinner—and there was the housewife and, as a song of the period relates, "a boy for you, a girl for me." But even well before the law was enacted, these stereotypes were far from matching reality.

Women—and children—were employed in some of our earliest factories. The daughters of the poor were working in the mills of New England in the 1800s. Working wives and daughters were commonplace among immigrants. Women, black and white, labored on farms and plantations.

In her recent book, "Enterprising Women," Caroline Bird documents the enormous extent to which the wives of our founding fathers took over the running of their husbands' businesses and enhanced the family fortunes, while other women created products, provided services, filled a wide range of jobs outside the home to support themselves and educate their children.

During the past three decades tens of millions of women from America's middle and upper income families have poured into the work force—for a great variety of reasons, but mostly economic.

Despite an upsurge of married women in the paid labor force, however, and despite the growing emphasis on women's rights, Social Security benefits are still geared to the obsolete concept of a woman dependent on her husband, and not in any sense the economic partner she is in a full six out of every 10 marriages today.

Even those provisions of the law that make no distinctions as to sex treat women inequitably because they reflect the inequitable treatment of women in the marketplace. Their low wages, for instance . . . their relegation to less significant jobs . . . the dismissal of the work they do in the home as having no economic value . . . the lack of recognition of the many different roles women must assume during their adult lives.

The gaps are highlighted by just one comparison: The average monthly Social Security benefit of male retired workers totaled $229 in June 1976, as against $182 for retired women workers. And this gap exists even though the benefit formula is weighted in favor of low-income workers (women).

Nor will any substantial percentage of women have much in the way of private pensions to supplement their Social Security benefits. They are less likely to be in jobs covered by private pensions. And if they are in these jobs, if they do work for a company with a pension plan, the irregularity of their employment or the fact that they work part-time may mean they will never qualify.

The Social Security program cannot be held responsible for the traditionally low wages paid to women, nor for the irregularity of their employment because of their responsibilities as homemakers and mothers. That would stretch "guilt" beyond all logic.

But the system can be restructured to take those factors into account and to make it less blatantly unfair to women.

Perhaps Rep. Donald M. Fraser, D-Minn., and his wife Arvonne have come up with a concept that points the way for the restructuring. The Frasers' proposal, unlike the present law, would assume that work in the home has an economic value and also that marriage is an economic partnership.

Couples could elect to have a share of the family income credited to each of their Social Security records, just as they now have the option of filing a joint income tax return.

You, a lifelong housewife, would therefore be able to build up your own Social Security record while you, the woman in and out of the paid labor force, would have a steady record of earnings, instead of earnings "gaps." And you, a divorced woman, would have a record of earnings to take with you from a marriage that had not lasted for at least 20 years.

Not only do women workers feel the inequities in our Social Security system's treatment of them, but the husbands and widowers of women workers also often suffer from the fallout of these provisions.

[From The Washington Star, Feb. 2, 1977]

SOCIAL SECURITY'S INEQUITIES AFFECT US ALL

(By Sylvia Porter)

Millions of women who have worked long enough to qualify for benefits as retired workers have been found to be entitled to higher benefits as dependents—although a wife's benefit at age 65 is only half the amount of the retired husband's benefit (less if the wife is between 62 and 65 at the time her husband retires).

This is because a woman worker gets her own Social Security benefit, but if it is less than the amount that would be payable to her as a dependent wife, the difference is added to her benefit total.

In effect, she gets the higher of the two benefits—but no more than she would have received if she had never worked outside the home and had never paid a cent in Social Security taxes!

The injustice of this is so apparent that I would insult you if I indulged in further indignant explanation. Suffice it to say that this happens in so many cases because of (1) the low wages paid to women generally (in 1972, nearly two-thirds of full-time year-round woman workers earned less than $7,000 a year, while more than three-quarters of the full-time, year-round male workers earned more than $7,000) and (2) the irregularity of women's employment (it is commonplace for a woman to drop out of the labor force to have children, and not return for a period—absences which leave blanks in her Social Security record).

A married couple with both partners working can end up with smaller retirement benefits than a couple with the same total earnings, but when the husband was the only worker. And if one of the working couple dies, the widowed husband or wife will get much lower benefits than the surviving partner in the case of the couple in which only one was a worker for pay.

Difficult as you may find that one to believe, the Social Security Administration's files are choked with cases documenting the unfair fallout of discrimination against women workers.

Although a woman is automatically presumed to have been her husband's dependent, the aged husband or widower of a woman worker cannot qualify for benefits

based on her work record unless he can prove his dependency upon her.

In every area of the United States, you will find cases where this upside-down situation exists. A case challenging this discriminatory treatment is now before the Supreme Court.

A woman who is divorced before her 20th anniversary loses her right to any wife's or widow's benefits based on her husband's work under Social Security. But a subsequent wife may collect these benefits even if she has been married to the man for just a short time before his retirement, death or disability.

Until a young housewife has been married at least 20 years, she has no assurance that she will get a Social Security benefit in her old age. Also, the family has no protection if the homemaker becomes disabled or dies.

There are no benefits designed to pay the cost of hiring a replacement to perform the work she did without pay. Only if she had a substantial record of work before she turned full-time homemaker, is there a chance that benefits may be payable to her dependents and they will be reduced because of the time she has been out of the labor force.

A woman who is widowed before age 60 receives mother's benefits if she has in her care children under 18 or an older, disabled child. If there is no severely disabled child, her benefits will stop when the youngest child reaches 18—unless she is already 60 by that time or is 50 or over and very severely disabled.

With what seems to me almost incomprehensible lack of realism, the law assumes that a reasonably able-bodied, middle-aged woman with no work experience, can just move right out into the vast, indifferent labor market and quickly find a job that will enable her to earn enough to support herself.

These are merely a sampling of actual situations which should shock you into full realization of the inequities in the treatment of women under Social Security. And they are not limited to any one group.

In one way or another, they affect us all—homemakers, divorcees, elderly wives and widows, high-earning professionals, low-paid domestics, the wives of laborers and the wives of executives.

[From the Washington Star, Feb. 3, 1977]

BILL TO SEEK EQUITY IN SOCIAL SECURITY

(By Sylvia Porter)

While our Social Security system is without doubt the most successful social program ever undertaken in the United States, it has become an exceedingly complex law—especially complex involving women.

Women may qualify for benefits as retired workers based on their own work, or as wives, widows, or aged dependents.

There are provisions of the law that deliberately treat men differently from women. There are other clauses that result in different treatment because they tend to reflect the now-obsolete view of women in our society as financially dependent on their husbands rather than as economic partners joining in providing the family's income security.

Many women feel they will be getting no return on the Social Security taxes they have paid on their earnings because, on retirement, their benefits will be very little or no higher than the amount they would be paid as dependent wives if they had never worked.

This situation reflects the generally low pay of women and the irregularity of their work patterns because of the time they take out for family responsibilities.

A bill to be introduced into the 95th Congress next Monday by Minnesota Democrat Donald Fraser is designed to bring about basic reforms in the Social Security system.

It would do this by providing a way for considering a couple's income jointly for Social Security purposes, just as the couple does in filing a joint income tax return.

Just about every woman would eventually wind up with a Social Security earnings record of her own on which to collect Social Security benefits, and so would every man.

Under the proposal:

Married persons who elected to file joint income-tax returns would each year be given Social Security credit for the higher of the following amounts: 50 percent of the couple's combined earnings in work covered by Social Security; or 75 percent of the covered earnings of the partner with the higher earnings.

Each couple would be credited with up to the maximum taxable for Social Security. That maximum is $16,500 in 1977.

The 50–50 sharing would occur where the husband and wife earn close to the same amount. The other method would be used if only one of the couple had any earnings covered by Social Security, or where one of them had much higher earnings than the other.

The W2 Forms that couples attach to joint returns and the returns themselves would give all the information needed to apportion the earnings to their individual Social Security records.

They would pay no additional Social Security taxes on these earnings.

Couples who did not file joint income tax returns would continue to get their Social Security credits as they do now.

Homemakers would be given their own Social Security records and would be brought into the system in their own right—instead of being able to collect benefits only as dependents of their employed husbands.

A divorced homemaker would have a Social Security record to take with her into her new life instead of losing her rights to wife's or widow's benefits, as she does now if she had not been married 20 years at the time of the divorce. Men would receive advantages, too, because with Social Security records of their own, couples would both build eligibility for disability benefits and the special dependency requirements for husbands and widowers would be removed.

There would be a transition period to guard against unanticipated adverse affects, special provisions for women widowed under age 60, other clauses to protect a newly widowed middle-aged homemaker who has few marketable skills and who, as Fraser points out, "cannot be expected to join the labor market immediately."

There are many other details in this legislation devised by Fraser and his wife, Arvonne. The reform is complex and the congressman admits it is far from perfect.

For instance, the bill might not provide complete equity for women who never marry. But he has come up with a basic proposal that Congress can use as a springboard to explore the concept's feasibility and merits.

And through public debate, this idea can be developed and improved.

Surely, the time has come for equality for women under Social Security. And surely, the obsolete stereotypes of the American women built into the system cannot be condoned much longer.

UNEMPLOYMENT STATISTICS

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. BIAGGI. Mr. Speaker, for many years now, the Bureau of Labor Statistics has been foisting upon an unsuspecting public unemployment statistics which by the Bureau's own admission are false and inaccurate. To his credit, Julius Shiskin, the Federal Commissioner of Labor Statistics, has been telling this Congress for a number of years that his figures are faulty. Yet the Federal Government continues to rely on them to dispense millions of dollars of Federal aid to various States and localities each year.

Primarily, the problem is the discrepancy between statistics at the State and Federal levels. The Federal figures regarding unemployment provided by the Bureau of Labor Statistics are considerably lower than the combined State figures, the difference being as much as 1.3 million jobs. The difference has been attributed to seasonal adjustments, which are used by the Bureau of Labor Statistics, but not by most States. It may also be the result of an understatement by the States regarding the extent of the recent economic recovery.

More unemployment translates into more money in Federal aid for States. Therefore, for certain States, revising the data will reflect higher employment and reduce the Federal aid tied to these figures. For others, though, accurate figures will mean more Federal aid dollars.

Some action has already been taken to coordinate these statistics, specifically the mandate for establishment of a National Commission on Employment and Unemployment Statistics. It will probably be at least 2 years, however, before any significant changes are made. Additionally, many State Governors would resist any change that would report less unemployment in their States, thus lessening the amount of Federal aid available.

Before more money—which may well be misdirected—is committed to correct the problem of unemployment, I urge my colleagues in the Education and Labor Committee and its distinguished chairman, Mr. PERKINS, to investigate this problem. To assist my colleagues in obtaining a better understanding of this problem, I am inserting three articles at this point in the RECORD which delve further into this pressing issue:

A WIDE DISCREPANCY ON JOB TOTALS

(By A. H. Raskin)

Lost, strayed or stolen: 1.3 million jobs. Two sets of employment figures, both based on identical samples taken in all 50 states and calculated under rules laid down by the Federal Bureau of Labor Statistics, have been getting so far apart in recent months that the difference now accounts for more jobs than there are in the whole state of Connecticut or of Louisiana.

The disparity arises out of estimats separately prepared by each state and by the B.L.S. in Washington from payroll data submitted by employers. The growing gulf between the state and Federal estimates raises disturbing questions about the reliability of some key information on which President-elect Jimmy Carter will have to build his economic policies.

The same data now govern the allocation of huge sums in Federal grants for public service jobs and other emergency assistance to states and cities. All of the spread in the figures officially published by the B.L.S. on the number of wage and salary workers in private and public employment has developed in the last year.

In September 1975 the Bureau estimated the national job total at 77.6 million. That figure was 500,000 below the total of the 50 separate state reports. In the following

month, the spread started moving in the opposite direction with the national estimate 100,000 above the state by state total.

By December the difference had grown to 500,000 and by April to a full million, with the national figure always on the high side. By September of this year, the last month for which the state breakdown is available, the B.L.S. national estimate was up to 79.8 million, a gain of 2.2 million jobs from the recession figure of a year earlier. The climb as shown by the state figures on which the national estimate is predicated was only one-sixth that big. That left the sum of the 50 state estimates 1,342,000 below the national figure.

In issuing its figures, the B.L.S. warns that the state and Federal calculations are likely to "differ slightly" for a variety of technical reasons. However, no one in Washington from Julius Shiskin, the Commissioner of Labor Statistics, down is disposed to brush aside deviations of the current dimensions as slight.

John Tucker, chief of the B.L.S. division of industry employment statistics, explained that the bureau has been making an upward adjustment in the state figures to "correct for a known bias that is especially pronounced in the early stages of a cyclical business recovery."

That bias, according to Mr. Tucker, results from the failure of the state reports to reflect with sufficient promptness the formation of new businesses, both small and large, as the economy lifts out of recession. He said the exclusion of such corporate births from the state-by-state reports had caused them to show only half the strength of the 1975–76 recovery in terms of new jobs.

Asked why the B.L.S. felt its adjusted estimates were more valid than the sum of the 50 state reports, Mr. Tucker declared that they squared not only with experience in past recessions but also with the job trend shown in unemployment insurance applications and in the Census Bureau survey of 47,000 households on which the B.L.S. bases its independent monthly report on national unemployment.

A less acquiescent view of the trustworthiness of both sets of figures was taken by the analyst who first called the spread between the two statistical series to public attention. Nicholas Kisburg, an adjunct assistant professor at Fordham University and legislative director of New York Teamsters Joint Council 16, said the disparity made him wonder whether any of the figures were worthy of belief.

"Here are statistics which the Governors of the various states will be using to beat Jimmy Carter over the head for billions of dollars of Government economic aid," the union analyst declared. "All the figures are derived from the same source, yet, because of an adjustment that may or may not be right, the two series come out with a difference in September that could all by itself account for one-fifth of the country's jobless. The states should not be permitted to publish figures which the B.L.S. itself says are so far wrong."

The Federal agency is already taking steps to reconcile the two series by calling on the states to revise their benchmarks and methodology in line with the Federal adjustment. Mr. Tucker predicted that the present "serious understatement" in the state-by-state job estimates would be wiped out by February or March of next year.

Charles A. Pearce, director of research for the New York State Labor Department, said preliminary studies here indicated a need for changes to make both the state and Federal figures more accurate. He acknowledged that the state job totals tended to be understated in the rising phase of a business cycle and to be overstated in the declining phase.

However, other states may choose to fight in the courts rather than accept any forced change in present computing standards. That is because the flow of Federal money may depend in important degree on how high or low each state's job total is by comparison with prerecession levels.

AN OVERHAUL OF UNEMPLOYMENT STATISTICS

(By A. H. Raskin)

The unemployment statistics that determine the flow of tens of billions of dollars in Federal job aid to states and cities are about to get a total overhaul. Once of interest primarily to academics, the figures have become so sensitive a political barometer that many analysts ascribe Jimmy Carter's Presidential victory largely to the fact that the Federal unemployment rate stood at the disturbingly high level of 7.9 percent in the last pre-election report.

Yet many manpower experts, including a large number in the Bureau of Labor Statistics itself, are convinced that the present measurement standards are too inexact to answer adequately all the public policy needs the White House and Congress rely on them to fill.

Indeed, so much doubt surounds some of the adjustment factors in current use that Prof. Franco Modigliani of the Massachusetts Institute of Technology, outgoing president of the American Economics Association, has suggested that President Ford might have lost the election on the basis of "false data" indicating a rise in joblessness since last summer.

Neither Professor Modigliani nor any other critic of the job figures implies that the bureau is deliberately manipulating them for political purposes. On the contrary, most of the concern is about distortions of a highly technical nature that have had the inadvertent effect of hurting the administration in power rather than helping it.

One such distortion resulted in a collective understatement by the 50 states of 1.3 million jobs in the extent of employment recovery from the recession low. The gap stemmed from a lag in recording new businesses started during the upturn.

Other distortions have arisen from the seasonal weights used by the bureau to make its month-by-month reports comparable. These tend to get highly questionable when the business cycle moves sharply up or down. In recognition of defects in the existing formula, the bureau will incorporate a revised adjustment for seasonality in its November report on employment and unemployment, due next Friday.

However, complaints about the adequacy of the job data go far beyond methodology and other technical factors. Labor objects to the exclusion from the jobless count of workers who have stopped looking because they feel there are no jobs to find. Business contends that the idle rate is inflated by the inclusions of large numbers of young people and others with no genuine attachment to the labor market.

Among the most vociferous arguers for a comprehensive review of all the elements in the employment statistics is the man in charge of the whole program, Julius Shiskin, Commissioner of Labor Statistics. For more than three years, he has been working within the Administration for a study commission comparable to one appointed in 1961 by President John F. Kennedy. That panel, headed by Prof. Robert A. Gordon of the University of California at Berkeley, made recommendations, many of which were adopted a decade ago.

At the end of last year Mr. Shiskin's project won endorsement from President Ford's Economic Policy Board, made up of the Secretaries of Treasury, Labor and Commerce and the chairman of the Council of Economic Advisers. Names of possible appointees were sent to the White House, but the project was dropped when Congress began discussing a similar study as part of its economic recovery program.

An emergency jobs law passed by both houses and signed by the President Oct. 1 now mandates the establishment of a National Commission on Employment and Unemployment Statistics, with broad authority to assess the validity of existing techniques and to recommend changes that could fundamentally alter all current concepts. Seven members are to be designated by the President, and the expectation is that Mr. Ford will leave their selection to his successor. Cabinet members and ranking members of Congress from both parties are also to sit on the panel.

The trouble with all this, in terms of the immediate questions about the dependability of job data, is that it will be two years at a minimum and more probably three before the commission's recommendations are fully considered and adopted.

Pleased as he is over the decision to create the study group, Mr. Shiskin has no intention of waiting several years to shore up weaknesses in the existing system.

"As I have repeatedly told the Joint Economic Committee, legislative requirements for all types of data bearing on employment have taken such a quantum jump in recent years that they have moved ahead of our capacity to supply what is wanted," he said last week. "It is not a money problem so much as it is one of technical know-how."

He is already seeking to enlist the cooperation of the states in a joint effort to reconcile and improve present methods of collecting and appraising payroll information supplied by employers. New job benchmarks are to be introduced at the Federal level early in 1977 to correct national employment estimates he considers still too low, especially in construction.

But use of these benchmarks will make still wider the 1.3 million spread between the national total of 79.8 million nonfarm jobs and the smaller sum of the 50-state figures from which it is supposedly derived. "We are pressing the states like mad to adjust their estimates to conform with our new benchmark," Mr. Shiskin said. "They have fallen out of line because there is no good way to allow for corporate births without the adjustment experience has shown us is needed in a recovery period."

Many Governors are likely to resist the proposed change, especially in states that would lose Federal grants for public-service jobs and other emergency aid if they reported higher statewide employment. But criticism of such abrupt changes in computation methods also comes from experts with no direct fiscal stake in the volume of joblessness.

Thus, Professor Modigliani of M.I.T. charges that "nobody does enough to call attention to the unreliability of the seasonal adjustments and other factors in employment figures which the public takes so seriously."

Most of the wiggles in the employment rate are just noise," he said. "They ought to publish very abundant warnings of the limits of the data so people will not be led astray by disparities of the kind that have caused so much flipping and flopping."

Professor Modigliani gave assurance that the American Economics Association would cooperate in any desired way with the new study commission. The association's president-elect for 1977, Prof. Lawrence W. Klein of the University of Pennsylvania's Wharton School can be expected to take a similar view. He is President-elect Carter's chief economic adviser.

400,000 JOBS ARE "FOUND" BY REVISING DATA APPROACH

(By A. H. Raskin)

The official scorekeepers on national employment and unemployment have just "found" nearly a million jobs.

Refinements by the Bureau of Labor Statistics in analyzing payroll information from employers will increase the national

estimate of nonfarm employment for January by at least 400,000 workers without any reference to how much money Washington pumps into the economy. In purely statistical terms, this sleight-of-computer will all by itself produce half as much additional empoyment as the 800,000 new jobs President-elect Carter and the Democratic leadership in Congress hope to create in the rest of this year through an infusion of roughly $15 billion in tax cuts, public works and other economic stimuli.

In reality, of course, no new jobs are being created by the revision in the Federal agency's computing techniques. The bureau has simply become convinced that its past estimates failed to record adequately hiring by new businesses, especially in such fields as construction, food processing and the service trades.

The upward adjustment in job totals, to be reflected for the first time in the official employment report issued next month, focuses new attention on weaknesses in the official job data that determine the flow of billions of dollars in emergency aid to states and cities.

These weaknesses show up glaringly in the measurement of both employment and unemployment, despite homeric efforts by the Federal statisticians and their state counterparts to eliminate discrepancies in their separate computations of how many workers have jobs and how many are looking for work they cannot find.

The figures that emerge from these Sisyphean determinative processes are breathlessly awaited in the White House and on Capitol Hill, where monthly fluctuations of two-tenths of three-tenths of a percentage point in the jobless rate are treated as definitive evidence of a surge toward prosperity or a slide into economic despair.

Yet the various measures are so poorly linked that it is possible, with no fakery on anyone's part, for the states to add up what are theoretically the same figures under the same rules and come out with lower totals than the national agency on all three elements in the job equation—employment, unemployment and the total labor force. Not only is it possible but also, it is exactly what is happening right now, to the considerable discomfiture of everyone involved.

No one is more embarrassed at the yawning gaps that have developed between the Federal and state estimate than the official who is working hardest to eliminate them: Julius Shiskin, the Federal Commissioner of Labor Statistics. The basic problem, as he sees it, is that Congress has mandated detailed local figures that are beyond the capacity of even the most skilled professionals to produce under deadline pressure in the required volume.

"I recognize the importance of what Congress is trying to do, and the figures we are providing have been getting steadily better," Mr. Shiskin said. "But they are still kind of crummy in terms of the magnitude of what they are expected to do."

A belief that much more sophisticated analytical techniques are needed before adequate statistics will be available is expressed by Prof. Lawrence R. Klein of the University of Pennsylvania, who was Mr. Carter's principal economic adviser in the campaign. As incoming president of the American Economic Association, Professor Klein is considered a strong possibility for appointment by Mr. Carter to head a national commission authorized by Congress last fall to overhaul all the job figures.

Mr. Klein is particularly dissatisfied with the seasonal weights used to adjust employment data on a month-to-month basis. He feels they are "jiggered around too freely" and contributed to misleading the country on what was happening to the economy at the start of the recovery in the spring of 1975.

The most immediate explosion over the jobless figures is likely to come in March when the bureau hopes to standardize the practices used by the states in calculating their own unemployment with those the bureau uses in arriving at both its state and national figures. On the basis of preliminary computations for the first 10 months of 1976, Mr. Shiskin estimates that the revised formula will mean a higher percentage of unemployed for roughly half the states and a lower percentage for the other half.

In the topsy turvy world of Federal grants, more unemployment is better than less because money for emergency public works and public service jobs is triggered by levels of joblessness. When Washington altered the computation method in the interest of uniformity a year ago, a half-dozen states brought lawsuits to halt the change. New Jersey is still pressing its claim in the Federal courts.

"We know the new change is political dynamite," said Mr. Shiskin, who ordered it. "But we believe what we are proposing is right from the standpoint not only of consistency but of fairness to all the states. There can be no comparability between one state and another if they are using 50 different approaches."

One volunteer watchdog of the system in New York State makes no secret of his apprehension over the potential impact on unemployment grants to this city and state. He is Nicholas Kisburg, legislative director of the New York Teamsters Joint Council, who first spotted the inconsistencies that raised danger flags on the trustworthiness of the state and national figures. "I am writing to Governor Carey and warning him that New York State, which probably has the best employment statistics in the nation, may wind up on the short end of this shuffle," the union economist said.

On the employment side, the gulf between the Federal and state estimates has been growing for more than a year, even though all the analysts are using the same raw material. The job total derived by the states from employer reports covering 41 percent of the country's hourly paid and salaried workers is currently 1.6 million below the national figure of 80 million as compiled by the bureau.

The spread is expected to widen to more than 2 million when the Federal estimates are enlarged next month in line with the new national yardsticks.

"An awful lot of dough is riding on our ability to see that each local area gets its fair share of Federal unemployment aid," Mr. Shiskin said. "We are moving as fast as we can."

TROUBLED BY AMNESTY

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. ABDNOR. Mr. Speaker, many citizens across this Nation are as deeply troubled by the recent granting of amnesty to draft evaders by President Carter as I have been. I would like to share with my colleagues the sentiments of two weekly editors from my South Dakota congressional district:

[From the Timber Lake (S. Dak.) Topic, Jan. 27, 1977]

IT SEEMS TO ME . . .

(By Mary Byington)

Life is cheap in the hands of politicians. They make wars, call our young men to fight them, and if they get wounded or killed, say a few conciliatory words. If some of the young men don't believe in their wars, and run off, after a few years, they are granted a pardon. "That's all right, fellows. You can come home now!"

The blanket pardon President Jimmy Carter gave the Vietnam draft dodgers leaves a tight knot in one's stomach; a sickening feeling. It leaves one wondering if anyone should be loyal to one's country, and go fight the wars the politicians got us into.

Not many people believed in the Vietnam war. But a President ordered U.S. troops there, and kept them there for ten long years. We were supposedly there to keep democracy alive in Southeast Asia.

It doesn't appear that we accomplished much.

There was a draft in those days. No amount of money could have gotten many men to fight that war. There were many young men, loyal to our form of government, who did their duty, and served in that war. It was the first time in the history of our country, that patriotic young men were shunned and despised by many of their countrymen, rather than honored and respected.

And so, now the circle has been completed. Those despisers of our form of government, who fled the country, rather than serve in its armed forces, have been forgiven. The move, President Carter, and the supporters of amnesty say, is to reunite our country. To those who have served, the action is like a slap in the face—a thumb of the nose. They might just as well be called "suckers."

So be it. The President has acted. Let's hope he'll never have to call on young men to fight a war!

[From the Faulk County (S. Dak.) Record, Jan. 27, 1977]

"OVER AT GEORGE'S"

(By George Stevenson)

I can't say that I go along with the executive order, by President Carter. This order granted a full, complete and unconditional pardon to all Vietnam draft evaders who were not involved in any violent act. Deserters from the military forces were not included.

I think this act will cause major problems in our country. I don't believe that our Veterans of Foreign Wars or American Legion groups will go along. What can we expect if our country would get into another war? Will our young people again turn their back on us, the people of the United States?

The stories of the many many heroisms of our forefathers, who served in the various wars, would apparently appear as "foolish acts." The thousands of men and women who have given their lives in the service of their country, were all pointless deaths.

I know that the present day thinking is that the Viet Nam War was wrong. But that is not the issue, I don't believe. The issue is that this group of people turned their back on their country, and I just can't buy it. Sure, we've all made mistakes, and some of them of great magnitude, but to turn your back on everything the United States represents, is another thing.

The Conscientious Objectors had an opportunity to serve their country in a non-military manner, and still chose to say no.

I can't believe that American businessmen will be anxious to employ these individuals. The potential employer will more than likely have had family, or else an employee that has had family in a war. What kind of a relationship do you think a family member of someone that was lost in the war, would have with someone that went to Canada, instead of fight, if in the same employ. It could have repercussions on the business.

I can appreciate all of the mothers that say they would rather have a draft evader

than a dead son, but there has been mothers since the beginning of time that had these maternal feelings, and still gave up their sons and husbands.

I apologize to my readers if I offend you on this matter, but I believe that I live in the greatest country in the world, and I like it. It hurts me to see people that are so narrow minded that they couldn't defend it.

The Lord as my witness, I was concerned when my son was getting close to draft age, that he would be involved in the Viet Nam conflict, but I can honestly say that if he had chose the "Canada Route", I would have felt shame. Right or wrong, these are my beliefs.

The Lenten Season will soon be upon us. Perhaps we should all do a little self evaluation and try very hard to understand the reasoning behind these pardons. Along with my other beliefs, I believe that God must have a reason for allowing the pardons to come to pass, and also a reason he wants me to try to understand. I put my trust in Him, maybe we all should.

LEGISLATION TO PROVIDE UTILITY STAMPS

Hon. Theodore M. (Ted) Risenhoover

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. RISENHOOVER. Mr. Speaker, severe winter weather has dramatically demonstrated the need to insure that all Americans, regardless of their income, have adequate utility service for their homes.

I have introduced legislation today to provide utility stamps for all families with annual incomes less than $6,500. This bill would allow up to $25 a month for households to pay costs of fuels used in everyday heating, lighting, and cooking.

The February 3 Wall Street Journal called this program a "humane, relatively inexpensive answer to the only genuine problem that can be associated with energy decontrol." The article stated that fuel stamps are "for the indigent who truly cannot afford a sharp boost in their energy costs."

The alternative to financial relief for these citizens could be more cases of elderly and poor families losing heat in their homes with resultant suffering and death.

It is a fact of supply-and-demand economics that energy shortages and the need for decontrol of natural gas prices to spur exploration cause price increases. The days of "cheap" energy are past. But we need a suitable buffer to protect the poor and elderly during the transition.

The legislation I have introduced, authorizing a $25 monthly utility stamp for families with less than $6,500 income, deserves the cosponsorship of my colleagues and immediate consideration and passage by this Congress. Thank you.

FREEDOM IN THE WORLD

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the following column by my constituent, Gen. Henry Huglin. General Huglin is a retired Air Force brigadier general and syndicated columnist and lecturer on national security and international affairs. General Huglin describes in this column the continuing world trend away from the principles of freedom:

FREEDOM IN THE WORLD

(By Henry Huglin)

In his inaugural address, President Carter said: "Two centuries ago our nation's birth was a milestone in the long quest for freedom . . . The passion for freedom is on the rise. Tapping this new spirit, there can be no nobler nor more ambitious task for America to undertake on this day of a new beginning than to help shape a just and peaceful world that is truly humane . . . Because we are free we can never be indifferent to the fate of freedom elsewhere."

Well, the "passion for freedom" may even be intrinsic in the human race, but it is not achieving freedom in the rest of the world as have hoped for two centuries it would.

The issue of peoples' freedom is the business of Freedom House in New York City. This organization—which, since 1940, has been monitoring the cause of freedom, and vigorously promoting its understanding and spread at home and abroad—has just issued its annual unique survey "Freedom in the World." It presents many points to ponder:

"The movement away from freedom in 1976 continued a four-year trend . . .

"Not free are 1,765.9 millions (43.9 percent of the world's population) . . . Partly free: 1,474 millions (36.4 percent of the total) . . . Free: 789.9 millions (19.6 percent of the world's people) . . .

". . . the reader must be clear about our definition of freedom. First, by freedom we do not mean national sovereignty . . . a former colony may be rated less free after independence than before—for example, Uganda.

"Given this limitation, 'freedom,' as used in the Survey, refers, first of all, to the extent to which the people of a country are able to play an active and critical role in choosing their leaders, and thus ultimately in determining the laws and means of enforcement under which they will live. Such *political rights* generally imply an authentic electoral procedure. Secondly, freedom refers to the extent to which people openly express opinion without fear, and are protected against arbitrary actions by an independent judiciary. Consideration of *civil rights* of this kind also includes a wide spectrum of other personal rights, such as those to freedom of religion, voluntary organization, and freedom of movement and occupation . . .

". . . the freedoms the Survey compares are the essential human rights that political systems must guarantee . . .

". . . the freer states in the world are non-socialist, multi-party states, while the less free are one-party states . . . capitalism by itself does not assure fredom . . . but socialism by itself seems to be positively detrimental . . ."

The Freedom House Survey lists 42 nations as "free," including our country, Canada, and most of western Europe; but in South America, only Colombia and Venezuela, and in Africa, only Botswana and Gambia.

Among the 67 listed as "not free" are all the communist nations; in South America, Argentina, Chile, Paraguay, and Uruguay; and in Africa, 32 nations, the vast majority.

The rest of the nations fall in between, as "partly free."

President Carter also said: "Our nation can be strong only if it is strong at home, and we know that the best way to enhance freedom in other lands is to demonstrate here that our democratic system is worthy of emulation."

Well, we have set a worthy example for two centuries, and we certainly need to keep bright our guiding light of freedom, justice, and opportunity; but we also need to recognize that example alone is not enough.

Beyond example, our leadership and resources are much needed throughout the world—as they have been for more than 30 years. The stability which comes from our military and economic strengths, employed with skillful diplomacy, are essential for basic security to exist in this troubled and still-dangerous world. And only with the stability that comes with security, can our other unmatched capabilities—such as in financial, technological, and managerial-knowhow fields—be most effectively applied to promote the social, economic, and political progress from which human freedoms can develop.

President Carter must appreciate this. He also said: "let no one confuse our idealism with weakness" and "we do not seek to intimidate, but it is clear that a world which others can dominate with impunity would be inhospitable to decency and a threat to the well-being of all people." Further, his sending of Vice President Mondale to reaffirm our commitments abroad and consult with our allies and partners in Europe and Japan is an indication that President Carter realizes that an activist international role is the one that we must play.

So, for all the peoples of the world, freedom—as well defined by Freedom House—is a worthy long-term goal for us as a nation. But we really need to keep in mind that progress toward that goal will take much more than our fine example and moralistic posturing—in wisdom, strength, world leadership, resolve, and persistence.

ENERGY CONSERVATION

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. JACOBS. Mr. Speaker, Lisa Minter is one of the smartest and most public spirited citizens in Indianapolis.

I should like to share with other Members of Congress Lisa's excellent letter to me concerning energy conservation:

INDIANAPOLIS, IND.,
January 30, 1977.

DEAR CONGRESSMAN JACOBS: I am in the fifth grade at Saint Lawrence School. Our school is having a science fair. My project is on energy conservation.

I would like to tell about some of the things that I've learned:

1. After you take a bath leave the water in the tub until it cools off. I measured the temperature and gallons of water we used and found out by letting the heat from the water get into the house before draining it we saved about 10,000,000 BTU's a year (3.000 KWH of electricity or 105 gallons of oil, or 16,000 cubic feet of gas.)

2. We have an electric clothes dryer and my father vents this into our house in the winter. (Never do this with a gas dryer.) This adds moisture to our air and saves another 10,000,000 BTU's.

3. We are very comfortable in our home when it is from 60° to 65°; even when it is −10° outside. We usually all wear sweaters.

4. When it is very cold outside we only open drapes on windows where the sun is shining in so the sun can help heat our house. I was wondering if you have any information or posters on energy conservation I could add to my display. Thank you.

Sincerely,

LISA MINTER.

NATIONAL NOTARY ASSOCIATION

HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. GOLDWATER. Mr. Speaker, I would like my colleagues to join with me in extending their heartiest congratulations upon the occasion of the 20th anniversary of the National Notary Association.

The largest notary organization in the country, with more than 20,000 members drawn from every State of the Union, the District of Columbia and U.S. territories, this California-based association has sustained its dedication to improving and strengthening the notary public office.

Since 1957, this professional, educational organization has devoted itself to instilling in its members a concept of professional ethics and public service. The National Notary Association has strived to create an obligation of self-discipline among notaries which goes above and beyond the requirements of the law and to encourage a solidarity of purpose and practice among our Nation's more than 2 million notaries.

It was the lack of information available to notaries and a need for education support that inspired Raymond C. Rothman, a leading authority on notarial customs and practices to establish an organization exclusively for notaries.

Among the accomplishments of the aassociation, and more specifically through the efforts of its founder and president, are the initiation and organization of a National Advisory Committee for a Uniform Notary Act, a model law available for State legislators updating existing notary statutes; the conception and introduction of the notarian program, a certification program for professional notaries; and the introduction of the first nationwide ethical and procedural code for notaries, the "Rules of Notarial Practice."

In the past two decades the National Notary Association has dedicated itself to encouraging both sound notarial practice, as well as the introduction and development of innovative notarial ideas. It initiated educational seminars where notaries have an opportunity to learn proper notarization practices and discuss notarial problems with experts and introduced an information service "hotline" by which notaries receive immediate answers to their notarial questions.

The National Notary Association has also been a major publisher of notary literature including the most up-to-date and comprehensive text on notaries, "Customs and Practices of Notaries Public and Digest of Notary Laws," and an innovative notary record book, the "Journal of Notarial Acts." The association offers members a bimonthly magazine, "The National Notary" which offers instructional "how-to" features and provocative articles about notary practice, and a quarterly legislative newsletter, "Notary Viewpoint" which reports legislative activity and opinion.

In the past 20 years, the NNA has been an important influence in upgrading notary standards, increasing awareness of the importance of notarization and warning against improper notarial practice.

It is indeed a pleasure to commend this fine organization on its excellent contributions to this Nation's commercial, business, and legal activities, and to wish it continued success in its efforts to develop innovative and professional procedures and practices in the office of the American notary public.

WTTR'S PAUL SMITH DOES WHAT COMES NATURALLY

HON. GOODLOE E. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. BYRON. Mr. Speaker, Paul Smith has been an outstanding member of the Carroll County, Md., community for nearly a quarter of a century. His weekend interviews over WTTR Radio have been informative and welcomed by his neighbors of the Sixth District. Recently the Carroll County Times newspaper offered an article on the contributions of Paul Smith. I would like to share with my colleagues this article by Dean Minnich:

WTTR'S PAUL SMITH DOES WHAT COMES NATURALLY

(By Dean Minnich)

Paul Smith of WTTR is as well-liked as he is well-known. In his 23 years with the station, he has become part of the personality of local radio—or vice versa.

"I've grown up with the station. We ironed out our problems together," he said, smiling.

His official title, as far as he has one, is that of advertising salesman and weekend announcer. And he is respected among businessmen for his low-key, nononsense approach to servicing their accounts and his willingness to go the extra step in their behalf.

But is that Paul Smith, or is it the way WTTR likes to work? The answer is, "Both. I'm right at home here," said Paul. The philosophies of management and the leanings of Paul Smith make for a happy marriage.

The private Paul Smith admits to being a bit of a rebel. He couldn't be happy working in an atmosphere where personalities or policies ran against his grain.

"When someone tells me I have to do something, I have a tendency to fight it. I couldn't work in a place where I had to punch a time clock. I like to work on a job until it's done, and if that means working past five, fine. I'll come in a little late the next morning or something."

He values individuality, loyalty, and integrity. WTTR gave him a chance to learn ad sales and radio from the inside, and he's grateful for that.

"I look forward to coming to work every day. I've been in a few situations where I couldn't have said that. And this is a high-class operation—it has a class reputation within the industry. Russ told me when I first came on as an ad salesman to never promise a client more than we could deliver."

One reason for his popularity is his willingness to provide the spotlight, rather than bask in it. His Sunday morning interviews with everyone from the ambassador from Canada to local Cub Scouts are people shows. They usually come into the studio to tape the segments, but if they can't, Paul goes to them with a portable tape unit. The shows are aired around 9:07 or 9:10 a.m. when many local listeners are just getting up or getting ready for church.

"The main thread of the interview has been to let people know what's going on . . . and to let people tell a story in their own words. It's not a crusading type of program. It's more like a magazine approach," he said.

He recalls that the first interview, 16 years ago, "was the medical society's concern over the King-Anderson bill. That was the first involvement of the government in medicine, the forerunner of medicare, and they were afraid of the possible effects it would have on traditional doctor-patient relationships, having the government getting involved. They thought it would turn health care into a mill. I got four nasty calls after the show—all from government employees."

Since then he has opened the show to people with all sorts of stories to tell, and he often lines up people who can give a different perspective to current events. He doesn't avoid controversial subjects, but he does have a knack for finding a way to discard the rhetoric and save the rationale.

One show, recorded on a routine Friday night patrol with a city police officer, pointed out the folly of having a single uniformed policeman responsible for controlling 2,000 spectators at a sporting event. It led to having security police and other forces being called in for that kind of duty.

The public Paul Smith is a mirror of the private man. They are one and the same, which helps explain why he's happy with his work.

He likes to know a little bit about everything. And he can discuss a wide range of subjects without a trace of smugness, which makes him an interesting conversationalist.

"I go in for varied reading. I'm not a reader of books as such; mostly journals and magazines. And newspapers, of course. I prefer editorials and columns, because I think they give a better perspective of reality than the so-called hard news," he said.

"So much journalism today, particularly in the broadcast side, has become too superficial. There's too much condensation of everything. I prefer the background type of article.

"We have created a conditioned generation. Everything is instant. There's no such thing as instant success, and that's what everyone's looking for," he said.

He is active in the Maryland chapter of a professional society of journalists, he said, because he wants to contribute to better journalism.

It is one of his few official affiliations. He is now an honorary member of the Westminster Lions Club, and a life member of the V.F.W.

"I'm not a joiner for the sake of joining. When I first got invitations to join certain organizations, I thanked them, but declined because I thought my responsibility was to help each group as they needed it."

When he wants to get away from the time demands of the radio business, Paul plays golf.

"I'm a golf nut . . . one of those guys you're likely to see on the tee in 16-degree weather," he said.

Paul and Janet Smith also like to take off in their travel trailer. They've traveled from the back woods of Canada to the Florida Keys, and seem to have an affinity for Canada.

"There's one place we've visited that really is away from it all. You hear the timber wolves howl at night, and in the morning the black bears rub themselves against your trailer. It's as if they're saying you're in Billy Bruin's back yard, so behave yourself."

His rebel's soul led him to buy a trailer in 1967.

"It was the motel rates . . . robbery . . . I told one motel operator I was just staying the night, not paying off the mortgage. The next year we bought a trailer."

At home, Paul is a packrat. He hates to throw things away. Tapes, materials, papers, "becomes resource material." They are also memories, some of the richest rewards of his radio career.

It has been a career born of an accident of circumstances; he came to Carroll County from his native Pennsylvania to teach school at Sykesville. His first contact with WTTR was in connection with a feature called, "Your Schools and You." From there he became a week-end announcer in November, 1954, and three months later, joined the staff as full-time ad salesman and week-end announcer.

Since then, he's been doing what comes naturally.

CLIMATE CHANGE AND NATIONAL SECURITY

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. BROWN of California. Mr. Speaker, we all now feel the urgent need to overcome the difficulties which have resulted from this winter's weather events. Preparations are already underway for potential flooding this spring in the East and for drastic water conservation in California and the Great Plains. Amid these immediate concerns, I would like to call my colleagues' attention to another level of contingency planning—longer in range and global in scope—as discussed in recent Central Intelligence Agency studies.

The CIA has examined the issues surrounding long-range prediction of weather and climate change. These need to be addressed in a more active and coordinated way in the Federal Government. We need to better understand the effects of natural climatic variations on growing season length, heating fuel needs, and precipitation patterns. The possible long-range impacts of man-induced climate fluctuation on food production, energy consumption, and human settlements, which have just begun to be explored scientifically, need explicit attention as well.

"The National Climate Program Act of 1977," H.R. 783, for which Mr. WINN of Kansas and I are now soliciting additional cosponsors, addresses these more global concerns. Two recent articles, one by James P. Sterba for the New York Times, February 2, 1977, and the second by Deborah Shapley for Science, January 28, 1977, raise the important national security and international economic questions that go beyond immediate concern with our inconstant weather.

Mr. Speaker, I ask that the articles be inserted in the RECORD. They support our need to be ready for the consequences of alternative future climatic conditions and changes.

The articles follow:

PROBLEMS FROM CLIMATE CHANGES FORESEEN IN A 1974 CIA REPORT

HOUSTON, January 31—In August 1974, researchers at the Central Intelligence Agency completed a classified 36-page working paper, entitled "A Study of Climatological Research as It Pertains to Intelligence Problems." In it they reported, "Leaders in climatology and economics are in agreement that a climatic change is taking place and that it has already caused major economic problems throughout the world."

The study was declassified last May, after a relatively mild winter and at a time when most Americans believed, despite warning, that the energy crisis was easing, if not over. It generated little attention.

Now, in the midst of major economic problems caused by a severe winter in the nation, studies on climate are receiving closer, if belated, scrutiny.

The C.I.A. study, prepared by its Office of Research and Development, raised sobering issues well beyond the economic effects of a cold winter. It said that many nations, including this one, were locked into isolated and shortsighted perspectives that were out of step with new global realities of population growth, food and energy resources, and the economic and political disruptions caused by major, and even minor, weather disruptions.

FAILURE TO PREPARE

The study said that the United States had failed to prepare for assessing these implications, especially as they related to questions on climate.

"Though the issues are important," the study said, "the United States has a limited capability in climatic forecasting. The Government expends over $150 million annually on short-range weather forecasting, but only a minimum of direct dollars on climatic forecasting. Only a few academic centers in the United States are engaged in training personnel in this field, which suggests we have a limited chance of solving the intelligence community's problem unless decisive action is taken."

The report said that intelligence analysts, as late as 1972, had "no methodologies to alert policy makers to adverse climatic change," and "no tools to assess the economic and political impact of such a change." Since then, world food and energy problems have intensified.

"With global climatic-induced agricultural failures in the early 1970's, the stability of many governments has been seriously threatened," the study said. "Many governments have gone to great lengths to hide their agricultural predicaments from other countries as well as from their own people."

WARNINGS SINCE EARLY 1970'S

Since the early 1970's, some United States authorities on energy, food and climate have steadily warned of worsening national and international predicaments in these interrelated areas, but their warnings have been disputed by others.

Students of climate, for example, contend that Americans are generally unaware of the overall effects of droughts, freezes, floods and other unusual climate patterns around the world because these problems have been perceived and reported as isolated occurrences and because they have not directly affected Americans in the way the energy crisis has affected them.

Students of weather, on the other hand, knew these occurrences as short-term aberrations and say it is too early to determine if they are part of a long-range global pattern. Meteorologists, or short-term weather forecasters, dispute the scientific credentials of climatologists, saying they are working in a new area without much base data and with no "proof" to back up their assertions.

While this dispute continues, some officials believe there is a growing consensus on one point: After several decades of relatively mild, predictable weather—during which modern agriculture developed, detailed weather records were kept, and the earth's population nearly tripled—the globe's weather appears to be entering an erratic period.

AGREEMENT ON IMPLICATIONS

Various authorities cannot agree upon why. But they do agree that the implications are enormous. Some climatologists contend that the emerging pattern is similar to one experienced in the mid-1800's, but with a major difference: The world's population in 1850 was only 1.1 billion. Today it is more than four billion.

"The new climatic era brings a promise of famine and starvation to many areas of the world," the C.I.A. study said. "The resultant unrest caused by the mass movement of peoples across borders as well as the attendant intelligence questions cannot be met with existing analytical tools."

Since then, the economic, social and political disruptions caused worldwide by energy shortages have been well documented. The drain on world oil and natural gas reserves, and the attendant price rises, have caused economic hardship around the globe. Unusual weather patterns have exacerbated those hardships.

Students of climate say the crisis this winter in the United States is but another tragic example. Their main hope—one shared by energy experts—is that the current crisis is severe enough and close enough to home to encourage the interest and planning required to deal with these long-range issues before the problems get too much worse.

SOVIET GRAIN HARVESTS: CIA STUDY PESSIMISTIC ON EFFECTS OF WEATHER

A recent Central Intelligence Agency (CIA) study of Soviet crop growing conditions has concluded that there is a good probability that the weather will continue to be unfavorable in the next 5 years and that crop production in the Soviet Union will fall short of official goals by 15 to 20 million metric tons each year. Such a shortfall would drive the Soviet Union to buy these amounts on world grain markets, principally from the United States, and therefore would have important foreign policy implications.

The CIA study is pessimistic by comparison with current statements made by the U.S. Department of Agriculture (USDA), which predicts that the Soviets will meet their projected goals. USDA has been using a period centered on the 1960's from which to extrapolate its more optimistic estimates; the CIA report, on the other hand, argues that the 1960's were abnormally favorable and should not be used as the sole basis for extrapolating future trends.

Since 1972, when the Soviets secretly bought up 14 million tons, or 20 percent of all U.S. grain exports, at bargain prices, the subject of Soviet grain production has been one of deep concern to USDA, CIA, and other government agencies. In addition, scientists' predictions of a steadily worsening global climate in the next 25 to 100 years has spurred new government studies of conditions in key world food producing areas. The Soviet Union is a crucial piece of the world food supply and demand puzzle.

The CIA study projects that weather in the grain-growing regions of the Soviet Union is getting worse and will not return to the favorable conditions of the middle and late 1960's. The middle and late 1960's, it finds, were unusually favorable for food production, not only by comparison with the period immediately before and after, but by comparison with long-term trends going back to the early part of the century. This finding has been seconded by independent work at the University of Missouri.

The study, done by CIA's Office of Economic Research, was presented by its author, CIA meteorologist Russell Ambrosiac, to a small group of government experts on 7 January at the National War College at Fort McNair in Washington, D.C., where a study of the world climate and food situation is under way. Although some of the officials who heard the presentation and who have read Ambrosiac's "official use only" paper have reservations about certain aspects, their general view seems to be that the work is sound.

The CIA study attempted to answer a question many U.S. analysts have about Soviet agriculture, namely, how much of the spectacular improvement in crop yields which the Soviets have experienced since the early 1960's has been due to the weather and how much has been due to improvements in technology, such as the widespread application of mineral fertilizer introduced by former premier Nikita Khrushchev in the 1960's. World Meteorological Organization data and data on individual crop yields for the grain-growing regions of European Russia and Kazakhstan were modeled to see what trends could be identified.

Ambrosiac concluded that small shifts in the weather could make great differences in Soviet crop yields, especially in the relatively dry region of Kazakhstan, where most of the spectacular yield improvements of the early 1960's occurred. Soviet weather was poor during the early 1960's, but improved as the decade advanced. Now, Ambrosiac found, it is getting worse again.

The climatological reason behind this shift to worse, drier weather in many grain-growing regions of the Soviet Union, according to Ambrosiac and other experts, is that the Arctic circumpolar air mass, which determines much of the Northern Hemisphere's weather and which was found to be expanding a few years ago (*Science*, 22 February 1974), is now believed to be contracting. This shift, climatologists explain, is pulling northward various dry weather belts such as the one which previously lay across the Russian deserts in southern Kazakhstan. Such belts are also shifting over Africa and northern India; both of these areas are also critical to the world balance of food demand and supply.

Whatever the cause, Ambrosiac estimated the result of this drier weather to be that the Soviets would produce, on the average, only 200 million metric tons of grain on the average each year during the next 5 years. But the official Soviet 5-year plan calls for production on the average of 215 to 220 million metric tons, and for production of 235 million metric tons in 1980. (In fact, Soviet grain production has undergone notorious, wild fluctuations. The 1975 crop was a mere 140 million metric tons, whereas 1976 saw a bumper harvest of 223 million metric tons.)

The CIA's findings about past Soviet weather trends have also been observed by Wayne Decker, a professor at the University of Missouri who is making a study for USDA of long-term weather data for the world's major food-producting regions, including the Soviet Union, Australia, Canada, and Argentina.

"By just about any standard the middle and late 1960's were a period of unusually good Soviet weather," Decker says, on the basis of data going back to the 1880's. "The latest deterioration started in the winter of 1971–72; the years which have followed have not in general been good for growing crops."

The problem is, however, that USDA now uses crop yield data from the 1960's—and not weather data—to project future, "normal" trends in Soviet agriculture. USDA claims that the Soviet Union will be able to meet their grain production goals. Explains Fletcher Pope, a Soviet specialist in the USDA Economic Research Service (ERS), in defining a "normal" Soviet grain crop year, "We take a simple average of the 11 year period from 1962 to 1972 and consider that to be the norm." Pope says this period is used because "it was the one for which data was available." If it turns out to have been an abnormally favorable period, he adds, USDA will have to revise its methodology.

David Schoonover, of ERS, who witnessed Ambrosiac's presentation, says, "Our basic conclusion over the next few years is that the Soviets are likely to meet their planned goals for grain production, assuming an equal distribution of good and bad years. He is disagreeing and saying, well, the chances are that the good years will be outnumbered by the bad." Schoonover also says that Ambrosiac's paper, although only a preliminary look at the problem, has already spurred some rethinking in his division of ERS over USDA's assumptions and forecasts.

The CIA–USDA controversy over forecasting Soviet crop production is part of a larger issue now being debated in scientific and government circles, over the future of world climate and food supplies (*Science*, 24 September 1976). The issue came to public attention last year when another study, from the Office of Research and Development of the CIA, predicted "mass migrations" and other forms of global political "instability" as a result of a long-term cooling trend in the Northern Hemisphere. The analysis—which was highly controversial at the time—predicted that U.S. food exports would be the key to resolving the political controversies caused by lack of food. In the course of the debate about this study and others which have been undertaken, a number of leading climatologists have criticized USDA's methods of forecasting crop yields because their weather assumptions, based on the unusually favorable Northern Hemisphere conditions of the last 20 years, are much too optimistic.

Soviet crop production is extremely sensitive to fluctuations in the weather. According to a recent speech by a former Soviet minister of agriculture, 66 percent of Russia's arable land already has insufficient precipitation. (By contrast, only 1 percent of the arable land in the United States has this handicap.) During the 1960's Khrushchev opened "new lands" to farming by extending Russia's major agricultural region eastward from European Russia across Kazakhistan to the Chinese border. But the new CIA prediction, if true, could mean that these "new lands," which get little rainfall as it is, could become harder and harder to cultivate in coming years. Should this happen, the Soviet Union would become even more dependent on imported food than it is already.

Decker, in his review of Soviet data, is impressed by certain correlations between Soviet weather conditions and the country's political history. Not only did Khrushchev's "new lands" policy coincide with a period of abnormally favorable weather, but the Stalinist era correlates with a period of poor weather, in the late 1930's. "I'm not qualified to relate it to the politics of the era, but boy, there must have been some hunger in Russia in the 1930's," he says. It seems obvious that, as far as CIA goes, such correlations will not go unnoticed.

GEN. THADDEUS KOSCIUSZKO—HERO OF TWO NATIONS

HON. HAROLD S. SAWYER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. SAWYER. Mr. Speaker, I feel it is fitting that we pay tribute to an American Revolutionary War hero of Polish descent, Gen. Thaddeus Kosciuszko.

This week, February 12, marks the date of his birth and we should commemorate this patriot. All too often, the spirit of the revolution is remembered only by the more prominent names rather than the fact that the struggle was waged by many people of diverse backgrounds.

Mr. Speaker, the many Americans of Polish descent can be proud of the contribution to freedom they have made over the years and to the strength of America.

After the revolution, Congress awarded to General Kosciuszko land in Ohio, which he sold, using the proceeds to establish a school for black children in New Jersey. The example General Kosciuszko set in the struggle for U.S. independence was carried back to Poland where he led his native people and initiated a series of needed reforms until he was defeated and captured by the Russians in 1794.

We who are fortunate to live in freedom must continue the battle against oppression and follow the pattern of men like General Kosciuszko whose devotion to human rights never waivered.

SCOUTING—AN EXPERIENCE FOR A LIFETIME

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. NATCHER. Mr. Speaker, 67 years ago today the Boy Scouts of America was incorporated in Washington, D.C. On this very special day in the history of the Boy Scouts I would like to express my sincere admiration and appreciation for the outstanding contributions they have made over the years.

During the entire month of February the Boy Scouts will be celebrating their anniversary with events such as storefront and shopping center displays, the traditional blue and gold dinners for Cub Scouts and their parents, reports to mayors and Governors, their National Conference, and a National Public Speaking Contest on the theme, "The New Spirit of '76—America's Heritage."

For the Boy Scouts, February is a month of reflection on past accomplishments and of anticipation and planning for future goals and projects. This is a time when, I am sure many Scouts and leaders will reflect upon the purpose of scouting, and I firmly believe that the basic concept of this organization will continue to generate a sincere realization of one's duty to God and country as well as a keen respect for the fundamental rights of all people.

While the traditional ideals of Scouting based upon fellowship, citizenship, and personal fitness have remained the same, the focus of Scouting has continually changed to meet the needs and interests of young men today.

During the coming year Boy Scouts will be participating in ongoing programs such as project SOAR—save our American resources—an environmental action program, and the National Scout

cides not to report it, that captain will be subject—under the stiffest penalty of Liberian law—to a fine of $250. In these circumstances, the tanker industry can be a very profitable business.

In 1949 Liberia had five ships with a total tonnage of 50,000. Ten years later they had 1,085 vessels and a total tonnage of 11,940,000. Today they have well over 2,500 ships, and a tonnage of over 73,000,000. Their fleet is still the fastest growing in the world. It carries almost 40 percent of the oil coming into U.S. ports, while U.S. ships carry only about six percent.

WHO OWNS LIBERIAN SHIPS?

The Liberian fleet is owned primarily by Americans and Greeks, with each accounting for about 35 to 40 percent of the total. The major U.S. oil companies own a considerable portion of these vessels, since over 80 percent of all tankers owned by members of the American Petroleum Institute fly a foreign flag.

WHO OWNED THE "ARGO MERCHANT"?

Liberian maritime law does not require the maintenance of ownership records. We know that the nominal owner of the *Argo Merchant* was Thebes Shipping Company, and that Thebes in turn was owned by Amerships, a seven-year-old shipping firm based in New York. Amerships is currently the owner of seven other corporations, all of which, like Thebes, have been incorporated for just one ship. Each of these vessels, in turn, is at least secondhand (the *Argo Merchant* was fourth-hand), and most are from 15 to 20 years old. Several have been involved in safety or minor oil spill incidents in the past, but all are still operating.

The question remains, who owns Amerships and how many more companies like Amerships are there?

ARE LIBERIAN SHIPS SAFE?

The Liberian shipping industry is becoming, more and more, a two class entity. Some of the ships flying the Liberian Flag are the largest, most modern, and best equipped vessels in the world. This is true because those spending good money to build these new ships are also smart enough to know that the Liberian Flag is the ticket to future profits.

On the other hand, however, fly-by-night shipping operations such as Amerships also find the Liberian Flag attractive. Many of the worst rust-buckets in the world, therefore, are either Liberian or Panamanian. On the whole, the safety record of the Liberian fleet is not a good one.

The world's largest oil spill was the *Torrey Canyon* incident in 1967. That vessel was owned by the Barracuda Corporation, a front company for Union Oil, and the same company that owned the *Sansinea* which exploded in Los Angeles Harbor one month ago. The *Torrey Canyon* flew the Liberian Flag.

In the years 1969 and 1970, Liberia owned 23.42 percent of the world's tanker tonnage, but was responsible for 43.38 percent of all the oil spilled in tanker accidents. The U.S. fleet, on the other hand, consisted of 6.50 percent of the world's fleet, and was responsible for only 0.88 percent of the spills.

In 1973 Liberia owned 17.2 percent of the world's total shipping tonnage, but its ships were involved in 30.7 percent of the world's vessel casualties. The fleets of those nations which are not considered to be flag of convenience nations owned 50.9 percent of the world's tonnage in 1973, but were responsible for only 14.3 percent of the vessel casualties. For the period 1971–1975, the ratio of tonnage lost to total tonnage owned was more than three times as high for Liberian ships as it was for U.S. ships.

WHY DO WE PUT UP WITH IT?

The widespread use of flag of convenience shipping has some serious costs for the United States and for the world. Accident rates and pollution costs are substantially higher with these vessels than with others. U.S. shipping does not generate as many employment opportunities as it otherwise would. A great deal of U.S. capital is spent overseas and a great deal of money is spent subsidizing U.S. shipping operations so that they can at least try to compete with the foreign boats.

Who benefits? The world oil and tanker industries, to the extent that there is a difference, benefit tremendously from the flag of convenience operations, and they lobby heavily in governments throughout the world to maintain it. The U.S. Government has consistently supported flag of convenience operations, and has backed the right of Liberia and Panama to take a major role in international maritime lawmaking, despite the fact that Liberian expertise in maritime affairs is not exactly home-grown.

It has been argued that, as Liberian ships replace new U.S. ships, the U.S. treasury saves on payments of subsidies to U.S. shipbuilders. The cost-cutting involved in using Chinese, Greek, or Filipino crews on third rate tankers coming into U.S. harbors, it is said, helps to reduce transport prices and therefore oil prices.

It is also important to remember that if foreign flag ships are going to be the rule rather than the exception, the Defense Department may have something to say about which foreign flag would be best. The understanding is that if war breaks out, U.S. owned Liberian Flag ships will be subject to immediate requisitioning by the U.S. Government. As one industry official put it "Liberia we look upon as the godson of the United States. The flag is the nearest thing to the U.S. Flag, and Uncle Sam certainly would have control over Liberian ships." Since the U.S. effective control concept is not founded on treaties, conventions, or intergovernmental agreements of any kind, it depends purely on private arrangements between the U.S. Government and shipowners.

TWO OTHER POINTS

1. The Free Port of Monrovia (named, incidentally, for President James Monroe) is not a particularly good port, since it only has a depth of 35 feet. It is, however, Liberia's only significant port, and it is located in Liberia's largest city. This port is managed by the Monrovia Port Authority, Ltd. The headquarters of this firm are, naturally enough, located in New York City, although the company was incorporated in Delaware. Seven companies form the Port Authority—Delta Steamship Line, Farrell Lines, Firestone Plantations, Mining Company, Ltd., Mobil Oil Corporation, Texaco, Inc., and the Liberia Company.

2. The Liberian delegation to the 1973 Convention of the Intergovernmental Maritime Consultative Organization (IMCO) contained at least as many American citizens, including Mr. Fred Lininger, as it contained Liberians. This is the convention which ratified several treaties dealing with oil pollution liability and with tanker safety standards that have since been presented to the Congress for ratification. Liberia was the first nation in the world to ratify these conventions which, I believe, constitute lowest common denominator standards for the world's oil and tanker industries.

CONCLUSION

Liberia, as a ship owning nation is primarily a corporate, not a sovereign, popular entity, and it should be treated as such. U.S. citizens wrote the Liberian shipping laws, U.S. companies own a major portion of Liberian Flag tankers, the Liberian shipping industry is based entirely in New York and Washington, the U.S. Government has consistently backed up the flag of convenience concept for what it deems to be security reasons, the Free Port of Monrovia is run by U.S. companies, and U.S. citizens sit on Liberian delegations to international negotiating bodies, continually backing lowest common denominator standards for world shipping.

Congress must ask itself, this year, whether lowest common denominator standards are good enough. We have been asked for years to go along with the international approach to tanker safety and oil spill liability. I intend, this year, to question the validity of that approach. I have become less and less sure that the "international approach" is truly that, or whether it is in fact, a bit of a hoax played on the American people and on our environment. Perhaps we should stop believing that we are negotiating with other countries, when we are, in fact, often talking to ourselves.

ON BRINGING PAY RAISE DISAPPROVAL RESOLUTIONS

HON. AUSTIN J. MURPHY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. MURPHY of Pennsylvania. Mr. Speaker, a matter of immediate and special concern to many Members of this body is the pending congressional pay raise recommendations of the Commission on Executive Legislative, and Judicial Salaries.

A number of my colleagues have voiced opposition to congressional pay increases at this time, and have translated their concern into a number of varying disapproval resolutions. I recently introduced House Resolution 197, along with Congressmen EDGAR and WALGREN, providing for disapproval of the recommended congressional raises.

We have been however, frustrated in our attempts to insure that House Resolution 197 or similar measures reach the floor for a vote by the February 19 deadline.

I would like to take this opportunity to share with my colleagues my views on this urgent issue, as given in my testimony before the Ad Hoc Subcommittee on Presidential Pay Recommendations of the Post Office and Civil Service Committee yesterday:

REMARKS OF HONORABLE AUSTIN J. MURPHY

Mr. Chairman: I have been somewhat frustrated in my attempts to have the recent Federal Pay and Compensation Commission report voted upon by the membership of this entire body. After having introduced and co-sponsored resolutions to reject the Commission report in toto and in part and not having said resolutions as yet reported to the floor for a vote, I have been in touch with the legislative counsel to prepare the proper motions to have the matter brought out of committee.

I have prepared a discharge petition and just prior to submitting it to the journal clerk learned that before such a petition may be presented a resolution bill or measure must have been referred to and considered by the committee for more than 30 days. This is where the frustrations began. I found that President Ford submitted with his approval the commission report in January 19, 1977, and that it would become effective on February 18, 1977 or 30 days hence. There was absolutely no conceivable way to submit a discharge petition until following the final enactment of the compensation report.

The only other manner in which the matter can be brought before the membership is by the suspension of the rules with the unanimous consent of the entire House. I have been advised by several of my colleagues that a mere hand wave when the speaker calls for an objection will suffice to prevent

unanimous consent. Suspension of the rules, I have also learned, can only be considered on a Monday or a Tuesday of a legislative week and by prior arrangement there will be no Congressional session held on Monday and Tuesday the 14th and 15th immediately preceding the effective date of the commission report. It has therefore become procedurally impossible for me or any member to insist that this body be allowed to vote on such an important measure.

I would urge this Committee to act favorably upon my resolution this week and further urge the majority and minority leadership to call the House of Representatives back into session on February 14 or 15 where a suspension of the rules may be considered. I would also respectfully request that the Rules Committee consider the manner in which pending legislation may be brought forth from committee. In the Pennsylvania legislature where I had the privilege of serving for 18 years, a mere discharge resolution submitted by any member would provide sufficient cause for a measure to appear on the next official days calendar of the session and that upon motion of five members the matter could then be voted upon during any subsequent day's consideration of the calendar.

I have prepared my motion to suspend the rules and if given the opportunity next Monday or Tuesday will submit it to this body. I thank the members for their time and for the parliamentary lessons I have been experiencing.

POSSIBLE SALE OF AIRCRAFT TO PAKISTAN AND INDIA

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. HAMILTON. Mr. Speaker, over the last several months there has been increasing concern expressed here about aspects of the nuclear policies of and nuclear agreements desired by Pakistan and India.

At the same time, both States have expressed interest in the purchase of American aircraft.

The question has arisen concerning positive or negative correlations between the resolution of nuclear policy disagreements and the availability of aircraft.

Over the next few months, the United States will have to try to resolve its nuclear policy disagreements with these two States. It is hoped that these discussions can take place independent of any commitment on the availability of aircraft. However, I believe that a negative relationship exists whereby if nuclear policy differences remain unresolved, no plane purchases can proceed.

I would like to bring to the attention of my colleagues some correspondence I have had with the State Department regarding these matters.

The correspondence follows:

SEPTEMBER 3, 1976.

Hon. HENRY A. KISSINGER,
Secretary of State,
Washington, D.C.

DEAR MR. SECRETARY: It is my understanding that the United States plans on selling A–7 fighter aircraft to Pakistan. This would represent the first sale of major combat aircraft to the subcontinent since the arms embargo was lifted.

I would like to know what assurances, if any, we received from the Government of Pakistan regarding its nuclear program and intentions to acquire reprocessing facilities prior to agreement to the sale of these aircraft and what form these assurances took.

I would appreciate your prompt consideration of this matter.

Sincerely yours,

LEE H. HAMILTON,
Chairman, Special Subcommittee on Investigations.

DEPARTMENT OF STATE,
Washington, D.C., September 22, 1976.

Hon. LEE H. HAMILTON,
Chairman, Special Subcommittee on Investigations, House of Representatives.

DEAR MR. LEE: In reply to your letter to Secretary Kissinger of September 3, I would like to inform you that no decision has been made on the sale of A–7 aircraft to Pakistan.

We are discussing with the Government of Pakistan the problems associated with the possible acquisition of a nuclear fuel reprocessing plant. No understandings have yet been reached on this matter.

KEMPTON B. JENKINS,
Acting Assistant Secretary for Congressional Relations.

JANUARY 10, 1977.

Hon. HENRY KISSINGER,
Secretary of State,
Washington, D.C.

DEAR MR. SECRETARY: Recent press reports have indicated that Pakistan is interested in purchasing A–7 aircraft from the United States and that India may be interested in A–4 aircraft for its aircraft carrier.

I would urge the Department of State not to approve either request until there is positive and public resolution of present nuclear policy disagreements we have with both Pakistan and India. To approve either sale, without progress on other important bilateral issues, could have a serious negative impact on the nuclear, political and strategic situation in that part of the world.

I appreciate your consideration of this request.

Sincerely yours,

LEE H. HAMILTON,
Chairman, Special Subcommittee on Investigations.

DEPARTMENT OF STATE,
Washington, D.C., January 27, 1977.

Hon. LEE H. HAMILTON,
Chairman, Special Subcommittee on Investigations.

DEAR LEE: I am replying to your letter of January 10, 1977, addressed to former Secretary Kissinger concerning reports in the press of interest by India and Pakistan in purchasing aircraft from the United States.

The reported interest of India in the A–4 aircraft has been much exaggerated. There has been no request from the Government of India to purchase such an aircraft from the United States and none is expected. A U.S. manufacturer (McDonnell-Douglas) has been authorized to make a presentation to the Indians concerning their A–4 aircraft, as they have to the Pakistanis. However, we have stated explicitly to McDonnell-Douglas and other companies interested in selling aircraft to South Asia that our approval of an unclassified briefing does not imply, directly or indirectly, any decision to approve a subsequent sale. Our recent public statement on the A–4 reiterated this position.

The Government of Pakistan's request for the A–7 has been under consideration for some time. No decision has been reached. Further consideration of this request will of course continue to take place in the context of other important policy issues. A sale of the nature and scale envisioned in the Pakistani request for the A–7 would require Congressional review pursuant to Section 36(b) of the Arms Export Control Act.

I hope that you will find the above useful. Thank you for yours views.

Sincerely,

KEMPTON B. JENKINS,
Acting Assistant Secretary for Congressional Relations.

MAJORITY RULE: BLUEPRINT FOR A RED SOUTH AFRICA?

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. McDONALD. Mr. Speaker, in recent days the press has reported what appears to be a confrontation between the Catholic Church in South Africa and the South African Government over school attendance. There is little doubt that the churches of the world, including the Vatican, have fallen victim to the siren song of "majority rule" for South Africa. Yet anyone who objectively examines the situation in South Africa recognizes that the theme of "majority rule" applied to South Africa could result in minority rule by Communist elements who would destroy and enslave whites and blacks alike.

The critics of South Africa are constantly placing the issue of South Africa in terms of black and white, when what these critics' efforts could lead to is a Red South Africa. These critics are always strangely silent about the two independent Bantu Kingdoms geographically within South Africa, Swaziland, and Lesotho. The recent fate of Laos and Cambodia, where traditional societies have been destroyed in a bloodbath of Communist slaughter, indicates what would happen to these two African members of the United Nations as well as to the Kingdom of the Zulus within South Africa should communism take over there.

The Afrikaners, a truly African nation forged from Dutch settlers who arrived at the Cape of Good Hope, then without a Bantu population, at the same time as our ancestors settled on the east coast of America, are a brave and religious people. The World Council of Churches, always playing the "Charlie McCarthy" to the Kremlin's "Edgar Bergen," along with the some times "Mortimer Snerd" policies of the Vatican, confuse many people. Recalling the large numbers of Indians in South Africa, men of good will should listen to such voices as that of Raja Mrigendra Singh, the eminent Sikh clergymen, as they appeared in the monthly publication ZAPP, an investment newsletter, for December 1976:

STATEMENT OF RAJA MRIGENDRA SINGH

As there is a significant Indian community in South Africa, ZAPP has asked a noted Indian religious leader, Raja Mrigendra Singh, minister of the Sikh temples in New York and Washington, D.C., for a brief comment on the South African situation. Raja Singh is a Prince of Patiala and the brother of the late Maharajah of that important Sikh principality in India. His family is esteemed by all Sikhs in the world because of a special blessing bestowed upon it by Guru Gobind

tion. I wish to share Ms. Beck's thoughts with my colleagues:

[From the Chicago Tribune, Jan. 31, 1977]

THE DOUBTS AND TORMENT LEFT IN WAKE OF ABORTIONS

(By Joan Beck)

"Maybe I didn't think about the abortion long enough. Sometimes I feel like it is murder"—Single woman.

More than 5 million abortions have been done in the United States since Jan. 22 four years ago when the Supreme Court ruled the procedure to be legal. But rarely has such a decision remained so contested, so passionately defended and yet so grievously deplored.

Every year increases the number of those with a vested interest in believing that abortion is not only legally permissible but morally all right as well—including not only the millions of women who have had abortions, but also the men responsible for the pregnancies, parents and other family members involved, and the physicians and nursing staff who make abortion a business.

Yet even among some of these, doubts about abortion are growing, not diminishing. A kind of collective uneasiness seems to be increasing in this country, not so much among those who have always opposed abortion as among some who welcomed it and still support it.

"I don't like abortions over five months, basically. This is, of course, a compromise, a copout. Because it doesn't make any difference. One is as much a fetus as the other. It's not rational; it's just an arbitrary point to allow some sort of moral outlet, guilt outlet. . . . It's termination of life, however you look at it".—Physician in abortion clinic.

Some of the growing uneasiness about abortion is reflected in two disturbing new books, both by women who advocated and still support free choice abortion.

"Letter to a Child Never Born," is Italian journalist Oriana Fallaci's ambivalent apologia to a child whose mother debates endlessly aborting because of inconvenience to her career. She has decided against abortion when miscarriage threatens. Then, about to lose a cherished writing assignment because the doctor has ordered her to bed, she signs herself out of a hospital and suffers the predicted loss of the infant.

Although her book is billed as a novel, Fallaci writes in first person about the agonies of choice between the unborn baby's claim to life and the mother's reluctance to sacrifice her own desires to make that life possible.

"In Necessity and Sorrow" exposes even more raw nerves. Its author, Magda Denes, clinical psychologist and psychiatrist, married, mother of two, describes herself as a "proabortionist with a bad secular conscience." She researched and wrote the book after having an abortion herself.

Denes spent months in an abortion clinic, talking to the doctors, nurses, staffers, patients, and families and finding enormous layers of guilt, despair, and dismay surrounding what were on the surface routine medical proceedings. [Quotes here are from the Denes book.]

"When under one roof, the number of dead fetuses mounts into the thousands, the simple fact of death gradually overshadows the significance of individual histories. It seems that none who work here can witness the extinction of a segment of the future generation without guilt and fear."—Denes.

Denes sees doctors endangering patients by using injections of hazardous anesthetic because it saves time and physicians who hate abortions, doing them because they make so much money. She hears a thousand heartbreaking stories about pregnant 12- and 13-year-olds, pregnant abandoned wives and mistresses, pregnancy causing more trouble in troubled marriages. She looks at bloody, awful surgical procedures and watches guilt-suppressing staff members take out their feelings in meannness to helpless, guilt-ridden patients.

Yet she still supports abortion, knowing full well it means that some human beings must die to make life better for other human beings. "A given fetus lives or dies as the mother's needs dictate," she says. "And so it should be." Abortions, says Denes, "are heartrending, ambivalent events of absolute necessity."

But Denes' "necessity" is one an increasing number of us will never, can never, ever accept, even in sorrow.

STUART LONG, TEXAS' LEADING NEWSMAN

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. PICKLE. Mr. Speaker, Stuart M. Long, a Texas newsman for more than 40 years, died February 3 in Austin. At the time of his death, he operated the Long News Service which served 21 Texas daily newspapers, the New York Times, and Newsweek.

In addition to his journalistic endeavors, Long was heavily involved in civic and political activities. For more than 30 years he was a Democratic precinct chairman in Austin and was a member of the Texas Democratic Executive Committee.

Long was active in Lyndon B. Johnson's 1948 campaign for the Senate and during LBJ's Presidency served on the President's Water Pollution Control Advisory Board. For the last few years, he was a member of the State school land board.

Along with his wife, Emma, who served many years on the Austin City Council, Long was a strong advocate of civil rights, while it was still very unpopular.

Despite his hectic work schedule, Long would always make time to meet with and speak to groups of aspiring young journalists. And his news service was both a training ground for novice reporters and a place where retirees could continue to ply their trade.

Stuart Long and I both came from the same far corner of west Texas where the sands of Texas and New Mexico blend, and where water is a most precious commodity.

Since our days together at the University of Texas in the 1930's, we have been close friends. After World War II, when I was privileged to be among the founders of KVET radio station in Austin, we selected Stuart Long to be our news director. Our brand spanking new station was advancing new ideas and advocating new programs and we certainly had chosen the right man in Stuart. At that time, some businessmen were upset because Stuart did not shy away from reporting controversy. But as time passed, the business community learned to respect and admire Long for his forthright stands and his unquestioned integrity.

Through various political battles, national elections, interparty squabbles on the local and State level, and in my own quest for this office, Stuart Long was a close ally.

I think that it is fair to state that Stuart Long was the best in-depth, and fairest reporter who ever covered the State capitol scene.

Because of his reputation for knowledge of Texas, his frequent dispatches to national newspapers and magazines were considered the "last word."

The New York Times Martin Waldron who delivered the eulogy for Stuart praised him as a man who always spoke the truth and fought for the rights for all to express their views. Though Stuart championed the rights of the poor and minorities group to be heard and to have full protection of this society's laws, Waldron noted, Long also said that the bigots, whose views he detested, must be given those same rights. "Earth receive your honored guest, Stuart Long is laid to rest," Waldron concluded.

Mr. Speaker, I ask for permission for a flag to be flown over the Capitol in memory of Stuart Long, a journalist of national renown and one who reported the news as it was. As the editor of the Austin Citizen, Wray Weddell said:

He wrote like he saw it, and almost always that's the way it was.

I offer my sincerest condolences to Emma and the family.

I also insert the following editorial from the Austin American Statesman from February 4, 1977:

"S LONG"

If there were a museum for the memorabilia of Stuart Long, who died Thursday, it would have to include what must have been hundreds of the bright bow ties made by his wife over the years.

It would surely include the single box of paper clips the thrifty newspaperman was said to have recycled for 30 years, and the battered typewriter reputed to be the oldest electric still in operation.

But some things couldn't go into a glass case, such as the soft, slow drawl that J. Frank Dobie called "the world's only true Texas accent."

And you couldn't display the crusading spirit that kept Long faithful to the truth even, sometimes, at the peril of his life. You couldn't touch the passion for justice that made him a liberal Democrat even through the years when that was a rare and courageous breed.

And no museum could hold the faith Long had in the young.

His funeral Saturday will be packed with journalists who got their first breaks, their first encouragement, from the lanky newspaperman who signed himself, "s long."

STATEMENT ON THE NEW JERSEY PINE BARRENS AND ON A "SECOND SYSTEM" OF NATIONAL GREENLINE PARKS

HON. JAMES J. FLORIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. FLORIO. Mr. Speaker, as this new Congress begins, and as a new administration begins with it, many of us are looking forward to an era of creative government—an era when many critical hu-

hours—no night work, no Saturdays. I don't enjoy it all anymore. I've lost all the zeal I had."

Even the prestige and status of the gavel and the black robe provide Cassibry with little consolation. "Honor and dignity," he said, "won't get you a loan."

Nevertheless, he sighs, "I guess all of this sounds ridiculous to many poor Americans."

U.S. District Court Judge Herbert Stern feels no need to apologize, perhaps in part because unlike many federal judges, he did not come to the bench from the plush offices of a highly paid private practice but rose through the ranks of the Justice Department to become U.S. Attorney for New Jersey before being appointed a judge.

"I suppose it can fairly be said that we don't have a right to complain because nobody's drafted" to be a judge, Stern said. But, he contended, what the judges are asking for cannot truly be considered a raise since their salaries have decreased due to inflation while nearly every federal employee's salary has kept pace through cost of living increases. "No one forces them to be judges," Stern said, "but they shouldn't be forced out by the erosion of the dollar. We didn't get trained all that we did to be reduced to the lowest common denominator."

Like many federal judges, Stern sees the relatively low salaries as having long-term effects on the federal judiciary. "This is supposed to be a career position," he said. "No one's going to take it if they're going to be punished for it."

Many judges feel that it takes about five years before a judge is fully experienced. With a continuation of low salary levels, Stern contends, the judiciary faces the prospect of a plethora of persons taking the position to "stay a year or two in order to be called your honor the rest of your life."

While the judges realize they are not the only ones who salaries have remained static for the last seven years, many of them have something less than comradely sympathy for the plight of the top ranking federal executives who receive presidential appointments. One judge, who asked not to be quoted, referred to them as "playboys. They leave their cushy jobs, take a pay cut and work for the government for a couple of years and get a few more credentials on their resume. Then they go back to the private sector where they're now worth twice as much as they were before."

Nevertheless, many presidential appointees feel that they, too, make their sacrifices in order to serve their country and that current salaries make anything longer than a two-year hitch financially untenable. Former deputy Transportation Secretary John W. Barnum, whose job ended with Jimmy Carter's inauguration said that his $44,600 annual salary was approximately one-fourth to one-fifth what he was making with the New York law firm of Cravath, Swaine, and Moore.

The move to Washington in 1970, he said, put an end to his pastime of collecting modern art and meant borrowing money to keep his children in their private schools, an alternative he considered preferable to placinc them in the District's private schools or moving out to the suburbs.

A salary increase, he said, "is imperative. It's just not possible to attract qualified people now.' He feels that even the impending pay raise to $57,000 is not sufficient. "They ought to give a 50 per cent increase," he said.

"One of the tragedies," Barnum said, "is that people only come to work for two or three years" and it often takes a year to thoroughly understand the job. People can only afford to stay that long, he said, before the financial drain begins to cut precipitiously into savings.

For George Dixon, former deputy secretary of the Treasury, the call came in December of 1975, leaving the question of a long-term career as a presidential appointee problematic at best. "Pay," he said, was not high on the list of deciding to come or not to come." Like Barnum, however, Dixon's nights were untroubled by fears of a lengthy time on the unemployment rolls once the new administration came in. "It's certainly a plus to have had Washington experience, he said. "Most businessmen are shamefully ignorant of how the government operates."

Dixon's own re-entry into the private sector has been a smooth one. He has exchanged his $44,600 salary for one of approximately $175,000-a-year, and his title of Dep. Director of the Treasury (annual budget: $3 billion) for that of President of First Bank System Inc., a multiple bank holding company (estimated resources: $7.5 billion).

There are those, however, who feel that the problem in attracting and keeping qualified people in the upper reaches of the federal bureaucracy is not the salaries but the tendency to stock these positions from the golden seas of the corporate executive suite or the silk stocking law office.

"I'm not troubled by moderate government salaries," said Ralph Nader associate Mark Green, who is director of the Corporate Responsibility Research Group. "They help filter out the monied conservatives who find they can't live on anything less than $70,000 a year. Current salaries are ample for public interest lawyers who are entering the government with increasing frequency."

While it is the attractive retirement benefits and not pay comparability with the private sector that is draining the GS supergrades, according to the Commission, low salaries have played a part in the vacancies that occur in a number of jobs traditionally filled not from the ranks of the Civil Service but from the outside Haeworth Robertson is one such outsider.

Robertson, who is chief Actuary for the Social Security Administration and a GS–18, will see his salary increase from $39,600 to $47,500. Nevertheless, he said, he will be surprised if he is still chief actuary six months from now. Haeworth Robertson has just about had it.

Robertson has held the job since April of 1975. It was first offered to him in 1973. At that time, he said he was on his way to Geneva to work for the United Nation's International Labor Office. Robertson asked his family what they would think of exchanging a $60,000 a year income, a 30 minute drive to the Swiss ski slopes for what was then a $30,000 a year job in Baltimore. They didn't think much.

Two years later, the job was still open. No one would take what amounted to an at least 50 per cent pay cut from what actuaries earn in the outside world. This time, Robertson accepted.

"I asked my good friends about it to see how the job was perceived by my colleagues," Robertson recalled. "They all said it was an important job." Now, he said, when he goes to actuarial meetings, his colleagues "tell me what a great job I'm doing. Sometimes I say to them, 'how would you like to switch salaries?' So far everyone's said they couldn't afford it."

Robertson's not sure now that he can either. For awhile, he said, the "psychic income" derived from an interesting job well done was enough, but the long hours that have deprived him of any social life, the lack of talent he can hire at the low salaries and the depletions of money saved from the insurance company he once owned have made it doubtful, he said, that he can remain in the job even with the pay raise.

Robertson acknowledges that there are a lot of working people in the country to whom his salary sounds like a great deal of money. He said, "I don't know what that has to do with it. I'm not a cabdriver, I'm not a janitor. I'm well educated, I've spent a lot of years at this. I've worked hard to get the money to do the things I've wanted to do. If I were independently wealthy, it would be different."

LIGHT CAPITAL TECHNOLOGY IN FOREIGN AID

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. LONG of Maryland. Mr. Speaker, if the American foreign aid program is ever to fulfill its stated goal of helping the world's poor, it must be redirected toward creating a self-generating process of capital formation in the poor nations. This "do-it-yourself" development can be made possible through the development and dissemination of light capital or appropriate technologies to poor countries. These tools and techniques can then be used to utilize idle labor time, the greatest resource of the developing world. I should like to submit for the RECORD my statement on light capital technology which I delivered before the AID Administrator's development seminar in November 1976.

The statement follows:

LIGHT CAPITAL TECHNOLOGY IN FOREIGN AID

(By Hon. CLARENCE D. LONG)

I realize I'm talking in a very complicated field and I'm sure that many of the things I say today will seem to be simplistic. But whenever one tries to do anything, one has to oversimplify, because action itself is a simplification. So at the risk of being regarded as the John Wayne of the foreign aid field, I am going to share with you some of my thoughts on light capital technology and foreign aid.

I realize, of course, that many of you have thought about this and perhaps thought about it more deeply than I have, but maybe some of you haven't. One often has to say things that everybody knows in order to get over the feeling that he appreciates and understands certain things that his audience already appreciates itself.

The United States has spent a quarter of a trillion dollars on foreign aid, most of it misdirected from the standpoint of improving the lot of the world's poor through economic development.

REASONS FOR AID'S FAILURE

A first reason for AID's failure is that much of the aid has not even gone for economic development but for luxury consumption and for competitive arms buildups in poor countries. In the ten years from 1965–1974, while the U.S. and multilateral development banks were giving India about $8 billion in foreign aid, India was spending over $16 billion on its military establishment.

Bad policy has been compounded by bad politics and by bad economics. Influential people have benefited from aid. In this country corporations and their co-conspirators among unions sell their products subsized by foreign aid at the expense of U.S. taxpayers. In developing nations elites siphon profits from port developments, dams, airport highways, or simply by stealing.

Even where aid has gone to economic development, it has been perverted, partly because of economists' lack of understanding of the development process. I am a professional economist as you know. As I think back over the role of professional economists in foreign aid, as an economist, I simply have to blush. Economists were ignoring the prin-

ciples of economics that they taught in their own class rooms, namely that the factors of production should be combined in proportions appropriate to their relative abundance and scarcity.

Books by Rostow and others made development look like a simple matter of increasing the amount of capital; little matter what kind, as long as the addition was enough to get a take-off, a term which in itself was one of the worst oversimplifications in the whole realm of economics.

A favorite thesis of early development literature was that the poor have little income left over after consumption to provide the savings needed for capital development and that this capital must therefore come from the outside. Further, because the poor were so desperate for consumer goods, most of the increase in production from progress would be soaked up by consumption rather than by allowing further saving and capital formation. There was—and still is—a failure to perceive that the poor nations have a large source of capital that doesn't need to come from prior savings but can come from unutilized or underutilized labor time.

Karl Marx called capital congealed labor time. I was brought up to ridicule that oversimplification, but it's become more evident at least in the development area what a profound truth this involves. However, all is in knowing how to congeal labor.

The bad economics comes from the failure to perceive that sophisticated capital is not appropriate to poor countries with vast underutilized labor since it can have the effect of disemploying large numbers of rural laborers or of failing to absorb growing labor forces.

THE TIME IS RIPE FOR A NEW VIEW OF AID

Why is a new view of foreign aid and light capital development in order? Why are we swinging away from the "trickle-down" view of development? I think there are various reasons.

First, the world is in the midst of an egalitarian upheaval. In all societies, everywhere, including western societies, people are demanding what they regard as a better distribution, a more even distribution of income, regardless of the impact on political, social, and economic institutions. If the poor can't be made richer, the rich are to be made poorer.

Second, "trickle-down" development has failed, or more accurately, it costs too much capital for the amount of benefit that trickles down. For example, an FY 77 AID loan for small farmers in El Salvador is estimated to have a foreign capital cost of $1,000 per family. The host government will also pay approximately $1,000 per family in local costs.

This is supposed to be a marvelous case of getting development on the cheap, but any calculation on the back of an envelope will tell you that there are about 300 million poor families in the non-Communist developing world, and this kind of AID loan would require $300 billion to help poor families—over 100 times what would be realistically forthcoming annually from the U.S. in both bilateral and multilateral economic aid. To help all the world's poor at this cost even considering other aid donors would require many years, during which time of course the number of poor would be rapidly growing because of population growth—outgrowing, in most, if not all, of the development. If we continue with policies that imply large capital inputs per person, we will not even be able to keep up with, much less catch up with, rural and urban poverty in poor countries.

Anyone who looks at the sidewalks of Bombay or at the countryside outside the cities in any poor country can see that heavy capital development strategies have, if anything, created extreme concentrations of wealth in poor nations while at the same time disemploying or failing to employ thousands and millions. Our foreign aid, originally thought of as a way of heading off communism, may well have been a boost to communism by increasing the already glaring disparities between the rich and the poor.

Third, growing numbers, both in Congress and in the development field, have had a chance to get out there in the field and see what works in development and what doesn't work. The realization has now dawned that light capital technology is how development occurred in now-developed nations during their early years when capital was scarce and expensive and labor, abundant and cheap. One reason why light capital technology hasn't been followed in recent development programs is that foreign aid has made it appear to poor countries that capital did not need to be economized on, because it would be given to them or loaned at concessionary, gift rates of interest.

Fourth, the time is ripe for a new look at foreign aid because the light capital view of development fits the political facts of life in aid-giving countries. The blue collar worker in any Congressman's audience, and I talk to him by the thousands, knows that there is a shortage of capital in the United States. He knows this from the high interest rates he must pay when he borrows, if he can borrow at all. He knows this from our huge unmet needs for:

Slum rehabilitation and middle class housing;

Mass transit;

Energy development;

Comprehensive health care;

Education for everyone—including special education for handicapped and the gifted;

Reducing pollution of air and water;

Flood control (I've seen estimates that it would cost ¼ of a trillion dollars to handle our flood control problem in this country alone, just one item) and;

Easing the plight of the aged.

Now if you add those programs together, you would come to trillions of dollars of unmet capital needs here in the U.S.

In view of our own unmet needs and the hundreds of billions of dollars it would require to apply sophisticated capital development to benefit all of the world's desperately poor, we have three choices:

(1) Giving up on aid. I don't think that anybody here wants to do that, but there are plenty of people who would like to.

(2) Settling for a permanent condition of token aid to poor lands, and that is basically what we are doing.

(3) Trying to make aid effective enough to cover the great masses of the world's poor with less capital per person aided.

The latter I want to develop a little further.

OUTLINES OF A PROGRAM IN LIGHT CAPITAL TECHNOLOGY

The greatest contribution of the U.S. and other aid donors to light capital technology can be in the area of knowledge and ideas instead of in massive capital transfers. I should hate to see light capital technology corrupted by huge sums of money before it has had a chance to prove its own self-generating capability. I think that would be a disservice to it.

We need not displace sophisticated capital technologies either immediately, or possibly ever. Light capital technologies can be developed and inserted into the interstices of the economies of poor countries simultaneously with infrastructural development, roads, irrigation, schools, etc. As light capital technologies prove themselves, the idea can spread from its not unimpressive present beginnings, and hopefully generate its own future capital, through what can be called capillary action.

I took a course in Physics before many people in this room were born, and I don't remember very much of it. But I do remember the example of holding a lump of sugar over a cup of coffee or any other liquid, just touching the tip of the sugar to the water and then watching, the rise of the liquid through capillary action, against the law of gravity, soaking the lump of sugar. That is what I mean by capillary action and I submit that this is the way we must move in development instead of with a "trickle down" approach in which we have been operating so far. Another "John Wayne-ism" perhaps, but I like it.

According to the A.I.D. report, "Proposal for a Program in Appropriate Technology," and other accounts, there are six national appropriate technology organizations in Africa, appropriate technology units in the central ministries of Pakistan, India, and Bangladesh, a new national appropriate technology organization in Honduras which A.I.D. plans to support, I understand, and many other organizations involved in some way with light capital technology.

Other aid organizations and international institutions—such as the Peace Corps, the World Bank, the Inter-American Development Bank, the International Labor Organization and other UN bodies, the Canadian aid agency—all are giving increasing attention to light capital activities. Numerous books and articles—of which Schumacher's *Small is Beautiful*, and Nicholas Jequier's *Appropriate Technology; Problems and Promises*—are appearing and you know a flood of books on the subject is on the way.

Politicians are not leaders, no matter what they claim. We are too busy, and besides that, one must have a following before he can get anywhere. Nothing is more disconcerting than to say "come on" and then look around and see nobody there. So usually, politicians have to take other peoples' ideas and follow them. But I think the Congress can lay a rather rare claim to leadership in the movement towards appropriate technology both in developing countries and in the U.S. itself.

The House under Clem Zablocki originated and, with my strong support, authorized a program for AID to spend $20 million through FY 1978 on light capital activities. The organization to implement that program, the Appropriate Technology Fund, is now being established.

I was able to insert language in the last two foreign aid appropriations committee reports directing the U.S. representatives to the World Bank, the Asian Development Bank, and the Inter-American Development Bank to take leadership "to bring these multilateral institutions to emphasize light capital technologies in their development projects." The *Long Amendment* to the Inter-American Development Bank Authorization Act has sparked increasing activity on appropriate technology within that Bank.

The FY 1977 ERDA (Energy Research and Development Administration) authorization bill—which died in the 94th Congress but which I feel with the new President can quickly be enacted in the 95th Congress included a $7.5 million program in appropriate energy technologies. The lessons we learn from this may be transferred, with plenty of modifications of course, to the poor countries.

The Community Services Administration, the successor to the Office of Economic Opportunity or OEO, has allocated $3 million for the creation of the National Center of Appropriate Technology in Butte, Montana. Sen. Mansfield had some interest in this project.

The Congress, through its power of the purse, can edge future programs in the direction of light capital technology. This, as a member of the Foreign Aid Appropriations Subcommittee, I hope to do. It can be done in various ways. We can simply say to countries, "If you're not interested in doing anything for your poor, then we'll have to take

our very limited aid funds and put them in other parts of the world where there is more will and sincerity for doing what we consider to be the main object of foreign aid." Now this depends, of course, on how much we really want to do this. There is no question in my mind that it can be done. This may cause some friction but after all the bad feelings and seeds of social strife that we have sown through past aid programs, it seems to me that the friction we might cause with certain elites in trying to do something right for a change might be more than compensated by our actually improving the lives of the poor in certain countries. For if Congress continues to pass out billions of dollars

For selling American weaponry;

To enable big corporations to sell their sophisticated products, at the American taxpayers' expense;

To pay rent for military bases;

All without encouraging light capital technology and economic development;

then our aid program will have continued to be a half-hearted program for achieving poorly thought through foreign policy objectives or for carrying out a crude mercantilism, rather than for achieving what foreign aid was originally conceived to do—help the poor of the world to a better life and possibly calm the bitter struggle now being waged with communism for the hearts and minds of mankind.

SAGINAW, MICH., HONORS CALVIN O'NEAL

HON. BOB TRAXLER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. TRAXLER. Mr. Speaker, on Wednesday, January 26, 1977, the city of Saginaw, Mich., paid extraordinary tribute to one of its alltime finest gentlemen athletes, Mr. Calvin O'Neal, middle linebacker for the University of Michigan Wolverines. As my colleagues, especially those from Ohio, know, Calvin O'Neal has been a kingpin in the Wolverines' defensive unit and a major reason for Michigan's domination of the Big Ten collegiate football conference in recent years. I know that all of my colleagues will join me, and the people of Saginaw, in wishing Mr. O'Neal the very best as he begins what is certain to be an outstanding professional football career.

Mr. Ken Tobacsko of the Saginaw News has written an excellent account of the warm reception and testimonal accorded to Calvin O'Neal in Saginaw; at this point I would like to insert that article in the RECORD:

FOUR HUNDRED STRONG HONOR CALVIN O'NEAL

(By Ken Tabacsko)

Saginaw came out in force Wednesday evening to honor its own All-American, the University of Michigan's Calvin O'Neal.

Despite poor road conditions due to blowing and drifting snow, 410 people filled the Civic Center's Unity Hall to honor O'Neal, a life-long Saginaw resident and former standout at Saginaw High.

U-M coach Bo Schembechler and some of O'Neal's teammates were victims of the storm and couldn't make the proceedings. Schembechler, leaving from Ann Arbor Wednesday afternoon, was forced to turn back for home at Brighton as the conditions became dangerous.

O'Neal, of course, starred as a Wolverine linebacker for the past two seasons. In this his senior year he was named as a UPI first team All-American, the first major college All-American from Saginaw since Jim Ellis made it at Michigan State in 1951 and 1952.

The many speakers and friends of O'Neal spoke highly of his football talents—he undoubtedly has a professional career to look forward to. But they also emphasized his value to the community as a model for all young athletes to follow.

Robert Brown, a manager at Michigan and a close friend of O'Neal's, perhaps said it best.

"Everyone he's always been around, on and off the field, he's helped improve," said Brown. "He set high standards for himself and for everyone else. I'm proud to be his friend."

Raymond M. Tortora, mayor of Saginaw, tried to point out what it means to a community to have a man like O'Neal represent it.

"Anytime you have young men like Calvin O'Neal represent the city, the city has to be proud," he said "And Saginaw is certainly proud of Calvin O'Neal."

Numerous groups and organizations presented the Michigan linebacker plaques, trophies and special awards. He'll probably need a special trunk to cart all his loots when he returns back to Ann Arbor today.

Steve Mason, a gridder at Northern Colorado and a teammate of O'Neal's at Saginaw High was present at the banquet, which was sponsored by The Saginaw News. "Calvin is just a beautiful person, he's always been like a brother to me," said Mason, who also should be selected for a tryout with the pros. "We started out at Arthur Eddy Junior High and we did everything together. We've been close ever since. I didn't care where this banquet was. If it was in Alaska I'd be there.

"Cal respects individuals and he's willing to help all people. He's certainly an All-American player but in my book he's an All-American person too."

O'Neal was noticeably touched by the program.

"It's a great thing to be honored by your home town," he said quietly. "I'd just like to thank everyone for having this day for me, it meant a lot.

"It's great to see the entire community come together. Athletics have been fantastic for me. I just hope I can come to a banquet much like this in a few years, honoring someone else."

O'Neal now has to finish the school year and then it's on to the pros. He leaves the college ranks knowing that Saginaw is behind him.

THE BLUE ANGELS

HON. CLAIR W. BURGENER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. BURGENER. Mr. Speaker, today I would like to pay special tribute to the demonstration pilots of the Navy Flight Demonstration Squardron, better known as the "Blue Angels."

Like most of us, they have a curtailed budget but continue to bring the Navy to the people and aid in recruiting for the all-volunteer military service. At present they are operating economical A-4 jets which save 70 percent more fuel as compared to the former F-4 jet, but still present an outstanding airshow to the public.

In 1977 the Blue Angeles will present an average of 80 airshows under the capable leadership of Cmdr. Casey Jones, and it should be noted that during the 3 preceding years there was not a single aircraft mishap during their training or public demonstrations.

This outstanding record of air safety achievement is possible by the quality and efficiency of their personnel and the most rigid of safety standards. For this great record of safety each squadron member is being presented with a letter of commendation from the Chief of Naval Air Training, Rear Adm. Burton Shepperd, U.S. Navy.

Those Members of Congress who have not had the opportunity to witness the Blue Angels' thrilling demonstration may be interested to know that the 1977 schedule as approved by the Department of Defense includes three public airshows in the Washington, D.C., area; May 1, at NAS Norfolk, Va.; June 6 at the Naval Academy, Annapolis, Md., with staging out of Andrews Air Force Base; and September 11, at NAS Patuxtent River, Md.

Since April 28, 1946, the Blue Angels have thrilled approximately 123 millior spectators throughout the United States, Canada, Mexico, South America, Central America, the Bahamas, the Philippines, Europe, Africa, and Asia. To this end the supervisors of the county of Imperial have declared February 20, 1977, as Blue Angel Appreciation Day, during which each member of the flight squadron will be publicly honored at a dinner sponsored by the county of Imperial and the chamber of commerce of the various cities within the county.

On this occasion, I would like to share with my colleagues a poem I recently received from the editor and publisher of the Imperial Valley Weekly, conveying the appreciation and pride of the citizenry of the county of Imperial.

TO THE BLUE ANGELS

(By Nettie Brown)

Angel pilots in Navy Blue
Flying their planes so true
Highest standards in the air;
Finest examples anywhere
Of America's power on high
As they flash across the sky,
In close formation, daring, true
Demonstrations of what pilots can do.

Blue Angels, perfection in truth,
Who demonstrate to America's youth
That life is still adventure thrilling
To those who prove that they are willing
To study and practice and learn,
Until they too their wings earn;
Then believe and dare and work to
Emulate the Navy's Angels Blue.

Valleyites watch in pride and wonder
As overhead the blue jets thunder
Above Imperial Valley desert land
Known as the hollow of God's hand—
"La palma de la mano de Dios"
We are glad that you are with us.
Blue Angels you're proud to be called,
Your shows leave the people enthralled.

Your mission is demonstration
Of precision Naval Aviation.
As you practice in our clear air
Blue Angels, we breathe a prayer
That you are safe, and happy, too.
That Imperial Valley's skies so blue
You call home; and here you'll return,
Because we love you, every one.

For all of these reasons, we point with pride and acknowledge the Blue Angels

for their devotion and service and wholeheartily join in Appreciation Day as set forth by the county of Imperial.

CRACKDOWN ON CRIME WORKS

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. MAZZOLI. Mr. Speaker, the following article from the National Observer of February 5, outlines some of the steps that have been effective in reducing crime in our cities.

The so-called career criminals programs, the speedy trial act, and community involvement have all contributed to this reduction. These programs are programs which I have supported and will continue to support.

Further, I encourage my colleagues to join me in working for stiffer and uniform sentences, reduction in crimes committed on bail by stronger bail laws, and heavy sentences for those convicted of using a gun in a crime.

With these additional steps, I believe that we can continues to reduce crime in our cities.

The article follows:

DROP IN VIOLENT CRIME—BIG-CITY RATES FALL SHARPLY; ANTICRIME PROGRAMS CITED

(By Richard Egan)

In Baltimore, after police bought 15,000 guns from citizens in 1974, handgun murders fell 123.6 per cent in 1975 and 34.6 per cent last year. In Detroit, after passage of a new rape law and establishment of a rape-crisis center, rapes declined by 8.6 per cent last year. In Indianapolis, after initiation of a program aimed at convicting and jailing hardened hoodlums, robberies dropped by 23.4 per cent last year.

Across the country, police and prosecutors are testing new ways to cut down on violent crime. Judges are handing down stiffer jail sentences. Citizens are joining the crime fight.

It all seems to be working. Violent crime—murder, rape, robbery, and aggravated assault—declined 5 per cent nationwide in the first nine months of 1976 compared with the like period in 1975, according to the latest FBI figures. The declines were even more dramatic in many of the nation's biggest cities. And the decreases appear to be continuing.

An Observer survey of the nation's 12 largest cities turned up violent-crime decreases two, three, and even four times the national average. Latest available figures show that violent crime was off 22.6 per cent in San Antonio, 18 per cent in Washington, D.C., 17.6 per cent in Philadelphia, 16.1 per cent in Chicago, 12 per cent in Houston, 11.8 per cent in Baltimore, and 11 per cent in Indianapolis. Eight of the 12 cities showed declines steeper than the national average. New York City had a 3 per cent drop; San Diego showed no change. Only Los Angeles (3.7 per cent) and Detroit (0.9 per cent) had increases.

Most specialists on crime can pinpoint no broad reasons for the drop. Nor are they willing to speculate about whether it will continue. "I don't have any idea about why it's happening," says William A. Hamilton, president of the Institute for Law and Social Research, a nonprofit organization based in Washington, D.C. "It is very hard to determine why this has happened," agrees Dr. David Abrahamsen, a New York City phychiatrist and psycholanalyst. "Possibly for the time being the number of violent crimes has reached a certain plateau, from which it could go up or down."

But police and prosecutors in most big cities believe that specific programs and approaches are slicing into violent-crime rates, particularly for rape and robbery. Many cities are focusing on repeat offenders. "You know, it's been said that if we got the right 50 men off the streets, we'd have 80 per cent of the rapists," says James D. Bannon, executive deputy police chief in Detroit.

Of the four violent-crime categories, the FBI statistics show declines of 10 per cent for murder and robbery and no change for rape and aggravated assault. Most police officials are puzzled by the decline in murders. "Police can do nothing about social conduct or economic conditions leading to homicide because the overwhelming majority are committed by the victim's relatives, friends, or companions of the moment," explains Detroit's Bannon.

Baltimore's 1974 gun-purchase program may indicate a way to reduce murder rates. Murders in Baltimore have fallen sharply for two years in a row since the program began. Last year the drop in all murders, including those by handguns, was 23 per cent, steepest among the 12 largest cities. Donald D. Pomerleau, Baltimore's police commissioner, says he's "not sure" that the program affected the murder rate. But he challenges anyone to prove otherwise.

Rapes in the 12 largest cities were down 5.6 per cent in the first nine months of 1976, below the national average. But police and prosecutors believe the actual decline may be even more sharp. They say more rapes are reported now than in previous years, when victims, out of fear or embarrassment, shied away from informing police.

Some of the sharpest declines in the 12 biggest cities have occurred in robbery rates; 8 cities bettered the national average. Robbery is by far the most frequently committed of the four violent crimes. It's also the crime for which most are arrested.

"REPEATER" PROGRAM WORKS

Some 21 cities and the state of Rhode Island operate programs specially geared to identifying, convicting, and jailing repeaters. The Federal Law Enforcement Assistance Administration (LEAA) helps finance such programs in Rhode Island and 18 cities. Though the first of these LEAA career-criminal programs began only in May 1975, the idea already seems to be bearing fruit.

In the first nine months of 1976, robbery declined 15.6 per cent in 9 of the first 11 jurisdictions participating in the LEAA program, according to the figures compiled by the nonprofit National Legal Data Center in Thousand Oaks, Calif. Over the same period the decline for all cities was 9 per cent. The center says that of 3,014 career-criminal cases disposed of so far, 2,833—94 per cent—resulted in convictions. And 93 per cent of those convicted went to jail. Plea bargaining is infrequent in the programs, and the average sentence has been 19 years. Those convicted had averaged five previous convictions.

Houston's career-criminal program, which began in July 1975, is typical. Authorities have set criteria to identify and weed out repeaters after their arrest. Depending on the offense, usually one or two prior convictions are required for career-criminal status. Then, instead of the case being handled in the usual way, an assistant district attorney and police move in immediately to review what steps need to be taken quickly to help obtain a conviction—more interviews, an identification lineup, a diagram, photos at the crime scene. Prosecutors try to develop the strongest possible case before going to trial, and they try to obtain convictions on the highest possible charge.

In 1975, the first year of Houston's career-criminal program, robberies were down 11 per cent. Last year they fell 14 per cent, to 4,977 from 5,859. That means "900 less people had a gun stuck in their face," points out Vic Pecorino, an assistant district attorney who heads the project's prosecuting team.

Besides Houston, 5 other cities in the top 12 have repeat-offender programs—Dallas, Detroit, Indianapolis, San Diego, and Washington, D.C. Last year the six cities showed an average decrease of 12.7 per cent in robbery.

The career-criminal program is fast spreading, with San Francisco, Seattle, and Akron, Ohio, beginning programs soon. But authorities in big cities cite several other factors as well for the drop in violent crime.

"The attention the court has been able to give in meting out some pretty stiff sentences has acted as a deterrent," says Police Chief Emil Peters of San Antonio, where violent crime last year went down at a rate 4½ times the national average. Peters adds, "People are taking rape more seriously, and possibly the message has gotten to potential victims to be more careful."

"I'd have to say that the general public, the judges included, are fed up with this robbery business," comments Bill White, chief of the felony section for the district attorney's office in Bexar County, Texas, which includes San Antonio. White also believes that heavy publicity given to the rape and murder of a San Antonio hospital nurse and to the subsequent conviction and death sentence handed her killer has helped to reduce rapes.

SPEEDY PROSECUTION PAYS

Eight years ago Washington, D.C., had the worst crime rate among the nation's 20 biggest cities. But since then, says Police Chief Maurice Cullinane, "we have enjoyed the nation's most enviable reduction in crime." Washington now ranks 17th, and its over-all crime rate has dropped 21 consecutive months.

Cullinane attributes the decline to three factors: "an active and concerned community whose degree of participation and interest in crime prevention grows each year; the effectiveness of increased foot patrols, bringing officers into regular contact with our residents," and the city's repeat-offender program.

F. Emmet Fitzpatrick, Philadelphia's district attorney, credits speedier prosecution and tougher sentencing for Philadelphia's reduction in violent crime last year. "We're seeing a seriousness in the prosecution of violent criminals," he explains. "More cases are coming to trial earlier than before. We've made the speedy prosecution of criminal cases a prime effort. Our courts are becoming more efficient. . . . And our sentencing has become more severe." He says judges have been giving convicted rapists sentences of as much as 45 to 90 years.

Ian H. Lennox, executive vice president of the private Citizens Crime Commission of Philadelphia, says other factors contributing to the decline are a tough firearms ordinance, a decrease in juvenile-gang activity, special police antimugger units, and active neighborhood anticrime groups. He notes, too, that in 1976, "There was a lot of community spirit, community pride. There was also, because of the Bicentennial, a great deal of police overtime and police presence in the streets."

Chicago police recovered 18,330 firearms in 1976, of which 85 per cent were handguns. "And when you recover that many handguns, you're going to cut down crime," says Joseph Di Leonardi, the city's homicide commander. He also says a "beat rep" program started last April has helped reduce crime. Under the program, police train citizens to help patrol their own neighborhoods.

Indianapolis also has a neighborhood crime-watch program, in which residents report crimes or suspicious activity to police. Mayor William H. Hudnut says the crime watchers, along with a low unemployment

rate of (3.7 per cent in November) and improved police morale and efficiency have helped curtail crime there.

James F. Kelley, prosecutor in Marion County, Indiana, which includes Indianapolis, says the city's career-criminal program has been effective in reducing crime. He cites a study by the Institute for Law and Social Research showing that 7 per cent of the criminals commit 40 per cent of the crimes. "If you assume that is correct—and we've had a hunch for years that it was—then what we're doing is getting the repeater off the street."

"Our hard-nosed attitude on prosecution" is the main reason offered by William A. Swisher, Maryland's state's attorney, for Baltimore's reduction in violent crime last year. "We've been pushing them in jail a lot quicker," he says. "And maybe the fact we are pushing might have deterred some. Maybe we've just got most of them locked up. Rehabilitation doesn't work. Probation doesn't work. We have to rely on punishment—keeping them off the streets."

Violent crime declined by 5.4 per cent in Dallas last year, and says Police Chief Don Byrd: "I don't think it was any one thing we did that contributed to the decline. I'm still saying that people make things happen, not structures or programs." But he does concede that a new police fixed-watch concept, under which more officers are deployed during peak crime hours, "may well have had some effect."

CAUTION AGAINST COMPLACENCY

District Attorney Henry Wade of Dallas attributes the crime reduction to "speedier trials, heavier penalties, better co-operation from the ordinary citizen, and better education and jobs among minorities." He also notes that several city businessmen have joined to offer cash rewards for information leading to indictment for certain crimes. Because of the reward program, "We have solved 15 robbery-murders that likely wouldn't have been solved otherwise," says Wade.

In the first 11 months of 1976, violent crime in New York City was down 3 per cent compared with the first 11 months of 1975. Rapes declined 11.2 per cent even though police believe there has been a steady increase in reporting of rapes. "We have been using women to investigate [rapes], and that has caused more women to report crimes," says Sgt. Peter Sweeney of the New York Police Information Bureau. "There is more of a feeling of understanding, and women have been willing to report the crime."

The plunging violent-crime rates are, of course, good news. But, cautions Alvin J. T. Zumbrun of the Maryland Crime Investigating Commission, "inasmuch as there has been such a drastic increase in violent crime over the past 10 or 15 years, even though there was a reported reduction last year, we have to be careful not to be complacent and not feel that somehow we have found the answers."

PERCENTAGE OF CHANGE IN VIOLENT CRIME IN 12 CITIES DURING THE 1ST 9 MOS OF 1976 COMPARED WITH THE LIKE PERIOD IN 1975

	Murder and manslaughter	Rape	Robbery	Aggravated assault	Total
Baltimore	−23.5	−5.8	−18.3	−9.2	−14.3
Chicago	+2.9	−30.0	−21.7	−9.6	−17.3
Dallas	−2.1	+4.5	−12.7	−6.4	−8.2
Detroit	+13.4	−12.8	+6.4	−3.1	+3.3
Houston	−8.6	+23.8	−16.5	−6.0	−11.8
Indianapolis	−1.7	+4.6	−23.9	+38.1	−6.7
Los Angeles	−8.0	+16.2	−3.9	+10.6	+3.7
New York City	−4.0	−11.8	+7.0	+1.7	+4.5
Philadelphia	−12.5	+9.7	−24.9	−6.3	−17.6
San Antonio	−8.7	−13.6	−23.6	−24.2	−22.7
San Diego	−15.2	−.1	−6.6	+10.1	0
Washington, D.C.	−18.9	+2.6	−22.2	−5.2	−17.3

SHEEDY AWARD ADDRESS BY PROF. ERNEST SANDEEN, UNIVERSITY OF NOTRE DAME

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. BRADEMAS. Mr. Speaker, the Sheedy Award is given annually at the University of Notre Dame to a professor in recognition of outstanding teaching.

I insert at this point in the RECORD the text of an address delivered by the recipient of the Sheedy Award last year, Prof. Ernest Sandeen, "Learning With the Left Hand."

The text of the address, delivered on October 15, 1976, follows:

LEARNING WITH THE LEFT HAND

(By Prof. Ernest Sandeen)

The disenchantment with higher education, on the part of both students and the public, which began with the turmoil of the 1960s, has been deepened in the 1970s by escalating educational costs and by diminishing job opportunities for graduates, especially those with liberal arts degrees. This situation has stimulated vigorous discussion across the country, in journals, seminars, and symposia, on how to revitalize the humanities. Much that is said is merely the mouthing of old cliches—with a certain gusto of course. For instance, we are told for the millionth time that the unique job of the humanities is to teach human values. What these values are and how they are to be taught are not very clearly indicated. There are, however, certain areas of development that seem to me promising.

One of these areas concerns the educational possibilities that lie in the student's interior life of sensation and feeling. At present I believe the education we offer, even in the humanities, is too exclusively intellectualized, too lopsidedly cerebral. Perhaps in our jealous concern to prove that our humanistic disciplines are as intellectually respectable as the sciences we have come to regard the student's emotional life as his own affair; our specified task, after all, is to educate his intellect. His personal feelings, like those of his teachers, are not only irrelevant, they actually confuse the issues and get in the way of our proper goal, a detached cultivation of the life of the mind.

EMOTIONS AND INTELLECT RELATED

But it now appears doubtful that any intellectual endeavor can be wholly disinterested. In even the most objective thinking, the thinker is still "in the act" with all his psychic dispositions deeply involved. Besides, we begin to suspect that emotion and feeling do not oppose our intellectual enterprise but complement and support it. The psychologist Joseph Church in his book, Language and the Discovery of Reality, puts it succinctly:

" . . . our human capacities for thought are no greater than our human capacities for feeling. It may well be that capacity for feeling . . . is the essential variable in intellectual differences. It is only those with strong feelings who can resist the second-hand formulations of experience handed down from their progenitors and can work to thematize them afresh for themselves. Certainly it is possible to be retentive without great feeling, but learning without the understanding that emotion gives is barren and perhaps even dangerous." (pp. 202–203)

What is suggested is not that we get the student to analyze his emotion life—that is simply another intellectual activity which can best be pursued in the study of psychology—but rather that we encourage him to become aware of his feelings, experience them, and cultivate them.

It is not a matter of releasing the student's emotions in a kind of wild revel but just the opposite. That is, we are beginning to understand that the student's feelings need to be educated as well as his intellect. We speak with justifiable pride of our dedicated attempt to teach our students to think and to think clearly. As we look out on this contemporary scene surely we must concede that for all of us it is also important to feel clearly.

Here is a short poem by Coventry Patmore:

MAGNA EST VERITAS

Here in this little Bay,
Full of tumultuous life and great repose,
Where, twice a day,
The purposeless, glad ocean comes and goes,
Under high cliffs, and far from the huge town,
I sit me down.

For want of me the world's course will not fail;
When all its work is done, the lie shall rot;
The truth is great, and shall prevail,
When none cares whether it prevail or not.

In my youth I greatly admired this poem for being brisk and brave and tough. But I see now that it has a soft spot at the center and that it derives its force from a state of mind not altogether admirable though one that I can still sympathize with. Reading between the lines we can imagine that the speaker has tried to instruct someone—a single person, a group, or a crowd—in what he regards as a high truth. But he has not been listened to, has maybe been laughed at. So he has abandoned the "huge town" for the sea-shore where he can be alone and lick the wounds of his rejection, a kind of intellectual Achilles sulking in his tent. He is deeply troubled but also he obviously enjoys feeling sorry for himself. He is clearly more concerned with his own feelings than with the "truth," or he could never say that truth is sure to prevail even "when none cares whether it prevail or not."

The student who comes to understand what is really going on in this poem, elementary as it is, will have to think clearly, to be sure, but he will also have to feel, that is, find his way among his own emotional responses and responsibilities. We can hope that with repeated experiences of this sort he will learn to discriminate, in Emily Dickinson's words, that "internal difference/Where the meanings are." In the process, I believe, he is being educated.

CREATIVE INTUITION

Next door to our feelings and emotions or maybe living in the same house with them is that mysterious mental capacity which Maritain called "creative intuition." Because it is an amorphous, ill-defined psychic force, we have given it scant space in our liberal arts teaching. Our attitude has been that thankfully there is always the fine arts department to relieve us of the responsibility of this ungainly, potentially dangerous monster. (Plato set the precedent for us by casting the poets out of his ideal Republic into the outer darkness of the non-rational.) But evidence is accumulating to show that our intuitive powers play an important role in intellectual as well as in artistic processes. Here it is the scientists and mathematicians who have led the way as their own disciplines have become more hypothetical and creative and have drawn closer to the arts. For example, the French mathematician and physicist, Henri Poincaré, testifies to his suddenly coming into full possession of solutions to mathematical problems which he was not thinking about at the moment but which he had previously been working on for several days without success. He attributes these epiphanic breakthroughs to the "emotional sensibility" of the

unconscious mind in association with its aesthetic sense for mathematical "elegance." Again, Albert Einstein says of his creative work. "The important thing is intuition." And those of you who have read James Watson's The Double Helix: A Personal Account of the Discovery of the DNA do not need to be persuaded of the significance in scientific research of educated guesses and lucky hunches.

THE RATIONAL AND THE INTUITIVE

The research being done on the two hemispheres of the brain by a group of medical doctors, psychiatrists, and psychologists at the University of California in San Francisco promises to clarify the relation between the rational and intuitive ways of the mind. They have conducted a long series of highly sophisticated experiments with animals, with normal human subjects, and with split-brain patients, mostly epileptics who have had the nerve fibers connecting the two halves of the brain surgically severed in an attempt to effect a cure. The conclusions so far derived from these experiments are conveniently summarized by a member of the team, Robert E. Ornstein, in his book, The Psychology of Consciousness. "The left hemisphere of the brain" he says, "(connected to the right side of the body) is predominantly involved with analytic, logical thinking, especially in verbal and mathematical functions. Its mode of operation is linear." It "seems to process information sequentially." ". . . The right hemisphere (. . . connected to the left side of the body) seems specialized for holistic mentation," such as thinking in wholes, gestalt thinking. "Its language ability is quite limited," maybe to a dozen words. It is "primarily responsible for our orientation in space, artistic endeavor, crafts, body image, recognition of faces." (pp. 67, 68)

Ornstein suggests that the right hemisphere may be the seat of Freud's "unconscious" mind, the left that of the "conscious" mind. In a "tentative dichotomy" between the two modes of consciousness he describes the one mode corresponding to the left hemisphere of the brain as intellectual and masculine; the other, corresponding to the right hemisphere, he describes as feminine, sensuous, and intuitive.

What is new in this research, says Ornstein, is "a recognition that these modes operate physiologically as well as mentally and culturally." (p. 85) He is at some pains to show that the distinction itself between the two modes is nothing new but has been recognized throughout human history.

I am reasonably sure of is that this obscure, validity of the research Ornstein reports on, and no one seems to know how the dark, dreamy creative region in our psyche can be educated, or if it can be educated at all. What I am reasonably sure of its that this obscure, intuitive capacity will be increasingly acknowleged and will be allowed room to work in, not only in the fine and performing arts, but in the liberal arts, in science, engineering, law, medicine, business. And not only in colleges and universities but in the schools.

COORDINATING THE ANALYTICAL AND THE CREATIVE

The objective, of course, is not to supplant the intellectual and analytical with the intuitive and creative but to find ways to coordinate the two modes for the most fruitful results. Nor is the aim primarily to produce great creative thinkers in every field though we can always do with more than we have. Our ambition will probably be more modest, namely, to make sure we engage all of the student's native resources—sensory, emotional and intuitive as well as intellectual—in the teaching and learning process.

And now I call my last witness to the stand, J. Bronowski, whom you may know from his TV series, The Ascent of Man. In his little book, Science and Human Values, he writes:

"The discoveries of science, the works of art are explorations—more, are explosions, of a hidden likeness. The discoverer or the artist presents in them two aspects of nature and fuses them into one. This is the act of creation . . . and it is the same act in original science and original art. But it is not therefore the monopoly of the man who wrote the poem or who made the discovery. . . The poem or the discovery exists in two moments of vision: the moment of appreciation as much as that of creation. . . . In the moment of appreciation we live again the moment when the creator saw and held the hidden likeness. When a simile takes us aback and persuades us together, when we find a juxtaposition in a picture both odd and intriguing, when a theory is at once fresh and convincing, we do not merely nod over someone else's work. We re-enact the creative act, and we ourselves make the discovery again. At bottom, there is no unifying likeness there until we too have seized it, we too have made it for ourselves."

I could not define in an abstract statement what education is but if a student can be brought to this pitch of perception, at once analytical and creative, then I believe you can say he is being educated.

PUBLIC WORKS APPLICATION PROCEDURE NEEDS TO BE SIMPLIFIED

HON. WILLIAM R. COTTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1977

Mr. COTTER. Mr. Speaker, in the RECORD of February 7, page 3810, I entered many criticisms from town officials in my district concerning last year's Public Works Employment Act. I would like to take this opportunity to add one additional letter, from the mayor of West Hartford, Conn., and to expand my comments on the program.

A concern expressed repeatedly by town officials was the complexity of the application process. Many of these towns are relatively small communities who could not afford the legal assistance needed to wade through the Economic Development Administration's application forms. Therefore, when Congress drafts new public works legislation, we ought to stress to EDA that application procedures need to be simplified.

Other town officials recommended that each municipality or agency be limited in the number of applications it could submit to EDA. Many communities applied for several projects, often because EDA's selection process was never made clear to them. Unable to understand EDA's hopelessly complex criteria, they were forced to cover their bets by applying for as many different projects as possible.

The result often was that a low priority project was selected in a community for Federal funding, while more important projects were passed over.

If a maximum were established on the number of applications each community could file, we could guarantee that only high-priority projects would be submitted for Federal assistance.

The letter follows:

WEST HARTFORD, CONN.,
February 3, 1977.

Hon. WILLIAM R. COTTER,
Member of Congress, Rayburn House Office Building, Washington, D.C.

DEAR CONGRESSMAN COTTER: This is in request for suggestions about Title I of the Public Works and Economic Development Act.

As you know, West Hartford appears to have fared well on the basis of a preliminary announcement to the effect that the Town will be receiving $1,823,120 for sidewalk reconstruction. It also is true that sidewalk reconstruction is not the highest priority among the six projects for which the Town had applied for a total of $5,839,878 in Title I funds.

One problem with Title I is that many local officials failed to understand not only that the application process precluded local prioritizing among projects but also that thirty percent of the funding was reserved for project areas where unemployment is below the national rate but at least 6.5%.

I question the efficacy and equitability of a procedure under which a local government knows virtually nothing about the project mix built into the Federal rating system and therefore must file as many applications as possible so as to maximize its funding potential and maintain its credibility. As a result, we hear that the Economic Development Administration has been deluged with thousands of applications which never can be funded.

Nor has the application process been as simple as had been promised. In fact, it has been incredibly complex. Many localities have allocated to this effort time and resources which, as a result of the very recessionary pressures the Act is intended to combat, they cannot afford.

At a regional meeting convened by Congressman Moffet to explain Title I, West Hartford representatives heard, from New Jersey Congressman Roe, one of the authors of the Act, that the Title I application had been designed, in part, to provide the Federal government with data as to the totality of needs nationwide and on a long-term basis, so that future Title I funding needs could be demonstrated and projected. While this objective is admirable, I fail to understand why its fulfillment would require applications of the length and complexity with which we have been confronted, especially in view of the requirement that essential unemployment and project area data be obtained from within and certified by the Federal system.

In theory, I favored the reservaton of some Title I funds for project areas where unemployment is significant but below the national average. An unemployed construction worker, after all, is an unemployed construction worker, regardless of residence.

While this provision also became a factor in West Hartford's receipt of Title I funds the practical limitations of this type of funding reservation must also be recognized. Under the Title I regulations, a recipient of a grant under either funding category must endeavor to achieve a minimum ten percent employment factor from within the designated project area. Conceivably, the remainder of the work force could be drawn from outside not only the project area but also the Labor Market Area.

An additional problem with this provision is that the Economic Development Administration failed to spell out the rationale in either the Title I regulations or grant award announcements through Congressional offices and the press.

Modifications in any further Title I or similar funding could include:

First, a regional allocation system, on a

Labor Market Area basis and with the Labor Market Area to be the designated project area for each grant, thus eliminating the present system of reserving funds for both high and moderate unemployment project areas. The regional allocation system should be based upon unemployment data generated directly through the Federal system, and a locality should have no choice as to project area.

Second, prior publication by the Economic Development Administration of its Labor Market Area project priority system, which should be revised to give as much weight to long-term economic impact as to labor intensity in construction.

Third, a simple, brief and straightforward preapplication system under which jurisdictions outline their substantive priorities and seek to relate these to EDA's unemployment-based priority system, with EDA then having responsibility for the identification of projects for which final grant applications should be prepared.

Fourth, much greater technical assistance to localities by EDA in the final application process, including site visits in which much of the documentation now required in the application is replaced by EDA staff inspection and certification.

And fifth, maintenance by EDA of a priority backup system under which projects which survive the preapplication stage but fail at any point in the final application sequence are quickly replaced in the latter.

I believe that these steps would improve equitability and efficiency and also would further the acceleration objective of Title I.

Yours truly,

ANNE P. STREETER,
Mayor.

HOUSE OF REPRESENTATIVES—*Wednesday, February 9, 1977*

The House met at 11 o'clock a.m.

The Reverend James P. Archibald, pastor, Capitol Hill United Methodist Church, offered the following prayer:

O God, we pause at this moment when we are to begin our day's work to ask for Your direction. The tasks that confront this body are so awesome that we dare not do otherwise.

We realize the burden of responsibility that each Member bears and the feelings of loneliness that often accompany courageous leadership. We ask that You speak to the individual needs of each of these who have been elected both to lead and to represent the people of the Nation.

Make them always sensitive to the subtle way in which You make your will known, and enable them to implement the moral, ethical, and spiritual qualities that have long been the goals of a good society.

Bless their families with understanding attitudes, and protect their homes as havens of peace. Help us all to see the sacredness of each individual person, regardless of his or her station in life. Enable us all to work for the fulfillment of Your dreams for our world.

In the name of all that is good and holy. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Is there objection to the approval of the Journal?

Mr. BAUMAN. Mr. Speaker, I object.

The SPEAKER. Objection is heard.

Mr. WRIGHT. Mr. Speaker, I move the approval of the Journal.

The SPEAKER. The question is on the motion offered by the gentleman from Texas, Mr. WRIGHT.

The question was taken; and the Speaker announced that the ayes appear to have it.

Mr. BAUMAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 364, nays 3, answered "present" 1, not voting 63, as follows:

So the motion was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

REPORT TO ACCOMPANY HOUSE RESOLUTION 261, PROVIDING FOR EXPENSES FOR COMMITTEE ON HOUSE ADMINISTRATION

Mr. THOMPSON, from the Committee on House Administration, submitted a privileged report (Rept. No. 95–13) to accompany House Resolution 261, a resolution providing for expenses of investigations and studies to be conducted by the Committee on House Administration, which was referred to the House Calendar and ordered printed.

APPOINTMENT AS MEMBERS OF CERTAIN STANDING COMMITTEES OF THE HOUSE

Mr. FOLEY. Mr. Speaker, as chairman of the Democratic Caucus and by direction of the Democratic Caucus, I offer a privileged resolution (H. Res. 271) and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 271

Resolved, That the following-named Members be, and they are hereby, elected to the following standing committees of the House of Representatives:

Committee on the District of Columbia: CARDISS COLLINS, Illinois.

Committee on Post Office and Civil Service: LEO RYAN, California.

The resolution was agreed to.

A motion to reconsider was laid on the table.

EXTENDING TIME IN WHICH AMERICAN INDIAN POLICY REVIEW COMMISSION MUST SUBMIT FINAL REPORT AND INCREASING AUTHORIZATION OF APPROPRIATIONS

Mr. MEEDS. Mr. Speaker, I ask unanimous consent that the Committee on Interior and Insular Affairs be discharged from the further consideration of the Senate joint resolution (S.J. Res. 10) to extend the period of time in which the American Indian Policy Review Commission must submit its final report and to increase the authorization of appropriations for such Commission, and ask for its immediate consideration in the House.

The Clerk read the title of the Senate joint resolution.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Washington?

There was no objection.

The Clerk read the Senate joint resolution as follows:

S.J. RES. 10

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the joint resolution entitled "Joint resolution to provide for the establishment of the American Indian Policy Review Commission", agreed to January 2, 1975 (88 Stat. 1910), is amended—

(1) by striking out "six" in the second sentence of section 5(a) and inserting in lieu thereof "nine";

(2) by striking out "six" in the third sentence of section 5(a) and inserting in lieu thereof "three"; and

(3) by striking out "$2,500,000" in section 7 and inserting in lieu thereof "$2,600,000".

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

INTRASTATE GAS PROFITS SHOULD BE REBATED TO CUSTOMERS

(Mr. PICKLE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. PICKLE. Mr. Speaker, last week when the House passed the conference committee's version of the Emergency Natural Gas Act, there was very little discussion of the profits that the pipeline companies will make during this temporary program.

I believe that most of my colleagues did not realize how much gas prices would or could rise.

In my district in central Texas, the LoVaca Gathering Co., an intrastate pipeline, may realize a profit of $1.5 million for transporting interstate gas for 60 days. I strongly feel that those extra profits should be rebated to the company's customers in Texas.

I also think that this same principle should apply to interstate pipelines and I have written to Chairman Dunham urging him to examine the profits of interstate lines during this period.

I hope that my colleagues will agree that we must take every opportunity to reduce the utility bills of consumers during this emergency. No individual or company should be allowed to take advantage of this crisis while so many Americans are suffering.

INTRODUCTION OF FREEDOM-OF-CHOICE AMENDMENTS TO SOCIAL SECURITY ACT

(Mr. VANIK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. VANIK. Mr. Speaker, I am today introducing legislation to which I would like to call the attention of my colleagues. This legislation consists of the freedom-of-choice amendments to the Social Security Act, and they would permit a social security recipient to work beyond the age of 65 without suffering a penalty in benefits.

The second bill would provide that a person could have the privilege of receiving outside income—beyond social security payments—in an amount equivalent to the difference between an individual's benefits and the maximum permissible to a worker receiving full social security retirement benefits, plus the $3,000 limitation. This would permit a great many of our elderly citizens who are at low income levels to bring themselves up to a higher level, and it could take them off food stamps, supplemental security benefits, and other supplemental programs and thus enable them to survive and face up to the escalating cost of living.

PROPOSED AMENDMENTS TO THE FEDERAL RULES OF CRIMINAL PROCEDURE

(Mr. MANN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MANN. Mr. Speaker, last April the Supreme Court promulgated several proposed amendments to the Federal Rules of Criminal Procedure. Those amendments, pursuant to statutes known as the Rules Enabling Acts, were to have taken effect last August 1. Because several of the proposed amendments raised questions that required closer congressional study than the time available permitted, we enacted legislation postponing the effective date until August 1 of this year (Public Law 94–349).

The Subcommittee on Criminal Justice will begin hearings on the proposed amendments on Wednesday, February 23, 1977. Additional hearings are set for Thursday, February 24 and, if necessary, Wednesday, March 2.

Persons wishing further information about the proposed amendments or wishing to testify on them are invited to contact the subcommittee office in room 2137, Rayburn House Office Building, telephone number 202/225–0406.

UPDATED INFORMATION ON ENERGY SHORTAGE TO BE MADE AVAILABLE

(Mr. WHITTEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WHITTEN. Mr. Speaker, our country has sufficient coal to meet our energy needs for thousands of years to come. If we would only open up this tremendous source of power, we could break the stranglehold which the oil-rich nations largely in the Middle East have on us. For we are their biggest and best customer and they know it:

The trouble is that in our efforts to get rid of the undesirable features of using coal, we caused much of American industry to install equipment for the use of oil or gas. Since they cannot change back to coal overnight, they are faced with ever increasing fuel costs to keep their plants going, and the American public is being faced with increased prices of the things they must purchase.

Our people are not only cold, but quite a number have frozen to death. Federally built houses are vacant because their purchasers cannot meet their payments and pay their electricity and fuel bills.

In 1974, I obtained an investigation by the Appropriations Committee investigators.

The report made in 1975 confirmed my statements here and was so in demand that copies are not now available.

Mr. Speaker, I have officially asked that this investigation be brought up to date.

I wish also to say, Mr. Speaker that, I am introducing today, a bill which if passed by the Congress, would enable us to meet this problem. This I will discuss later when copies are available.

We have spent more than $5 million on research and development of exotic fuels. We need to do further research on the use of coal, but while we are doing that, we have at our doorstep enough coal to supply us for thousands of years. We must use it while we improve the methods of its mining and its use.

AN EXPLANATION OF A "NO" VOTE ON APPROVAL OF THE JOURNAL

(Mr. STEIGER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. STEIGER. Mr. Speaker, in response to a multitude of inquiries as to why I am voting "no" on the approval of the Journal, I wish to take this time to simply indicate that until such time as the CONGRESSIONAL RECORD can be made an accurate reflection of the proceedings of this House I intend to use this one vehicle as a protest against what I consider to be a substantial abuse by this body of the CONGRESSIONAL RECORD.

I will be circulating a letter in the next week to all my colleagues in an effort similar to one we made 2 years ago, 4 years ago, 6 years ago, and 8 years ago, an effort to try to clean up the RECORD, and I hope all the Members will join with me so that at some point I can vote "aye" on the approval of the Journal.

Mr. Speaker, until that happens I intend to vote "no" on this question.

A CALL FOR A VOTE ON MEMBERS' SALARY INCREASE

(Mr. FRENZEL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FRENZEL. Mr. Speaker, while the House is out of session in the coming 6-day "district work period," the clock will be ticking on the congressional salary increase. When we return here on February 16, we will have only 2 or 3 working days to vote on that proposal before it automatically becomes effective.

It is becoming increasingly apparent that there will be no such vote. Yet, I can think of no other action by the House that will more adversely affect our credibility or confidence rating than our refusal to have a recorded vote on the increase. I believe we have the obligation to be recorded on this issue.

We may not be the best agency to set our salaries, but as long as we have that duty, we also have the duty to vote on it, rather than to allow an increase to become effective by our default.

We also ought not to vote ourselves raises, or allow them to become effective, which occur in the current term of Congress. All increases should be effective only in the session following the vote which authorized them.

I believe we have this double obligation to people who sent us here and I regret we are apparently not going to fulfill it.

LEGISLATIVE PROGRAM

(Mr. MICHEL asked and was given permission to address the House for 1 minute.)

Mr. MICHEL. Mr. Speaker, I have taken this time for the purpose of inquiring of the distinguished majority leader the program for next week.

Mr. WRIGHT. Mr. Speaker, if the gentleman from Illinois will yield, following the consideration of the resolution which presently is before the House today, we will consider amendments to the Small Business Act and the Small Business Investment Act of 1958. Upon conclusion of that legislation, the House will leave for its winter district work period at the close of business today and will resume here on Wednesday, February 16, 1977, at 12 o'clock noon.

On that date the House will consider House Resolution 261, House Administration Committee funding resolution.

On Thursday and the balance of that week the House will meet at 11 o'clock a.m. and will receive President Portillo of Mexico on Thursday.

It is anticipated that on the following week, the week of February 21, we will have two very important pieces of legislation before the House. One will be the third concurrent resolution on the budget, and the other will be a $4 billion authorization out of the Committee on Public Works and Transportation for extension of the Capital Development and Investment Act. This is the public works jobs program, an important component of the economic stimulus package.

Mr. MICHEL. Mr. Speaker, on what days does the distinguished majority leader anticipate that the budget resolution and the $4 billion bill will be up for consideration that following week? Would the gentleman believe that they would be scheduled for the middle of the week or would we start on Monday?

Mr. WRIGHT. If the gentleman will yield further, quite probably this would take place in the middle of the week on Tuesday and Wednesday. That is the present plan. We will have to refine that plan and give notice concerning its specific details during the week of February 14.

Mr. MICHEL. So that all of the Members should be put on notice that there will be important pieces of legislation the following week.

Mr. WRIGHT. That is correct. During the week of February 21, the House will be considering very important legislation.

Mr. BAUMAN. Mr. Speaker, if the gentleman would yield, let me say that I notice on the program announced for next week that we will only be in session on Wednesday and Thursday. Those are the only days that the House could possibly act in any way concerning legislation dealing with the congressional pay raise. I notice that the majority leader did not announce anything concerning that and many of us are very much in favor of bringing this matter to the floor so that we can vote against it.

It seems to me that there might be a possibility of at least making a record of those who would be here on Wednesday and Thursday ready to act on the pay raise if the leadership would be ready to bring this matter before us. Is there any plan to bring this before the House next week?

Mr. WRIGHT. The gentleman knows the rules of the House, I assume, probably as well as I do. That matter, like all the other matters we have been discussing, is before one of the standing committees of the House. If legislation concerning that question should be reported by the standing committee and application made for a rule, I am sure it would be scheduled and considered.

Mr. BAUMAN. If the gentleman would yield further, I will just say that the gentleman from Maryland does know the rules of the House. I think he also knows who rules the House, and if there were a real desire to bring the pay raise out for a vote, it would be brought out.

AUTHORIZING CLERK TO RECEIVE MESSAGES FROM THE SENATE AND THE SPEAKER TO SIGN ENROLLED BILLS AND JOINT RESOLUTIONS DULY PASSED AND TRULY ENROLLED NOTWITHSTANDING ADJOURNMENT

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that, notwithstanding any adjournment of the House until Wednesday, February 16, 1977, the clerk be authorized to receive messages from the Senate and that the Speaker be authorized to sign any enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

The SPEAKER pro tempore (Mr. ROSTENKOWSKI). Is there objection to the request of the gentleman from Texas?

There was no objection.

AUTHORIZING SPEAKER TO ACCEPT RESIGNATIONS AND TO APPOINT COMMISSIONS, BOARDS AND COMMITTEES AUTHORIZED BY LAW OR BY THE HOUSE NOTWITHSTANDING ADJOURNMENT

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that, notwithstanding any adjournment of the House until February 16, 1977, the Speaker be authorized to accept resignations, and to appoint commissions, boards, and committees authorized by law or by the House.

The SPEAKER pro tempore (Mr. ROSTENKOWSKI). Is there objection to the request of the gentleman from Texas?

There was no objection.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY NEXT

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule on Wednesday of next week be dispensed with.

The SPEAKER pro tempore (Mr. ROSTENKOWSKI): Is there objection to the request of the gentleman from Texas?

There was no objection.

COMMITTEE ON STANDARDS OF OFFICIAL CONDUCT INVESTIGATION OF IMPROPER SOUTH KOREAN INFLUENCE

Mr. SISK. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 252, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 252

Whereas article I, section 9, clause 8 of the United States Constitution prohibits any person holding Federal office, including Members of Congress, from accepting any present, emolument, office, or title from any foreign government without the consent of Congress; and

Whereas Congress has forbidden the receipt of political contributions from a foreign national, including a foreign government (2 U.S.C. 441e); and

Whereas the Federal Criminal Code prohibits the receipt of anything of value by any Member of Congress to influence his performance of his official duties or to reward or compensate him, other than as provided for by law, for the performance of those duties (18 U.S.C. 201, 203); and

Whereas rule XLIII of the Rules of the House of Representatives sets forth the Code of Official Conduct for Members, officers and employees of the House of Representatives and, among other things, prohibits the acceptance of any gift of substantial value, directly or indirectly, from any person, organization, or corporation having a direct interest in legislation before the Congress; and

Whereas information has come to the attention of the House of Representatives alleging that Members of the House of Representatives have been the object of efforts by certain foreign governments or persons and organizations acting on behalf of foreign governments (including the Government of the Republic of Korea) to influence the Members' official conduct by conferring things of value on them or on members of their immediate families or their business or political associates; and

Whereas clause 4(e)(1) of rule X of the Rules of the House of Representatives entrusts the Committee on Standards of Official Conduct with particular responsibility—

(A) to recommend to the House of Representatives from time to time such administrative actions as it may deem appropriate to establish or enforce standards of official conduct for Members, officers, and employees of the House of Representatives;

(B) to investigate any alleged violation, by a Member, officer, or employee of the House of Representatives, of the Code of Official Conduct or of any law, rule, regulation, or other standard of conduct applicable to the conduct of such Member, officer, or employee in the performance of his duties or the discharge of his responsibilities, and after notice and hearing, to recommend to the House of Representatives, by resolution or otherwise, such action as the committee may deem appropriate in the circumstances; and

(C) to report to the appropriate Federal or State authorities, with the approval of the House of Representatives, any substantial evidence of a violation, by a Member, officer, or employee of the House of Representatives, of any law applicable to the performance of his duties or the discharge of his responsibilities, which may have been disclosed in a committee investigation: Now, therefore be it

Resolved, That the Committee on Standards of Official Conduct be and it is hereby authorized and directed to conduct a full and complete inquiry and investigation to determine whether Members of the House of Representatives, their immediate families, or their associates accepted anything of value, directly or indirectly, from the Government of the Republic of Korea or representatives thereof. The scope of the inquiry and investigation shall be determined by the committee in its discretion and may extend to any matters relevant to discharging its responsibilities pursuant to this resolution.

SEC. 2. The committee shall report to the House of Representatives any findings, conclusions, and recommendations it deems proper with respect to the adequacy of the present Code of Official Conduct or the Federal laws, rules, regulations, and other standards of conduct applicable to the conduct of Members of the House of Representatives in the performance of their duties and the discharge of their responsibilities (1) to protect the House of Representatives against the exertion of improper influence by or on behalf of foreign governments and (2) to prohibit Members of the House of Representatives from receiving things of value under circumstances that conflict, or appear to conflict, with their obligations to perform their constitutional duties without regard to private gain or benefit.

SEC. 3. The committee, after appropriate notice and hearing, shall report to the House of Representatives its recommendations as to such action, if any, that the committee deems appropriate by the House of Representatives as a result of any alleged violation of the Code of Official Conduct or of any law, rule, regulation, or other standard of conduct applicable to the conduct of such Member, officer, or employee in the performance of his duties or the discharge of his responsibilities.

SEC. 4. (a) For the purpose of conducting any inquiry or investigation pursuant to this resolution, the committee is authorized to require—

(1) by subpena or otherwise—

(A) the attendance and testimony of any person at a hearing or at the taking of a deposition by any member of the committee; and

(B) the production of such things; and

(2) by interrogatory, the furnishing under oath of such information as it deems necessary to such inquiry or investigation.

(b) The authority conferred by subsection (a) of this section may be exercised—

(1) by the chairman and the ranking minority member acting jointly, or, if either declines to act, by the other acting alone, except that in the event either so declines, either shall have the right to refer to the committee for decision the question whether such authority shall be so exercised and the committee shall be convened promptly to render that decision; or

(2) by the committee acting as a whole.

(c) Subpenas and interrogatories authorized under this section may be issued over the signature of the chairman, or ranking minority member, or any member designated by either of them. A subpena may be served by any person designated by the chairman, or ranking minority member, or any member designated by either of them and may be served either within or without the United States on any national or resident of the United States or any other person subject to the jurisdiction of the United States.

(d) In connection with any inquiry or investigation pursuant to this resolution, the committee may request the Secretary of State to transmit a letter rogatory or request to a foreign tribunal, officer, or agency.

(e) Subpenas for the taking of depositions or the production of things may be returnable at specified offices of the committee or at a scheduled hearing, as the committee may direct.

(f) The chairman, or ranking minority member, or any member designated by either of them (or, with respect to any deposition, answer to interrogatory, or affidavit, any person authorized by law to administer oaths) may administer oaths to any witness.

(g) For the purposes of this section, "things" includes books, records, correspondence, logs, journals, memorandums, papers, documents, writings, drawings, graphs, charts, photographs, reproductions, recordings, tapes, transcripts, printout, data compilations from which information can be obtained (translated, if necessary, into reasonably usable form), tangible objects, and other things of any kind.

SEC. 5. For the purpose of conducting any inquiry or investigation pursuant to this resolution, the committee is authorized to sit and act, without regard to clause 2(m) of rule XI of the Rules of the House of Representatives, during the present Congress at such times and places within or without the United States, whether the House is meeting, has recessed, or has adjourned, and to hold such hearings, as it deems necessary.

SEC. 6. The committee is authorized to seek to participate and to participate, by special counsel appointed by the committee, on behalf of the committee and the House of Representatives in any judicial proceeding concerning or relating in any way to the inquiry or investigations conducted pursuant to this resolution.

SEC. 7. The authority conferred by this resolution is in addition to, and not in lieu of, the authority conferred upon the committee by the Rules of the House of Representatives. In conducting any inquiry or investigation pursuant to this resolution, the committee is authorized to adopt special rules of procedures as may be appropriate.

SEC. 8. Any funds made available to the committee after the adoption of this resolution may be expended for the purpose of carrying out the inquiry and investigation authorized and directed by this resolution.

COMMITTEE AMENDMENTS

The SPEAKER pro tempore (Mr. ROSTENKOWSKI). The Clerk will report the committee amendments.

The Clerk read as follows:

Committee amendments: On page 3, line 3, after the word "inquiry" insert the words "and investigation".

On page 3, line 7, after the word "inquiry" insert the words "and investigation".

The committee amendments were agreed to.

The SPEAKER pro tempore. The Chair recognizes the gentleman from California (Mr. SISK) for 1 hour.

Mr. SISK. Mr. Speaker, in connection with yielding on this particular matter I will be yielding for the purposes of debate only, and, at this time, I will yield 30 minutes to the gentleman from Tennessee (Mr. QUILLEN) pending which I yield myself such time as I may consume.

GENERAL LEAVE

Mr. SISK. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on this resolution, House Resolution 252.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. SISK. Mr. Speaker, I call up House Resolution 252 to authorize and direct the Committee on Standards of Official Conduct to determine whether Members of the House, their immediate families, or their associates accepted anything of value, directly or indirectly from the Government of the Republic of Korea or representatives thereof.

This resolution is a matter of original jurisdiction for the Committee on Rules which held hearings on it yesterday. The committee voted to report the matter favorably as a privileged resolution and to recommend that two amendments be adopted.

Under this procedure, the resolution may be debated for 1 hour. Amendments are in order only by direction of the Committee on Rules and the only two amendments authorized by the committee are included in its report—House Report 95–10—on the resolution.

Mr. Speaker, House Resolution 252 basically directs the Committee on Standards of Official Conduct to investigate allegations of South Korean attempts to influence Members of the

House. Under clause 4(e)(1) of rule X, the Committee on Standards has the jurisdiction to pursue such an investigation. The purpose of this resolution is to augment that authority as well as to more clearly define the intent of the investigation and to establish special procedures which may be used in the conduct of the investigation.

The resolution provides the Committee on Standards with discretion in determining the scope of the inquiry and investigation. The committee will be allowed to pursue the investigation overseas if necessary. The committee is required to report any findings or recommendations it deems appropriate concerning the adequacy of the present Code of Official Conduct or Federal restrictions protecting the House against improper influence by foreign governments and prohibiting Members from receiving gifts in conflict with the Constitution. The committee also is to report any recommendations it might have pursuant to violations by Members, officers, or employees of the Official Code of Conduct.

The resolution specifies the procedure for authorizing and issuing subpenas and interrogatories, including requests to the Secretary of State for the transmittal of letters rogatory to foreign agencies. Depositions may only be taken by members of the committee.

Pursuant to other investigations of this matter, the committee is authorized to participate by special counsel on behalf of the committee and the House in any judicial proceedings related to any inquiry or investigation conducted under the authority of House Resolution 252.

Mr. Speaker, I voted in the Committee on Rules to report House Resolution 252 favorably. I believe this investigation is needed to clarify the many allegations of wrongdoing that have been bandied about of recent months. I am sure the Committee on Standards of Official Conduct will do an excellent job in conducting the investigation and I urge my colleagues to vote to adopt House Resolution 252.

Mr. QUILLEN. Mr. Speaker, I yield myself so much time as I may use.

Mr. Speaker, the able gentleman from California (Mr. SISK) has explained the provisions of the resolution. I am here today not only as a member of the Committee on Rules but also as a member of the Committee on Standards of Official Conduct. Although some might say this resolution is not needed, the committee already has the authority, but the resolution proposes some guidelines and some specifications.

Mr. Speaker, I urge the adoption of the resolution.

Mr. Speaker, I yield 2 minutes to the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Speaker, I take this brief time only to call the attention of the membership to the italicized language which appears on lines 3 and 8 of House Resolution 252 at page 3. Those words were added by way of amendment, an amendment which I offered and which was accepted in the Committee on Rules as an amendment to the original resolution before us which had been presented, of course, by the House Committee on Standards of Official Conduct. I offered that amendatory language because I wanted to draw attention to something that now appears in the Standing Rules of the House which were adopted on the first day of this session, of this 1st session of the 95th Congress.

In that regard I would like to draw the attention of the Members particularly to rule X, paragraph 4(a)(A):

> No resolution, report, recommendation, or advisory opinion relating to the official conduct of a Member, officer, or employee of the House shall be made by the Committee on Standards of Official Conduct, and no investigation of such conduct shall be undertaken by such committee, unless approved by the affirmative vote of a majority of the members of the committee.

Of course in this instance the House Committee on Standards of Official Conduct unanimously voted to adopt this resolution, but it occurs to me that there could be instances where that committee might refuse to act, where we might fail to get an affirmative vote within the committee and yet a majority of the Members of this body would think it was a proper subject for inquiry and investigation by the House Ethics Committee. So therefore, shortly after the beginning of this session, I did introduce a resolution proposing a change in the rules of the House that would provide that in any instance where the committee did not act, where we did not have a majority of the Members of the committee voting to take affirmative action to undertake an investigation or inquiry, we could have a vote in this body and a majority of the membership could mandate the committee to act. I think it is important that we make that change in the rules.

I further introduced a proposed change that would require the committee in each instance that it undertakes an inquiry or investigation to make a full and complete report to the House.

Those matters of course were referred to the Committee on Rules which has original jurisdiction over any proposed changes in the rules and I would hope that the distinguished chairman of that committee, on which I am privileged to serve, would promptly call or schedule hearings so that we could consider what I believe are important and necessary changes in the present rules of the House.

Mr. SISK. Mr. Chairman, I yield to the gentleman from Georgia, the chairman of the Committee on Standards of Official Conduct, 2 minutes.

Mr. FLYNT. Mr. Speaker, House Resolution 252 would authorize and direct the Committee on Standards of Official Conduct to conduct a full and complete inquiry and investigation to determine whether Members of the House of Representatives or their families and associates, have accepted money and other emoluments from the Government of the Republic of Korea or its representatives. Our committee fully supports this resolution.

The purpose of this resolution is clear. Information has come to the attention of the House of Representatives alleging that certain Members have been the object of efforts by the Government of the Republic of Korea and its representatives to improperly influence Members' official conduct by conferring things of value on them. The receipt of such gifts or other payments may violate the Constitution and certain laws of the United States, as well as rule XLIII of the Rules of the House of Representatives, which prohibits the acceptance of any gift of substantial value from any person or organization having a direct interest in pending legislation. These standards are set forth in the first five "whereas" clauses of the resolution.

The investigation authorized by this resolution, as set out in section 2 of the resolution, would call upon the committee to report to the House of Representatives its findings and recommendations with respect to the adequacy of the present Code of Official Conduct and Federal laws: First, to protect the House of Representatives against the exertion of improper influence by foreign governments and second, to prevent Members from receiving things of value under circumstances that may present a conflict of interest.

In addition, pursuant to section 3 of the resolution, the committee would conduct hearings into alleged violations of the Code of Official Conduct or other applicable laws or standards of conduct by individual Members and report to the House of Representatives its recommendations as may be appropriate to discipline. These hearings would be conducted in accordance with the rules of the committee, which set forth in detail procedures to be followed.

The recently publicized allegations have ranged from selective charges against only a few Members to unconfirmed reports that as many as 90 persons may be implicated. These vague and conflicting reports have raised serious questions in the public's mind about the integrity of the House of Representatives and about its ability and desire to uphold high standards of ethics that befit the peoples' representatives. The pressing issue at hand is our willingness to exercise, with both determination and fairness, our exclusive constitutional responsibility under article I, section 5 to prescribe rules of conduct for our Members and to take appropriate disciplinary measures in response to any violations.

Thus, it is essential that the House of Representatives undertake the proposed investigation to determine the true facts and circumstances that surround the as yet unsubstantiated allegations. If there has been no organized or widespread effort to exert improper influence on our legislative processes, then that should be established openly and publicly, so that we may restore full confidence in our membership.

If, on the other hand, there have been attempts on behalf of foreign governments to subvert the legislative process for their own purposes and designs, we must act quickly and decisively to take action against those Members who have violated their official responsibilities and reconfirm that such breaches will not be tolerated. Whatever the outcome, the investigation our committee proposes to undertake will enable both the House of Representatives and the American people to determine the true facts. It will also enable us to take such measures as

will secure continued adherence to the ideals and principles that must govern our deliberations and actions if we are to preserve the integrity of the House of Representatives.

The Rules of the House of Representatives, of course, give the Committee on Standards of Official Conduct standing authority to conduct investigations relating to the standards of official conduct and to recommend appropriate administrative or disciplinary actions. For several months our committee has been gathering relevant information about questionable contacts between Members of the House of Representatives and representatives of the Korean Government. Our committee is prepared to proceed vigorously with an investigation under our current authority.

Nevertheless, both I and the members of my committee believe that it is particularly important under the current circumstances that the full House of Representatives demonstrate at the outset its commitment to a full and fair investigation. It is for this reason that Mr. SPENCE, the ranking minority member, and I are seeking this special resolution.

In addition, the resolution deals with procedural matters that would supplement the Rules of the House of Representatives. These additional procedures are necessary in an investigation of the type under consideration, not only to facilitate a thorough investigation, but also to insure the fairness of the investigation. It is our intention to conduct as complete an investigation as possible before proceeding with general hearings and before instituting any proceedings with respect to specific individuals.

Our goal is to be able to pursue all relevant evidence wherever it may be. The thoroughness and effectiveness of our investigation will depend to a large extent on the ability of the committee to require answers to interrogatories and to secure depositions of witnesses prior to formal hearings. These procedures are provided for in section 4 of the resolution, which deals generally with the committee's subpena power. These provisions are patterned after the provisions in House Resolution 803 of the 93d Congress, the authorizing resolution for the Judiciary Committee's impeachment inquiry.

However, House Resolution 252 differs in that a Member must be present at all depositions, and, I assure you, that no subpena shall be issued, or deposition or interrogatory taken, unless authorized by a majority of the committee members voting, a majority being present. Section 5, also like House Resolution 803, would permit the committee to meet at any time and any place, including outside the United States. In this investigation, where witnesses may be located overseas and may be unwilling to journey to the United States, it is important that the committee be able to obtain testimony wherever the witness may be found.

Section 6 would make it clear that the committee has the right to appear in court through special counsel, on behalf of both the committee and the House, in any proceeding relating to the investigation. I should note that the committee already has retained the law firm of Hughes, Hubbard, & Reed to assist the committee in its investigation. The efforts of that firm will be under the direction of Mr. Philip A. Lacovara, who previously was counsel to the Special Prosecutor under both Messrs. Cox and Jaworski.

Finally, section 7 states that the authority conferred by this resolution is in addition to the authority conferred upon the committee by the Rules of the House of Representatives. The funding for the investigation will come from the general funds made available to the committee unless additional funding is subsequently approved.

Mr. Speaker, I urge the adoption of House Resolution 252.

Mr. QUILLEN. Mr. Speaker, I yield such time as he may consume to the gentleman from Florida (Mr. YOUNG), after which I yield 2 minutes to the distinguished ranking member of the House Committee on Standards of Official Conduct, the gentleman from South Carolina (Mr. SPENCE).

Mr. YOUNG of Florida. Mr. Speaker, ever since headlines flashed across our Nation's newspapers in December and January, relating in alarming detail the activities of Tongsun Park and his associates in allegedly buying the political influence of some 50 or 60 U.S. Congressmen, the American people have waited for some positive action by this House to clearly investigate those charges. House Resolution 252 is the first significant step in that direction, and I am happy to support it. It is not the only necessary step, but it is an important one.

The faith of the American people in its elected officials is at a very low ebb, and no wonder. The very word "Congressman" draws pictures in the minds of many of Watergate, sex, and drinking scandals, and now sadly the buying of political favors by a foreign government. Our distinguished Speaker has been quoted in the New York Times as admitting that—

> We have to face the fact that the public is cynical about its officials in general, and about Congress in particular.

And he is right.

The Committee on Standards of Official Conduct has a difficult task before it. Not only are the mechanics of the investigation important, the thorough and fair probing of the activities of all those Members in question, but the sincerity of its motivation is in question. We have all been told by the American people and the American press that they question that Congress is capable of "cleaning its own house," "investigating its own kind," "doing its own laundry."

In effect, the investigation by this committee and its success or failure not only concerns the reputations and credibility of those Members being investigated, but in fact the reputations of all Members of the House of Representatives. Proof of guilt or innocence must be absolutely certain. It must be established beyond the shadow of a doubt, and if the alleged offenders are found guilty, they must be effectively dealt with by this body. Our country cannot support and Congress cannot risk any kind of whitewashing of this matter.

This investigation by this committee should not only encompass the efforts of its own members, but it should seek information from the other Government bodies that are also investigating this matter. No piece of information that would prove the guilt or innocence of the alleged offenders should be overlooked or discounted. Other committees, including those involved with funding this investigation, should cooperate in every way to bring this distasteful problem to a just conclusion as rapidly as possible.

It is my sincere hope, that once authorized by House Resolution 252, the Committee on Standards of Official Conduct will rise to the enormous responsibility assigned to it, and do the very necessary job before it with efficiency, dedication, and expediency.

Mr. SPENCE. Mr. Speaker, one additional reason for this resolution is to give the membership of this body the opportunity to express themselves to the American people and to reassure the American people that this body intends to deal with the allegations concerning Korean involvement with Members of Congress.

Mr. Speaker, I think our committee is uniquely qualified to undertake this inquiry and investigation because the Committee on Standards of Official Conduct is the only politically balanced committee that we have in the House. I can assure the Members of this body that from my discussions with our membership and, incidentally, 5 of our 12 members are new members this year, and our staff counsel, that we intend to show no favoritism, to tolerate no coverup of the dealings of any person, regardless of position or political affiliation.

Mr. KETCHUM. Mr. Speaker, will the gentleman yield?

Mr. SPENCE. I yield to the gentleman from California.

Mr. KETCHUM. Mr. Speaker, I thank my friend, the gentleman from South Carolina, for yielding.

I asked the gentleman to yield for the purpose of asking a question which perhaps the gentleman might not be able to answer, deferring to the chairman of the Committee on Ethics. The first "whereas" in the resolution prohibits Members of Congress from accepting any present, emolument, office, or title from any foreign government without the consent of Congress.

Now, while the primary purpose, obviously, is the investigation of alleged discrepancies dealing with South Korea, is the committee going to devote any time at all to inquiring as to trips taken to the People's Republic of China and to Cuba, as an example, where I read in the Congressional Quarterly that those trips were paid in part by those countries and by this Government.

The SPEAKER pro tempore. The time of the gentleman from South Carolina has expired.

Mr. QUILLEN. Mr. Speaker, I yield 2 additional minutes to the gentleman from South Carolina.

Mr. KETCHUM. Mr. Speaker, will the gentleman yield further?

Mr. SPENCE. I yield to the gentleman from California.

Mr. KETCHUM. Mr. Speaker, when those are partly paid by the Government of the United States and partly by the People's Republics of China and Cuba, I am most interested if the committee will delve into that and justify those expenditures?

Mr. SPENCE. Mr. Speaker, my understanding is that this resolution deals with the Republic of Korea. We have a full enough job investigating the allegations made with regard to Korea, but I am convinced that if anyone brings any charges dealing with other nations, we will look into that.

Mr. KETCHUM. Mr. Speaker, if the gentleman will yield further, this gentleman is not making a charge. I am only making a statement which is in the Congressional Quarterly that trips to the People's Republic of China were funded partly by this country and partly by the People's Republic of China. If that is not legal, the committee should examine it and tell us if it is legal or not.

Mr. SPENCE. Mr. Speaker, I think the same would apply to any nation. This resolution has to do with Korea.

Mr. KETCHUM. Mr. Speaker, if the gentleman will yield further, it goes much further than that.

Mr. QUILLEN. Mr. Speaker, I know some Members have read the resolution and have found in some instances the language is very narrow. I am sure that the Committee on Standards of Official Conduct of the House will provide some guidelines on which to operate.

I know that this will be the case.

Mr. THOMPSON. Mr. Speaker, will the gentleman yield?

Mr. QUILLEN. I will be happy to yield to the gentleman from New Jersey.

Mr. THOMPSON. I thank the gentleman for yielding to me.

Mr. Speaker, I am constrained to disagree that the language is narrow. On page 6, section (g) it reads:

(g) For the purposes of this section, "things" includes books, records, correspondence, logs, journals, memorandums, papers, documents, writings, drawings, graphs, charts, photographs, reproductions, recordings, tapes, transcripts, printout, data compilations from which information can be obtained (translated, if necessary, into reasonably usable form), tangible objects, and other things of any kind.

It does everything but give everybody a .38 caliber pistol.

Mr. QUILLEN. I think if the gentleman will go to page 3, lines 4, 5, and 6, he will read that—

Members of the House of Representatives, their immediate families, or their associates accepted anything of value, directly or indirectly. . . .

Yet, the United States Code is less strict when it says that one cannot accept anything of value to influence a vote. This House and this committee is after corruption within those borders, within the framework of the Federal Government. Corruption is the thing we are after. I think the committee has done its best in this respect.

Mr. THOMPSON. I applaud the objective, but I do take exception to the gentleman's characterization of its being narrow.

Mr. GONZALEZ. Mr. Speaker, will the gentleman yield for a question?

Mr. QUILLEN. I will be happy to yield.

Mr. GONZALEZ. Has any discussion been held with respect to the techniques? Does this visualize the use of listening or electronic devices and the like?

Mr. QUILLEN. I made this statement as a member of the Rules Committee, and as a member of the Committee on Standards of Official Conduct, that there will be no use whatsoever of any kind of such device, either in the open or under the table. This member of this Committee on Standards of Official Conduct will not sit idly by and let anything like that happen.

I will yield at this time to the chairman of the committee for a reply.

Mr. FLYNT. Mr. Speaker, the committee certainly does not intend to use electronic devices, and will not tolerate the use of electronic penetration or listening or sound-gathering devices.

Mr. GONZALEZ. I thank the gentleman.

Mr. QUILLEN. Mr. Speaker, I yield 2 minutes to the gentleman from Virginia (Mr. BUTLER).

Mr. BUTLER. I thank the gentleman for yielding to me.

Mr. Speaker, I had not anticipated participating in this debate, but I am concerned about some of the things I have heard this morning. If I could have the attention of the chairman of the committee, I would like to say to the chairman that we have been led to believe from a comment from the gentleman and from the ranking minority member today, that the committee is in a unique position to reassure the American people with reference to the ethics of the Congress.

Of course, the conduct of the committee in the past has not been that reassuring, so I would like to pursue with the gentleman a moment some questions which arise in my mind.

Specifically, let us assume that charges are made to the committee with reference to the conduct of an individual Member of this House, and the gentleman's committee, during the course of its investigation, concludes that the charges are groundless, that the conduct of the Member is not reprehensible and should not be subject to comment.

Now, where will we find that information? Will we be in the position, as Members of this House, and will the American people be in a position somewhere to go to a public record or a public report and decide whether they agree with the conclusion or not?

Mr. FLYNT. I will respond to the gentleman from Virginia by saying that under the circumstances which he outlines in the preface to his question, that if ever there is a complaint filed with this committee by a Member of the House in accordance with the rules of the House, that it will be fully and completely handled and reported to the House in accordance with the rules.

Mr. BUTLER. Will the gentleman respond further? Does that mean that we will know the committee's reaction to what comes to its attention, and the basis for that reaction?

Mr. FLYNT. Let me say to the gentleman from Virginia that he or any other Member of the House can receive any information along that line he requests.

The SPEAKER pro tempore. The time of the gentleman from Virginia has expired.

Mr. QUILLEN. Mr. Speaker, I yield 2 additional minutes to the gentleman from Virginia (Mr. BUTLER).

Mr. BUTLER. Will it be included in the gentleman's report? That is the concern I have.

Mr. FLYNT. Insofar as it is relevant to the complaint, the answer is yes.

Mr. BUTLER. Let me ask the gentleman further: The gentleman is asking for the authority to take interrogatories and depositions and to proceed in this fashion. Are these interrogatories and depositions available to the membership as soon as they are printed, or do they have to be entered into committee records to be available to us?

Mr. FLYNT. I would say, in response to the question of the gentleman from Virginia, that we are subject to certain rules of the House regarding executive sessions and the confidentiality of committee records and committee files.

The gentleman from Virginia may well be aware that our committee frequently receives totally frivolous complaints. We have not in the past, nor do we now see any necessity or even any justification for printing in the CONGRESSIONAL RECORD, or otherwise, frivolous complaints which have absolutely no foundation whatsoever.

The mere fact, I would say to the gentleman from Virginia, that a Member is investigated by the Committee on Standards of Official Conduct could be used, and would be used, in derogation of the individual Member or the employee of the House involved, even though he may or may not have done anything illegal or improper.

Mr. BUTLER. I thank the gentleman.

The SPEAKER. The time of the gentleman from Virginia has again expired.

Mr. QUILLEN. Mr. Speaker, I yield 1 additional minute to the gentleman from Virginia (Mr. BUTLER).

Mr. FLYNT. Mr. Speaker, if the gentleman is asking are we going to publish frivolous complaints, the answer is "No." If the gentleman is asking if we are going to make public records and reports of cases in which seven members of the committee vote to proceed and conduct the investigation, the answer would be "Yes."

Mr. BUTLER. I think the gentleman does not quite understand my problem. I have a feeling that the committee in the past has considered complaints of frivolity to be frivolous complaints and withheld their report from us, and I do not want that to happen again.

Mr. FLYNT. If the gentleman wants those frivolous reports made public, I think he has an adequate remedy in seeking an amendment under the Rules of the House.

Mr. BUTLER. If the complaints of misconduct deal with a Member who has left this House or who has resigned, would the gentleman consider it his responsibility under this resolution to report to us the finding with reference to that person?

Mr. FLYNT. Under the provision of the Constitution which gives the House disciplinary powers over Members and Members only, I would say "No."

Mr. SISK. Mr. Speaker, I yield 4 minutes to the gentleman from Connecticut (Mr. DODD).

Mr. DODD. Mr. Speaker, I would like to engage the chairman of the committee, the gentleman from Georgia (Mr. FLYNT), in a colloquy, if I might, for the purposes of establishing some legislative history in response to some questions I have regarding House Resolution 252.

First of all, Mr. Speaker, let me just say that I support strongly this resolution. I hope it is overwhelmingly adopted by this Congress as a testimony of our deep concern to improve the impression of this institution and furthermore our willingness to deal with the ethics of this House.

Mr. Speaker, if I may, I would like to refer the gentleman from Georgia to the "resolved" clause on page 3, beginning with line 1 and proceeding to lines 3 and 4, where we call for a full and complete inquiry to determine whether Members of the House of Representatives, their immediate families, or their associates accepted anything of value, directly or indirectly, from the Government of the Republic of Korea or representatives thereof.

Earlier in the "whereas" clause, Mr. Speaker, we talk about not only Members of the House but officers or employees as well.

Is it the gentleman's intention and the intention of the committee to include not only Members of the House but also officers of the House and employees as well as part of your investigation?

Mr. FLYNT. The gentleman is correct.

Mr. DODD. I would also like to inquire as to this. When we speak of the word "associates," I find the word "associates" to be a rather vague and broad term.

It is my assumption and, I would hope, the intention of the committee that this term would mean political and business associates and those representing a fiduciary relationship and would not encompass some nebulous, broad concept of who an "associate" might be?

Mr. FLYNT. The gentleman is correct. Mr. Speaker, let me say further to the gentleman from Connecticut (Mr. DODD), in reply to his question, that this choice of words was made in order to give authority to the committee to inquire into the indirect relationships covered by this resolution as well as the direct relationship.

Mr. DODD. Mr. Speaker, I thank the chairman of the committee.

My last point is this: Continuing along in that line 5 of the "resolved" clause, it says, "accepted anything of value, directly or indirectly . . ."

What is the committee's intention with regard to that language? In the past we have talked of substantial value. "Anything of value" appears to be far too broad language.

What is the intention of the committee on that point?

Mr. FLYNT. It is the intention of the committee to interpret that language as substantial value.

Mr. DODD. Mr. Speaker, my last question of the gentleman has to do with section 4 on page 5 as it relates to subpena power. My question is whether or not the chairman of the committee intends to proceed in issuing subpenas by having a vote of the committee, or, as the resolution now reads, will there merely be a decision made by the committee chairman or the ranking minority member?

Mr. FLYNT. Mr. Speaker, actually I believe that the language to which the gentleman from Connecticut (Mr. DODD) refers applies to the mechanical aspects of the issuance of a subpena.

It is the intention of the ranking minority member of the committee, the gentleman from South Carolina (Mr. SPENCE), and me not to sign any subpena which has not been authorized by a majority of the committee members voting, a majority being present.

I made that same statement before the Committee on Rules, which statement was concurred in by the gentleman from South Carolina (Mr. SPENCE). We agreed at that time that neither he nor I will sign or issue any subpena unless the subpena in question has been properly authorized by the committee.

Let me make this clear: The Rules of the House of Representatives require that a subpena be authorized only by a majority of the members voting, a majority being present. I assure you that although there have been some changes in the House rules as to certain other committees and a provision has been made that for certain purposes a quorum can consist of less than a majority, there will be no subpenas issued by our committee unless such subpena has been authorized by a majority of the committee members voting, a majority being present.

Mr. DODD. Mr. Speaker, I do not want the chairman of the committee to think that anything in these questions is designed or intended to attempt to limit the committee's authority, but I think these could be important points in terms of maintaining the integrity of the committee and defining its function.

Mr. SISK. Mr. Speaker, I yield 2 minutes to the gentleman from Missouri (Mr. VOLKMER).

Mr. VOLKMER. Mr. Speaker, at this time I would also like to engage the chairman of the committee in a colloquy in regard to establishing perhaps some history in regard to this legislation.

I would first like to say that I, too, support the legislation, but there are some matters about which I would like to inquire.

First, I would like to ask the gentleman this: I notice in the resolution the language pertains only to present Members of Congress; is that correct?

Mr. FLYNT. Mr. Speaker, if the gentleman will yield, I think the language actually refers to "Members," and that would be interpreted by the Member now speaking as present Members.

Mr. VOLKMER. It does not extend to former Members of Congress as far as taking any type of action is concerned; is that correct or not correct?

Mr. FLYNT. Except, I would say to the distinguished gentleman from Missouri, that where the investigation requires investigation into facts and circumstances in which persons not Members of the House are involved. We will not let our investigations run into a stone wall because of that language.

As far as any disciplinary power is concerned, I would say that the disciplinary power of this committee and of the House is limited to Members, officers, and employees presently serving.

Mr. VOLKMER. The gentleman anticipates, then, that the committee's investigative power would include former Members and that, if necessary to obtain the information, et cetera, the committee would pursue that phase of it also; is that correct?

Mr. FLYNT. If the gentleman will yield further, the answer is yes.

Mr. VOLKMER. I would also like to inquire into this matter: At the present time there is an ongoing investigation by the Justice Department into the same area; is that correct?

Mr. FLYNT. We understand that there may be at least two parallel investigations going on in the same area.

Mr. VOLKMER. Has the chairman been in contact at all with the Justice Department?

Mr. FLYNT. Yes, we have.

Mr. VOLKMER. And the committee does not intend, by this investigation, to usurp or replace the Justice Department's investigation, or does it?

Mr. FLYNT. Not only do we not intend to, we could not if we did desire to. As far as I know, the investigations will be carried on in a parallel fashion.

The SPEAKER pro tempore. The time of the gentleman from Missouri (Mr. VOLKMER) has expired.

Mr. SISK. Mr. Speaker, I yield 1 additional minute to the gentleman from Missouri.

Mr. VOLKMER. Mr. Speaker, I would like to pursue this just briefly.

In other words, the committee plans to work together as much as possible with the Justice Department on this matter; is that correct?

Mr. FLYNT. If the gentleman will yield further, we have so requested, yes. We have asked for their cooperation and have assured the Justice Department of ours.

Mr. VOLKMER. Mr. Speaker, I thank the gentleman.

Mr. QUILLEN. Mr. Speaker, I yield 2 minutes to the gentleman from Ohio (Mr. LATTA).

Mr. LATTA. Mr. Speaker, I strongly support this resolution; however, I feel that the rules of the House should be

made sufficiently broad to give this Committee on Standards of Official Conduct sufficient power to investigate such matters whenever and wherever they may arise, and to do so forthrightly and vigorously, without coming to the House for special authority. I think in the future we should consider going in this direction so that this committee has such authority.

Mr. Speaker, I now ask the chairman of the committee whether he will kindly answer just a couple of questions about this resolution.

I am a little bit disturbed that on page 3 we limit the inquiry to the investigation to the activities of the Government of the Republic of Korea, whereas on page 2 of the resolution, in the "Whereas" clause, it says:

> Whereas information has come to the attention of the House of Representatives alleging that Members of the House of Representatives have been the object of efforts by certain foreign governments . . .

It says "governments," plural. Page 3 language limits it to the Republic of Korea.

In answer to a question raised by the gentleman from California (Mr. KETCHUM), I understood the chairman to say that the committee was going to direct its investigation only to the Government of the Republic of Korea. Why is it that the resolution refers to "governments" and the investigation is to be limited to the Republic of Korea?

Mr. FLYNT. If the gentleman will yield, Mr. Speaker, I think the record will show that the gentleman from California (Mr. KETCHUM) addressed his questions to the gentleman from South Carolina. Therefore, I would ask the gentleman from South Carolina to answer them.

Insofar as this Member recalls, there were no questions asked of him.

Mr. LATTA. Would the gentleman care to answer my question?

Mr. FLYNT. I give the same answer that the gentleman from South Carolina gave, that the present investigation is restricted to the Republic of Korea.

Mr. LATTA. Then if it came to the committee's attention in the course of its investigation, that other foreign governments were improperly lobbying Members of Congress—perhaps on a foreign aid bill, where they want to increase the aid to their countries or they improperly lobbied a Member on a trade bill or a sugar bill, things of that nature—would the Committee on Standards of Official Conduct choose to investigate these matters?

Mr. FLYNT. We would certainly not overlook it. However, the scope of this inquiry and investigation is going to be broad enough as it is.

At this point the committee has no information along that line. If the gentleman has any information, we would be glad to receive it; but at this time the scope of this inquiry and investigation does not go beyond the language of this resolution.

Mr. LATTA. Mr. Speaker, the gentleman apparently did not hear what I asked. The question was, If—and I repeat the word if—it came to the committee's attention during the course of its investigation that other countries had been improperly lobbying Members, would the committee choose to go into these matters?

The SPEAKER pro tempore. The time of the gentleman from Ohio (Mr. LATTA) has expired.

Mr. QUILLEN. Mr. Speaker, I yield 1 additional minute to the gentleman from Ohio.

Mr. LATTA. To continue, I think this is very important, Mr. Speaker, because I do not think that we ought to single out one particular country and limit the inquiry as to the wrongdoing of this country when other countries may have been doing something similar, but not getting the same publicity.

If such matters to which I have referred come to the committee's attention, Mr. Speaker, I think they should be brought to the attention of this House and to the attention of the American people.

Mr. Speaker, I, for one, sense an insidious movement going on in this country to cut this little friendly country loose from any ties with the United States of America and to let it float by itself. Should this happen, I am confident it will eventually end up in the Communist camp. I do not want to see this happen. So, if it comes to the attention of the gentleman from Georgia that other countries have been improperly lobbying Members of Congress, I hope he will bring these facts to the attention of the House.

Mr. FLYNT. Mr. Speaker, let me say to the gentleman from Ohio that our inquiry is going to be conducted strictly pursuant to the terms of this resolution and strictly pursuant to the terms of a committee resolution, which the committee adopted yesterday contingent on the adoption of this resolution by the House. We are going to fully and totally explore, inquire into, and investigate every lead that comes to our attention.

Mr. LATTA. Mr. Speaker, I thank the gentleman from Georgia.

So, at least if it came to the attention of the gentleman from Georgia that country X had been doing something improper to influence Members of the Congress in their official duties that the gentleman would choose to reveal its activities as well as those of the Republic of Korea?

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. QUILLEN. I yield 2 additional minutes to the gentleman from Ohio.

Mr. FLYNT. Mr. Speaker, if the gentleman will yield, let me say that we are going to do a thorough and complete investigation pursuant to the terms of this resolution and the committee resolution which was adopted yesterday.

Mr. LATTA. Mr. Speaker, I thank the gentleman from Georgia for the comments he has made.

Mr. QUILLEN. Mr. Speaker, let me say to the gentleman from California (Mr. SISK) that I have three additional requests for time which will total about 5 minutes. Would the gentleman prefer that I continue to yield time?

Mr. SISK. Yes, Mr. Speaker, I would prefer that the gentleman from Tennessee yield time.

Mr. QUILLEN. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. Mr. Speaker, I thank the gentleman from Tennessee for yielding me this time. I would like to ask several questions of the gentleman from Georgia (Mr. FLYNT).

My first question is in regard to the language on page 3. First, let me state that in the rules of the House the Committee on Standards of Official Conduct is authorized, among other things, to investigate Members, officers, and employees of the House, and makes no mention of others. The language in the present resolution goes beyond the Members of the House of Representatives and refers "to their immediate families, or their associates."

Has the committee given any thought to the possibility of grounds for quashing a subpena based on the premise that the scope of the investigation outlined in this resolution goes beyond the jurisdiction and special oversight functions of the Committee on Standards of Official Conduct granted it under the rules of the House? Is there any danger of this happening?

Mr. FLYNT. Mr. Speaker, if the gentleman from Illinois will yield, we did go into that. This was included at the suggestion and at the request of the committee's counsel. He asked that this language be included in the form in which it now appears in the resolution because counsel expressed the opinion that there might be occasions or circumstances in which it is necessary to so inquire in order to conduct a completely thorough investigation.

Mr. MICHEL. I thank the gentleman from Georgia for his explanation. I might add that I am not quarreling with that, particularly in view of some of the things that have been publicly disclosed previously by the news media.

Now, if I might call the attention of the gentleman from Georgia to section 8 of the resolution before us now, which says:

> Any funds made available to the committee after the adoption of this resolution may be expended for the purpose of carrying out the inquiry and investigation authorized and directed by this resolution.

Further, the chairman, the gentleman from Georgia (Mr. FLYNT) is the author of House Resolution 233, referred to the Committee on House Administration, calling for a funding for your committee of $530,000 to carry out its functions and duties under the rules of the House. There is also a follow-up resolution, House Resolution 234 which was introduced and coauthored, I suppose by all the members of the Ethics Committee.

Mr. FLYNT. The gentleman is correct.

The SPEAKER. The time of the gentleman has again expired.

Mr. QUILLEN. Mr. Speaker, I yield 1 additional minute to the gentleman from Illinois.

Mr. MICHEL. House Resolution 234 states that the expenses of the committee "shall be paid out of the contingent fund of the House by vouchers authorized by such committee, and signed by the ranking majority member on such committee."

One route, House Resolution 233, authored by the chairman, would go through the Committee on House Administration and the other, House Resolution 234, I would assume, would allow the committee to draw their moneys directly from the contingent fund and bypass the Committee on House Administration. Am I correct in this?

Mr. FLYNT. Both resolutions have been referred to the House Committee on House Administration. Let me say that during the 94th Congress the House saw fit to give this committee the authority to draw on the contingent fund of the House. Let me say to the gentleman from Illinois—and I am glad that the gentleman from New Jersey (Mr. THOMPSON) is on his feet because I want him to understand this also—House Resolution 234, I believe, is the one which would provide for automatic funding.

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. QUILLEN. Mr. Speaker, I have two other requests for time, but I would be happy to yield 1 additional minute to the gentleman from Illinois (Mr. MICHEL). I might ask my friend, the gentleman from California (Mr. SISK) if he would yield some time, and we will work it out.

Mr. SISK. Mr. Speaker, I yield 2 additional minutes.

Mr. MICHEL. Mr. Speaker, I will take the additional minute I have here to say that I think we ought to clarify the questions I have raised about the funding of this committee. I think we ought to know specifically if it is possible that the committee would use the entire $530,000 that is embodied in House Resolution 233 for this South Korean investigation.

Mr. FLYNT. If the gentleman would yield, the gentleman is absolutely correct. If I may—and I hope the gentleman can get additional time, if necessary for me to fully respond to the gentleman's question—this committee is the most difficult committee in the world for which to prepare a budget. No matter what this committee asks for, it is either too much or too little. I do not think that anybody at any time at any place in this body has ever been satisfied with the budget that this committee requested. Our budget has probably been cut more than any budget requested by any committee in the Congress of the United States.

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. QUILLEN. Mr. Speaker, I yield 1 additional minute to the gentleman from Illinois (Mr. MICHEL).

Mr. SISK. Mr. Speaker, I yield 2 additional minutes to the gentleman.

Mr. MICHEL. I thank both gentlemen.

Mr. FLYNT. If the gentleman from Illinois (Mr. MICHEL) would yield further, the staff, the ranking minority member of the committee and I worked diligently on the preparation of the budget which we asked the committee to authorize us to submit to the Committee on House Administration. We discussed several figures. Every figure that we discussed in the preliminary planning of our budget was in excess of the amount which the gentleman from South Carolina (Mr. SPENCE) and I recommended to the committee. As a matter of fact, Mr. SPENCE and I recommended the amount of $483,000. We went to that lower figure because this committee, among other things, has been subjected to a substantial amount of criticism because of the size of a previous budget that we requested. We recommended that figure. Immediately one of the members of the committee asked unanimous consent that it be increased from $483,000 to $530,000. Unanimous consent was granted. The amended figure was amended by unanimous consent again. A member of the committee offered an amendment to increase it from $530 to $875,000.

I voted for the increased amount because I have no idea what this investigation is going to take. The vote on the amendment to increase the amount to $875,000 resulted in a 4 to 4 tie. Under the custom of our committee whenever we have a tie vote we suspend for up to a maximum of 15 minutes to give any members who had been present during that session, but left, an opportunity to come back and vote if he or she so desires. A member was called and within 15 minutes he came back and he voted against the increased figure.

During the discussion of the budget proposal every member of the committee raised the question: Could we ever anticipate the exact amount that we would need or a reasonably approximate amount? The answer was given by every member of the committee who had prior service on this committee, that is before the 95th Congress, there is no way on earth to anticipate how much we will need.

The SPEAKER pro tempore. The time of the gentleman from Illinois has expired.

Mr. SISK. I yield the gentleman from Illinois 1 additional minute.

Mr. MICHEL. Mr. Speaker, I want to make clear for those of us who are very mindful of what we are spending on ourselves around here, whether it is this investigation or another, that I do not want to have anyone believe that I intend in any way to inhibit the scope of this investigation by putting a hard-and-fast cap on the funding. Far be it from me to do that, but by the same token this House has an obligation to get some idea how much money the committee expects to spend on this investigation and by what method the committee will be funded.

Mr. FLYNT. Mr. Speaker, if the gentleman will yield further, may I say this: I think we can do it for $530,000. I am not sure of that, but I think we can.

Mr. MICHEL. I can only hope we will start this investigation and see later just exactly where we are, and then I think the House would be amenable, based on the information it would have at that time, to any possible increase in funding.

Mr. FLYNT. I hope the gentleman's assumption is correct.

Mr. SISK. Mr. Speaker, I yield 2 minutes to the gentleman from New Jersey (Mr. THOMPSON).

Mr. THOMPSON. Mr. Speaker, to further the colloquy between the two gentlemen, I would like to make two things clear with respect to the Committee on House Administration and funding.

First, if this Member has anything to say about it, authority will not be given to the committee chaired by my distinguished friend, the gentleman from Georgia, to go to the contingent fund of the House. Rather the resolutions will and should, as they do now, go to the Committee on House Administration. I recognize fully the chairman's difficulties in arriving at a specific sum of money. It is extremely difficult. As soon as is possible the distinguished gentleman from Pennsylvania (Mr. DENT), the chairman of the Subcommittee on Accounts, will have referred to his subcommittee the money resolution requested jointly by the gentleman from South Carolina (Mr. SPENCE) and the gentleman from Georgia (Mr. FLYNT).

There will be testimony taken and there will be justification required.

We do not want, as the gentleman from Illinois indicated, in any way to inhibit a full and fair needed investigation. On the other hand we must see, as responsible Members of this body, justification for the amount. It would seem to me from the knowledge which I already have accumulated on this subject that the figure stated by the gentleman from Georgia (Mr. FLYNT), approximately $530,000, would seem reasonable and that he and the gentleman from South Carolina (Mr. SPENCE) would be able to justify that before the committee.

Further, all the Members of this body by going through the House Administration route will be protected and will have in each and every instance, if further moneys are required, the opportunity to debate and to vote on that money. That is the responsible way in which it should be done and it is my intention that it should be done in that way.

Mr. QUILLEN. Mr. Speaker, I yield 1 minute to the gentleman from Pennsylvania (Mr. WALKER).

Mr. WALKER. Mr. Speaker, I intend to vote for House Resolution 252, but I say that reluctantly. I question whether this resolution is adequate for the job that must be done.

On January 27, I introduced House Resolution 202 calling for the creation of a select committee to investigate the so-called South Korean scandal. My resolution would grant broad powers to the select committee. This type of special investigation, with clearly defined jurisdiction, is what the American public deserves.

Because I felt a select committee investigation was the best possible course of action, I informed President Carter of my resolution and asked for his opinion. In my letter to President Carter I said:

I have introduced legislation to create a Select Committee to investigate these allegations. The only way that this case can be closed forever is to include anyone, present and former members of the legislative and Executive alike, who could have been involved in these most serious allegations of misconduct. In light of your remarks last Wednesday, I'm sure you also want to see a full public disclosure, and I would like to know your position on the matter of creating a Select Committee.

In President Carter's reply, which I received just this week, he said:

I believe your suggestion of an investigation is a good one.

Obviously, President Carter agrees that only the most complete, the most thorough, the most comprehensive investigation will suffice. I hope this resolution will accomplish that goal.

Mr. QUILLEN. Mr. Speaker, I am happy to yield the last 2 minutes to the gentleman from California (Mr. KETCHUM).

Mr. KETCHUM. Mr. Speaker I thank the gentleman for yielding.

Mr. Speaker, I direct my questions, and that is the purpose for taking this time, to the distinguished chairman of the committee, the gentleman from Georgia (Mr. FLYNT).

Mr. Speaker, I think where the confusion is arising is that this resolution is very poorly drafted. In the "whereas" column it talks about foreign governments and in the "resolved" column it talks about only one government. If we refer to page 2 it says, "by certain foreign governments or persons and organizations acting on behalf of foreign governments including the Government of the Republic of Korea."

Then in the "resolved" clause it says just Korea.

Mr. Speaker, the question keeps arising about the People's Republic of China and the Government of Cuba. The questions. I have asked have not been asked and they have not been answered. Is it the chairman's position that if I have a questions, I am not making any allegations, but if I have a question concerning the propriety of accepting those emoluments from foreign countries, that I must then make a formal complaint to the committee?

Mr. FLYNT. Mr. Speaker, if the gentleman will yield, if the gentleman is addressing that question to me, there are three ways to do it. The gentleman could do it by filing a complaint with the committee, by asking the committee for an opinion, or by introducing an appropriate resolution.

Mr. KETCHUM. Mr. Speaker, I appreciate the gentleman's answer. So which method was used here? We are only talking about one. Did someone in the House make an allegation?

I have all the papers, as does everybody else, but did someone make an allegation?

Mr. FLYNT. Mr. Speaker, if the gentleman will yield further, there was no specific allegation made. There have been a number of letters, which fall short of the formal requirements for a complaint. However, under the circumstances which existed at the time, the committee did not stand on formality and undertook during the 94th Congress and continued in the 95th Congress to proceed with this investigation.

Mr. SISK. Mr. Speaker, I yield such time as he may consume to the gentleman from Maryland (Mr. BAUMAN) for the purpose of asking a question.

Mr. BAUMAN. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, I want to direct a question to the gentleman from Georgia (Mr. FLYNT). There has been a great deal of speculation in the public press and in the media as to the numbers of Members involved in this Korean investigation. While I fully understand that the gentleman may not be able to give a precise answer, I have heard figures as wild as 200 Members' names referred to the Justice Department and the minority leader of the other body said 30, 40 or 50 Members of the House are involved.

Can the gentleman from Georgia give us any estimate of the number of Members involved?

Mr. FLYNT. Mr. Speaker, if the gentleman will yield, at this point the gentleman from Georgia cannot give any numerical number.

Mr. BAUMAN. Can the gentleman say whether it is a few or a great number?

Mr. FLYNT. Mr. Speaker, if the gentleman will yield further, to be honest, we do not know at this point.

Mr. SISK. Mr. Speaker, I expect, unless my colleague desires to yield further, to move the previous question in a few moments.

Let me say that the question just raised by my colleague from Maryland was a question which was discussed in the Committee on Rules because of some of the rumors and comments that have been made. Of course, I think again we have seen or observed a demonstration of how sometimes our friends in the media like to stretch matters in order to make them look as bad as they possibly can for Members of Congress. Actually, under questioning, the members of the committee testifying, including the chairman, indicated that there was in fact no substance to assurances that there might have been 40 or 60 or 105 or any other number actually involved.

I appreciate the interest of my colleague from Maryland, because I do think sometimes—and it is rather deplorable—we see these numbers tossed around, and once we see them they proceed to paint the darkest possible picture with the highest possible number. That seems to be one of those things we experience.

Let me say in conclusion that I support this resolution. I hope the committee is able to come up with adequate and ready answers and that, in fact, it will tend to do those things which will restore greater confidence in the Congress of the United States by the American public.

Mr. HANNAFORD. Mr. Speaker, I would like to add my voice to that of many of my colleagues in support of a strong, thorough investigation of the charges that Members of Congress have accepted bribes from representatives of the Government of South Korea.

In recent years, the Congress has been repeatedly attacked as corrupt and unethical. The immoral activities of a relatively few Members have reflected adversely on the honesty and integrity of us all.

The news reports of the activities of alleged South Korean intelligence agents in this country imply that a large number of former and present Members of Congress could be involved in related illegal activities.

I believe that these reports can only result in a continued lowering of respect for Congress by the American people. The correct, and only, course of action for the House to follow is to authorize and fully support a complete and objective investigation of these charges by the Ethics Committee.

We should make it clear to the committee and its staff and to the American people that we are not seeking and will not be satisfied with anything less than the complete truth about the illegal lobbying techniques of South Korean agents, that we intend to pursue the evidence wherever it might lead and whomever it might involved. If we expect the American people to have any repect for us or confidence in us in the future, we can do no less.

Mr. HAMILTON. Mr. Speaker, like most people I am disturbed by recent allegations that Members of Congress have accepted money and gifts from representatives of the Republic of Korea. These allegations, many of which appear to be well documented, give me reason to believe that Members of Congress may be in violation of provisions of the U.S. Constitution, the Federal Criminal Code, and the Rules of the House of Representatives. A full and complete investigation of the substance of these allegations must be undertaken without delay.

Therefore, I wish to express my support for House Resolution 252, a resolution directing the Committee on Standards of Official Conduct to conduct an appropriate inquiry.

Mr. Speaker, I am aware that wrongdoing and the appearance of wrongdoing on the part of elected officials seriously erode the confidence that many Americans have in their Government. It is no exaggeration to say that this erosion of confidence is one of the gravest problems facing our Nation today. Confidence will not be restored until allegations of abuse of office have been thoroughly and fairly examined.

As a member of the Committee on Standards of Official Conduct, I urge prompt action on the measure before us.

Mr. THONE. Mr. Speaker, just a few rotten apples can make the whole barrel smell badly. The revelations that some Members of the House of Representatives have accepted large sums from agents of foreign nations reflects badly on all of us. The only means we have of restoring the reputation of this body as a whole and all those individual Members who have not been involved in such misdeeds is to make public all the facts.

Therefore, I enthusiastically support House Resolution 252. We must give the Committee on Standards of Official Conduct all the tools they need to undertake a thorough investigation. Further we

must give them wholehearted backing in pursuing this matter.

Since some of the Members of this body—including some in positions of leadership—have admitted taking large amounts of cash from South Korean emissaries, there ought to be an outside investigation of the matter. Twelve of us in the House have written President Carter, asking that he appoint a special prosecutor to pursue this scandal.

The President has replied as follows:

Thank you for sharing with me your concern about alleged payoffs to Congressional members by the Korean government. I, too, am concerned by the implied involvement of the Korean government and its emissaries, and I believe your suggestion of an investigation is a good one.

I would like for Griffin Bell to be aware of your suggestion of a Justice Department effort to get to the bottom of the matter, so I have asked him to review your letter.

Hopefully, the Attorney General's review at the request of the President will result in thorough pursuit of this scandal. But we must also take steps to clean our own House. We must not only ferret out all those who have recently been involved in accepting contributions from representatives of foreign governments but also take steps to guard against repetition of such wrongdoing in the future.

Mr. Speaker, I urge passage of House Resolution 252.

Mr. MAZZOLI. Mr. Speaker, I rise in support of House Resolution 235, directing the House Committee on Standards of Official Conduct to conduct an inquiry to determine whether Members of the House, their immediate families, or their associates have accepted anything of value from the South Korean Government or its representatives.

Charges of congressional wrongdoing have flown fast and furious in recent months. My constituents are concerned. The general public is concerned. I am concerned.

Mr. Speaker, I cannot judge the truth or the falsity of reports alleging misconduct on the part of House Members in accepting gifts from the Korean Government.

But, in view of the many questions which have been raised, it is imperative that the Standards Committee conduct an exhaustive and unflinching investigation of the so-called Korean Connection and to bring all wrongdoing and all wrongdoers to an accounting.

To do less would be a serious disservice to the Congress and to our citizenry.

The bottom line here is: The House must press to the very heart of the "Korean Connection" letting the chips fall where they may.

Mr. WEISS. Mr. Speaker, I support this resolution as a continuation of my commitment to work for a high standard of conduct by Members of Congress.

This resolution authorizes and directs the Committee on Standards of Official Conduct to conduct a full and complete inquiry and investigation to determine whether Members of the House, their immediate families, or their associates accepted anything of value, directly or indirectly, from the Government of the Republic of Korea or its representatives. The committee will determine to what extent, if any, Members of Congress have violated our own Code of Ethics and will recommend appropriate action to the House.

We have the obligation and opportunity to put our House in order. The American people expect us to fulfill that obligation.

Mr. SISK. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the resolution.

The question was taken.

Mr. SISK. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 388, nays 0, answered "present" 1, not voting 42, as follows:

Mr. Pepper with Mr. Ammerman.
Mr. Stark with Mr. Jenkins.
Mr. Gibbons with Mr. Gudger.
Mr. Krueger with Mr. Jacobs.
Mrs. Keys with Mr. Heftel.

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERSONAL EXPLANATION

Mr. BEARD of Rhode Island. Mr. Speaker, due to a malfunction of the notification device in my office, I missed the vote on the House resolution to investigate alleged improper South Korean influence on Members of Congress. I have registered a complaint to the manager of the Democratic cloakroom on the nature of this incident.

Had I been present, I would have voted for the resolution, which did pass by an overwhelming margin.

PERMISSION FOR COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION TO HAVE UNTIL MIDNIGHT, FRIDAY, FEBRUARY 11, 1977, TO FILE REPORTS ON CERTAIN BILLS

Mr. JOHNSON of California. Mr. Speaker, I ask unanimous consent that the Committee on Public Works and Transportation may have until midnight, Friday, February 11, 1977, to file reports on the following bills:

H. R. 26, to provide improved notice to the public of changes in air carrier fares;

H. R. 27, to authorize reduced fare transportation for elderly and handicapped persons;

H. R. 735, relating to eligibility for aircraft registration;

H. R. 736, relating to emergency locator transmitters; and

H. R. 284, to amend the John F. Kennedy Center Act to authorize funds for certain repairs and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

AMENDING THE SMALL BUSINESS ACT AND THE SMALL BUSINESS INVESTMENT ACT OF 1958

Mr. LONG of Louisiana. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 270 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 270

Resolved, That upon the adoption of this resolution it shall be in order to move, section 402(a) of the Congressional Budget Act of 1974 (Public Law 93-344) to the contrary notwithstanding, that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 692) to amend the Small Business Act and the Small Business Investment Act of 1958 to increase loan authorization and surety bond guarantee authority; and to improve the disaster assistance, certificate of competency and Small Business set-aside programs. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Small Business, the bill shall be read for amendment under the five-minute rule by titles instead of by sections. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto without intervening motion except one motion to recommit.

The SPEAKER. The gentleman from Louisiana (Mr. LONG) is recognized for 1 hour.

Mr. LONG of Louisiana. Mr. Speaker, I yield the usual 30 minutes to the minority, the distinguished gentleman from Mississippi (Mr. LOTT) pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 270 provides for the consideration of H.R. 692, a bill which amends the Small Business Act and the Small Business Investment Act of 1958 to increase loan authorization and surety bond guarantee authority; and to improve the disaster assistance, certificate of competency, and small business setaside programs.

H.R. 692 is divided into 6 titles as follows:

Title I—increases SBA's authorizations and limitations for fiscal year 1977 as needed and establishes operating levels for all of SBA's programs for fiscal years 1978 and 1979.

Title II—makes miscellaneous conforming and technical amendments to the Small Business Act and the Small Business Investment Act of 1958.

Title III—authorizes SBA to provide financial assistance to small homebuilders; enlarges the eligibility for SBA compliance loans; and authorizes up to a 5 year moratorium on repayment of SBA loans.

Title IV—authorizes SBA to make displaced business loans to a small concern which has been displaced by a project of a State or local government. It also authorizes SBA to make economic injury loans to small business concerns in an area affected by a natural disaster upon the request of the Governor of the State involved.

Title V—expands SBA's certificate of competency program by giving to SBA the final determination of all elements of responsibility and eligibility of a small business for purposes of bidding on Government contracts.

Title VI—directs Federal agencies, to the extent feasible, to divide small business setaside contracts into amounts of less than $1 million each.

Mr. Speaker, this bill is an omnibus bill that makes those changes in the law which have been agreed to overwhelmingly by the Small Business Committee. The vote in committee was 23 to 0.

Under the bill as presently written there is a need to waive points of order as to section 402 of the Budget Act of 1974 because section 101 of H.R. 692 contains an authorization for fiscal year 1977. It should be noted, however, that the section in violation will be deleted from the bill, by the Committee on Small Business through amendment immediately after the adoption of this rule. The section is no longer necessary because the identical authorizations were passed on February 1, 1977, in H.R. 2467. The Committee on Rules, however, felt that the waiver was still necessary in order to avoid a point of order from being lodged prior to the amendment to delete being offered.

As the Committee on Small Business stated in its report on the bill:

The provisions of this encompassing bill are needed by the Nation's small businessmen if a climate is to be provided in which they may prosper.

Mr. Speaker, I urge the adoption of House Resolution 270 so that we may debate and vote on H.R. 692.

Mr. LOTT. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, as indicated by the gentleman from Louisiana, House Resolution 270 is a 1-hour, open rule providing for consideration of H.R. 692, the Small Business Act and the Small Business Investment Act Amendments of 1977. The resolution waives section 402(a) of the Congressional Budget Act because section 101 of the bill contains a 1977 fiscal year authorization. Since the Budget Act requires legislation authorizing new budget authority for a fiscal year to be reported on or before May 15 preceding the beginning of that fiscal year, a waiver of the provision of the Act is necessary in order even to consider the measure.

In any event, because H.R. 2647, which passed the House on February 1, is identical to section 101 of the bill before us, it is my understanding that an amendment will be offered to strike this section from the legislation.

Very briefly, H.R. 692 proposes:

First, to increase SBA's loan authorization and surety bond guarantee authority;

Second, to improve SBA disaster assistance and set-aside programs;

Third, to provide SBA financial assistance to small homebuilders;

Fourth, to make displaced business loans to small concerns which have been displaced by State or local projects; and

Fifth, to expand SBA's certificate of competency program.

Costs during the current and next 5 fiscal years are estimated at less than $185 million.

All of these modifications in the Small Business and Small Business Investment Acts are justified. I support them and am pleased especially that the bill includes small homebuilder assistance and displaced business loans to small firms which have been inconvenienced by State or local government projects.

Mr. Speaker, I intend to vote for this rule which allows the bill to be read by titles instead of by sections. Upon its adoption, I also intend to support the passage of the legislation.

Mr. LONG of Louisiana. Mr. Speaker, I yield to the gentleman from Florida (Mr. SIKES) such time as he may consume.

Mr. SIKES. Mr. Speaker, I support the rule and the legislation now before the House. At a time when we hear a great deal about the need for eliminating useless or duplicative Federal agencies and programs, it is worth noting one of the agencies in Government which positively and effectively meets its responsibilities. I refer to the Small Business Administration. The work of this Agency provides a pleasing contrast to some which seem to be more intent upon injecting themselves and their regulations into the day-to-day business of commerce and industry and into the lives of private individuals.

In the SBA we find dedicated men and women who are in business to promote business for others rather than for themselves; to help businessmen and industrialists to expand or to function more efficiently. One need only to travel across the Nation or to almost any city or town to see evidence that the Federal program to support and encourage small business is a success. True, there have been troubled areas as there are with almost any effort undertaken to assist people in helping themselves. But I am certain the good outweighs the bad many times over and I am proud to be among those who stand behind the work this worthwhile Agency of Government is doing.

If one were to study only the legalisms of SBA, it would seem it is charged primarily with helping supply the capital needed by small businesses for the purchase of equipment and supplies, for the expansion or construction of facilities, and to give a helping hand when working capital is needed. That may be the nuts and bolts of SBA, but it translates into better lives for thousands of families in our land who now own their own businesses or who work for a small business which would not exist were it not for the help afforded by SBA.

The SBA does a lot more than boost business. It creates independence for small business owners. It helps them compete with larger, richer, more powerful competitors. It opens the way to financial assistance at limited cost, helps the disadvantaged to a useful, productive life, it paves the way for the handicapped to become self-sufficient and hire others with similar handicaps to improve their lot in life by means of work instead of welfare.

The Small Business Administration programs provide disaster loans when needed and where needed, at rates within the reach of those hard hit by adversity. It provides the means for State and local development companies to encourage the creation of small business through seed money and other programs.

In short, Mr. Speaker, the programs of the SBA are the kind America needs. No responsibility of Government is more solemn than that of meeting the needs of those whose desire is to better themselves through work.

During this past year, small businesses have been especially hard hit by the weather, energy shortages, ever-rising production and marketing costs, and by consumer uncertainty. Many have been forced to close their doors and that is regrettable. But far more have managed to hang on through rough times with the help of SBA and to continue to contribute to the stream of commerce in our country.

Small business has played an important role throughout the history of our Nation. The giants of industry have made and poured wealth into our cities and industrial centers. But there still are the millions of small businessmen who go about their daily work of making the countless items and providing the multiple services without which the economy would falter. These small businessmen together provide as many or more jobs than do the giants and it is invaluable to them to know that if help be needed, the Small Business Administration is ready to help if money is made available by the Congress.

I repeat, Mr. Speaker, many, many programs have been created by the Congress. Too many of these are of little value. Some are best known for their nuisance effect. The Small Business Administration is not one of these. It is vital to our Nation and those who work for a better America. The addition in authorization and function provided in the pending bill are fully justified.

Mr. LONG of Louisiana. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. SMITH of Iowa. Mr. Speaker, I call up the bill H.R. 692 to amend the Small Business Act and the Small Business Investment Act of 1958 to increase loan authorization and surety bond guarantee authority; and to improve the disaster assistance, certificate of competency and small business setaside programs, and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

The Clerk read the bill as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—AUTHORIZATIONS AND LIMITATIONS

PART A

SURETY BOND GUARANTEES

SEC. 101. Section 412 of the Small Business Investment Act of 1958 is amended by striking out "$56,500,000" and by inserting in lieu thereof "$71,000,000".

BUSINESS LOAN AND INVESTMENT FUND

SEC. 102. Section 4(c) of the Small Business Act is amended by striking out "$6,000,000,000," and by inserting in lieu thereof "$8,000,000,000".

ECONOMIC OPPORTUNITY LOANS

SEC. 103. Section 4(c)(4) of the Small Business Act is amended by striking out "$450,000,000" and by inserting in lieu thereof "$525,000,000".

SMALL BUSINESS INVESTMENT COMPANIES

SEC. 104. Section 4(c)(4) of the Small Business Act is amended by striking out "$725,000,000" and by inserting in lieu thereof "$1,100,000,000".

PART B

LINE ITEM PROGRAM AUTHORIZATIONS

SEC. 105. Section 4(c) of the Small Business Act is amended by striking out paragraph (4) and by inserting in lieu thereof the following:

'(4) The following program levels are authorized:

"(A) For fiscal year 1978:

"(i) For the programs authorized by section 7(a) of this Act the Administration is authorized to make $400,000,000 in direct loans, $15,000,000 in immediate participation loans, and $2,500,000,000 in deferred participation loans.

"(ii) For the programs authorized by section 7(h) of this Act the Administration is authorized to make $20,000,000 in direct and immediate participation loans and $20,000,000 in guaranteed loans.

"(iii) For the programs authorized by section 7(i) of this Act the Administration is authorized to make $60,000,000 in direct and immediate participation loans and $81,000,000 in guaranteed loans.

"(iv) For the programs authorized by sections 501 and 502 of the Small Business Investment Act of 1958 the Administration is authorized to make $40,000,000 in direct and immediate participation loans and $20,000,000 in guaranteed loans.

"(v) For the programs authorized by title III of the Small Business Investment Act of 1958 the Administration is authorized to make $20,000,000 in direct purchase of debentures and preferred securities and to make $180,000,000 in guarantees of debentures.

"(v) For the programs authorized by part B of title IV of the Small Business Investment Act of 1958 the Administration is authorized to enter guarantees not to exceed $915,000,000.

"(vii) For the programs authorized by sections 7(b)(3), 7(b)(4), 7(b)(5), 7(b)(6), 7(b)(7), 7(b)(8), and 7(g) of this Act the Administration is authorized to enter loans, guarantees, and other obligations or commitments not to exceed $300,000,000.

"(B) for fiscal year 1979:

"(i) For the programs authorized by section 7(a) of this Act the Administration is authorized to make $440,000,000 in direct loans, $17,000,000 in immediate participation loans, and $2,800,000,000 in deferred participation loans.

"(ii) For the programs authorized by section 7(h) of this Act the Administration is authorized to make $22,000,000 in direct and immediate participation loans and $22,000,000 in guaranteed loans.

"(iii) For the programs authorized by section 7(i) of this Act the Administration is authorized to make $66,000,000 in direct and immediate participation loans and $89,000,000 in guaranteed loans.

"(iv) For the programs authorized by sections 501 and 502 of the Small Business Investment Act of 1958 the Administration is authorized to make $44,000,000 in direct and immediate participation loans and $22,000,000 in guaranteed loans.

"(v) For the programs authorized by title III of the Small Business Investment Act of 1958 the Administration is authorized to make $22,000,000 in direct purchase of debentures and preferred securities and to make $198,000,000 in guarantees of debentures.

"(iv) For the programs authorized by part B of title IV of the Small Business Investment Act of 1958 the Administration is authorized to enter guarantees not to exceed $1,010,000,000.

"(vii) For the programs authorized by sections 7(b)(3), 7(b)(4), 7(b)(5), 7(b)6), 7(b)(7), 7(b)(8), and 7(g) of this Act the Administration is authorized to enter loans, guarantees, and other obligations or commitments not to exceed $300,000,000.

SEC. 106. Section 403 of the Small Business Investment Act of 1958 is amended by striking out "from time to time such amounts not to exceed $10,000,000 to provide capital for the fund" and by inserting in lieu thereof ", as capital thereof, such amounts as may be necessary to carry out the functions of the Administration, which appropriations shall remain available until expended".

SEC. 107. Section 412 of the Small Business Investment Act of 1958 is amended by striking out "from time to time such amounts not to exceed $56,500,000 to provide capital for the fund" and by inserting in lieu thereof ", as capital thereof, such amounts as may be necessary to carry out the functions of the Administration, which appropriations shall remain available until expended".

SEC. 108. Part B of this title shall become effective on October 1, 1977.

TITLE II

MISCELLANEOUS CONFORMING AND TECHNICAL AMENDMENTS

SEC. 201. Section 4(c)(2) of the Small Business Act is amended by striking out "and 7(c)(2)" and by inserting in lieu thereof "7(c)(2), and 7(g)".

SEC. 202. Section 4(c)(5) of the Small Business Act is amended by striking out "Committees on Banking and Currency of the Senate and House of Representatives" and by inserting in lieu thereof "Committee on Banking, Housing and Urban Affairs of the Senate and the Committee on Small Business of the House of Representatives".

SEC. 203. Section 10(b) of the Small Business Act is amended by striking out "House Select Committee to Conduct a Study and Investigation of the Problems of Small Business" and by inserting in lieu thereof "Committee on Small Business of the House of Representatives".

SEC. 204. Section 10(e) of the Small Business Act is amended by striking out "House Select Committee To Conduct a Study and Investigation of the Problems of Small Business" and by inserting in lieu thereof "Committee on Small Business of the House of Representatives".

SEC. 205. Section 10(g) of the Small Business Act is amended by striking out "Banking and Currency" and by inserting in lieu thereof "Small Business".

SEC. 206. Section 5316 of title 5, United States Code, is amended by striking from paragraph (11) the figure "(3)" and by inserting the figure "(4)".

REPORTS TO THE PRESIDENT AND THE CONGRESS

SEC. 207. Section 10(a) of the Small Business Act (15 U.S.C. 639(a)) is amended by adding at the end thereof the following new sentence: "With respect to minority small business concerns, the report shall include the proportion of loans and other assistance under this Act provided to such concerns, the goals of the Administration for the next fiscal year with respect to such concerns, and recommendations for improving assistance to minority small business concerns under this Act.".

TITLE III—AMENDMENTS TO SMALL BUSINESS ADMINISTRATION LOAN AUTHORITY

HOMEBUILDERS

SEC. 301. Section 7(a) of the Small Business Act (15 U.S.C. 636(a)) is amended by inserting the following after the semicolon at the end of the first clause "or to finance residential or commercial construction or rehabilitation for sale: *Provided, however,* That such loans shall not be used primarily for the acquisition of land;".

COMPLIANCE LOANS

SEC. 302. Section 7(b)(5) of the Small Business Act is amended by inserting immediately after "any Federal law" the words "heretofore or hereafter enacted".

MORATORIUMS

SEC. 303. Section 5 of the Small Business Act is amended by adding at the end thereof the following new subsection:

"(f)(1) Subject to the requirements and conditions contained in this subsection, upon application by a small business concern which is the recipient of a loan made under this Act, the Administration shall assume the small business concern's obligation to make the required payments under such loan or shall suspend such obligation if the loan was a direct loan made by the Administration. While such payments are being made by the Administration pursuant to the assumption of such obligation or while such obligation is suspended, no such payment with respect to the loan shall be required by the small business concern.

"(2) The Administration shall assume or suspend for a period of not to exceed five years any small business concern's obligation under this subsection only if—

"(A) without the assumption or suspension of the obligation, the small business concern would, in the opinion of the Administration, become insolvent or remain insolvent;

"(B) with the assumption or suspension of the obligation, the small business concern would, in the opinion of the Administration, become or remain a viable small business entity; and

"(C) the small business concern executes a satisfactory agreement in writing as provided by paragraph (3).

"(3) Notwithstanding the provisions of sections 7(a)(4)(C) and 7(i)(1) of this Act, the Administration may extend the maturity of any loan on which the Administration assumes or suspends the obligation pursuant to this subsection for a corresponding period of time.

"(4)(A) Prior to the assumption or suspension by the Administration of any small business concern's obligation under this subsection, the Administration, consistent with the purposes sought to be achieved herein, shall require the small business concern to agree in writing to repay to it the aggregate amount of the payments which were required under the loan during the period for which such obligation was assumed or suspended, either—

"(i) by periodic payments not less in amount or less frequently falling due than those which were due under the loan during such period, or

"(ii) pursuant to a repayment schedule agreed upon by the Administration and the small business concern, or

"(iii) by a combination of the payments described in clause (i) and clause (ii).

"(B) In addition to requiring the small business concern to execute the agreement described in subparagraph (A), the Administration shall, prior to the assumption or suspension of the obligation, take such action, and require the small business concern to take such action, including the provision of such security as the Administration deems appropriate in the circumstances, as may be necessary or appropriate to insure that the rights and interests of the lender will be safeguarded adequately during and after the period in which such obligation is so assumed or suspended.

"(5) The term 'required payments' with respect to any loan means payments of principal and interest under the loan.".

SEC. 304. Section 4(c) of the Small Business Act is amended by inserting in clauses (1)(A) and (2)(A) thereof "5(f)", after the word "sections".

TITLE IV—AMENDMENTS TO SMALL BUSINESS ADMINISTRATION DISASTER LOAN AUTHORITY

DISPLACED BUSINESS LOANS

SEC. 401. Section 4(c) of the Small Business Act is amended as follows:

(1) by inserting in paragraph (1)(A) after the figure "7(b)(2)," the figure "7(b)(3),," and by striking from paragraph (1)(B) thereof the figure "7(b)(3),";

(2) by inserting in paragraph (2)(A) after the figure "7(b)(2)," the figure "7(b)(3)," and by striking from paragraph (2)(B) thereof the figure "7(b)(3),"; and

(3) by striking from paragraph (4) thereof the figure "7(b)(3),".

SEC. 402. Section 7 of the Small Business Act is amended by striking "federally aided urban renewal program or a highway project or any other construction constructed by or with funds provided in whole or in part by the Federal Government" and by inserting in lieu thereof "program or project constructed by or with funds provided in whole or in part by the Federal Government or by a program or project by a State or local government or public service entity, providing such government or public service entity has the authority to exercise the right of eminent domain on such program or project".

ECONOMIC INJURY LOANS

SEC. 403. Section 7(b)(2) of the Small Business Act is amended by adding "or" after the semicolon at the end of section 7(b)(2)(B) and by adding the following:

"(C) a disaster as determined by the Administrator of the Small Business Administration pursuant to the Disaster Relief Act of 1970; and

"(D) if no disaster declaration has been issued pursuant to (A), (B), or (C) herein, the Governor of a State in which a disaster has occurred may certify to the Small Business Administration that small business concerns (1) have suffered economic injury as a result of such disaster, and (2) are in need of financial assistance which is not available on reasonable terms in the disaster stricken area. Upon receipt of such certification, the Administration may then make such loans as would have been available under this paragraph if a disaster declaration had been issued;".

TITLE V—CERTIFICATE OF COMPETENCY

SEC. 501. Section 8(b) of the Small Business Act is amended by striking paragraph (7) and by inserting in lieu thereof the following:

"(7)(A) To certify to Government procurement officers, and officers engaged in the sale and disposal of Federal property, with respect to all elements of responsibility, including, but not limited to, capability, competency, capacity, credit, integrity, perseverance, and tenacity, of any small business concern or group of such concerns to receive and perform a specific Government contract. A Government procurement officer or an officer engaged in the sale and disposal of Federal property may not, for any reason specified in the preceding sentence, preclude any small business concern or group of such concerns from being awarded such contract without referring the matter for a final disposition to the Administration.

"(B) If a Government procurement officer finds that an otherwise qualified small business concern may be ineligible due to the provisions of section 35(a) of title 41, United States Code, of the Walsh-Healey Act, he shall notify the Administration in writing of such finding. The Administration shall review such finding and shall either dismiss it and certify the small business concern to

be an eligible Government contractor for a specific Goverment contract or if it concurs in the finding, forward the matter to the Secretary of Labor for final disposition, in which case the Administration may certify the small business concern only if the Secretary of Labor finds the small business concern not to be in violation.

"(C) In any case in which a small business concern or group of such concerns has been certified by the Administration pursuant to (A) or (B) to be a responsible or eligible Government contractor as to a specific Government contract, the officers of the Government having procurement or property disposal powers are directed to accept such certification as conclusive, and shall let such Government contract to such concern or group of concerns without requiring it to meet any other requirement of responsibility or eligibility.".

TITLE VI—SMALL BUSINESS SET-ASIDES

SEC. 601. Section 15 of the Small Business Act is amended by adding the following at the end thereof: "With respect to any work to be performed the amount of which would exceed the maximum amount of any contract for which a surety may be guaranteed against loss under section 411 of the Small Business Investment Act of 1958 (15 U.S.C. 694(b)), the contracting procurement agency shall, to the extent feasible, place contracts so as to allow more than one small business concern to perform such work.".

GENERAL LEAVE

Mr. SMITH of Iowa. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill under consideration.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. SMITH of Iowa. Mr. Speaker, I move to strike the last word.

Mr. Speaker, I rise in strong support of H.R. 692 and urge the immediate passage of this legislation.

The purpose of this bill is to increase the Small Business Administration's authorizations and limitations on its loan programs; and to increase the scope of eligibility for SBA assistance and the terms thereof.

The purpose of this bill is to—

Increase SBA's authorizations and limitations for fiscal year 1977 and establish operating levels for all of SBA's programs for fiscal years 1978 and 1979;

Make miscellaneous conforming and technical amendments to the Small Business Act and the Small Business Investment Act;

Authorize SBA to provide financial assistance to small home builders; enlarge the eligibility for SBA compliance loans; and authorize up to a 5-year moratorium on repayment of SBA loans;

Authorize SBA to make displaced business loans to a small concern which has been displaced by a project by a State or local government; and authorize SBA to make economic injury loans to small business concerns in an area affected by a natural disaster upon the request of the Governor of the State involved;

Expand SBA's certificate of competency program by including the final determination of all elements of responsibility and specific aspects of eligibility of a small business for purposes of bidding on Government contracts; and

Direct Federal agencies, to the extent feasible, to divide small business setaside contracts into amounts of less than $1,000,000 each.

During the 94th Congress, the committee held extensive hearings on numerous bills and those which received favorable consideration were incorporated in a clean bill (H.R. 13567) which was favorably reported by a vote of 33 to 0. This omnibus bill passed the House on June 7, 1976, under Suspension of the Rules by a vote of 341–2. The Senate, however, failed to act upon the bill.

This bill was reintroduced in the 95th Congress as H.R. 692 and was favorably reported by a unanimous vote of 23 to 0. Since SBA has almost exhausted its loan authority and in order to avoid immediate curtailment of SBA loan programs, a separate bill providing enough authority for the balance of fiscal year 1977 was also reported (H.R. 2647) and passed by the House on February 1, 1977, under suspension of the rules. This bill, H.R. 692, provides the needed authority for fiscal year 1978 and fiscal year 1979. The Committee will offer a floor amendment to H.R. 692 to take into consideration the passage of H.R. 2647.

In the committee's report, there is a summary of SBA's current major financial programs and I would commend that portion of the report to Members who may have questions about what SBA is and what it does.

Since this is an omnibus bill, a detailed discussion of it would consume a considerable amount of the House's time. I am, therefore, only going to hit the highlights.

TITLE I

In order to continue the operation of SBA programs through fiscal year 1977, it is necessary to increase the limitation on the amount of financial assistance which may be outstanding under the business loan and investment fund from $6 billion to $8 billion; to increase the sublimitation on the amount of economic opportunity loans which may be outstanding from $450,000 to $525,000; and to increase the sublimitation on the amount of financial assistance which may be outstanding to small business investment companies from $725,000,000 to $1,100,000,000. These are the amounts which were requested by President Ford.

Although the above increases will carry SBA through fiscal year 1977, it would be better planning and facilitate greater performance to specify the program levels at which SBA might operate for several years in advance. This would also provide for more congressional control over SBA and would more clearly give SBA and the small business community an indication of the amount of assistance which it might anticipate to be forthcoming from SBA during the next several years and would also eliminate the necessity for Congress to deal with SBA's program levels each year.

TITLE II

SMALL BUSINESS COMMITTEE

At the commencement of the 94th Congress, legislative responsibility for providing assistance to and protection of small business, including financial aid, and participation of small business enterprises in Federal procurement and Government contracts, was given to the House Small Business Committee. This jurisdiction was formerly with the House Committee on Banking, Currency and Housing, and the Small Business Committee was a select committee.

The Small Business Act specifically provides for the submission of certain reports and information to the House Select Committee on Small Business and to the House Committee on Banking and Currency. In order to carry out the change in legislative jurisdiction, these reports and information should now be provided to the House Committee on Small Business and the Small Business Act as amended.

ASSOCIATE ADMINISTRATOR FOR MINORITY SMALL BUSINESS

Prior to 1974, SBA had three Associate Administrators. In that year, a new position of Associate Administrator for Minority Small Business was established and one has been appointed. Although SBA's three other Associate Administrators are established at executive level V, no executive level was established for the new Associate Administrator and he should be similarly established at the same executive level.

SBA'S ANNUAL REPORT

SBA submits an annual report to the President, the President of the Senate, and the Speaker of the House of Representatives. The report includes a description of the state of small business, a description of the operations of SBA and recommendations for strengthening or improving SBA's programs. Although SBA is statutorily directed to provide specific assistance to socially and economically disadvantaged individuals, it does not, in its annual report, specifically report on minority small business concerns.

A breakdown of the assistance provided to minorities, the goals of the Administration for the next fiscal year with respect to such concerns, and recommendations for improving assistance to them would be helpful.

TITLE III

HOMEBUILDERS

Until late last year, a homebuilder, regardless of size, and although over 80 percent of all homebuilders are small businesses, was precluded by SBA from receiving financial assistance.

Subsequent to the House action last year in overwhelmingly passing the predecessor of this bill, SBA did amend its rules to permit homebuilders to obtain limited financial assistance in a very few situations, however, we do not believe that SBA's new rule is sufficient.

SBA bases this preclusion on their policy that homebuilders as a class are speculators, unless the homebuilder is a custom builder; that is, he is performing the construction under a contract with a specific purchaser.

This equipment of an "assured customer" is not applied to other industries. A manufacturer does not have assured customers for his products nor does a

wholesaler or retailer have assured customers for their line of business and yet all of these are eligible for SBA assistance and are given SBA assistance.

Many small homebuilders are unable to obtain loans from banks because of the modest size of their operation. This credit problem affects the small builder no less than it affects other small businessmen in their attempt to obtain bank financing. Like other small businessmen, the homebuilder needs help from time to time from some other source to make the financial arrangements necessary for the firm's economic well-being.

No other agency or department of the Federal Government, including the Department of Housing and Urban Development, currently provides the same kind of direct financial assistance to homebuilders as does the SBA to other small businessmen.

A number of Members have introduced legislation to correct this inequity, including Congressmen LAFALCE, WHALEN, LEHMAN, HAMILTON, FISH, LEVITAS, and Mrs. BOGGS. I intend to subsequently recognize such of these Members as may desire to be heard on this provision.

COMPLIANCE LOANS

Under section 7(b)(5) of the Small Business Act, SBA makes loans to small business concerns in order to assist them in effecting additions to or alterations in its plant, facilities, or methods of operation to meet requirements imposed upon the business pursuant to any Federal or State law or regulation issued in conformity with the Federal law.

Unless, however, the Federal law was enacted subsequent to enactment of this provision in January of 1974 or unless SBA had a specific loan program established prior thereto, SBA refuses to make these compliance loans to meet statutory requirements.

This prospective interpretation of the compliance loan authority denies assistance to small concerns which are required to meet federally imposed or authorized standards established by earlier law.

The requirements of any Federal or State law impose just as much of a financial burden upon small business concerns who must meet these standards, regardless of the date when the requirement was imposed. Thus they should be eligible to receive the same type of assistance.

This lack of SBA assistance has caused considerable problems for small nursing homes which have been required by the Department of Health, Education, and Welfare to comply with the provisions of the Life Safety Code of the National Fire Protection Association.

Legislation to correct this injustice was introduced by Congressman LOTT and I will subsequently recognize him if he is desirous of making a statement.

MORATORIUMS

As a prerequisite to making any loan, SBA must first determine that there is a reasonable assurance of repayment. The statute also imposes a maximum maturity date or a maximum term for the loan and many SBA loans are made for a maximum statutory term.

Subsequent to the making of a loan, some small business concerns experience financial difficulties, oftentimes due to causes beyond their control; for example, the recent economic recession. Some of these concerns would be able to survive and prosper if there was specific authority in SBA to defer the payments due either to SBA or to a bank which had made a guaranteed loan.

Under the existing law, SBA may defer such payments only in order to provide for an orderly liquidation of the loan. It would be to the benefit of all concerned to give SBA specific statutory authority to grant deferments in other situations providing that without it the borrower would become insolvent or remain insolvent and further providing that with the assumption or suspension of the obligation the borrower would become or remain a viable small business entity.

Legislation to specifically authorize a temporary moratorium on the repayment of SBA loans was introduced by Mr. PARREN MITCHELL and I will also subsequently recognize him.

TITLE IV

DISPLACED BUSINESS LOANS

The Small Business Administration is specifically authorized under section 7(b)(3) to make loans to small business concerns to assist them in continuing in business or in establishing a new business if the concern has been harmed by a project or program constructed by or with Federal funds.

These loans are funded under SBA's business loan and investment fund, whereas all of SBA's other nonphysical disaster loans are funded under its disaster fund.

Small businesses sustain just as much financial injury when they are displaced by a project or program by a State or local government or public service entity and need Federal loan assistance to assist in their recovery.

Loan assistance, which would carry interest at a rate above the cost of interest to the Federal Government, should be provided to cover this situation, and all displaced business loans should be funded through SBA's disaster loan revolving fund as are all other nonphysical disaster loans.

ECONOMIC INJURY LOANS

SBA is authorized to make loans to small businesses which are located in an area affected by a natural disaster if they suffer substantial economic injury as a result of the disaster, but only if the disaster was declared by the President, the Secretary of Agriculture, or the Administrator of SBA.

There are many small businesses which suffer the requisite economic injury but are unable to obtain this type of loan because of the local nature of the disaster.

Those concerns affected by a natural disaster should be eligible for economic injury type loans even if the disaster was not of such proportion as to necessitate a disaster declaration.

For example, a fire destroyed a telephone company office and disrupted service to thousands of small business concerns. This disruption imposed severe financial loss upon many of these concerns which were dependent upon telephone service to solicit customers. Because the fire did not qualify for a disaster declaration, those small businesses which were harmed could not receive this type of SBA loan assistance.

Severe localized damages from storms, floods, fire, and droughts oftentimes cause severe financial loss to small businessmen in the impacted area. For example, in Alpine County, Calif., the entire community of Bear Valley has filed bankruptcy due to lost business revenue because ski lodges could not operate because of a lack of snow. If some type of Federal loan assistance had been available, many of these financially injured small concerns could have ultimately recovered.

Congressmen JOHN MCFALL and DICK OTTINGER have introduced legislation to rectify this situation and I will, subsequently, recognize them.

TITLE V

Section 8(b)(7) of the Small Business Act authorizes the Small Business Administration to issue a certificate of competency (COC). This document "certifies to a Federal procuring activity that a small business concern is competent as to capacity and credit to perform a specific Government contract." Whenever any question arises as to the capacity and credit of such small business concern, the Government procurement officer refers the matter to the Small Business Administration, and its subsequent decision on the matter is conclusive.

There is, at present, no statutory requirement mandating that once a certificate of competency is issued the contract must be let to the small business, nor does the statute include other elements aside from a small business capacity or credit. This has resulted in severe problems for the small business community.

Small business can and has been denied Government contracts because the procuring activity has determined that the small business lacked the requisite "tenacity, perseverance or integrity" to perform a specific Government contract. Such a finding results in the small firm being branded as nonresponsible. Resort to the COC procedure in such cases is not available since capacity and credit are, purportedly, not involved.

Although SBA normally has the right to appeal such determinations to a higher authority within the procuring activity, such action is of questionable value as there is an inherent difficulty in asking a bureaucracy to overrule itself. Also, the procurement need not be held in abeyance pending the appeal if the contracting officer subjectively determines that the items called for by the contract are urgently needed.

There is yet another instance when procurement officers need not refer a matter to SBA for a COC determination, which is working an inequity on small business.

A bidder on a Government contract must also show that he is a manufacturer of or a regular dealer in the materials, supplies, articles, or equipment to be manufactured or used in the performance of the contract. Rules and regulations of the Department of Labor require that a procurement officer must reject bids from a bidder who is not a manufacturer or dealer within the meaning of the statute. If a small business is deemed ineligible due to this provision of the Walsh-Healey Act, there is no recourse to the certificate of competency procedure.

The small business does have the right to appeal the determination to the Department of Labor. However, the committee is not aware of any case in which the Department of Labor has reversed a finding of ineligibility made pursuant to this act.

The application of the Department of Labor rulings varies widely in different areas of the country. Bidders who would be eligible in one area are declared ineligible in another. For example, a bidder was declared ineligible because he did not manufacture the pencils to be included in a kit which was to be supplied to the Government.

The literal implementation of this requirement would exclude such corporate giants as General Motors or Rockwell International from receiving Government contracts. Very few firms produce every integral part that goes into the finished product. But this test is being applied most harshly to small business. The Defense Contract Administration Services has used this test on numerous occasions when conducting its preaware surveys on potential Government contractors. When low bidders are declared ineligible because of an inequitable application of a good law, the Government pays more for its products, and small business is unjustly denied an opportunity to perform on Federal contracts.

Legislation dealing with this subject was introduced by our colleague, JOSEPH P. ADDABBO, and I will subsequently recognize him.

TITLE VIII

The Small Business Act and numerous other statutes recognize the role which small business should play in our economy, particularly in providing goods and services to the Federal Government. This recognition is indicated by statutory language requiring that small business receive a fair portion of the total purchases and contracts for property and services for the Government.

All Federal agencies set aside some of the contracts exclusively for bidding by small business. The Miller Act requires that a successful bidder provide a surety bond to insure the performance of any Federal contract for more than $2,000. The Small Business Administration operates a surety bond guarantee program under which SBA will reimburse the surety for loss sustained on a surety bond issued on behalf of the small business, providing the size of the contract does not exceed $1 million.

Some Federal contracts, however, which are set aside for small business are for more than $1 million. Most small businesses cannot obtain the necessary surety bond in excess of this amount and thus are effectively precluded from bidding on small business set-asides which exceed $1 million.

It would be beneficial to all concerned to direct the Federal agency which is letting a contract as a small business set-aside to divide large contracts into smaller ones, to the extent feasible, so as to keep set-aside contracts to less than $1 million.

CONCLUSION

This legislation which is before the House this afternoon was written by the committee after conducting extensive hearings upon numerous bills which were introduced to rectify problems facing the small businessman.

Again, I want to stress that the cosponsors of this bill were jointly responsible for the development of this bill. This bill originated in the legislative branch and combines the ideas of the cosponsors. It is a bipartisan or nonpartisan bill. The ranking minority member of the committee, Mr. CONTE, worked hard and constructively to develop this measure which was unanimously reported by the committee. It should receive the bipartisan support of the entire membership of the House and I urge its immediate passage.

RECOGNITION OF MEMBERS

Mr. Speaker, as chairman of the Small Business Committee, I want to commend all of the members of the committee who devoted their time to attendance and participation in the numerous days of hearings which culminated in the drafting of this legislation.

Also, on behalf of the committee, I want to commend the Members of the House who brought the problems of small business to our attention and who also proposed legislative solutions to these problems. These Members, although many of them do not serve on the Small Business Committee, have a keen interest in the viability of small businessmen throughout the Nation and provided us with the information and assistance so that we can carry out our responsibility of providing assistance to and protection of small business. Thus, I want to single out for special recognition because of the input they provided us: Mr. MCFALL, Mrs. BOGGS, and Messrs. ADDABBO, DOWNEY, FISH, LEHMAN, LEVITAS, LOTT, MITCHELL of Maryland, OTTINGER, and WHALEN.

AMENDMENT OFFERED BY MR. SMITH OF IOWA

Mr. SMITH of Iowa. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SMITH of Iowa: Amend page 1 by striking lines 5 through 8 and renumbering the remaining sections.

Amend page 3, line 22, by striking "$915,000,000" and by inserting $2,000,000,000".

Amend page 5, line 7, by striking "$1,010,000,000" and by inserting "$2,000,000,000".

Mr. SMITH of Iowa. Mr. Speaker, this amendment deals with title I. First it strikes section 101 which puts this bill in compliance with the Budget and Control Act.

The other amendments put this bill in conformity with the bill we passed here last week, H.R. 2467, relative to the authorizations for fiscal years 1978 and 1979. We are making the multiple-year authorizations so that we will not be doing as so many committees have done in the past, run 6 months behind in authorizations. We are trying to set them in advance so everyone will know in advance what authorizations are permitted, and also, so the department will have good guidelines on which to base their programing.

I ask for adoption of the amendment.

Mr. CONTE. Mr. Speaker, we have no objection to the amendment. It is merely making conforming changes to match the bill that passed last Tuesday.

The SPEAKER. The question is on the amendment offered by the gentleman from Iowa.

The amendment was agreed to.

The SPEAKER. Does the gentleman from Iowa have further amendments?

Mr. SMITH of Iowa. Mr. Speaker, I have an amendment to title III but the bill is to be read by titles.

The SPEAKER. The bill is open to amendment at any point so the amendment is in order.

AMENDMENT OFFERED BY MR. SMITH OF IOWA

Mr. SMITH of Iowa. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SMITH of Iowa: Amend page 9, line 11, by striking "(3)" and by inserting "(4)".

Mr. SMITH of Iowa. Mr. Speaker, this is a very noncontroversial amendment and I do not believe there is any question about it. I ask that it be adopted.

Mr. CONTE. Mr. Speaker, we have no objection.

The SPEAKER. The question is on the amendment offered by the gentleman from Iowa.

The amendment was agreed to.

AMENDMENT OFFERED BY MR. HARRIS

Mr. HARRIS. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HARRIS: On page 7, delete all of Section 206, beginning on line 6 and ending on line 8.

Mr. HARRIS. Mr. Speaker, this provision in the bill creates an additional Associate Administrator for the Small Business Administration. I think it pretty much exemplifies what we have been doing in other legislation which some of us have been trying to stop from doing. If we have had a boom in the number of generals and admirals in the Armed Forces, we have also had a boom in the supergrades as far as the civil service is concerned. We are going to continue to have that boom as long as an individual legislation such as this we continue to create additional supergrade posts, as this bill does. It creates an additional executive level 5 for the Small Business Administration, without having referred the legislation to the Civil Service Committee and without having

any sort of coordination with other agencies. The bill simply says that another executive level 5 post is established for the Small Business Administration.

It may be they need another executive level 5 there, but if they do we ought to have some means of coordinating the matter, it ought to go to the Civil Service Committee for its review and recommendation as to the creation of another supergrade post.

It seems to me at this particular time we ought at least to take into consideration the fact that we are having reorganization proposals being made by the Carter administration and we should consider this whole matter in an orderly way, instead of continuing the practice of having an individual piece of legislation creating these new posts.

Mr. Speaker, I think it would not be destructive in any way to the bill to create the right type of procedure if we remove just this section from the bill, so as to give the Civil Service Committee and the new administration the opportunity to make its recommendations clear on Assistant Secretaries and Associate Administrators of this type and not to continue the precedent of having individual pieces of legislation creating these special supergrade posts.

Mr. Speaker, I would hope that my colleagues on this bill would agree to this principle, so that we can remove this section, section 206, from the bill and not perpetuate the practice of creating these supergrade posts.

Mr. SMITH of Iowa. Mr. Speaker, I rise in opposition to the amendment.

Mr. Speaker, the gentleman from Virginia asks us to agree with the principle. I do not disagree with the principle, but I think there is an exception here.

The rationale for this provision is that this person is doing the job and he has been doing the job. He is the only person doing the job as an Associate Administrator who does not also have an executive level 5 title.

Actually, as a GS–18 and because of the ceiling, he is paid the same amount of money he would have been paid as an executive level 5. If the ceiling is lifted it would make a difference; however, our colleague, the gentleman from Maryland (Mr. MITCHELL) who brought this to the attention of the committee, felt, and I thought made a very good case, that in this instance this provision ought to be an exception to general principle that was stated by the gentleman from Virginia. On that basis the committee opposes the amendment.

Mr. CONTE. Mr. Speaker, I move to strike the last word. I rise in opposition to the amendment.

Mr. Speaker, I find it hard to believe that anyone would object to a level 5 Associate Administrator for minority enterprises. If every agency of the Government had been as attentive to minorities as the SBA has been, a good portion of our national shame would have been erased by now. Certainly the SBA has had some failings in this area; but with the strong support of this House, SBA has led the way. It has a record it can be proud of and one we can all be proud of in this country.

Mr. Speaker, I want the SBA to continue to lead the way and set an example. For that reason, I believe it was wrong for this body to refuse to recognize the Administrator of the Minority Enterprises as an executive level position. In the name of commonsense and decency, I urge defeat of this amendment.

Mr. HARRIS. Mr. Speaker, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Virginia.

Mr. HARRIS. Mr. Speaker, I am sure my colleague, the gentleman from Massachusetts, understands that I could not agree more. We should consider the creation of another supergrade post in the Small Business Administration and certainly minority enterprises is something we should consider an administrator for; but I am sure my colleague would agree that if we continue to have legislation by agency creating more executive levels and administrators without having anybody coordinate this kind of creation, we are going to continue to have this upsurge and inflation of supergrades.

Mr. Speaker, I am sure my colleague will agree with me not to do it by way of individual pieces of legislation like this, but to have the Civil Service Commission make recommendations as to executive levels and how many Assistant Secretaries and Associate Administrators we have in a given agency. I am sure my colleague would agree with that.

Mr. CONTE. Mr. Speaker, I sort of agree with the gentleman in a sense; but I feel that this committee, even before it became a legislative committee, when it was a select committee, it had many hearings on minority enterprises. We came out with a strong unanimous feeling that there should be this level 5 Administrator for Minority Enterprises. It is that important. It is a very important function in the SBA and they have done such an excellent job that they should be pulled out of the flock, so to say, and brought to the forefront in a level 5 position.

Mr. Speaker, I hope the amendment will be defeated.

Mr. CARTER. Mr. Speaker, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Speaker, I rise in support of H.R. 692, amendments to Small Business Act and Small Business Investment Act. This bill is the result of thoroughly nonpartisan effort of the Small Business Committee. It is sponsored by the distinguished committee chairman, NEAL SMITH of Iowa, and cosponsored by numerous other members of the committee from both parties. It was approved by the committee unanimously.

This bill is identical to H.R. 13567 which was passed by the House June 7, 1976, by a vote of 341 to 2, but was not acted on by the Senate.

The bill is designed to meet needs not met under the present Small Business Act of 1958. First, this bill will provide help under the Small Business Act for homebuilders, who are not presently covered. Second, it will increase the limit on the amount which may be outstanding at any one time in three different categories of loans. Business loans and investment will increase from $6 billion to $8 billion, economic opportunity loans from $450,000 to $525,000, and financial assistance to small business investment companies from $725,000 to $1.1 million.

These increases are considered necessary for SBA programs to operate through fiscal year 1977 at the full level of funding provided by law. Third, this legislation will authorize SBA to determine "responsibility" of a small business concern, and then allow the maximum statutory term on loans to be suspended for up to 5 years under certain circumstances. Fourth, it authorizes SBA to dispense disaster loan funds to small businesses upon request from the Governor of that State without a Presidential declaration. Fifth, it authorizes loans made to businesses displaced by Federal projects out of the disaster loan funds. Sixth, it changes the authorizations for the lease and surety bond guarantee programs from specific dollar amounts to open-ended amounts.

Mr. Speaker, I think it is highly significant that the Small Business Committee is sending this bill to the floor for the second year in a row by unanimous vote. It is my belief that passage of this bill is necessary for small businesses to maintain their part of our Nation's economic recovery, as well as the continued vitality of the small business program. I urge passage of this bill.

Mr. MITCHELL of Maryland. Mr. Speaker, I move to strike the last word, and I rise in opposition to the amendment.

Mr. Speaker, let me just make clear to my colleagues a little bit about the history of this amendment. When I first addressed the issue as to the status of the Administrator for Minority Small Business, that was under the Nixon administration. At that point, there were discussions with the Civil Service Commission and with the administration. The Nixon administration agreed that the position should be elevated to what is proposed in this piece of legislation.

We went through the same effort in terms of the Ford administration. The Civil Service Commission raised no objections at that time, and the Ford administration agreed to raising the level of this position to what is proposed in this bill.

Now, it seems to me that the argument about waiting to reorganize the Government, waiting for the President's proposal to reorganize the Government, may have some merit, but on the other hand, you know and I know that such a reorganization is at least 8 months down the road before it begins to fall in place, if it ever falls in place. Meanwhile, we have got the pressing problem of minority businesses trying to exert sufficient strength through an administrator so

that they can become a part of the economic mainstream of this country.

I would like to make one more point on this to my colleagues. I serve on the Budget Committee, and one of the problems of the Budget Committee is the matter of uncontrollables—how much money we have committed to uncontrollable items. I respectfully suggest to the Members that to the extent and degree we are able to achieve some form of parity for minority businessmen; to the extent and degree that we are able to do that, that is to the extent and degree we are going to be able to begin to reduce some of the uncontrollables in the budget. Therefore, I urge defeat of the amendment.

Mr. ADDABBO. Mr. Speaker, will the gentleman yield?

Mr. MITCHELL of Maryland. I yield to the chairman.

Mr. ADDABBO. Mr. Speaker, as the gentleman will recall, we held extensive hearings, and I chaired the subcommittee on small business. In many cases, all administrations have given lip service to the minorities. They have shown dollar figures and numbers, but never any real intention to help the minority go with the mainstream.

In our hearings, we looked at the question of an administrator for minority small businesses. He was lost. He had to report through three other people before he could get through to the administrator. If we are truly going to help the minority small businessman, he must have an administrator; he must have someone up front to be able to speak for him in this program. I would ask defeat of this amendment and passage of the bill.

Mr. MITCHELL of Maryland. I wholeheartedly concur with the gentleman's statement and comments. Again, I urge the overwhelming defeat of this amendment, which is well-intentioned but which could have a disastrous impact as we try to open up the doors for minority businesses in this country.

The SPEAKER. The question is on the amendment offered by the gentleman from Virginia (Mr. HARRIS).

The question was taken; and on a division (demanded by Mr. DE LA GARZA) there were—ayes 3; noes 26.

So the amendment was rejected.

Mr. DE LA GARZA. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, today I introduced a bill which amends the original Small Business Administration Act, which could very well fit into this legislation in title IV of the bill. The problem arose, though, after this legislation was originally discussed and passed the first time through the Congress, and rather than amending or attempting to amend at this time, I would just like to advise the chairman of the committee and the members of the committee of the problem and of the bill which I have introduced.

When the Republic of Mexico devalued the peso, it caused tremendous stress and economic impact on the American side of the border.

For many reasons we found, to our distress at the time, that the original jurisdiction of the Small Business Administration did not cover that type of economic disaster. So what I am attempting to do by my legislation is this: In this bill we refer to any economic impact due to a relocation or any adverse economic impact caused by a project of a local government or a State government. That is title IV of this act.

I have introduced my bill that would amend, ostensibly, that section, saying that if there is any economic impact due to an economic policy of a contiguous nation, Mexico or Canada, then we would be eligible for the Small Business Administration, under the rules and regulations already existing.

I am not going to offer an amendment, but, rather, I am informing the chairman that I would hope we might have his cooperation.

Mr. SMITH of Iowa. Mr. Speaker, will the gentleman yield?

Mr. DE LA GARZA. I yield to the gentleman from Iowa (Mr. SMITH).

Mr. SMITH of Iowa. I thank the gentleman for yielding.

Mr. Speaker, the gentleman did present this amendment to me about an hour ago and he explained it to me. Frankly, I did not hear of the problem before that. I suppose that by reading the paper I should have heard of it. But the gentleman first brought it to my attention.

Mr. Speaker, I do think the gentleman's suggestion has considerable merit, and I will make sure one of the subcommittees promptly considers this matter and will keep in touch with the gentleman so that he can make his argument at the appropriate time.

Mr. DE LA GARZA. Mr. Speaker, I appreciate the pledge of cooperation of the chairman.

Mr. CONTE. Mr. Speaker, I move to strike the requisite number of words, and I rise in support of the legislation.

Mr. Speaker, I rise to express my wholehearted support for this bill, H.R. 692.

It is a good bill—an omnibus bill which includes those provisions which your Small Business Committee has identified as being in immediate need of enactment.

Mr. Speaker, I would like to emphasize that, although this bill was the first to be reported in this Congress, it was not hastily thrown together without proper consideration.

The provisions of this bill, with only a couple of minor exceptions, were included during the last Congress in H.R. 13567, which was passed in this body by a resounding vote of 341 to 2.

These provisions enjoy the unanimous bipartisan support of your Small Business Committee, as is reflected in the fact that the committee voted the bill reported favorably, on January 27, by a vote of 23 to 0.

During the second session of the last Congress, the Small Business Committee held extensive hearings and worked hard to reach a unanimous, bipartisan consensus on what should be done immediately with regard to the Small Business Act and the Small Business Investment Act. We reached that consensus and the House endorsed it last June 7.

Unfortunately, Mr. Speaker, the other body did not take advantage of the opportunity to respond to the immediate needs we had so carefully identified. While more than 13 million American small businessmen waited, our bill died in the other body with the final adjournment of the 94th Congress.

Those 13 million small businessmen, the people who provide almost half our GNP and a livelihood for half of our citizens, are still waiting. I believe we owe it to those men and women to act forcefully today to give the other body another opportunity—an early opportunity—to end the wait.

Mr. Speaker, I will not repeat all of the arguments which justify enactment of this bill. The most able chairman of our committee, my distinguished friend and colleague, NEAL SMITH, has already done that. I do, however, want to mention a couple of items which, to me, deserve to be highlighted.

First, title I of the bill provides the vitally needed new ceilings for the SBA programs. Part A of the title gives the Agency the room it needs to operate through this fiscal year. Part B provides a new approach for the following 2 fiscal years. It sets forth annual program levels of operation for each of the SBA activities.

This is an approach I have long advocated. It is an approach strongly favored by the National Federation of Independent Business and other small business groups and their friends. This "line item" approach tells our committee, the Appropriations Committee, the Congress, and the SBA exactly what SBA is expected to do in each area; and, of equal or more importance, it tells the small business community just what it can expect from its Agency.

I also want to mention title V, which expands and improves the SBA certificate of competency program. The C of C program saves the Government money, because the applicant is always the low bidder. It also gives the small firm effective protection against arbitrary decisions by procurement officers. It gives him his only protection short of an expensive lawsuit.

Unfortunately, over the years, procuring agencies have found ways to get around the certificate of competency appeal. Instead of using terms such as "capacity" and "credit" in disqualifying small firms, they use terms like "tenacity" and "perseverance" or they say the small firm is not a regular manufacturer or dealer. They are allowing form to triumph over substance. This new language will end all of that. It will permit an appeal to SBA whenever a small bidder is disqualified for any factors that really involve capacity or credit regardless of what they are called.

In conclusion, Mr. Speaker, I would like to express my deep appreciation and gratitude to the new chairman of the Small Business Committee, NEAL SMITH of Iowa. It is obvious, from the prompt and responsive action our committee has

already taken this Congress, that the Small Business Committee of this House and the small business community of this Nation is in good and capable hands.

When I last took this floor to advocate passage of a small business bill, it was my privilege to pay tribute to past chairman of the Small Business Committee—Joe Evins of Tennessee. At that time, with more than ample justification, I referred to Joe Evins as the "champion of the small businessmen of this country."

Mr. MITCHELL of Maryland. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, I rise in support of passage of H.R. 692, amending the Small Business Act and the Small Business Investment Act of 1958.

This legislation contains numerous provisions which are key to strengthening the role of small business in our economy, in general, and several provisions which are crucial to the survival of minority business, in particular. I am pleased, therefore, to urge my colleagues to overwhelmingly adopt this measure as was done by the House during the 94th Congress.

Because of continuing high rates of unemployment which unrelentingly and inordinately plague the minority sector of our populace, viable, strong minority enterprise is a must. I know that minority entrepreneurs are eager and willing to make the necessary sacrifices to enter and remain in the American economic mainstream. Yet, usually due to a paucity of resources and an abundance of insensitivity on the part of the larger community—an insensitivity which in many cases has become institutionalized in both the private and public sectors—a large number of minority businesses exist only from day to day. With far too many minority businesses, economic stability is often elusive and economic parity is frequently nonexistent.

Business failures are never a plus, not for the business, not for the community, not for the State, and certainly not for the Nation. Every time a business, regardless how small, has to reduce its output or close its doors, we all lose—unemployment is increased and human resource programs at every level of government are greater strained.

It is excellent, therefore, that H.R. 692 contains provisions aimed at providing certain businesses with a final chance for survival, after all else has failed. This bill allows the Small Business Administration to suspend loan repayments for a period of up to 5 years, providing, most importantly, that without the moratorium the small business concern would become or remain insolvent and that with the moratorium the small business would become or remain a viable business entity. This SBA authority is designed only for those businesses in the most desperate of circumstances. However, my colleagues should note that this single provision takes on a new added importance in the face of problems already beginning to arise out of this year's unexpectedly severe winter.

Other provisions of this legislation which, for example, lock in an associate administrator for minority small business at a level equivalent to other SBA associate administrators and direct SBA to shed to more light on the specific problems of minority business enterprise are overdue.

H.R. 692 is a step in the right direction as far as small and minority business is concerned. This bill sets the stage for even stronger minority business legislation which is vitally needed if economic parity is ever to be achieved by certain segments of our citizenry.

Believe me, so-called strong signs of economic recovery which we at the national level hear about from time to time have not yet, and may well never, "trickel down" to some segments of our economic community. Until such time as those alleged trickels become a continuing stream, this Congress has the obligation to fend off the destruction that comes with an economic drought, or a naturally crippling winter, which is very real to many small businesses.

H.R. 692 should be passed.

Mr. DRINAN. Mr. Speaker, I rise in enthusiastic support of the pending amendments to the Small Business Act (H.R. 692). This bill has been unanimously reported by the House Small Business Committee in answer to the need for additional financial assistance by the small business community.

It is not surprising that additional assistance is required, Mr. Speaker, in view of the fact that economic recovery has slowed somewhat in recent months. The economy is recovering, as shown by the fact that consumer confidence at the end of 1976 had improved substantially. Yet in its first major 1977 economic report, the Congressional Budget Office forecast that the recovery would take longer than initially expected. Most disappointingly, the unemployment rate is projected to drop to no lower than 6.5 percent from the present rate of 7.8 percent.

These economic figures are especially revealing due to the fact that small business is always most directly affected by changes in the economy. Small business is in effect the barometer of economic activity. When business improves, local shops and manufacturing concerns are generally the first to feel its effect. And when economic prospects worsen, small business is similarly first to feel the crunch.

Mr. Speaker, as a result of this great vulnerability which local entrepreneurs face in our economy, it is necessary for the Congress to be especially mindful of their problems. It is for this reason that H.R. 692 must be enacted so that we can protect the interest of those individuals who have toiled for years to build their own businesses. The road is not easy for these individuals, and since they comprise such an important part of the U.S. gross national product, we must not fail to carefully consider the difficulties which they face.

The amendments which we are considering today increase the limits for the Small Business Administration for loans and obligations which may be outstanding at any time. The current limit is $6 billion, but unless this overall limit is raised, many businesses will have to be turned down when they seek financial assistance. Therefore, in order to continue the operations of these programs the bill increases the limit to $8 billion. The legislation also authorizes the appropriation of $71 million for the SBA surety bond guarantee fund. This fund is necessary so that small business can post performance bonds in order to meet the requirements of any specific contracts which they may be eligible for. A number of other limits are also increased in order to foster economic growth among small businesses.

Mr. Speaker, H.R. 692 includes additional provisions which will be important to the small business community. One important change is that the SBA is now authorized to make regular business loans to small homebuilders for construction or rehabilitation of buildings. Up until this time, a homebuilder, regardless of size, was precluded from receiving financial assistance from the Small Business Administration. It was felt that homebuilders as a class are speculators, and under this misleading categorization many promising businessmen and businesswomen were precluded from small business financial assistance. This was surely an unfortunate characterization of the average small homebuilder, especially in view of the fact that small construction firms account for 77 percent of the construction industry.

Mr. Speaker, in order to key in on other important provisions in this legislation I would like to briefly review several of the inclusions. The bill—

Authorizes SBA to make business loans to small concerns displaced by State or local government projects;

Gives SBA the authority to make economic injury loans at a Governor's request to small business in an area affected by a natural disaster;

Expands SBA's certificate of competency program by authorizing SBA to make all determinations regarding the responsibility of a small business to perform a specific Government contract;

Directs Federal agencies, wherever possible, to divide small business set-aside contracts into amounts of less than $1 million each;

Enlarges the eligibility for SBA compliance loans in order that small business will be able to meet the requirements of a Federal law, a State law, or regulation issued in conformity with a Federal law; and

Authorizes up to a 5-year moratorium on repayment of SBA loans provided that without the moratorium the business would become insolvent.

It can be seen, Mr. Speaker, that H.R. 692 provides a number of sweeping new protections for the small business owner. No legislation which could be passed would ever genuinely assist the individual entrepreneur in meeting all of his or her individual problems. However, by focusing in on a number of the largest problems, I hope that we may be able to as-

not only provide a source of income, but provide a valuable community service. Without these enterprising people, our country's economic system would be less stable and less productive, and our unemployment rate would be even higher than the high levels it is today.

Unfortunately, these entrepreneurs are handicapped in their efforts to build new businesses. Nonavailability of investment funds, natural disasters, relocation due to displacement by a Government program or project, and the imposition of strong compliance requirements all serve to inhibit the growth of a new or struggling firm. The Small Business Administration was established for the purpose of assisting these small businesses to get started and cushioning their financial burdens during periods of unexpected financial crisis. All too often though, the SBA fails to actively promote the programs for which they were established to administer.

Today the House overwhelmingly passed H.R. 692, a bill which amends the Small Business Act and the Small Business Investment Act of 1958. It provides that many homebuilders can now obtain more extensive loans. The Committee on Small Business found that most of these homebuilders are really small businesspersons who are not speculators, but people who provide an invaluable service for buyers in an overinflated housing market. H.R. 692 also softens the impact of stringent compliance requirements on small businesses by allowing them to obtain compliance loans.

In a depressed economic environment, just meeting the monthly bills is quite difficult. By giving the SBA the authority to defer payments to either SBA or to a bank which had made a guaranteed loan, small businesses will be better able to weather hard financial times and, in the long run, to survive. This bill would also extend loans to small businesses who suffer economic injury due to displacement by a project or program of the State or local government.

The intent of the legislation is clear. The Committee on Small Business and the House have served notice that they want to extend protection and financial assistance to small business. I hope that the Small Business Administration will liberally effectuate it.

Mr. SMITH of Iowa. Mr. Speaker, I move the previous question on the bill.

The previous question was ordered.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. ROUSSELOT. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 381, nays 0, not voting 50, as follows:

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

SUMMARY OF THE NATURAL GAS REFORM BILL TO BE INTRODUCED IN THE HOUSE FEBRUARY 9, 1977, BY REPRESENTATIVE CLIFFORD ALLEN

(Mr. ALLEN asked and was given permission to address the House for 1 min-

ute, to revise and extend his remarks and include extraneous matter.)

Mr. ALLEN. Mr. Speaker, I am today introducing in the House a bill to reform the Natural Gas Act to encourage the exploration and drilling for natural gas, by vesting certain extraordinary and other powers in the President, to encourage the conservation and nonwasteful use of natural gas, and to protect the public from being ripped off by unreasonably high rates by the natural gas industry through proper regulation and control of all natural gas by the Federal Power Commission, State regulatory commissions, and other agencies established for that purpose by the several States and U.S. territories.

The first thing that this bill would do is to recognize that natural gas is not a manmade commodity, but is a natural resource created and placed in the Earth by our Maker for the benefit of all mankind.

In our present economy, we must surely recognize that all natural gas is a vitally needed and essential national resource, and this bill so states.

We must surely recognize also that there is a great and urgent need to speed up and greatly expand the exploration and drilling for more natural gas to meet the present and future demands for this essential fuel in all 50 States.

To encourage and provide substantial incentives to natural gas companies and other persons to increase their exploration and drilling for more natural gas, this bill would confer certain extraordinary powers in the Office of the President.

The lack of such financial incentives to increase their exploration and drilling for more natural gas has been emphasized, time and time again, by spokesmen of the natural gas industry as the reason more exploration and drilling has not taken place over the past several years. In this connection it is claimed that the exploration and drilling for natural gas, even in the most promising sites, often results in dry holes, where no gas, oil, or other valuable minerals are found, resulting in total losses for those who hazard their money for such exploration and research.

To meet this situation, this bill would grant discretionary power and authority to the President, on behalf of the Government, to share in the risk of such exploration and drilling, through certain agreements he would be empowered to make with those who are willing to venture their capital in such exploration and drilling. Under such agreements, the Federal Government would pay and reimburse such parties up to, but not to exceed, 50 percent of the cost and losses suffered by such producers in all cases where such exploration or drilling results in a dry hole.

This is a unique and never-before-tried incentive to help increase the supply of natural gas that would be available for the market, and would help to hold down the prices to consumers in view of the fact that the Government would be sharing in these losses and costs of drilling dry holes, which have heretofore been added to the rates and prices charged for this essential fuel.

To promote the conservation and to end the wasteful uses of natural gas to fire boilers and for other low-priority uses, for which other types of efficient fuels are in more plentiful supply, and to insure adequate supplies of natural gas at reasonable prices to residential users, small businesses, and other higher priority users, the bill requires the Federal Power Commission to establish as a matter of law the priorities for the various uses of natural gas, with the highest priority going to residential users, small businesses, and other such users as may be determined by the Commission, with the approval of the President. The Commission is then directed that natural gas supplies be committed first to these high-priority users. No user may be charged a rate less than that charged to residential consumers and the highest priority users.

To further discourage the wasteful practice of furnishing cheaper gas to lower-priority users, the Commission and other regulatory agencies may establish differential rate schedules to provide that the lower the priority use the higher the rate.

Then, for the first time, all natural gas, and the rates to be charged by all natural gas companies, would be properly regulated for the protection of the consumers in all 50 States, without the present unfair discrimination.

To accomplish this, the bill revamps the coverage language of the Natural Gas Act. The Federal Power Commission was originally charged with regulation only of transporting and selling natural gas, and of only that part of transportation and sales which took place across State lines. The original law specifically exempted from coverage any intrastate transportation and sale. The reform bill expands the regulatory jurisdiction of the Federal Power Commission to the production, supplying and distribution, as well as the transportation and sale, of natural gas, wherever located and whether or not it crosses State lines. The only exclusion from the Commission's jurisdiction is where sales by local distributors to ultimate consumers are already being regulated by State commissions or other appropriate agencies of State or territorial governments. The bill also applies to all natural gas companies, which are defined as persons engaged in the production, distribution, supplying, transportation or sale of natural gas.

This bill also expands the statutory definition of interstate commerce to specifically include any commerce affecting interstate commerce and to specifically include the exploration, drilling, production, distribution, supplying, transportation or sale of natural gas, regardless of location, except that regulated by proper State or territorial government.

Further teeth are added by the addition of definitions of "local distributor" and "ultimate consumer," spelling out exactly which sales are still outside the purview of the Commission.

In light of the difficulty of obtaining an accurate picture of the true extent of the natural gas supply crisis, the bill requires every natural gas company to file monthly reports with the Commission and the President reflecting its current inventory and supply and demand for natural gas, including 6- and 12-month projections of its supply and demand, with an appropriate penalty for failure to comply.

The President is accorded power to seize supplies of natural gas in two situations: First, where he shall determine that gas is being arbitrarily withheld from the market by any person, in which event he can redistribute the seized gas, provided that prices are pegged at those established by the Commission; and two, where there is true scarcity, in which event the seizure procedures shall comply with those in the President's Emergency Natural Gas Act. Here again, the President has the power to reallocate available supplies.

The President, the Commission, and any citizen adversely affected by the activities of a natural gas company, each has been given further right of enforcement by mandatory court order, injunctive or any other appropriate relief through the courts.

I believe it was Abraham Lincoln who said this Nation could not continue to exist half free and half slave. The same is true of our use of natural gas. We cannot permit this vital natural resource to remain half regulated and half unregulated.

This bill recognizes this principle in undertaking to provide essential natural gas to consumers, without the present unfair discrimination of sufficient and even overabundant, supplies being made available in some unregulated States at various and different prices, while other States and parts of the Nation are having their gas supplies seriously curtailed below their minimum needs, with no semblance at all of any uniform policy or sensible rationale in the rates and prices charged the consumers, but only the rankest kind of invidious discrimination.

The American people know that we are all in this together. This reform bill will let all of us carry our own fair share for the welfare of the Nation.

TANKER SAFETY LEGISLATION

(Mr. DICKS asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. DICKS. Mr. Speaker, as the 95th Congress began, we were all inundated with news reports of oil tanker accidents and widescale marine pollution. It is my strong hope that before we end the 95th Congress, we will have placed on the statute books strong and comprehensive tanker safety legislation.

It is clear that we will need the close cooperation and leadership of the executive branch if we are to succeed in this endeavor. And with Brock Adams as the new Secretary of Transportation, I believe we have just the man who can provide us with such help. I think it is sig-

nificant to note that one of Secretary Adams' first actions in his new position was to put into effect new regulations on tanker safety. I applaud the Secretary on this action, and look forward to working with him in building on this record.

I believe the case for a comprehensive tanker safety bill is overwhelming—I only wish we did not need catastrophic oil spills to help build public support for such action. Actually, tanker mishaps cause only a fraction of the total oil pollution problem. Various studies estimate that between 6 and 9 million tons of oil soil our marine environment every year; most experts place pollution due to oil transport at approximately 1½ to 2 million tons annually. Within this 1½ to 2 million ton figure, the weight of evidence seems to indicate that only 1 out of 7 gallons stems from accidents; the remainder comes from routine tanker operations. This indicates to me that effective tanker safety legislation will need to take a more encompassing approach than narrow accident prevention, if we are to be successful. A 1975 study by the National Academy of Sciences has compiled the best statistics I have seen on this matter, which I will place in the RECORD at this point:

Summary of oil pollution inputs in the world's oceans caused by tankers

[1973 Estimated annual input—in tons]

Cause:	
Tanker operational spillage caused by tank washing and ballast water discharge: 75 percent by tankers without a load-on-top system and 25 percent by tankers with L.O.T.	1,080,000
Tanker accidents	200,000
Tanker drydocking	250,000
Tanker terminal operations	3,000
Tanker bilges and bunkering	50,000
Total[1]	1,583,000

[1] This total is equivalent to nearly ½ billion gallons of oil each year.

Source: "Petroleum in the Marine Environment," National Academy of Sciences, January 1975.

ESTIMATE OF OIL POLLUTION INPUT TO THE WORLD'S OCEANS FROM ALL SOURCES

Budget of petroleum hydrocarbon introduced into the oceans

Source	Input rate (millions of tons per year) Best estimate	Probable range	Reference
Natural seeps	0.6	0.2–1.0	Wilson et al. (1973).
Offshore production	.08	.08–.15	Do.
Transportation:			
LOT tankers	.31	.15–.4	Results of workshop panel deliberations.
Non-LOT tankers	.77	.65–1.0	
Drydocking	.25	.2–.3	
Terminal operations.	.003	.0015–.005	
Bilges bunkering	.5	.4–.7	
Tanker accidents	.2	.12–.25	
Nontanker accidents.	.1	.02–.15	
Coastal refineries	.2	.2–.3	Brummage (1973a).
Atmosphere	.6	.4–.8	Feuerstein (1973).
Coastal municipal wastes.	.3		Storrs (1973).
Coastal, nonrefining, industrial wastes.	.3		Do.
Urban runoff	.3	.1–.5	Storrs (1973), Hallhgen (1973).
River runoff	1.6		Do.
Total	6.113		

The NAS study estimated that between 6 to 9 million tons of oil stay continually in our oceans. What bothers me most is that we simply have no way of knowing what the long-term effects of such chronic oil pollution really are. And we all know the situation will get worse before it gets better. This is because every study made on the subject concludes that the amount of oil pollution in our waters is directly related to the amount of oil transported at sea.

The figures I have seen show that in 1985, between 3½ to 4 billion tons of oil will be transported by sea. A Smithsonian Institution study extrapolated from current oil pollution rates and estimated that by 1985, 4 to 5 million tons of oil will be added to the marine environment from tanker operations alone.

So far, this country has been lucky. Exact figures are difficult to come by, but the Coast Guard estimates that we suffer a polluting accident once in every 5,500 harbor transits. I do not believe we can take too much comfort in our past good fortune, however. With the projected increase of oil transported at sea, and the aging of the world's supertanker fleet, we must take actions to lengthen the odds against a catastrophic oil spill off our coasts. All it takes is one major accident: When the supertanker *Metula* ran aground off the coast of Chile, it created an oil slick the size of which could have completely covered Puget Sound.

It is my hope, therefore, that the Congress will enact comprehensive tanker safety legislation. On other occasions, I would like to share with my colleagues some thoughts on different component parts of a reasonable and comprehensive tanker safety legislative package.

FORMER MEMBER SAMUEL WEISS DIES

(Mr. MOORHEAD of Pennsylvania asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, it is with great sadness that I report to the Chamber the death in Pittsburgh of Samuel A. Weiss, a former Member from Pennsylvania who served in the Congress from 1941 to 1946.

Sammy Weiss, as he was known to multitudes in western Pennsylvania, was a man who mixed politics and his love of athletics in a lifetime career. Before serving in the State house and being elected to Congress, Weiss played baseball and football at Duquesne University and was a referee in the old National Professional Football League, the predecessor of today's National Football League.

After leaving the Congress, Weiss was elected to the court of common pleas and served more than 20 years before he retired in 1967.

Sammy Weiss was a man who long will be remembered in my State as a dedicated public official, a fine athlete, a judge with a strong sense of justice and a man who mixed little mercy with his judicial decisions.

I would like to include in the RECORD at this time an article from the Pittsburgh Post-Gazette noting the death of Samuel A. Weiss:

SAMUEL A. WEISS, RETIRED JUDGE, 74

Retired Judge Samuel A. Weiss, who for almost half a century was a one-man political and sports spectacular, died yesterday at Negley House, a Shadyside nursing home, after a lengthy illness.

Judge Weiss, 74, had retired from Common Pleas Court in 1967 while in his third successive 10-year term. He had been a member of Congress and a member of the state House of Representatives before assuming the judgeship in 1946.

But the judge's greatest popularity was on the sports banquet circuit where he frequently was a speaker. He had been captain of the Duquesne Unversity football team in 1923 and captain of Duquesne's baseball team in 1924.

Judge Weiss received his law degree from Duquesne in 1927 and continued his interest in football by becoming a referee in the old National Professional Football League, the predecessor of the present National Football Conference of the National Football League.

That helped him eat in his early years as a lawyer as did the banquet circuit. As his wife Jeannette, once said of Judge Weiss, "he's just not the pipe and slippers kind."

As a beginning lawyer, Judge Weiss won his first defense case with the help of the prosecuting attorney, the late M. Barney Cohen. Later on the bench Judge Weiss was generally regarded as a jurist unlikely to temper mercy with justice.

In 1952, Judge Weiss carried a .25-caliber Spanish pistol. He said that after he had ruled against Communist members of the Serbian Progressive Club of Wilmerding he had received threats and had surprised intruders in his home on two successive nights.

Judge Weiss was born in Poland and was brought to the United States as an infant. In his later judicial years he lived in the University Square Apartments in Shadyside but he still called Glassport his home.

He had been honored by the major veterans organizations, the Salvation Army and Duquesne University. He was a past regional chairman of the United Jewish Appeal and the National Jewish Hospital at Denver and past president of Rosalia Foundling and Maternity Hospital.

B'nai B'rith named a lodge after him, and he also was a member of the Fraternity Lodge, F&AM. He was active in the National Conference of Christians and Jews, and in bar associations.

Judge Weiss is survived by his wife, Jeannette E.; a son, James Edgar Weiss; a daughter, Mrs. Robert (Joy Arlene) Cohen of Washington, D.C., four sisters, Mrs. Etta Alderman and Pearl Weiss, both of Pittsburgh; Mrs. Molly Broudy and Mrs. Bessie Lebowitz, both of White Oak; and five grandchildren.

Services will be at Blank Brothers Inc. funeral home at noon today, with visitations beginning at 10:30 a.m. Interment will be in B'nai Israel Cemetery.

GENERAL LEAVE

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the life, character, and public service of the late Honorable Samuel A. Weiss.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

RECENT EFFORT TO REPEAL THE ROBINSON-PATMAN ACT

(Mr. BRECKINRIDGE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. BRECKINRIDGE. Mr. Speaker, but a few days before the resignation of the Ford administration's Attorney General and the inauguration of the incoming Carter administration, a small group of attorneys in the Antitrust Division of the U.S. Department of Justice released a document entitled "U.S. Department of Justice Report on the Robinson-Patman Act." That document constitutes an attack upon a section of our Federal antitrust laws which prohibits unjust and damaging price discriminations in the sale of goods in interstate commerce.

The document to which I refer is little more than a compendium of the assertions and arguments heretofore made without empirical or factual evidence. When the House Small Business Committee held hearings on related matters, one of the principals from this group in the Antitrust Division testified to the effect that he had publicly acknowledged that his arguments against the Robinson-Patman Act are largely based upon anecdotal information and philosophic bias. Nevertheless, this small group in the Department of Justice proceeded to compile this so-called U.S. Department of Justice Report on the Robinson-Patman Act, and to have it published in the waning days of the last administration. It is not signed. Neither does it show who the authors of this document were within this small group of attorneys to which I have reference.

As a Member of the House of Representatives, and as chairman of a subcommittee charged with the responsibility of reporting on matters such as this, which not only affects but is vital to the small business community, I wish to advise that this matter will be fully investigated, further hearings held, and a report made to the House of Representatives concerning it.

Mr. Speaker, I ask consent to revise and extend my remarks at this point in the RECORD:

Previously the same small group of attorneys in the Antitrust Division of the Department of Justice had made a similar attack on that section of our antitrust laws, which is known as the Robinson-Patman Act. On September 30, 1976, the Committee on Small Business of the House of Representatives submitted, and there was printed, House Report No. 94–1738 of the 94th Congress regarding that attack. The House report is entitled, "Recent Efforts To Amend Or Repeal The Robinson-Patman Act." On page 60 of that report, as published by the House of Representatives, is the following statement:

> Within the Antitrust Division of the Department of Justice, there is a coterie of lawyers who have expressed animosity to the Clayton Antitrust Law as amended by the Robinson-Patman Act. They formed the nucleus of a group called the "Regulatory Reform Unit" under the aegis of Assistant Attorney General Kauper, to study the various administrative agencies and commissions.
>
> Moreover, without explanation, is the fact that as a part of its regulatory reform program, this so-called "Regulatory Reform Unit" in the Antitrust Division of the Department of Justice surfaced with draft proposals for the repeal of the Robinson-Patman Act which is an amendment to the Clayton Antitrust Act. Why this small group of attorneys in that Unit considers a provision of the antitrust laws as a regulation of business is left unexplained. The Robinson-Patman Act is part of the antitrust law and it is not an act to "regulate" business; it is an act to prohibit unfair acts and practices through discrimination in price, service or facilities. Nevertheless, that "Regulatory Reform Unit" during July 1975 caused to be circulated to the Office of Management and Budget (OMB) drafts of bills which would amend or repeal the Robinson-Patman Act for the obvious purpose of having copies of such proposals recirculated to the other Federal departments and agencies.

Moreover, this same small group of attorneys in the Antitrust Division have claimed, in effect, that Congress did not know what it was doing when it passed the Robinson-Patman Act in 1935–36, and that there had not been adequate hearings held for consideration of the matter at that time or since (see pgs. 88–89, House Rep. No. 94–1738, 94th Congress and Cong. Rec., Dec. 18, 1975, pgs. 41809 and 41810).

Mr. Speaker, the trouble and fault with this small group of attorneys in the Antitrust Division is that they appear to be without communication with the practical everyday operations of business and confine their thinking to the views expressed by each other. For example, the document which they have just released as a report on the Robinson-Patman Act appears to be based in some part upon the views and arguments heretofore expressed publicly by members of this same the Department of Justice. In a number of places in that document they have quoted each other and cited public remarks made by members of the group. They simply do not seem to understand the hard facts of business life, and of competition, and of the problems faced by small business in this country.

When the Ad Hoc Subcommittee on Antitrust, the Robinson-Patman Act, and related matters of the House Small Business Committee held hearings in the fall of 1975, on other suggestions made by this same group of repeal of the Robinson-Patman Act, a petition was presented to the committee and to Congress by more than 60 small business associations representing approximately 3½ million small business firms. The petition read as follows:

> We join in this statement as a Petition to Congress to preserve in all respects the Robinson-Patman Act in its present form, without weakening amendments.
>
> We also urge the Congress to take appropriate action to improve the enforcement of this basic statute in all respects so that violations of the Robinson-Patman Act may be swiftly discovered and prosecuted.

These small business associations believe, without reservation, that repeal or weakening of Robinson-Patman would severely jeopardize our system of private enterprise and accelerate the trend toward giantism in the distribution of commodities. The greatest bulwark against monopoly is a strong small business community. It is in the public interest to prohibit predatory practices that would destroy both competition and competitors. The life of competition is in numbers of competitors. To insure that small business remains strong in numbers and in economic health, it needs fair rules of competition as typified by Robinson-Patman.

These associations further believe that small business would be so disadvantaged if Robinson-Patman were repealed—or weakened by amendments—that their major but losing battle for survival would be launched. There is no question but that thousands of businesses would be driven from the marketplace, resulting in a disastrous impact on our economy, tax revenues, and jobs. (See H. Rep. No. 94–1738, pages 3, 4, and 103.)

I include the following:

[From the Washington Post, February 7, 1977]

ANTITRUST CHIEF AND BIG BUSINESS

(By Jack Anderson and Les Whitten)

Donald G. Baker is a decent sort, a lawyer of excellent reputation, with an upright air and a scholarly demeanor. As the Justice Department's antitrust chief, he is supposed to police the cut-throat corporate world. But the business tycoons who inhabit this world make Baker look like Snow White among the seven dwarfs.

He discourses upon the evils of economic concentration, he espouses the theory of antitrust enforcement. But when it comes down to protecting the public from rigged prices and corporate monopolies, Baker has not exactly been a bold champion of vigorous action.

His latest tilt with the barons of Big Business is described in a confidential memo, which was never intended to be circulated outside the Justice Department. It reveals how he settled a price-fixing case with the two electrical giants, General Electric and Westinghouse, without demanding concessions that might have brought down energy prices.

The pursuit of lower energy prices is one of the top objectives of the federal government. Yet Baker could have broken the price squeeze in return for dropping antitrust allegations against General Electric and Westinghouse, the memo suggests.

Between them, GE and Westinghouse, sell about 90 per cent of the giant turbine generators, that produce electricity in America's power plants. Each generator costs millions which, in turn, has an impact on the price that the public eventually must pay for electricity.

The story is worth telling from the beginning. The Justice Department charged that for the past 12 years GE and Westinghouse had "deliberately" eliminated price competition in the giant turbine industry. The two companies allegedly accomplished this through an elaborate pricing scheme, which resulted in very similar prices for both GE and Westinghouse turbines.

Baker got an agreement from the two companies to stop "stabilizing" prices through this complex method. Yet GE and Westinghouse had promised the Justice Department years ago not to fix the prices of turbine generators. In other words, the companies merely promised again not to do something which they had already sworn never to do.

The agreement was opposed by two senior antitrust officials, Bernard Hollander and Richard Stern. The determined Stern put his objections in a confidential memo, which he submitted to Baker shortly before the settlement was approved.

Stern reminded Baker that Westinghouse was "extremely anxious" to settle the price-fixing case. This gave the Justice Department an opportunity to gain some important concessions from Westinghouse in a separate but related antitrust case, Stern pleaded.

In the latter case, Westinghouse allegedly used its contracts with the Mitsubishi Company to prevent the Japanese firm from shipping giant turbine generators to the United States.

The entry of Mitsubishi into the American market, Stern contends, would cause a "sharp price drop." He, therefore, "strongly urged" Baker as part of the settlement to insist "that Westinghouse agree to permit Mitsubishi to ship turbine generators to the U.S."

Footnote: In a telephone interview with our reporters Gary Cohn and Richard Dokolow, Baker said he approved the settlement because the government got all the relief it was seeking. He acknowledged that both Stern and Hollander had opposed the agreement but said Stern's memo called for "an inappropriate use of prosecutorial discretion." Both Stern and Hollander refused to comment.

ANOTHER FIX?

Another price-fixing case, involving the giant Atlantic Richfield oil combine, will be presented to a California grand jury this week.

The investigation has been kept hush-hush. But we have learned from insiders that the state's case will probably be similar to a lawsuit, which has been brought against Atlantic Richfield (ARCO) by franchised dealers in southern California.

In affidavits prepared for the civil suit, former ARCO sales representatives and dealers will describe attempts to control their prices by coercion. Many of these people are expected to be called before the grand jury.

An ARCO spokesman "categorically denied" the accusations brought against the company in the lawsuit. "We are confident our practices are legal and that we haven't been coercing our dealers," he said. He had no comment on the grand jury investigation.

GRAIN RESEAL AND FARM STORAGE ACT

(Mr. SEBELIUS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SEBELIUS. Mr. Speaker, unfortunately, depressed wheat and feed grain prices are once again forcing farmers to place their grain under nonrecourse Commodity Credit Corporation loans. These loans are administered according to the Agriculture Act of 1949 that authorizes the Secretary of Agriculture to determine the length of the loan, loan price, rate of interest, and storage payments. In addition, it is stipulated that grain taken into ownership by the CCC cannot be sold on the market unless the cash price is at least 115 percent of the loan rate.

However, as the program exists today, the USDA could release the grain at the expense of the farmer. In fact, in the 1960's the Commodity Credit Corporation continually sold grain as soon as the price reached 115 percent of the loan rate. The result was a wheat market continually depressed by the Government. This is the underlying reason why farmers today are so adamantly opposed to Government ownership of grain.

Mr. Speaker, grain producers are currently in the midst of a farm price and credit crisis. Wheat farmers face a very erratic marketing situation. The combination of a large carryover and spotty production throughout our Nation's Wheat Belt means the farmer will continue to face an unpredictable market. More to the point, the grain producer's financial situation is such he must be able to plan for the future with some consistency.

During this uncertain period in American agriculture, it is my strong belief that farmers and growers should have maximum control over when and where their grain is marketed. What is at stake is our Nation's grain producing capability. The man whose job it is to feed our Nation and a troubled and hungry world must at least have some control over decisions that affect his ability to stay in business.

With CCC nonrecourse loans on the 1976 crop approaching their 11-month termination date, there will undoubtedly be a Government takeover unless prices improve. Once again, we face the possibility that the CCC could unload this wheat when the need arises. We should take a lesson from past Government interference in the farmer's market and make sure this does not happen again.

I am introducing a bill that would safeguard the farmer's economic well-being through changes in the administration of the nonrecourse loan program. My bill would amend the Agriculture Act of 1949 so that producers of wheat, corn, barley, oats, rye, and grain sorghum would have the option of resealing grain under loan at the initial period for repayment of the loan, for an additional 12 months with storage payments and no interest. The farmer would also have the privilege of resealing for a third year with the same conditions if the market price were below 75 percent of parity. If the price were above 75 percent of parity, the loan extension would require the Secretary of Agriculture's consent.

This legislation also contains an antidumping provision so that if the CCC were to own grain, it would not be able to sell for less than 150 percent of the current loan level except under conditions when the grain is in danger of deterioration or spoilage or when natural disasters create a need for emergency livestock feed.

OPPOSITION TO AN AUTOMATIC CONGRESSIONAL PAY RAISE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. LUNDINE) is recognized for 5 minutes.

Mr. LUNDINE. Mr. Speaker, I rise to urge the congressional leadership to schedule a prompt vote on disapproving the proposed congressional pay increase.

I am proud to be among the cosponsors of the Pay Raise Deferral Act, H.R. 1365, which stipulates that Congress cannot vote itself an increase in salary while it is in office. Under this legislation no increase in congressional pay would take effect until a new Congress has been elected, following the one in which such an increase was approved. I feel it is extremely important that no elected official should be allowed to raise his or her own salary during the current term of office, no matter how much justification is offered for that step. I urge the House to take prompt action on the Pay Raise Deferral Act.

As elected officials, we are obligated to stand up and face this issue directly. We cannot afford to duck the question and allow the pay increases to go into effect automatically. Public confidence in this institution is already perilously low, and avoiding a vote on the pay raise would only further erode that confidence.

Congress must also adopt a strict code of ethics prior to any pay raise, not as an afterthought. Any increase in pay must be accompanied by a prohibition on earned outside income to avoid any possible conflict of interest. Constituent service accounts must be eliminated or strictly controlled. Moreover, full financial disclosure is absolutely necessary to restore public confidence and integrity in this institution.

Mr. Speaker, I shall include in the RECORD my testimony before the Post Office and Civil Service Committee concerning these issues.

We must begin now, Mr. Speaker, to act decisively to regain the public trust in this institution. But we cannot do it if we are not afforded the opportunity to vote in pay raises and if we continue to defer consideration of related ethics issues. I earnestly hope that the leadership schedules a vote on this important matter directly after the Lincoln Day recess.

The testimony follows:

TESTIMONY OF REPRESENTATIVE STANLEY N. LUNDINE

Mr. Chairman, members of the Committee, thank you for the opportunity to testify on the pay raises recommended by former President Ford.

I have two areas of concern on this issue. The first is procedural. We have got to find new ways to implement present and future pay raises for members of Congress. One excellent proposal put forth by my colleague, Mr. Whalen, is H.R. 1365, the Pay Raise Deferral Act. I cosponsored this bill with the hope that it would not only be implemented, but implemented before the pay raise took effect automatically.

This legislation would prevent any increase in congressional pay during the tenure of the Congress which had voted for such an increase. Approved pay raises would take effect only after a new Congress had been elected. I feel it is very important that no elected official should be allowed to raise his or her own salary during the current term of office, no matter how much justification is offered for that step. I urge this committee to take prompt action and report out H.R. 1365 immediately after the Lincoln Day recess.

Another concern that I have involves public trust in this institution. As elected officials, we are obligated to deal directly with the proposed pay raise. We cannot afford to avoid the question and allow pay increases to go into effect automatically. Public confidence in the Congress is already perilously low, and dodging a vote on the pay raise would only further erode that confidence. No Congress or any legislature should be able to vote raises to its own salary.

No pay increases should ever become effective without an intervening election so that the public is aware of the proposal in advance and can act accordingly.

Furthermore, any increase in pay of members of Congress must be linked to a strict

code of ethic or the public will grow increasigly skeptical of our integrity. Outside income of elected officials should be strictly limited and all possible conflicts of interest eliminated. All benefits, including salaries and office expenses, should be open and available for public inspection at any time. And the level of compensation for public officials should be sufficient so that holding office is not reserved exclusively for the wealthy.

I strongly urge this committee to report out a resolution requiring a vote on the pay raise before the deadline, so that we may have an opportunity to deal with this important issue directly and responsibly.

Thank you very much.

LONGER TERMS FOR REPRESENTATIVES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Kansas (Mr. GLICKMAN) is recognized for 10 minutes.

Mr. GLICKMAN. Mr. Speaker, today I am introducing, along with Mr. STOCKMAN, my colleague from Michigan, a joint resolution, the purpose of which is to amend the Constitution of the United States in order to provide for staggered 4-year terms for Members of the House of Representatives, and to limit the number of terms a person may serve in the House of Representatives and the Senate to three and two respectively, or for a total of 12 years in either body.

Although I have not been a Member of Congress for very long—and if this resolution passes, will not remain in this body for nearly as long as some of my esteemed colleagues—I am proud today to be introducing what I have been told with gentle humor is a "freshman bill."

I would like to point out that the demand for the 4-year term has been long standing. Ever since the Constitutional Convention of 1787, it has been argued that the 2-year term for Representatives is too short a time for Members to acquaint themselves with their duties. In the almost 200 years since the Convention, proposals similar to the one I am introducing have proliferated.

Both Presidents Johnson and Truman called for longer terms, with President Truman, in addition, advocating a 12-year service limitation. From 1963 to 1972 alone, 44 proposals were introduced calling for a 4-year House term. In the more recent 94th Congress, 19 proposals to lengthen and/or limit the number of years Congressmen or Senators might serve were introduced.

Although Congress has not yet legislated with regard to these innovations, the time when our constituents will press for action is rapidly approaching. If my esteemed colleagues were to poll their districts today, their constituents would, I believe—wisely—mirror the sentiments of the people of Kansas' Fourth District and support the provisions of this resolution.

Our constituents, I believe, understand that facility with the ever-increasing complexity of issues is not only a legislator's prerogative, but his or her responsibility as well. The technical and legislative intricacies of our time must be fully understood in order to insure against laws that may be frivolous, inadequately researched, or superficial in origin. The current 2-year House term, almost by nature deems these goals difficult to achieve.

Depth of knowledge and excellence resulting from experience is acknowledged to be crucial to the practice of medicine, law, and the other professions. Yet "instant knowledge" on a myriad of issues is expected from legislators whose varied backgrounds run the gamut from farmer to physician. The inconsistency appears self-evident, even without the added variable of campaigning. By instituting 4-year terms for House Members, the Congress and more importantly, the American people, could anticipate and demand improved quality in legislation and representation.

Preventive legislation, rather than bills drafted in a crisis-to-crisis oriented legislature, could indeed become reality. In addition, the sophistication of the American mass media and transportation system allows all Representatives to maintain as close a relationship with their electorate as desired. Through these channels, the "will of the people" remains obvious to the concerned legislator.

This is a reform measure—one to which I am personally committed. I deeply believe that concurrent with the legislative advantage of the 4-year term, limitation of terms in both Houses is the only way to achieve true reform. I have promised my own constituents of Kansas' Fourth District that no matter what the fate of this particular measure, I personally—if fortunate enough to have the option—will not remain a Member of the House of Representatives for more than 12 years. It is because of my deep belief in the ultimate moral advantage of this inseparable portion of the resolution that I made, and intend to keep that promise.

The only way to protect against abuse of power or, if you will, an "Imperial Congress" is through the limitation of terms. The 22d amendment to the Constitution which, as we all know, limits the number of terms a President can serve was a step in the right direction—but only a step.

It is time for the Congress of the United States to stop taking small steps and begin to walk. By placing the Congress on a similar footing with the President we would, I believe, meet the current challenges to our society.

Because of the 8 year Executive term limitation, we see Presidents pouring every effort into the implementation of plans. We also see that by holding Presidential elections every 4 years, there is a constant source of competing ideas placed before the public. It is through this process that both the public and the candidate are educated; first on the people's desires and second on the candidate's solutions.

In the case of the Congress, the 12-year limitation imposed by this resolution on both Houses was not an arbitrarily determined one.

The 12-year limitation will be imposed equally because of the equal legislative power of the two branches. It seems to me that this particular length of time would legislatively, politically, and morally provide the framework for positive reform.

It will allow Members of both Houses adequate time in which to learn the workings of Congress itself and develop an expertise in the areas where his or her Committees have jurisdiction. It encourages a Member to take initiative in areas of interest to his or her district or State, as well as to his or her self and the Nation. In short, 12 years is a sufficiently lengthy period of time for a Member to make his or her mark, as it were, without participating voluntarily, or perhaps sadly inevitably, in the empire building process which has unfortunately come to our attention over the last several years. And, an important corollary to this idea, it will serve to end the all too frequently found situation that occurs when a Member's interest becomes too entwined with that of special interest groups.

I do want to mention at this point, all personal considerations aside, that the resolution I am about to place before you in no way prohibits an interested legislator from serving in the House of Representatives for the aforementioned time and then going on to serve in the Senate or vice versa. The system, in addition, would become operational only upon passage of this resolution, and therefore current Members of either legislative body would have the option of continuing to run for office for three more terms in the House or two more in the Senate.

Pushed by recent scandals, both Houses of Congress have had committees and commissions struggling to develop procedural changes. The solutions, as we all realize, will be difficult, but I do feel that the resolution represents the type of creative reform the American people have a right to expect from us, their elected Representatives.

Mr. Speaker, at this point I insert the body of the following resolution:

H.J. RES. —

Joint resolution proposing an amendment to the Constitution of the United States providing for staggered four-year terms for Representatives, for a limitation on the number of terms a person may serve in the House of Representatives or the Senate, and for other purposes

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States within seven years of the date of final passage of this joint resolution:

"ARTICLE —

"SECTION 1. The House of Representatives shall be composed of Members elected for four-year terms by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State

legislature. Immediately after they shall be assembled in consequence of the first election after the ratification of this article, the Representatives shall be divided as equally as may be into two classes. The seats of the Representatives of the first class shall be vacated at the expiration of the second year, and of the second class at the expiration of the fourth year, so that one-half may be chosen every second year.

"SEC. 2. No person shall be elected to the House of Representatives more than three times, except that any person who is elected to a vacant seat and serves for less than two years in such seat, or to a two-year term as a member of the first class under section 1 of this article, may be elected to the House of Representatives three more times. Only elections beginning with the first election after the ratification of this article shall be counted in determining the eligibility of any person to be elected to the House of Representatives under this section.

"SEC. 3. No person shall be elected to the Senate more than twice, except that any person who is elected to or chosen for a vacant seat and serves for less than three years in such seat, may be elected to the Senate twice more. Only elections beginning with the first election after the ratification of this article shall be counted in determining the eligibility of any person to be elected to the Senate under this section.

"SEC. 4. The first clause of section 2 of Article I of the Constitution of the United States is hereby repealed."

NUCLEAR EXPLOSIVES TESTING

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. PRICE) is recognized for 10 minutes.

Mr. PRICE. Mr. Speaker, I am pleased by President Carter's strong desire to reduce all armaments and I commend particularly his wish to proceed rapidly with SALT. However, with regard to nuclear explosives testing, I would hope that there not be any precipitous unilateral action. A hasty decision could significantly affect our current and future nuclear forces without imposing comparable restraints on other potential signatories to a comprehensive nuclear test ban treaty.

I am well aware of accounts on the disputes between the United States and U.S.S.R. on the yield of explosives detonated in the early period of the so-called threshold test ban treaty starting in March 1976. The Senate has not approved this treaty, but the United States and U.S.S.R. are supposed to observe its provisions about not testing explosives above 150 kilotons yield.

Such disputes, I fear, are only the tip of an iceberg of problems that would be generated by a comprehensive test ban treaty without ironclad verification procedures.

In 1971 I presided at the last hearing held by a committee of the U.S. Congress on the status of U.S. seismological techniques which could be used for differentiating between natural and manmade underground seismic events. Testimony by expert witnesses concluded that by 1971 the U.S. capability to detect seismic events had improved to the state whereby a determined evader might be able to conduct 5 to 10 kiloton tests underground with little chance of detection.

It must be clearly understood that detection of a seismic event is only one part of the total picture. The identification of the origin of the seismic event as natural or manmade requires as a minimum:

Detection by a number of seismic stations;

Accurate geographic coordinates;

Accurate determination of magnitude—or yield;

Accurate interpretation of recorded seismic waves;

Photographic — satellite — evidence; and

Onsite inspection.

It was expressly stated as a conclusion of my 1971 hearings that a good deal of nuclear weapons technology can be developed by tests at 5 kilotons and lower without too much chance of being shown to have violated a comprehensive test ban treaty.

We know that the Soviet Union is determined to conduct a strong, comprehensive program using peaceful nuclear explosives for a number of projects:

Oil and gas well stimulation;

Above ground water reservoirs;

Below ground gas and oil storage cavities; and

River course alteration.

We must fully comprehend how well the current U.S. technology would permit us to differentiate between a peaceful nuclear explosive and a weapons test, while recognizing the fact that a peaceful nuclear explosive could have yields up to megatons.

I consider it imperative that the Congress be brought up to date on several highly important matters related to a comprehensive nuclear test ban:

The current state of U.S. technology to detect, locate and identify the origin of seismic events.

The relative importance today of the four safeguards appended to the limited test ban treaty of 1963.

The role of peaceful nuclear explosives in a comprehensive nuclear test ban.

I plan to convene hearings on this matter which I consider extremely vital to our national security. I would hope that no precipitous action be taken until we are fully and currently informed on our capability to monitor and enforce a comprehensive test ban treaty.

THE NEED TO PROTECT THE CONFIDENTIALITY OF MEDICAL RECORDS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. CRANE) is recognized for 30 minutes.

Mr. CRANE. Mr. Speaker, in the last 4 months there have been a number of reports on television and in the newspapers concerning the confidentiality of patients' medical records. These reports revealed that individual privacy has been invaded by persons who are able to gain access to confidential medical, tax, and other records by both illegal and legal means, often with the cooperation of Government employees.

According to John Fialka in the Washington Star, December 9, 1976, investigators from the FBI and IRS were probing the operations of a Chicago investigative service that apparently gained unauthorized access to medical records and sold the information to many of the country's largest insurance companies. Many of these confidential records were obtained from a variety of Federal agencies, including the FBI, IRS, Veterans' Administration, Social Security Administration, and the Department of Defense. Sensitive material such as psychiatric histories were included in the purloined records.

On January 12, 1977, the National Bureau of Standards released a 2-year study on privacy and medical records by Alan F. Westin, "Computers, Health Records and Citizens Rights," which called for action to protect the privacy of health records. Speaking at a news conference, Westin said:

> The issue of privacy in health records touches the life of each of us. Everytime we visit a hospital or fill out health insurance forms, a record is generated and information from these medical records now flows regularly out of the primary health care setting in ways that give us very little control over how this information is used.

Contrary to the time-honored tradition that one's medical condition and treatment was a private matter between doctor and patient, the study revealed that a variety of individuals and institutions had access to these confidential records. Westin found that—

> An individual's medical and health data now circulates from doctor's offices, clinics, and hospitals to the files of insurance companies, health care review committees, employers, educational institutions, the military, the police, credit bureaus, government licensing agencies, research studies and surveys and a host of other users.

The study cites examples of leaks and misuse of health data about psychiatric patients, homosexuals, abortion patients, and those undergoing drug or alcohol rehabilitation and wished to keep their problems and treatment confidential.

While I believe that violations of the right to privacy are serious matters and should be prosecuted, whether the offenders be private investigators or their collaborators in Government agencies, I have been especially concerned over the greatest threat to our privacy—the Federal Government itself. Illegal Government activities such as surveillance of individuals and misuse of IRS records have received a great deal of attention by the media, but it is less well known that the Government has legal access to a great variety of records. In fact, Congress has enacted legislation which actually requires the Government agencies to obtain these records in order to conduct evaluation studies, authorize payments, perform oversight functions, and carry out other aspects of these laws.

The passage of the Privacy Act of 1974 emphasized congressional concern for the confidentiality of various types of personal records by providing safeguards for individuals against invasions of personal privacy and penalties up to $5,000 for violations of this act. However, thanks to loopholes in the Privacy Act,

some Government agencies still have authority to inspect and collect records in order to carry out their functions. Section 2(b)(1) of that act states:

The purpose of this Act is to provide certain safeguards against an invasion of personal privacy by requiring Federal agencies, *except as otherwise provided by law*, to permit an individual to determine what records pertaining to him are collected, maintained, used, or disseminated by such agencies. (Emphasis added.)

Section 3(a)(7) then provides that—

Each agency that maintains a system of records shall—maintain in its record only such information about an individual *as is relevant and necessary to accomplish a purpose of the agency required to be accomplished by statute or by Executive order of the President.* (Emphasis added.)

Thus, Government agencies are permitted not only to collect and maintain records for the purposes of criminal investigations but to carry out their everyday activities.

Because of the loophole in the Privacy Act which allows for the invasion of privacy by Government agencies if "otherwise provided by law," our personal medical records are not even safe from the prying eyes of Federal bureaucrats, let alone anyone else who may obtain them from Government agencies through burglary or bribery. For example, in the Social Security Amendments of 1972, Congress established professional standards review organizations—PSRO's—the purpose of which is to "apply professionally developed norms of care, diagnosis, and treatment based upon typical patterns of practice in its regions—including typical lengths-of-stay for institutional care by age and diagnosis—as principal points of evaluation and review."

Though the ostensible purpose of PSRO's is to hold down medicare and medicaid costs by setting guidelines for health care, such as minimum requirements for hospital admission and average lengths of stay for the various types of cases, their authority may be interpreted to permit access to the records of private patients as well, section 1155(f)(1)(B) of the Social Security Act, as amended, provides that a PSRO will—

Collect such data relevant to its function and such information and keep and maintain such records in such form as the Secretary may require to carry out the purposes of this part and to permit access to and use of any such records as the Secretary may require for such purposes.

Moreover, section 1155(b)(3) authorizes PSRO's to—

Examine the pertinent records of any practitioner or provider of health care services providing services with respect to which such organization has a responsibility for review . . .

Thus, in order to determine standards and norms, PSRO's have the authority to inspect the records of private patients as well as those receiving Federal assistance for the payment of their health care.

In its zeal to check rising medicare and medicaid costs, the Congress has created organizations—PSRO's—with the potential to destroy the confidentiality of the traditional doctor-patient relationship by making available to the Federal bureaucracy the medical and psychiatric histories of everyone subject to PSRO's, which will soon include the entire United States. Such confidentiality had already been violated by the IRS for many years as it demanded and received physicians' office records as part of income-tax audits.

Through the PSRO law and other legislation increasing Federal involvement in the health care system, the Government has become the greatest potential threat to the individual's right to medical privacy. Theoretically, an "Ellsberg break-in" would no longer be necessary if an official of the IRS or HEW wanted to examine sensitive psychiatric records for authorized reasons. These records would be available through laws and regulations permitting access to files in hospitals and doctors' offices. The only check on these abuses, unless a greater degree of confidentiality is extended to private medical records, will be the good will of the bureaucrats.

After its examination of the problems involved in maintaining health record systems while providing a degree of confidentiality, the Westin report presented 12 major principles that should be followed to preserve individuals' privacy. Several of these principles involved guaranteeing people the right to know how the information in their health records will be used and their right to specify when, what, to whom, and for how long that information is to be released.

In stressing the seriousness of the medical privacy problem, Westin said:

No single action can hope to deal with the tremendously varied and complex issues of citizen rights in health record-keeping. It will take a mosaic of policy actions over time to do what is needed. But we must begin to take these actions now. We cannot afford to wait until national health insurance is enacted or the reorganization of the American health care system is completed.

I most heartedly concur with Mr. Westin's conclusion as to the need to begin immediately to alleviate the confidentiality problem. Today I am reintroducing legislation, first proposed in December 1975, to provide for the confidentiality of medical and/or dental records of patients not receiving assistance from the Federal Government. While it can be argued that the Government needs to examine the records of medicaid and medicare patients to prevent or detect fraud and abuse, the Government should have no right to violate the privacy of those under private medical care.

Although passage of such legislation is not the total answer to the problem of medical records confidentiality, it is a necessary first step. Moreover, it is totally consistent with the objectives of the Privacy Act of 1974. We must act now to insure that individuals retain their rights of privacy when seeking medical treatment. Further Government involvement in the health-care field can only lead to the destruction of the last remnants of that privacy unless safeguards are enacted now.

Whether or not they share my views regarding proposals for national health insurance and other Government health programs, I urge my colleagues to consider the effects they would have on medical privacy and, therefore, join me in sponsoring this legislation. I include the text of my bill at the conclusion of my remarks:

A bill to provide for the confidentiality of medical and/or dental records of patients not receiving assistance from the Federal Government, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That no officer, employee, or agent of the United States, or any agency, or department thereof, may inspect, acquire, or otherwise require for any reason whatever, any part of medical and/or dental records of patients whose medical and/or dental care was not, or will not be, provided directly by the Federal Government, or was not, or will not be, paid for (in whole or in part) under a Federal program or any other programs receiving Federal financial assistance, unless such patient has authorized such disclosure in accordance with section 2.

SEC. 2. A patient may authorize disclosure under section 1 if he furnishes a signed and dated statement in which he—

(1) authorizes such disclosure for a specific period of time;

(2) identifies the patient records which are authorized to be disclosed; and

(3) specifies the purposes for which, and the agencies to which, such records may be disclosed.

SEC. 3. Any person who violates section 1, upon conviction, shall be fined not more than $10,000 or imprisoned for not more than five years, or both.

SEC. 4. In addition to any other remedy contained in this chapter or otherwise available, injunctive relief shall be available to any person aggrieved by a violation or threatened violation of this title.

SEC. 5. Should any other law of the United States grant, or appear to grant, power or authority to any person to violate section 1 of this Act, the provisions thereof shall supersede and pro tanto override and annul such law, except those statutes hereinafter enacted which specifically refer to this title.

SEC. 6. The provisions of this title shall become effective upon the expiration of ninety days following the date of enactment.

JACK KEMP SUPPORTS LEGISLATION TO REORGANIZE AND REFORM THE OPERATIONS OF THE EXECUTIVE AGENCIES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KEMP) is recognized for 60 minutes.

Mr. KEMP. Mr. Speaker, I have taken this time today for two purposes.

First, to associate myself with the remarks of the gentleman from Texas (Mr. BROOKS), the chairman of our Committee on Government Operations. Those remarks concern the approach reflected in the President's Government reorganization message of last week.

Second, to announce my introduction of two very important pieces of legislation dealing with Government organization and operations.

Let me return to the first point for a moment. I think all of us agree there is a need for a reorganization of certain executive agencies along functional lines.

The President has recommended one way to do that. The chairman has recommended another. And while I have introduced a third measure, I am also joining the chairman in the introduction of his reorganization bill. During last year's campaign, Mr. Carter said repeatedly that he would insist on Government reorganization, and he struck a responsive chord with the public. I know when I dealt with this issue, I did also. The issue here is not one of purpose. It is one of mechanics. And I am pleased we are all on the same side of the issue as to that purpose.

As to the second point, I introduced H.R. 3260, the Executive Agencies Reorganization and Operations Reform Act, and H.R. 3261, the Federal Programs and Spending Control Act, yesterday. The first bill is completely new, one designed to bring substantial improvement in efficiencies and accountability to the people in the conduct of executive agencies. The second bill is a revised zero-base budget, sunset bill, a Federal-level one patterned after the law sought by, and passed during the term of, Mr. Carter when he was Governor of Georgia.

RETHINKING THE FUNCTIONS OF GOVERNMENT

The problem with Government today is not its organizational structure alone, although that is a major part of the problem. It is also the isolation of Government decisionmaking from the people; a lack of accountability to the people directly or through their elected representatives; the anonymity of those who conceive and author the agency rules and regulations which govern our lives as much as any law ever passed openly by Congress; and an arrogance which arises, perhaps quite naturally, from those who think they know what the people need and want better than the people themselves.

The reorganization and reforms which would be launched by the enactment of the two bills I introduced yesterday stand in marked contrast to the way Government functions usually, today. There can be little doubt but that the Federal Government is virtually out of control.

It continues to accumulate power over our lives—and to exercise it.

It spends more money in every year that goes by, and it persists in mortgaging our future by deficit financing much of that spending.

It continues to grow out of proportion to the rest of society.

It willingly—forcefully, if need be—assumes responsibilities which previously rested with the people.

Its rules and regulations have grown so cumbersome as to tie down almost any decisionmaking into a bundle of redtape.

And, if all of these things are not bad enough, consider the fact that neither the Congress nor the past or present administration have really dealt effectively with the problems.

The fault rests in both places.

In many instances the Congress has become too close to the agency officers and employees who advocate a continuation or expansion of their own programs, budgets, and agencies, and too close to the interests which threaten retaliation at the voting booths in the next election, unless their projects are kept going or new ones started, no matter what the effects on the common good.

Similarly, in many instances the elected heads of the executive branch—the President and Vice President—and the heads of the agencies have become little more than spokesmen for the bureaucracy below them, responding more to what the bureaucrats think should be the administration's programs than to what these leaders really know should be the program thrusts. This is how new administrations, such as the one just taking office, gradually lose sight of the commitments made to the people during campaigns. The Carter administration must be on the lookout for this phenomenon. The effects are obvious.

Inefficiency in Government has become the norm; so has delay.

Confused as to both purpose and means, Government now alternates erratically between doing too much and doing too little.

It all adds up to Government increasingly acting in its own interests and not in the interests of the people whose purpose it ought to be to serve.

When Government reaches the point that it is more to be tolerated than to be supported, something is wrong with the relationship between the people and Government as to which is the master and which is the servant. This is one of the responsive chords the President hit upon during the campaign. He brought this point out, when few others would, and I think almost everyone, whether they voted for him or not, agreed with him on the point.

There has been an erosion of individual freedom of choice. That erosion has been sufficiently gradual to permit an unconscious adaption by the people. A gradual erosion is freedom's most effective enemy, for freedom is not generally lost by the forces of violent attack. Those specific incidents when revolution and upheaval did quickly destroy freedom were preceded by an intellectual evolution which made those acts possible. These less immediately obvious threats must, therefore, be a cause of great concern among all who cherish freedom.

It is almost impossible to itemize the areas of conduct now subject to Federal regulation because there are so many, but a cursory examination of any Government organizational chart shows us the areas of our lives now subject to that regulation: Health, education, welfare, labor, commerce, housing, transportation, finance, agriculture, environment, communications, wages and prices, energy, labor-management relations, trade, alcohol, tobacco, firearms, savings, community relations, civil affairs, land use, natural resource use, recreation, commodities, securities, insurance, marketing, consumer affairs, productivity, nutrition, travel, economic development, shipping, vocational and career opportunities, employment standards, occupational safety, child development, retirement, rehabilitation, interest rates, credit availability, land sales, aviation, railroads, highways, safety, institutionalized voluntarism, arts and humanities, equal employment opportunity, export-import terms, trucking, small business, veterans, postal service, ad infinitum.

The point is this: As Government assumed each of the many components within each of these subject areas, it removed decisionmaking from the people, a process inherently antithetical to the exercise of free choice. Some of these are, indeed, necessary and are clearly in the interest of the people, the general welfare. But, taken all together, government as a cure-all is diminishing freedom.

WHY THE BUREAUCRACY GROWS AND GROWS

Why has there been such an inordinate growth in government in recent years?

There is a reason for the growth of government which relates specifically to our discussion today. It is the inherent characteristic of government to grow. And the best way to look at this reason is to contrast motivations in the private and public sectors.

The free enterprise economy—the economy of the private sector—dictates that waste and duplication be guarded against. In such an economy it is in a person's self-interest to serve the interests of others. In order to gain access to material goods and thus satisfy his own wants and needs, a person must first earn income by supplying in a market something which is valued by other people. This individual must of necessity consider the wants and needs of others. This is the way to assure the greatest growth in the common good too, for the best way to promote the welfare of all the people is to allow people the maximum amount of personal liberty, individual action, and freedom of enterprise.

These self-interests do not stop in a person when he assumes a position in government. The market restraints which channeled that self-interest to the benefit of society do stop. Without these market restraints, the pursuit of self-interest can become identified too readily with those of government, or one of its departments or agencies, or one's own position within it. For example, a problem resolved is one less from which to justify increases in statutory or regulatory power and agency authority, and one less from which to justify more funds and staff slots in the budget and management process. In a government of fiercely vying interests among departments and agencies for percentages of overall employee slots and funds, the greater the likelihood of getting them if you have more and more to do—year after year. The best way to assure this, of course, is to constantly add to the workload. And the best way to do that is to finish less and less. Delay is the best way to do it. This observation is not to cast a blanket aspersion on government employees' conduct, for this is often an unconscious process. But the consequences are the same.

This lack of incentives produces the kind of stagnation and frustration of purpose which reorganization can help overcome. There is nothing like the "shakeup" resulting from agency reorganization to put some better defined purposes and renewed spirit in motion. This is not the main purpose of reorganization, but it is not a bad byproduct.

EXECUTIVE AGENCIES REORGANIZATION AND OPERATIONS REFORM ACT OF 1977

The Executive Agencies Reorganization and Operations Reform Act is designed to—

Reorganize certain executive agencies according to four functional categories, title I;

Require the rules and regulations proposed by executive agencies to be acted upon by the Congress, title II;

Impose certain additional requirements upon the President and executive agencies, title III; and

Tighten the standards of official conduct governing officers and employees of executive agencies, title IV.

Let me comment on each of these more thoroughly.

REORGANIZATION OF CERTAIN EXECUTIVE AGENCIES

Government intervention in, and regulation of, the economy has become a heavy burden on consumers and producers. Regulatory agencies have worsened the effects of inflation by approving fare, price, and rate increases not always commensurate with the public interest, often without due consideration of the relative costs and benefits arising from such approvals.

Regulatory agencies have also impeded competition in certain industries, contributing to monopolistic and oligopolistic market patterns contrary to the public interest, bringing harm to both producers and consumers. To the producers by denying smaller businesses opportunities to compete for a fairer share of the market. And, to the consumers by depriving them of the lower prices and diversity of services and goods which greater competition would foster.

Regulatory agencies have often misapplied their limited resources by focusing on trivial aspects of regulations, neglecting critical economic issues. They have failed to set clear priorities and to articulate cogent policies, permitting patterns of bureaucratic stagnation and consequent public frustration and confusion to arise. In addition, the case-by-case adjudicatory approach of most regulatory agencies has created unreasonable delay in responding to changed public interest. This has impaired the effectiveness of consumer interest organizations and burdened producers with excessive paperwork. It has also impeded their abilities to adapt to changing market conditions and new technology.

And it is mostly the regulatory agencies which have grown less accountable to the public in whose interest they have been created to act. They have gradually amassed those powers granted by Congress and delegated by the President, the exercise of which, without full accountability to the public, is contrary to the democratic principles upon which our system of laws is based. This accountability cannot be assured adequately without constant and thorough oversight of such agencies and their activities by the elected Representatives of the people in Congress.

The purpose of title I, therefore, is to require the President to submit at least one plan in each year of the next 4 years to reorganize certain executive agencies and the Congress to act in a timely manner upon each plan.

Not later than the last day of March in each of the next 4 years, the President would submit a specific plan of reorganization. The schedule for those plans are as follows:

A plan concerning regulation of energy and environmental matters, to be submitted in 1978, covering the Environmental Protection Administration, the Federal Energy Administration, the Federal Power Commission, the Energy Research and Demonstration Administration, the Nuclear Regulatory Commission, and the relevant regulatory functions of the agencies within the Department of the Interior and of the Interstate Commerce Commission;

A plan concerning regulation of commerce, transportation, and communications, to be submitted in 1979, covering the Civil Aeronautics Board, the Interstate Commerce Commission, the relevant regulatory functions of the Department of Transportation, and the Federal Communications Commission;

A plan concerning food health, and safety, and unfair or deceptive trade practices, to be submitted in 1980, covering the Consumer Product Safety Commission, the Federal Aviation Administration, the Federal Trade Commission, the Food and Drug Administration, the National Transportation Safety Board, the Occupational Safety and Health Administration, the relevant regulatory functions of the Department of Agriculture, and the National Highway Traffic Safety Administration; and,

A plan concerning labor, housing, and Government procurement, to be submitted in 1981, covering the National Labor Relations Board, the Federal Mediation and Conciliation Service, the Equal Employment Opportunity Commission, the Federal Housing Administration, and the General Services Administration.

The bill provides for a procedure to include additional agencies, the policy parameters for reorganization, a course of action in case the President does not transmit a plan, and the means for congressional review of the plans.

REFORM OF REGULATORY PRACTICES

Title II is particularly important. It goes to the heart of this matter—the growth of a virtually independent lawmaking body within the executive branch—the regulatory agencies themselves.

Congress must now face this question of what to do about the mechanics and growth of Federal administrative rulemaking. It is within our power to do so.

Article I, section 8, clause 18 of the Constitution sets forth our basic power:

> The Congress shall have Power . . . To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof.

Congress, thus, has the power to make laws, including those laws which give to the administrative agencies the authority to issue rules. For example, Congress has the power to issue licenses for the operation of television stations, but it has expressly delegated that power to the Federal Communications Commission. Congress has, in short, given its powers to an administrative agency.

Inherent in this process is the continuing, constitutional power of Congress to make further laws, through which some or all of that power is returned to the Congress. The basic theory of the Constitution would be violated by restrictions on Congress retrieving its own powers. There are clear precedents for Congress exercising such authority, ranging from the constitutional argument successfully advanced by Chief Justice Marshall in *McCulloch* v. *Maryland*, 4 Wheat (17 U.S.) 316 (1819) to Congress exercise of that authority in recent decades.

In McCulloch against Maryland Chief Justice Marshall asserted that all that was required to establish the validity of an action under clause 18 was as follows:

> All means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consistent with the letter and spirit of the Constitution, are constitutional.

The Congressional Research Service of the Library of Congress reported early last year that in the last 43 years, 183 separate provisions in 126 acts of Congress contain some type of congressional review or consent for proposed administrative agency implementations of law. Others have since been enacted. Some require specific action. Others simply provide a procedure which Congress can use at its discretion.

We have done, therefore, on a selected basis in the past that which is proposed to be done on a uniform, consistent basis through title II of this bill.

We must establish this system at the congressional level. The courts cannot routinely monitor the consistency of administrative rules with congressional intent. It would be piecemeal and potentially inconsistent. And it would produce unimaginable frustrations in carrying out the laws.

There are two routes Congress can follow in overseeing rules and regulations—a tough one and an easy one. We can require the proposed rule be laid before the Congress and if no action is taken within a specified period of time to prohibit the rule from becoming operational, it would go into effect automatically. That is the easy route. Or, we can require an action by both Houses before the rule becomes operational. That is the tougher route. We should

prefer that tougher stance, not because it is tougher, but rather because it is far too easy for something like this to become lost in the maze of legislative process.

ECONOMIC IMPACT STATEMENTS

The legislation, section 202, would make every agency demonstrate that the economic benefits of a proposed rule or regulation exceed its anticipated costs to the public. No one in Government knows exactly how much regulation costs our economy, either in terms of tax dollars spent to maintain the regulators or in terms of higher prices for goods and services we purchase. Most agree the direct tax cost to the people is at least $2.2 billion this year, but it is the indirect cost of higher prices which is most severe. The General Accounting Office has put the yearly costs of Federal regulation at $60 billion. A Federal Trade Commission report found $80 billion in economic waste attributable to regulatory overkill.

We ought to think about those figures for a moment. Even if you take the lowest figure—$60 billion—it means we are paying prices for goods and services about 6-percent higher than we would otherwise in our trillion dollar private economy. That means, for example, that you would be able to buy a $4,000 car for $240 less, a $500 refrigerator for $30 less, $50 of groceries for $3 less. If you use some of the higher estimates, it is even more revealing. That $4,000 car could be purchased for $520 less, the $500 refrigerator for $65 less, the $50 bags of groceries for $6.50 less—reductions of about 13 percent. The point is no matter which figures you use, the cost to the consumer would be substantially less. Not all of these costs could be eliminated; I think most would concede Government has certain regulatory responsibilities, for example, with respect to health and safety. But these costs could be reduced substantially, and I would think the American consumer would be grateful for those cost reductions. For once, the consumer would see more money in his pocket as a result of Government instead of the usual less.

CONFLICT BETWEEN RULES AND REGULATIONS

This bill section 203, would also relieve persons from liability for noncompliance with agency standards where they can show their violation was necessitated by compliance with other rules and regulations promulgated by the same or another agency. I heard recently of the meat processor who was instructed by one Federal agency to tear out his ceramic wall tiles and to replace them with stainless steel—for improved sanitary purposes—only to be fined several weeks later by another Federal agency for having removed the noise absorbing ceramic tiles and replacing them with noise reflecting stainless steel. The examples are endless, and they show the Catch-22 character of regulation today: If you do not make a change, one agency will fine you, and if you do, another will. And the courts have been very reluctant to set aside these fines, because the rules and regulations were promulgated pursuant to statute and in conformity with agency rulemaking procedures. The legislation before us would correct this.

ASSESSMENT OF PENALTIES

Section 205 of the bill would remove another inequity. Under most present regulations, if there is a violation, no matter what its cause, the company must bear the penalty. There are many circumstances where the employer has not been responsible for a condition giving rise to a violation of a rule. Acts of commission and omission by employees are now solely the liability of the employer. The effects of this should be obvious. It destroys any incentive on the part of the employee to take care that no violations exist. Only when an incentive not to violate regulations is reinstilled at the level where a great number of violations can occur will we see a further decline in violations. The legislation addresses itself to this problem by making employers and/or employees responsible.

Taken cumulatively, the provisions of this legislation would reduce the excessive paperwork burden. This is an area that hits smaller business very hard. The larger businesses can afford to pay their lawyers and accountants to handle these reports, this paperwork, but the smaller businessman or woman often has to do this work themselves to keep down the costs of doing business. The more forms there are to be filled out, the less time there is to make the small business more productive, more successful, a larger employer in the community. Congress has made some strides in this area in recent years, but it is obvious that we have not gone far enough. This bill takes us some more steps down that road.

REQUIREMENT FOR MAKING FINAL DETERMINATIONS AND FINDINGS

The bill, section 206, would do away with the delay by requiring an agency to make its final determination within 6 months. If the agency fails to reach a decision by that time, the Government can continue the matter, but it would have to reimburse the applicant and other aggrieved parties for costs attributable to the agency's inability to take timely action. There is no incentive for Government to act promptly in most matters, and it is this lack of incentive which produces most delay in dealing with Government. The bill proposes restoring an incentive through attaching dollar liability costs to the agency for its failure to act in a timely fashion. This too is needed.

DISCLOSURE OF INITIATOR AND AUTHOR OF RULES

Section 207 of the bill would require all rules and regulations prepared by executive agencies to list their initiators and authors. This was the proposal specifically put forward by the President in last week's "fireside chat." I wholeheartedly endorse it.

PUBLIC SHOULD SUPPORT ENACTMENT OF THIS LEGISLATION

It is only natural that the administrative agencies will oppose the enactment of this measure. The reasons should be obvious. This bill would begin the shift back from the agencies and to the Congress of the legislative powers which we have delegated to those agencies. It would make those agencies more accountable to the Congress and through the Congress to the producing and consuming public. The requirement that economic impacts be prepared and transmitted to the Congress would circumscribe the often arrogant, elitist, "we administrative agencies know better for the people than they know for themselves or even their Representatives know for them" attitude which permeates some agencies and some decisions. The requirement that they make final determinations within 6 months would require greater employee productivity and improved efficiency—both of which would tend to reduce their needs for more funds and more personnel slots. As I said at the outset, the principle of accountability must govern in a free society. To allow it to be second place to bureaucratic interest is blatantly antidemocratic.

REFORM OF EXECUTIVE AGENCY OPERATIONS

Title III contains six provisions.

Section 301 requires the transmittal to Congress of Presidential proclamations and Executive orders, for these frequently carry the impact of rules.

Section 302 requires the preparation of a consolidated financial statement for the Federal Government, including what are now off-budget or deferred-payment items. By doing this, we will see exactly how much of the people's present and future income Congress is committing itself to take from them. You can rest assured that figure is far greater than what our budget figures reflect each year.

Section 303 requires budgets to include an analysis of the regional impacts of the decisions reflected in these budgets.

Section 304 both restates the existing congressional policy with respect to the acquisition of commercial or industrial products and services for use by the Federal Government and legislatively ratifies certain personnel figures for the calculation of relative cost comparisons.

Section 305 requires the payment of interest on overdue contract payments.

Section 306 assures equal access to the courts in lawsuits involving executive agencies.

TIGHTENING OF THE STANDARDS OF OFFICIAL CONDUCT FOR FEDERAL OFFICERS AND EMPLOYEES

I would not ask an officer or employee of the executive branch to do something, or refrain from doing something, that we in the legislative branch would then turn around and either refrain from or do. I think that is hypocritical. Everything I have written into title IV of this bill is something that I have already insisted upon with respect to Congress, principally through my Congressional Reform Act, H.R. 1831, and my Congressional Reform Resolution, House Resolution 107.

Title IV would enact six provisions with respect to the conduct of Federal officers and employees.

Section 401 would prohibit political referrals for positions in the competitive service.

Section 402 would require a former officer or employee to go for 1 year before taking a position with an organization or industry with which his work had been directly associated prior to leaving the Federal service. I do not think that is unreasonable.

Section 403 would prohibit payment of travel and related expenses of officers or employees by foreign governments or organizations controlled or funded by them.

Section 404 would prohibit reimbursement for first-class air fare for officers and employees. They could take a first-class flight if they wanted to, but the taxpayers would only pay the coach rate, the officer or employee paying the difference.

Section 405 sets forth mandatory disclosure requirements for honorariums, gifts, and honors received by officers and employees.

Section 406 requires a mandatory audit of tax returns made by most all the White House personnel, by persons appointed directly by a President whether subject to confirmation or not, and by the higher-paid officers and employees of the agencies.

Title V sets forth the general provisions covering definitions and the date of enactment.

FEDERAL PROGRAMS AND SPENDING CONTROL ACT

The second bill I introduced yesterday is the Federal Programs and Spending Control Act. That bill would do several very important things:

First. Provide for the elimination of inactive and overlapping Federal programs;

Second. Require authorizations of new budget authority for Government programs and activities at least every 4 years;

Third. Establish a procedure for zero-based review and evaluation of Government programs and activities every 4 years, including off-budget items;

Fourth, require disclosure of the projected costs and savings of actions proposed through bills and joint resolutions of the Congress.

In short, this particular bill is a Federal "sunset law".

Sunset laws have already been enacted by some of the States, and several measures have been introduced in Congress with respect to the Federal Government. The bill which I introduced today, for example, is patterned after but builds upon a measure introduced by Senator EDMUND MUSKIE of Maine, the last Congress chairman of the Senate Committee on the Budget, S. 2.

These measures are called sunset laws because of the procedure they set forth. A program, an activity, an agency put in place to administer a program or activity, and a bureaucracy to sustain it—the Sun sets, so to speak, upon each of these unless they are rejustified and reauthorized in a specific time frame. Instead of a program or activity being continued and funded year after year—for no apparent reason other than the fact that it existed during the prior year—these sunset laws establish a mechanism to force a reexamination of the value of the program of activity.

A sunset law gives us an opportunity, therefore, to eliminate or reform programs and activities, to reduce costs to the taxpayers, to reduce the number of Government workers, to enhance efficiency and reduce redtape by combining otherwise duplicating functions, and even to more carefully examine programs before they become law in the first place.

Sunset laws alone will not do all that is necessary to bring Government under more effective control of the legislative branch, and the Constitution is very clear on this point that it is the legislative branch which has this responsibility. Government will not be brought back into its rightful—that of servant to the people instead of their master—until a change in attitude about the role of Government in relation to society as a whole takes effect and is felt in the legislative chambers. But the sunset laws are, beyond question, very important steps in the right direction.

GROWING AWARENESS OF PROBLEM WILL MAKE ITS RESOLUTION MORE POSSIBLE

I am encouraged by a rapidly growing awareness of the problem of government grown too big. A better understanding of the problem will lead, inevitably, to attempts to deal with it.

What is most encouraging of all, however, is the way in which efforts to deal with the problem cut across—as they should and must—the traditional separations of political party and philosophy.

Both Republicans and Democrats are at the forefront of this issue, as are liberals, moderates, and conservatives.

It cannot be overlooked either that Senator MUSKIE's bill was cosponsored by Senator HUMPHREY, the Democratic Party's nominee for President in 1968 and an acknowledged spokesman for liberal forces in our country, by Senator BARRY GOLDWATER of Arizona, the Republican Party's candidate for President in 1964 and an acknowledged spokesman for conservative causes in our country, and 40 others in the Senate.

Because I am offering an amended text of Senator MUSKIE's bill, I would like to take a moment to quote from the Senator's remarks at the time he introduced his measure last year:

> Solutions to these problems elude us not because we have not tried. But in too many cases we in Congress have satisfied ourselves with the rhetoric of legislation, leaving the hard work of implementation—from rulemaking to evaluation—to the executive branch. To put it another way, we in Congress have not paid enough attention to how well the programs we adopted were working—at least not beyond a cursory review every few years.
>
> And now these years of inattention to performance are taking their toll, as we reap a bumper crop of public disenchantment with Government so unresponsive that it cannot even perform the simple day-to-day tasks that need to be done.
>
> I offer this not as a suggestion that we abandon our commitment to solving the Nation's problems.
>
> On the contrary, I offer this legislation in recognition of the fact that until we bring what programs we now have under control, we simply may not have the reserves we need—either in the budget or the public's trust—to pursue new legislative solutions to pressing national problems.

Senator MUSKIE's observations are widely shared, and perhaps in the coming months they will become the majority opinion in both Houses sufficient to assure the passage of a Federal sunset law.

I hope that the consideration of—and hopefully the adoption of—these sunset law proposals will facilitate a movement within the Congress to restore a more rational balance between the role of Government and the role of the private sector. Whether one's viewpoint is that we should undertake these reforms to cut back drastically on the size of Government or whether one's viewpoint is that it is the only way to assure more effective Government exercise of its responsibilities, a Federal sunset law should be adopted and as soon as possible.

A CALL FOR CONGRESSIONAL ACTION NOW

Mr. Speaker, the legislation I introduced yesterday would give Congress a new handle in shaping the agencies and programs of the Federal Government. Those bills would work in tandem. The enactment of both, at essentially the same time, is important if we are to answer the questions being raised by the people and return accountability to those people and to the Congress to the operation of the Government.

CONGRESSIONAL REFORM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. STOCKMAN) is recognized for 10 minutes.

Mr. STOCKMAN. Mr. Speaker, I am happy to join my distinguished colleague from Kansas (Mr. GLICKMAN) in sponsoring a joint resolution to amend the Constitution of the United States to provide for staggered 4-year terms for Representatives and for a limitation on the number of terms a person may serve in the House of Representatives and in the Senate.

The purpose of this resolution is twofold: In limiting the total number of terms which a legislator may serve, a Senator or Representative is less likely to forget the people to whom he will return.

In increasing the length of a term for a Member of the House, Representatives would be permitted a greater period of time in which they would be free of campaigning and, therefore, better able to devote their attention to legislative work. This same feature would reduce the influence and pressures of special interest groups, leaving the legislator better able to react to his own best judgment.

When I was campaigning last year for the congressional seat which I now hold, I became acutely aware that the vast majority of voters believe that by imposing a limitation on terms the system would not be as vulnerable to the excesses which the present seniority system too often demonstrates. By reducing the power of incumbency, we would open the possibilities for far more citizens to run for office. That occurrence might not set well with many of us here, but we have talked a great deal lately about ethics and integrity. The question is, "Do we have the integrity to do what is right for the country, regardless of personal aggrandizement?"

Twelve years in each House is adequate time in which to press for those pieces of legislation near and dear to the Congressman and his constituents, but not usually enough time to become a professional politician whose main goal is reelection and maintaining a residence in Washington, D.C. This guaranteed turnover would bring a constant influx of new opinions and insights to this body, thus insuring that it remain responsive to the people. The combination of longer terms and limited reelection would provide the optimal conditions for stability, efficiency, responsiveness, and statemanship.

With offices being vacated in an orderly, reliable fashion, many more people would have the opportunity which the Founding Fathers envisioned: to trade private life for public service and yet never be so far from private life that common woes and aspirations are forgotten.

Another part of this resolution deals with the length of a single term in the House. The present 2-year system is a misnomer. Members are actually in office only 1 year. The second year is often spent on the road, campaigning.

The present system is anachronistic. During the first Congress, only 142 bills were introduced; but even then James Madison argued that only a 3-year term woud give a Member sufficient time to digest intelligently all 142 bills before him and vote responsibly. In the 94th Congress, 19,371 bills and resolutions were introduced. The legislative itch of which John Randolph spoke has become a rash on the body politic.

Biennial elections shortchange all concerned. Of necessity, voters receive less responsible and informed voting from their Representatives, and Members are frustrated in trying to do the job they were elected to do.

Mr. Speaker, as I stated, the implementation of this amendment would involve some discomfiture on the part of many Congressmen and Senators and would require time to be assimilated by the public prior to its ultimate ratification. I believe, however, that these changes are in the best interest of the Nation. Our legislative bodies will be opened to service by people who might otherwise not have had the chance. There will be greater diversity of opinion heard in debate and in the formulation of the country's laws. With a citizen legislature, the power of government would not be concentrated in Washington but returned to the States and local units of government.

Mr. Speaker, I urge my colleagues to support this resolution. They will find, as I have, a great deal of support for this type measure. The American people want an active role in their Government, but too often they find it a closed system which requires too much time and effort to break into. If they could rely on key offices coming open at specific times, we would find a much greater interest in government and would see a manifestation of the citizen-statesman model of the Founding Fathers.

COSPONSORS OF THE CONGRESSIONAL PAY RAISE DEFERRAL ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 5 minutes.

Mr. WHALEN. Mr. Speaker, yesterday I reintroduced the Congressional Pay Raise Deferral Act with additional cosponsors. This brings to 80 the number of Representatives who have joined me in support of this legislation.

On Monday, February 7, I appeared before the ad hoc subcommittee that is considering the matter of congressional salaries. I testified in support of changes in the procedures by which we consider the matter of congressional salaries, and I urged the Post Office and Civil Service Committee to give favorable attention to the Congressional Pay Raise Deferral Act.

Along with my testimony, I presented to the committee several supplementary materials. One of those items was a list of cosponsors of my bill. In the brief time since my appearance Monday afternoon, seven additional cosponsors have signed up, thus outdating the list I had provided the panel.

To update the record, then, I wish to insert here the current list of Representatives who are cosponsors of the proposed Congressional Pay Raise Deferral Act.

Also, Mr. Speaker, I wish to note that the name of our colleague from Texas, JIM COLLINS, has replaced that of the gentlewoman from Illinois, CARDISS COLLINS, on the list. This corrects a clerical error that occurred in earlier listings of cosponsors:

SPONSORS OF CONGRESSIONAL PAY RAISE DEFERRAL ACT AS OF FEBRUARY 8, 1977

Author Charles W. Whalen, Jr., Ohio.
Skip Bafalis, Florida.
Berkley Bedell, Iowa.
Mike Blouin, Iowa.
John Breaux, Louisiana.
Clarence Brown, Ohio.

REINTRODUCING ENERGY DISASTER ASSISTANCE BILL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. MCDADE) is recognized for 5 minutes.

Mr. MCDADE. Mr. Speaker, I am today reintroducing my energy disaster assistance bill. Although we have given our assent to emergency natural gas legislation, improving the allocation of supplies during this shortage period, we have not addressed the severe economic consequences which result from any energy disaster.

My bill, which was first introduced in 1975, is designed to assure that the vic-

a mystical visionary of human rights scarcely second to Abraham Lincoln.

One would think that the life of a man who was the master military mind of the American Revolution would have received the closest attention of historians. Actually, his papers have not yet been fully collected, much less an authoritative biography been written.

Thaddeus Kosciuszko did not come by these talents accidentally. His life confirms the maxim that genius is the talent for infinite pains. He was a prodigious toiler all of his life. He burned the midnight oil; then sentries awakened him so that he might study before dawn.

He was born in the Polesi district of Poland, of the landed gentry. He was descended of a famous line of valiant Polish officers. However, they were not of the Polish grand nobility, as was Count Casimir Pulaski, youthful Chief of Cavalry of the Continental Army. The father of Thaddeus Kosciuszko owned a small village in this district. As a boy, Kosciuszko had as playmates the sons of the peasants of the village. There, he developed a love for the common people, as deep as that of Abraham Lincoln.

Technically, belonging to neither the titled aristocracy nor the peasantry, he proved to be the common denominator in uniting them in the cause of Poland. His immortality in Poland is roughly comparable to a montage of General George Washington and Abraham Lincoln in the United States. In Poland the name of Kosciuszko is an abbreviation for the soul of Poland and the determination that it will never die.

His brilliant career in the American Revolution was followed by an even more spectacular one as the single world figure embodying the exalted spiritual qualities of both the American and French Revolutions. The roots were in his childhood. His mother had given him Plutarch's *Lives* to read. The lad's imagination was fired by the heroic battle against tyrants by Timoleon of Corinth. It proved to be his life model.

His essential military talent which brought victory to the American Cause was his magnificent insight into the use of terrain as a natural defense. His decisive service to the American Revolution was in defeating the key British strategy of severing New England from the rest of the Colonies by control of the Hudson Valley. Colonel Kosciuszko prevented this at the Battle of Saratoga in the north and by his impregnable fortifications of West Point in the south.

The Battle of Saratoga, fought in October of 1777, is unanimously called one of the ten most important battles in recorded history. The reason is that when British General "Gentleman Johnny" Burogyne surrendered, both France and Spain were convinced that the Continental Army could win, and thereupon entered into the war as allies of the Colonies.

The campaign of "Gentleman Johnny" was brilliantly conceived. It was a three-pronged offensive, Colonel Barry St. Leger was to come down the Mohawk Valley from Lake Ontario, in a flanking movement; General Burgoyne was to hammer down Lake Champlain and Lake George to Albany; and General Clinton was to come up the Hudson from New York City, to provide the anvil for "Gentleman Johnny's" descending hammer on the Continental Army. Obviously enough, the hammer and anvil had to be prevented from meeting. Only twenty miles north of Albany, Colonel Thaddeus Kosciuszko selected a natural fortress in the terrain, and he made it both an invulnerable fort and a trap by his brilliant engineering.

In briefest terms, Colonel Kosciuszko found a little mount which controlled the narrow road between it and the river and he crowned it with artillery. He had carefully selected the mount; it was just below Mill Creek, flowing into the Hudson. His selection provided a water barrier which prohibited the famed bayonet charge of the Redcoats on the American right flank. Moreover, Mill Creek's tributaries had formed four deep ravines running from northeast to southwest, natural breastworks which made infantry attack on the American center impossible. Thereafter, to crown the masterpiece, General Kosciuszko placed the heaviest concentration of American artillery on the higher Bemis Heights, commanding both the river and the ravines.

"Gentleman Johnny" had no alternative but to attack the American left flank. This movement had been foreseen by Kosciuszko and the Continental sharpshooters were waiting. Brigadier Frazer, the soul of the British forces, was shot, and when that noble soldier pitched from his saddle, the British Crown in the Colonies fell with him.

General Horatio Gates, Commanding General of the American forces, attested that the genius of Thaddeus Kosciuszko was the decisive factor in these words: "Let us be honest. In war as in medicine, natural causes not under our control do much. The great tacticians of the campaign were hills and forests, which Colonel Kosciuszko was skilful enough to select for my encampments."

His masterpiece of strategy was at Saratoga; but his greatest work of military art was the creation of West Point. As at Saratoga, it was in the selection of the site. In all of the vast Hudson Valley Colonel Kosciuszko selected the one point where the river bends around a high promontory controlling both angles of the stream. On a grand scale, he chained the river, then placed his controlling batteries on the high plateau. Thus, the all-powerful British Navy was blocked from the south; never again could the British pincer off New England. Colonel Kosciuszko's intellectual triumph at West Point was greater than at Saratoga. This, because the fortress was too formidable to attack.

The British were forced to revise their grand strategy. They abandoned the North and the Hudson Valley to open operations in the South. Thus, Colonel Kosciuszko's greatest victory was at West Point, the battle his Majesty's forces dared not fight.

Incidents during his tour of duty at West Point afford some insight into his heart. In personal habits, he was abstemious to the point of asceticism. But, when even beyond this he began to appear emaciated, his concerned brother officers discovered that he was giving his rations to sick British prisoners of war. Again, his quarters were so spare that his brother officers astounded him one day by insisting that he accept a manservant—a slave named Agrippa. Colonel Kosciuszko protested that he had no idea of what to do with a slave. Told that he might do as he wished, he turned to Agrippa and told him he was a free man.

Asked by General Washington why he was drawing no pay, he answered simply that the unpaid enlisted men needed money more than he. He refused offered promotions to Brigadier General. He was so self-effacing that General Washington remarked at West Point, "You are too modest." Perhaps the best insight into his spirit is his remote rock garden down from the main battlements. It was on a broad ledge jutting out from the living rock of the granite cliff. At the north end of it he diverted a sparkling brook to form a splashing fountain. This retreat suggests that, beneath his military genius, lay the brooding stoicism of Marcus Aurelius and the compassion of St. Francis of Assisi.

When the British switched their offensive to the Carolinas, Colonel Kosciuszko was made Engineer of the South. His commanding generals, Gates and Greene, relied on him completely in the selection of campsites, transport and fortifications. The Continental Army waged the same Kosciuszko guerilla-engineering tactics that it did aganist "Gentleman Johnny" on his march to Saratoga. Again, the joining of the British forces was prevented. They retired to Yorktown, to await reinforcements by sea.

The expected relief by the British Navy of General Cornwallis was thwarted by the victory of the French West Indies Fleet in the Battle of the Chesapeake Capes. The French Fleet and the Continental Army closed in on the surrounded British. Cornwallis surrendered. After the surrender but before news reached the southern theater, Colonel Kosciuszko led the action against James Island at Charleston, in which bloody foray the last shot of the Revolution was fired.

Thaddeus Kosciuszko was not just another lucky General. His professional military qualifications stood out like a lighthouse as he arrived with letters from Prince Czartoryski to General Washington's second-in-command, General Henry Lee. As a youth, he was first in his college. He was first King's Cadet at Poland's West Point and he was first at the advanced Ecole Militaire in Paris. General Washington's staff, like the generals of Mr. Lincoln's Army, were to receive their training in battle.

He had scarcely unpacked his bags before the anxious authorities begged his assistance in devising a defense for the city. In doing so, Colonel Kosciuszko planned and effected a defense against amphibious warfare for a young nation which had no navy at all.

A sea-land pincer was closing on the Continental Army. General Washington, badly beaten in the Battle of New York and driven north to White Plains, was falling back across New Jersey to Philadelphia. Lord Cornwallis relentlessly pursued. Out at sea, off the Delaware Capes, His Majesty's Fleet, under command of Admiral Howe, made ready to sail up the Delaware River to attack Philadelphia by sea. Washington retreated across the Delaware. Cornwallis gloated that he had trapped the fox at last. But down at the narrow turn of the Delaware, Colonel Kosciuszko designed and built, by Herculean effort, throughout that autumn, forts on Billingsport Island, which controlled both banks of the Delaware. The river was corked. The British sea-land pincers couldn't close.

General Washington, falling back across the Delaware just above Trenton, was not fully apprised of this. With his back to the wall, he sent orders to Philadelphia to build fortifications in preparation for a last-ditch siege. It must have been with enormous relief that he learned that Colonel Kosciuszko had protected the rear of the Continental Army. The rest is dramatic history, how on Christmas Night Washington recrossed the Delaware to smite the Hessians at Trenton and followed it up with the blow at Princeton which sent Cornwallis reeling back to New Brunswick. Down in the Delaware Bay, Admiral Howe, after evaluating the cost of reducing the Kosciuszko forts, stood out to sea. Colonel Kosciuszko had held Philadelphia by making its river approaches too formidable to attack.

Colonel Kosciuszko was rushed north. The strategic key to the Hudson Valley was between Lake Champlain and Lake George, at Fort Ticonderoga. Colonel Kosciuszko at once outlined full defenses, but the Kosciuszko plans were shelved. "Gentleman Johnny" Burgoyne seized the very heights Colonel Kosciuszko had regarded as controlling. So controlling that the Americans were forced to evacuate without offering battle. Had

Colonel Kosciuszko's advice been taken, the Burgoyne invasion would have been stopped then; the Battle of Saratoga would not have had to be fought.

The American Revolution had illuminated the military art of General Kosciuszko. The ensuing years were to reveal the magnitude of his soul. When Kosciuszko set sail for his native land, it was with heavy heart. These United States were free, but heavier claims were being hammered on Poland.

He was made Major General of the Crown Army. He trained a Polish militia, the equivalent of the American Continental Army. He was no Hamlet. He took arms against Poland's sea of troubles when Catherine the Great started the infamous second partitioning of Poland, nor did he falter when Prussia and Austria entered the lists against him. Poland's peasant army went down fighting, and General Kosciuszko went down with it, leading the last desperate charge. Sabered at the back of the head and lanced repeatedly as he lay unconscious, he lay at death's door in the prison of Peter and Paul. He was by that time too powerful a spiritual force to kill physically, so Catherine the Great left him to die. In an epic battle of wills, he beat both death and Catherine. When she died, Czar Paul rushed to offer him his freedom. The paralyzed man refused it unless the 12,000 Polish survivors were also freed. The Czar struck a bargain; they could go home to Poland, but he must accept life in exile. Paradoxically, to free his people, he gave up his homeland.

Stockholm and London received him with tumultous welcomes as an indomitable Spartacus in defeat. He returned to America and subsequently returned again to Europe on secret mission for Thomas Jefferson to settle the sea war of the French and Americans. He spurned Napoleon as a dictator.

When Napoleon met his Waterloo, Czar Alexander I all but begged Kosciuszko to become viceroy of the Kingdom of Poland. Iron-willed Kosciuszko refused: it was Poland absolutely free or nothing. Then the czar offered to champion Poland's cause at the Congress of Vienna. Kosciuszko went there expecting that his objective had been reached at last.

But under pressure of his allies the czar gave way; Poland remained partitioned. Kosciuszko's spirit was not broken, but his body was. He refused to step on Polish soil while another flag flew over it. The untold riches he was offered he could have used. He was a poor man when he went to the little village of Soleure, Switzerland to die. But it is still a legend that he shared his meager sustenance with the poorest in the village.

A sigh of relief swept through the royal palaces of Europe when on October 15, 1817, he died, for they felt and believed that the spirit of Poland died with him.

But it appeared that neither his spirit nor the spirit of Poland had died. To the field outside of Krakow where his little army had battled Russian heavy artillery with scythes, came a few very poor Polish peasants. With no means for a monument, they simply deposited a few handfuls of earth from their little villages. Like wildfire, the word spread through Poland. Hundreds, then thousands, then tens of thousands of the poorest peasants came with little containers of Polish soil. They who could not raise their flag could raise a monument. A hand-made mountain was raised of great base and well over 200 feet high.

To their everlasting glory the Founding Fathers repaid part of the Republic's debt before Kosciuszko died. When he returned to Philadelphia on August 18, 1797, the American people inundated him with affection. As the ship *Adrianna* swept by Fort Mifflin which he had built, its guns thundered a thirteen-gun salute. All Philadelphia crowded to the wharf. It cheered deliriously as he was carried from her deck, believing for an awkward moment that he was being hoisted in triumph. A wave of pity swept through the crowd when it was perceived the man could not walk. But the reaction was instant and spectacular for that staid city: the horses from his carriage were unharnessed, and the city fathers themselves pulled the vehicle through cheering thousands to his dwelling.

President Adams sent a courier. Wrote the second President: "I hope you will find all the consolation, tranquility and satisfaction you desire after the glorious record you have made in a greater theater, On my arrival in Philadelphia, I hope to have the pleasure to receive you." But it was with Thomas Jefferson, then Vice-President, that General Kosciuszko formed his deepest friendship.

Philadelphia continued to lavish its affection upon him. Love has curative powers. Within months he could walk. To the little house at 301 Pine Street came a string of distinguished visitors: the Duke of Orleans, future King of France, cabinet members, senators, governors and diplomats from abroad; but its most distinguished visitor was Vice-President Thomas Jefferson. Thomas Jefferson became the executor of his will—a will in which General Kosciuszko directed that his American assets be used to purchase the freedom of slaves and furnish them with both land and education.

These distinguished gentlemen exchanged several interesting documents, among them false passports forged by Vice-President Jefferson for General Kosciuszko. The purpose was to get the general to Paris to end the undeclared naval war between the United States and France. Smuggled out at dead of night by Thomas Jefferson himself, General Kosciuszko sailed for Paris via Lisbon. General Kosciuszko apparently accomplished his mission: hostilities ceased after he arrived in Paris.

Thomas Jefferson wrote of General Kosciuszko: "He is as pure a son of liberty as I have ever known, and of that liberty which is to go to all, and not to the few and rich alone."

The most significant tribute to General Kosciuszko came from the Commander-in-Chief, General George Washington himself. General Washington's letters reveal the growth of his respect. "There is one in Philadelphia who I am told is clever, but him I have never seen," General Washington wrote after his Trenton victory, alluding to Colonel Kosciuszko's decisive fortifications at Fort Mifflin. After the Battle of Saratoga, General Washington wrote the Congress, "I would take the liberty to mention that I have been informed that the Engineer of the Northern Army (Cosieski, I think his name is) is a gentleman of science and merit. From the character I have had of him, he is deserving of notice." When General Washington congratulated him on his West Point masterpiece, Colonel Kosciuszko answered that it was God who created the promontory and the river, and added that the site was ideal for a military academy. General Washington replied, "Colonel Kosci—do you mind if I call you Colonel Kosci—you are too modest."

When Kosciuszko arrived in Philadelphia in 1797, General Washington, well aware of the worldwide acclaim bestowed on him, wrote:

I beg you to be assured that no one has a higher respect and veneration for your character than I have; and no one more seriously wished, during your arduous struggle in the cause of liberty and your country, that it might be crowned with success.

But the ways of providence are inscrutable and mortals must submit. I pray you to believe that at all times and under any circumstances, it would make me happy to see you at my last retreat from which I never expect to be more than twenty miles again.

At his historic Farewell to his Officers, surrounded by the resplendent panoply of a magnificent staff, the Commander-in-Chief singled out General Thaddeus Kosciuszko. General Washington then presented General Kosciuszko with his pistols and his sword.

General Washington, a man of forbidding dignity and icy reserve, followed this with one of the most dramatic accolades in American history. The officers of the Continental Army had formed the Order of the Cincinnati. General Washington himself nominated General Kosciuszko for membership. The Officers of the Order then presented General Washington the highest symbol of their regard, the cameo ring of the Order.

Signifying the highest respect, affection, and indeed reverence for their Commander-in-Chief, it must have been among the most prized of his possessions. Thus, when General Washington took from his finger the ring of the Cincinnati, bowed, and presented it to General Kosciuszko, he was bestowing upon the brilliant Polish military genius the highest accolade of the Continental Army.

It is a fair interpretation that General Washington was amplifying by deed what General Gates had declared at Saratoga: "Let us be honest; the military skill of General Kosciuszko is as responsible for the victory of the Revolutionary War as it was the Battle of Saratoga."

PROGRESS OF SELECT COMMITTEE ON ASSASSINATIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 5 minutes.

Mr. GONZALEZ. Mr. Speaker, when the House Select Committee on Assassinations was established by this body for the 95th Congress a week ago, I promised to keep Members of the House advised of the progress I have made in the establishment of a responsible committee.

I have held two preliminary, informal meetings to discuss some serious reorganizational matters, and have called the first, formal meeting of the committee for next Wednesday, February 16, at 9 a.m. in 1302 Longworth for the purpose of discussing financial, organizational, and personnel matters. I have sent each member of the committee a proposed set of rules to govern the committee.

I would also bring to my colleagues' attention the text of my letter to the editor of the New York Times in response to the article about George McMillan entitled: "Qualms About the House's Assassination Investigation" which appeared in the February 5, 1977, edition of the Times.

The material follows:

WASHINGTON, D.C., *February 6, 1977.*

EDITOR,
New York Times,
New York, N.Y.

DEAR EDITOR: I would be giving tacit approval to the misstatement of fact contained in the article by George McMillan, an assassinologist, entitled, "Qualms About the House's Assassination Investigation," if I did not respond.

McMillan states, "It is not surprising that

the day after the House Committee's appropriation, its chairman, Representative Henry B. Gonzalez, announced what a headline called, "New Evidence in JFK Killing," only to admit when challenged that his evidence was "uncorroborated." I did not "admit" the evidence was uncorroborated—I clearly stated it and not when challenged as McMillan suggests.

McMillan seems to know far more about how the Committee is going to proceed, than even the Members of the Committee; that is, "going to the small army of sectarian scholars, the assassinologists." We are proceeding to gather evidence, not simply theories or opinions as McMillan suggests.

Next, he states that none of the Warren Commission conclusions have ever been impeached. It would inure to the benefit of McMillan if he were to read the conclusion of the report of the United States Senate Select Committee to Study Governmental Operations, which states, among other things:

"The Committee emphasizes that it has not uncovered any evidence sufficient to justify a conclusion that there was a conspiracy to assassinate President Kennedy. The Committee has, however, developed evidence which impeaches the process by which the intelligence agencies arrived at their own conclusions about the assassination, and by which they provided information to the Warren Commission. *This evidence indicates that the investigation of the assassination was deficient and that facts which might have substantially affected the course of the investigation were not provided the Warren Commission or those individuals within the FBI and CIA, as well as other agencies of Government who were charged with investigating the assassination.*" (emphasis supplied).

As to the assassination of Dr. Martin Luther King, Jr., he correctly states that there were stipulated facts; what he does not state is that in the course of the plea proceedings Ray stood up and denied statements that there was no conspiracy. Of course this does not mean there was a conspiracy—but in fact Ray stated in open court that he did not agree that there was not a conspiracy.

Mr. McMillan apparently has an "in" with the Justice Department as to their just completed 148 page report with an "exhaustive review of 203,000 documents in the King assassination file"—because not even Members of Congress who are on the Appropriations Subcommittee for the Department of Justice have been allowed to see the report.

Similarly, he has reached a conclusion that the investigation will be "callous." Indeed, it is not our task to lay to rest the questions or conclusions raised by assassinologists like Mr. McMillan, or the critics of the Warren Commission Report. When the last evidence has been assembled and the final report written even then there will still be the cries of the critics—for they have inexhaustable voices. But this committee will have an opportunity to seek and find the truth whatever it may be and wherever it may lead.

[From the New York Times, Feb. 5, 1977]

QUALMS ABOUT THE HOUSE'S ASSASSINATION INVESTIGATION

(By George McMillan)

CAMBRIDGE, MASS.—That new House investigation into assassinations was almost certain to fail, even if the re-established Select Committee on Assassinations had been given the $13 million and the two-year life span it had sought. But this week, a skeptical Congress gave it only until March 31 and $84,000 a month with which to prove that it had a reason to exist.

A Congressional investigation is by its very nature not the ideal environment for clearing up factual confusion. The temptation to seek headlines is too great. But now the assassination committee must find "new" facts, produce sensations within two months, or die. The trouble with the committee is not that it will fail to clear up the confusion about political assassinations but that it will make more confusion and leave us at the end of two months with a new bag of dishearteningly bewildering set of spooks and conspiracies.

It is not surprising that the day after the House committee's appropriation, its chairman, Representative Henry B. Gonzalez, announced what a headline called "New Evidence in J. F. K. Killing," only to admit when challenged that his evidence was "uncorroborated."

This demand for quick new assassination "facts" is almost certain to cause the committee to turn to that small army of sectarian scholars, the assassinologists who have for more than a decade been raising questions about the events in Dallas in November 1963, and Memphis faster than the old ones could be answered.

Indeed, these assassinologists have now produced rumors that they bitterly dispute among themselves. The common characteristic of these questions is that they are negative. Many can never be answered.

But standing stubbornly above this controversy are two facts:

1. There is an overwhelmingly persuasive hard core of positive, interlocked evidence that Lee Harvey Oswald killed John F. Kennedy and that James Earl Ray killed Dr. King.

2. There is not a scintilla of positive hard evidence that either Ray or Oswald was acting for, or with, a conspiracy.

None of the conclusions in the Warren Commission report (whose 26 volumes make it the best-documented crime in the history of mankind) has ever been impeached, and they show convincingly that Oswald killed two men and tried to kill a third, not only Kennedy but also Dallas patrolman J. D. Tippit, after having already tried to kill Maj. Gen. Edwin Walker in April 1963.

The Justice Department has just completed a 148-page report that is an exhaustive review of the 203,000 documents in the King assassination file. The conclusion reached is that Ray killed Dr. King and did it alone. Ray's movements as he enacted his brutal murder are traced step by step in the 8,000-word narrative of "stipulated facts" to which Ray pleaded guilty in Memphis.

Ray no sooner had pleaded guilty than he claimed he had been coerced, and asked for a new trial.

After studying this carefully, a three-judge Sixth Circuit Court of Appeals ruled unanimously against Ray on every one of his allegations. On Dec. 14, 1976, the United States Supreme Court refused to review the lower-court decision.

If Ray had not pleaded guilty, and if Jack Ruby had not killed Lee Harvey Oswald, the two assassins would have been tried in court, with rules of evidence that excluded the irrelevant rumor, the peripheral fact; cross-examination of the witnesses would have blown open a thousand speculations, and everything would have been witnessed and reported upon by the press and judged by a jury of ordinary men and women. Sirhan Sirhan, who killed Robert F. Kennedy, and Arthur Bremer, who shot George C. Wallace, were tried and found guilty, and there have been very few rumors about their crimes.

Now that it's too late to try Oswald or Ray, it is almost impossible to think of any other format of review where the rumors that have festered for more than a decade could be put to rest.

But it is hard to see what good can come from a callous investigation of the profound and tragic events. Some day we must learn to accept the intrinsic irony and absurdity of them, that Oswald and Ray, indistinct killers with amorphous ideologies, did in fact alone change our history.

H.R. 1985: PROTECTION OF PRIVATE RECORDS ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KOCH) is recognized for 5 minutes.

Mr. KOCH. Mr. Speaker, Representative GOLDWATER and I have joined together to work on various aspects of privacy. Today he has taken a special order to explain H.R. 1984, the Comprehensive Right to Privacy Act. I would like at this time to discuss another bill of which we are prime cosponsors.

The essence of H.R. 1985 is to restore to the individual the protection and the privacy that our Founding Fathers provided for in the fourth amendment to the U.S. Constitution. The fourth amendment states:

> The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

The U.S. Supreme Court and the private sector have failed to respect the fourth amendment during the recent information technology revolution. I refer specifically to the distressing decision this past spring of the U.S. Supreme Court in United States against Miller on bank records and the equally shocking testimony at the same time before the Privacy Protection Study Commission of the failure of credit card companies and American Telephone & Telegraph to protect the privacy of their customers.

BANK RECORDS

The U.S. Supreme Court held in *United States* v. *Miller*, 44 U.S.L.W. 4528 (April 21, 1976), that an individual has no expectation of privacy with respect to his bank records, that there is no need for judicial review prior to the requisitioning of his records, and that the individual has no standing to challenge the requisitioning of his records.

To its credit the Supreme Court of Representative GOLDWATER's home State, California, has a better understanding of the fourth amendment. In the unanimous decision of *Burrows* v. *Superior Court*, 13 Cal. 3d 238, 529 P. 2d 590 (1974) the court stated:

> It cannot be gainsaid that the customer of a bank expects that the documents, such as checks, which he transmits to the bank in the course of his business operations, will remain private, and that such an expectation is reasonable.
>
> For all practical purposes, the disclosure by individuals or business firms of their financial affairs to a bank is not entirely volitional, since it is impossible to participate in the economic life of contemporary society without maintaining a bank account.

In the course of such dealings, a depositor reveals many aspects of his personal affairs, opinions, habits and associations. Indeed, the totality of bank records provides a virtual current biography. . . . To permit a police officer access to these records merely upon his request, without any judicial control as to relevancy or other traditional requirements of legal process, and to allow the evidence to be used in any subsequent criminal prosecution . . ., opens the door to a vast and unlimited range of very real abuses of police power.

The decision in United States against Miller followed logically from the U.S. Supreme Court decision in *California Bankers Association* v. *Shultz*, 416 U.S. 21 (1974). There the Court held that maintenance of bank customers' records, as required by the Bank Secrecy Act of 1970, 12 U.S.C. 1829b(d), was not a seizure within the meaning of the fourth amendment and was not unlawful in the absence of a warrant and probable cause. Mr. Justice Marshall warned in that case:

It is ironic that although the majority deems the bank customers' Fourth Amendment claims premature, it also intimates that once the bank has made the copies of a customer's checks, the customer no longer has standing to invoke his Fourth Amendment right when demand is made on the bank by the Government for the records.

In United States against Miller the Court found the defendant's claims to be made too late. As Marshall remarked in dissent:

Since the Court in *California Bankers Assn.* held that a bank, in complying with the requirement that it keep copies of the checks written by its customers, "neither searches nor seizes records in which depositor has a Fourth Amendment right," 416 U.S., at 54, there is nothing new in today's holding that respondent has no protected Fourth Amendment interest in such records. A fortiori, he does not have standing to contest the Government's subpoena to the bank.

TELEPHONE AND CREDIT RECORDS

Representative GOLDWATER and I are both members of the Privacy Protection Study Commission. This Commission was set up by the Privacy Act of 1974, Public Law 93-579, and its final report is due by June 10, 1977. The Commission's mandate is to study the standards now in force for the protection of personal information and to recommend those privacy principles, now followed by the Federal Government under the Privacy Act of 1974, that should be followed as well by State and local governments and the private sector.

The Commission has held hearings on the recordkeeping practices of a number of organizations, including mailing-list compilers and direct-mail marketers, credit-card issuers, depository and lending institutions, reservation services, insurance underwriters, primary health care providers and third-party payers, statistical agencies and research organizations, consumer reporting agencies, educational institutions, Internal Revenue Service and related State local tax authorities, public assistance and social service agencies, and employers, labor unions, and employment and personnel services.

I was astounded to learn at the February 11 and 12, 1976, hearings of the total disregard that A.T. & T. and the major credit card companies have for their customers' privacy. In particular, American Express testified that no notice is given to an individual whose records are subpenaed. As many of you may be aware, in many States the attorney issues his own subpenas, without prior judicial review.

American Airlines testified that most Government requests for information were received by telephone and that most responses to such requests were made by telephone. There was no notation of the disclosure on the customer's record and no notification of the customer either before or after. The decision to disclose was made not after an independent judicial review for probable cause, but by the company, which basically wished to stay on the good side of the Government.

American Express to its credit expressed a willingness at the hearings to reconsider its policy, and it now notifies its customers promptly, unless the Government has secured a court order directing it not to do so. The company will wait the full length of time allowed by the subpena before providing the information in order to allow cardmembers the opportunity to exercise their rights.

On the other hand A.T. & T.—where in the past at least 75 to 90 percent of the customers whose records have been subpenaed have not been notified either before or after—stated that it would not of its own volition improve its practices with respect to the privacy of its customers' records. Rather A.T. & T. suggested that Congress resolve the question of requiring prior notice to customers.

H.R. 1985

For this reason I and Representative GOLDWATER have introduced H.R. 1985. It complements H.R. 214, which the House Judiciary Subcommittee on Courts, Civil Liberties, and the Administration of Justice reported to the full committee in the last session; the committee subsequently recommitted the bill to subcommittee for consideration of additional amendments. Title I of H.R. 214 places controls on access by the Federal Government to bank records, telephone toll records, and credit records.

Our legislation places limits on State and local governments' access to bank records, telephone toll records, and credit records, as well as limiting access by persons in the private sector. When somebody wishes access to these records of an individual, our bill requires either: First, the individual's written consent to allow dissemination of his or her records; or second, an administrative subpena that the individual could challenge; or third, a judicial subpena with notice to the individual except in cases where a criminal or civil investigation would be jeopardized, or fourth, a court authorized search warrant with notification to the individual. A listing would have to be kept of all record disclosures. Individuals can under the bill sue for actual and punitive damages. Violators are subject to imprisonment for not more than 1 year and a fine of not more than $1,000 or both.

In addition, to deal with the problem of eavesdropping on conversations, the legislation provides for limits on so-called supervisory monitoring of customer conversations with employees of governmental and private organizations incident to the rendering of services. Written notice, valid for only a 30-day period, must be given to an employee that he or she might be monitored for the purpose of training and evaluation of performance.

The monitoring by Federal Government agencies of telephone calls between their employees and citizens calling on business, without the knowledge of the employees and citizens, was brought to my attention by a constituent. Frankly, I do not like the idea of the telephone monitoring at all. I agree with the statement made by Chief Justice Oliver Wendell Holmes characterizing electronic surveillance "as such dirty business." There are those who take the position that it is simply a method by which it can be ascertained whether employees are carrying out their duties in a responsible way when so much of their job is conducted on the telephone. If that is the case then there must be safeguards, and this bill imposes a reasonable restraint by requiring the consent of the employee and by prohibiting the employer from requiring such consent as a condition of employment.

A more detailed section-by-section analysis of H.R. 1985 follows:

SECTION-BY-SECTION ANALYSIS

Section 1. Short Title. Currently the bill is known as the "Right to Private Records Act." This ambiguous title will be changed, as to some it may imply governments' right to an individual's private records.

Section 2. Definitions. H.R. 214 governs access to credit records only if maintained by credit card issuers or consumer reporting agencies, thus excluding records of such creditors as installment sellers (*e.g.*, furniture or automobile dealers) and those extending open-ended credit without issuing credit cards (*e.g.* mail order sellers). H.R. 1985 contains no such restriction and applies to "any person who regularly extends, or arranges for the extension of, credit."

Section 3. Confidentiality of Financial, Toll, and Credit Records. This section states the general rule that (a) (1) no state or local government shall obtain information from a person's financial, toll, or credit records unless such disclosure is made pursuant to a sec. 4 authorization, or a sec. 5 administrative subpena or summons, or a sec. 6 search warrant, or a sec. 7 judicial subpena; that (b) (1) no person shall obtain information from a person's financial, toll, or credit records unless such disclosure is made pursuant to a sec. 4 authorization or a sec. 7 judicial subpena. There are exceptions for the internal use of the companies or for use by the companies in legal action relating to the records.

Section 4. Authorization of Disclosure. A person may give either a general authorization (b) or a specific authorization (c). The general authorization allows use of the information for purposes similar to those allowed for consumer reports in 15 U.S.C. § 1681(b) (Fair Credit Reporting Act). The general authorization, a written statement, must (1)

describe the type of information authorized to be disclosed, (2) specify for which of the permissible uses disclosure is granted, (3) state that the person understands that revocation, in writing, may be made at any time, (4) state that the person may obtain a statement of disclosures made, upon written request and payment of a reasonable fee, (5) be signed and dated.

The specific authorization, a written statement, authorizes disclosure of particular information, from particular records, to particular persons, with the safeguards described in 3, 4, and 5 above. The specific authorization is effective for no longer than one year.

Neither a general nor a specific authorization may be required as a condition of doing business with the company. The company must maintain for five years a statement of disclosures that contains the date, the purpose, and the person to whom each disclosure was made under this section.

Section 5. Administrative Subpenas and Summonses. The State or local government upon issuance of an administrative subpena or summons must notify the company in writing of the company's obligations under the Act and attempt to notify the person whose records are being requested with a notice prescribed by the Act (b). The person may direct the company, in writing, to comply with the subpena or summons, or within eighteen days either the person or the company must object, in writing, to the agency issuing the subpena or summons. The company must comply with a court order that issues after notice to the person and an opportunity by the person to challenge the subpena or summons. No initial notice to the person whose records are being requested is necessary for State tax authorities (1) that are attempting with the subpena or summons to determine assets available to meet a tax assessment of judgment or (2) that have determined that notice would impede collection of a tax assessment or judgment.

Section 6. Search Warrants. Information is obtainable with a properly authorized search warrant, where the search warrant identifies the information and the record involved with reasonable particularity and both the company and the person are served with the search warrant before the information is obtained.

Section 7. Judicial Subpenas. Upon issuance of a judicial subpena the person or state or local government desiring the information must notify the company in writing of the company's obligations under the Act and attempt to notify the person whose records are being subpenaed with a notice prescribed by the Act (a)(2). The person whose records are being subpenaed may direct the company, in writing, to comply with the subpena, or within eighteen days the person or company must challenge the subpena by an appropriate motion in court. The company must comply with the court decision that is issued after notice to the person whose records are being subpenaed and an opportunity by the person to challenge the subpena.

A State or local government may request a court to authorize delay of initial notice to the person whose records are being subpenaed where on the basis of affidavit or sworn testimony it has been affirmatively demonstrated that notification of the person would seriously jeopardize a continuing investigation of the offenses listed in Sec. 7(b)(3). Such a period of delay may not exceed 90 days.

Additional such periods of dely may be obtained, but notification may not be delayed for more than one year after the date of the issuance of the subpena. Except, upon a showing of probable cause, further delays of up to 180 days each may be obtained. Upon the expiration of a period of delay of notification the court must attempt to notify the person whose records have been subpenaed with a notice prescribed by the Act. Sec. 7(b)(2). A report must be filed with the Director of the Administrative Office of the United States Courts within 30 days after an application for delayed notification is made, with the Director providing an annual report to Congress.

Section 8. Challenge to Subpena by Person to Whom Record Relates. This section specifically grants a person whose records have been subpenaed standing to challenge the subpena.

Section 9. Limitation on Use of Information. Any information obtained under this Act may be used only for the purpose for which it was obtained.

Section 10. Exceptions. The Act does not apply to information that is disclosed in such a manner that the information is not identifiable with, or as having come from the records of, a particular person.

Except for Section 9 the Act does not apply to disclosures required (1) by supervisory agencies carrying out their supervisory duties or (2) in returns or reports to State or local tax authorities.

Section 11. Civil Remedies. Any person, company, or State or local official, who knowingly violates the Act, is liable for actual damages in an amount not less than (a) $100 times the number of days on which disclosure was made or (b) $1,000, whichever amount is greater; punitive damages, if the violation was willful; costs and reasonable attorney's fees. Injunctive relief may be requested. An action will lie in any appropriate U.S. district court, regardless of the amount in controversy, or in any other court of competent jurisdiction. The three year stature of limitations runs from the later of (a) the date on which the violation occurred or (b) the date on which the person bringing the action discovered the violation.

Section 12. Criminal Penalties. Any person, company, or State or local official, who willfully violates the Act, may be fined not more than $1,000 or imprisoned not more than one year, or both.

Section 13. Interception of Oral and Wire Communications. This section would amend 18 U.S.C. § 2511(2)(a)(1) to allow employer monitoring of communications between employees and citizens or customers under certain conditions only. The monitoring must be for the purpose of training or evaluating the performance of an employee. The employee must be notified, in writing, prior to the monitoring, of the period when such monitoring will occur and the specific communication facilities that will be monitored. The employee must consent in writing to the monitoring and such consent may not be required as a condition of employment. Each employer notice and employee consent is valid for no more than 30 days. The substance, purport, of meaning of any monitored communication may not be recorded.

18 U.S.C. § 2510(4) is amended by striking the word "aural", so that § 2510(4) reads: "intercept" means the acquisition of the contents of any wire or oral communication through the use of any electronic, mechanical, or other device.

Section 14. Effective Date. The provisions of the Act will become effective 180 days after the date of the Act's enactment.

For further background information I would refer those interested in the subject to (1) the CONGRESSIONAL RECORD of February 25, 1976, pp. 4292–4300, which sets forth the sworn testimony of AT&T, American Express, American Airlines, and Atlantic Ritchfield officials before the Privacy Protection Study Commission; (2) The CONGRESSIONAL RECORD of September 21, 1976, pp. 31696–31697, which sets forth the Koch-IRS-FCC correspondence on monitoring of telephone conversations between employees and citizens; (3) the ACLU *Privacy Report* of October, 1976, which describes the legal history with respect to privacy of bank records and state court and legislative action on the matter.

PAY RAISES SHOULD GO THROUGH

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. PATTERSON) is recognized for 5 minutes.

Mr. PATTERSON of California. Mr. Speaker, I rise today in support of the recommendations made by the President's Commission on Executive, Legislative, and Judicial Salaries.

I wish to start off by saying that it is difficult for a Member of Congress to have to decide on his or her own salary, however as provided for under law, unless the Congress specifically disapproves the quadrennial recommendations of the President's Commission on Exectutive, Legislative, and Judicial Salaries, they become law. Therefore, when this comes to the floor of the House in the form of a resolution of disapproval, we must face the issue squarely, however politically distasteful it may be.

The President's Commission, with the approval of both President Ford and President Carter, has recommended an overall 28 percent salary increase for top level officials in the executive and judicial branches as well as for Members of Congress. The Commission's proposals would affect the salaries of 2,496 persons. Congressional salaries would increase from $44,600 per year to $57,500 per year.

I support the Commission's recommendations for salary increases as well as its recommendations for a strict code of ethics for public officials, both elected and administrative.

With the exception of a 5 percent cost-of-living increase 2 years ago, there has been a freeze on these top level Federal salaries since 1969. Since that time the cost-of-living index has increased 61 percent. Executive salaries in the private sector have increased 53 percent since 1969. Meanwhile, the salaries of all other Federal employees and those in private industry have kept pace with rising inflation. This is not to say that congressional salaries should be equal to those of the private sector executives, but that they should be adequate enough to attract and retain the very best people. The Commission made its recommendations based on what it felt was the minimum salary that could be paid to attract and keep people of high quality in public office and in high Government positions.

If we keep these salaries frozen, we must face up to the serious consequences of a Congress that is made up of only the very rich, of those willing to abuse their position and compromise themselves politically, or of those who regard the job of a Representative as a part-time one. We must not only provide adequate monetary incentives to prevent

this from happening but we must act immediately to prevent further abuse of the public trust by adopting a strict code of ethics. Above all, it is the abuse of public office as well as the pinch of inflation and high taxes which have created the public's hostility to pay increases. Therefore, we must act immediately to implement a strict code of ethics which includes strict requirements for full public disclosure of income, debts and other financial transactions; severe restrictions, if not outright elimination, of outside earned income; full accounting of all expense funds; and precise standards on conflict of interest.

We must also address the issues of inflation and taxes in an intelligent, fair minded and full-time manner without conflict of interest. Bribery and political wheeling and dealing should not be what the public must expect from their elected representatives. Rather political excellence, fairness, and responsibility should be the standard. The people should expect, even demand, intelligent, fair and full-time attention to the public's business. No government official can be tolerated who abuses his or her public office or gives only part-time attention to the job.

I am confident that the American people who elect us are not as concerned about the amount of our public salary, but they are concerned about what we do here, how we spend our time, whether or not we receive "other income" and from what sources, and whether or not we deserve to be here. For these reasons, and more, we must be concerned with restoring public confidence in the integrity of their representative government—from elected representatives to appointed judges to appointed executive managers of government business.

REGARDING FREEDOM OF CHOICE SOCIAL SECURITY AMENDMENTS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. VANIK) is recognized for 5 minutes.

Mr. VANIK. Mr. Speaker, today I am introducing my freedom of choice amendments to social security beneficiaries. I feel that this legislation is an ideal solution to the problem of providing the many retired citizens receiving social security benefits with adequate relief, while at the same time preventing an enormous drain on the social security trust fund.

For some time, millions of retired citizens receiving social security benefits but still able to work, have sought the elimination of the earnings limitation. Under present law, the maximum earned income allowable to a social security recipient is fixed at $3,000, effective January 1, 1977, regardless of the size of the individual's social security check, which today can range from a minimum of $107.90 per month for an individual retiring in 1976 at age 65, to a maximum of $387.30 for an individual retiring in 1976 at age 65. Once an individual earns more than $3,000, his social security benefits are reduced $1 for every $2 of earnings above $3,000. In essence, this is a 50-percent tax on top of other income and withholding taxes. In addition, the limitation on work earnings has been considered unfair, because there is no limit on how much an individual can receive from interest and investments. Thus an extremely wealthy retiree can receive tens of thousands in investment income plus his full social security benefit, while a low income person who earns over $3,000 sees his social security benefits reduced.

The elimination of the earned income limit would provide more freedom of choice for those on social security who could both work and enjoy their full retirement benefits. Every change in social security has vast budgetary impact. The total elimination of the earned income limit would result in an annual cost to the social security trust funds of approximately $8 billion.

Millions of retired Americans struggle with the inflationary impact on food, rent, and utilities. They struggle for their very existence if they are on the minimum or lower range of social security benefits. This large group of citizens must depend on additional public support for survival—either through State and local relief supplements, the Federal SSI program, or the Federal food stamp program.

In 1977, when the earned income limit rises to $3,000, a retired worker receiving the maximum social security payment of $4,647—an amount which is continually being adjusted to account for the cost of living—could earn $3,000 without loss of social security benefits, for a total income of $7,647.60. A retired person receiving the social security minimum of $1,294.80 could earn $3,000 for a total income of $4,294.80—only $1,713.80 above the poverty level for an individual over 65 years of age.

Retired citizens in the lower levels of social security benefits require public subsidy or assistance to survive. Approximately 50 percent of the 4.6 million Americans on supplemental security income also receive some social security. The total State and Federal cost of supplemental security income for these elderly who also receive social security benefits is over $3.5 billion.

In addition, 3.5 million citizens on social security also receive food stamps as essential living supplements. This costs the Federal Government nearly $1.2 billion per year.

I am proposing that the allowable earned income for social security recipients be increased to the difference between an individual's benefits and the maximum benefit plus the $3,000 allowance provided under current law. For example, the maximum annual social security benefit today totals $4,647.60. The recipient is permitted to earn an additional $3,000 for a total $7,647.60. For a recipient of maximum social security benefits, my amendment would have no effect. However, it would permit a recipient of minimum social security benefits of $1,294.80 to earn up to $6,352.80 for a total income of $7,647.60 without losing any social security benefits. Those receiving social security benefits between maximum and minimum levels would be proportionately affected. The schedule would be as follows:

Maximum social security benefit annually	$4,647.60
Earned income limit	3,000.00
Total disposable income	7,647.60
Minimum benefit annually	1,294.80
Earned income limit under Vanik amendment	6,352.80
Total disposable income	7,647.60
Increase in allowed earnings over present law	3,352.80

The adoption of my amendment would cost the social security trust fund approximately $1.5 billion compared to an $8 billion cost in completely eliminating the earned income limitation. Since it would permit a social security beneficiary to earn the difference between his social security benefits and his living needs, it would provide the social security recipient with a freedom of choice to earn the differential between benefit payment and need instead of seeking a welfare supplement either through the SSI program or food stamps.

If 50 percent of the social security beneficiaries also receiving SSI and food stamps develop further earned income, approximately $1,787,000,000 could be saved in the SSI program while approximately $600,000,000 could be saved annually in food stamp disbursements to the elderly. While the amendment which I propose would cost $1.5 billion, it would be more than offset by the transfer of individuals from the welfare rolls and give those on social security an option to work for essential needs.

I propose a second amendment to social security which would give a citizen over 65 an option to continue work with significantly increased benefits upon retirement. At present, a person who continues to work, pays social security taxes and defers social security benefits receives a ridiculous 1 percent per year increase in the level of benefits he will ultimately receive. My amendment would increase benefits upon retirement to a proper actuarial level. A senior citizen should have the freedom of choice to continue employment without penalty.

To achieve this "proper actuarial level," it will be necessary to change the annual increase for those who defer social security benefits to 7 percent per year. The actuaries at social security estimate that this will cost roughly $800 million in calendar 1978. This figure would then increase for several years before leveling off.

TAX DEDUCTIONS FOR FAMILY DAY CARE PROVIDERS

The SPEAKER pro tempore. Under a previous order of the House, the gentle

man from Minnesota (Mr. FRASER) is recognized for 10 minutes.

Mr. FRASER. Mr. Speaker, today my colleague from Minnesota, Mr. VENTO, and I are introducing legislation to allow families who provide day-care services in their homes to continue to take tax deductions for business expenses they incur.

The Tax Reform Act of 1976 restricted deductions for expenses attributable to business use of homes. In most cases the provisions are good ones which will minimize abuses by requiring that the amount of deductions be limited to the amount of income generated by that business and that the portion of the home used for the business be used on an exclusive and regular basis.

Because of the unique nature of the family day care business, the "exclusive" use test can rarely be met. In fact, one of the most attractive features of family day care is that the children are cared for in a home. Rarely are they cared for in a room used so exclusively for day care that the providers could qualify for the business expense deduction. In order to meet the exclusive use test, the area in which day care is provided would have to be off-limits to the family during nonbusiness hours. That is a pretty stiff test to meet.

The bill we are introducing would remove the exclusive use test for providers of family day care services. Deductions would be limited to the expenses allocable to the portion of the house used for day care/and limited to offsetting the income earned from day care.

If there is not some relief from the very strict exclusive use provision, I am afraid day care providers will be driven out of business. They incur many additional expenses in taking care of children, including additional utility costs and obvious depreciation of the house and its furnishings. It is only fair that the provider be allowed to deduct these real business expenses.

I would like to share with my colleagues a letter I received from one of my constituents, Jean Wald of Columbia Heights, Minn. Ms. Wald is a family day care provider, and she writes with firsthand knowledge of the need to continue to allow the deduction of business expenses for this home business.

Ms. Wald writes:

Re: Tax Reform Act of 1976.

Representative FRASER: Please read the . . . article from the Sun Newspaper, Jan. 12, 1977: "Family day care mothers provide home away from home." Notice the pictures of cheerful, emotionally-secure children and attentive FDC Providers. We FDC Providers work approximately 50 hours per week at direct child care. I and many others also spend countless hours per week arranging for support services. For this, we receive poverty-level incomes.

When I entered the Family Day Care Field; only me, my husband and my (then) 9-yr.-old daughter occupied our home. My household instantly increased by 7 pre-schoolers (50 hrs. per wk. each) to 10. Over a period of 2½ years, there were noticeable utility increases and physical deterioration/damages; due mainly to the Family Day Care service. In 2½ years, the cost of summer-winter heating (gas) doubled. While there was a rate increase; we attribute the doubling mainly to increased opening of outside doors during extreme weather, by day care children and their families. "Family Use" of utilities remained constant "Business Use" explains the increase. Partial gas and electricity costs are legitimate Family Day Care Business Expenses.

The type of deterioration of our home during the past 2½ years; also indicates that the pre-school day care children are "persons responsible." Floor coverings in kitchen and bathroom "wore out"—needed to be replaced with more durable types. Living room drapes which had been continually "tugged-at" needed to be replaced with more durable venetian blinds, that could be raised out-of-reach, if necessary. Damage to walls from floor-level to 4-ft.-level (child height) are apparent. The damages are caused by children who have respect for property; but spend much of their day "exploring." The damages aren't extraordinary or unusual. But they are legitimate Family Day Care Business Expenses.

Family Day Care, by definition, can only be located within a home. I am fortunately able to use two rooms for Business Use (Children's Activities) only. But "Family Living" is a very important part of any Family Day Care Program. And for that we need to use our entire homes. To keep us FDC Providers, providing this valuable Child Care service, at the low incomes we receive; I request that you vote to amend the 1976 Tax Reform Act retroactive to 1976 taxes, so that Family Day Care is exempt from the exclusive use and able to claim deductions for depreciation, rent, and utilities. These are legitimate deductions for us.

Thank you!

Sincerely,

JEAN WALD,
Group Family Day Care Providers,
Anoka County, Minn.

AMENDING FEDERAL COURT RULES

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from New York (Ms. HOLTZMAN) is recognized for 15 minutes.

Ms. HOLTZMAN. Mr. Speaker, today I am introducing a bill to amend the rulemaking procedures for the Federal courts. By amending the Rules Enabling Act, this bill seeks to insure that Federal court rules, which critically affect the rights of our citizens, will receive careful consideration and public participation.

Under present law, Federal court rules are supposedly promulgated by the Supreme Court. Such rules then go into effect automatically unless Congress, by statute, changes them. In fact, the Supreme Court does not fashion the rules. Instead, they are promulgated by the advisory committees of the Judicial Conference, a group composed of Federal judges. The Supreme Court does little more than rubberstamp the rules proposed by the Conference.

Justice Douglas said of the process in his dissent to the Federal Rules of Evidence:

[T]his Court does not write the Rules, nor supervise their writing nor appraise them on their merits, weighing the pros and cons. . . . Those who write the Rules are members of a Committee named by the Judicial Conference. The members are eminent; but they are the sole judges of the merits of the proposed Rules, our approval being merely perfunctory. In other words, we are merely the conduit to Congress. Yet the public assumes that our imprimatur is on the Rules, as of course it is.

Another problem occurs under the present system. Even though the Supreme Court does not deliberate on the rules, the fact that it approves them means that the Court is then placed in the awkward positions of deciding on their validity when the rules are challenged in a particular case.

Furthermore, the rules which come to the Supreme Court for approval have often not been as good as they could be. One reason is that the Judicial Conference drafts rules without the benefit of widespread comment by the bar and interested public. The advisory committees to the Judicial Conference, which do the actual drafting, are often made up of law professors and appellate judges. They do not include enough experienced trial lawyers or represent an adequate cross-section of interests.

The Judicial Conference generally adopts rules behind closed doors. It does not have published procedures. Until recently, no public hearings were held and the record of advisory committee votes on particular rules and dissenting views were never made public.

The best evidence of the inadequacy of the rule-making procedure is that four times in the last 4 years the Congress has had to step in and revise the proposed rules.

Under the present system, however it is difficult for Congress to block the rules. Unless it passes a statute within 90 days, the rules go into effect automatically. This means that bad rules can go into effect by default if both Houses cannot agree, one House fails to act or the President refuses to sign the bill. The burden should not be on Congress to stop bad rules but on the proposers to show the rules are good.

My bill would reform the present rulemaking procedures. First, it would take the rulemaking power away from the Supreme Court which does not exercise that power anyway. Second, it would give the responsibility for proposing rules to the Judicial Conference which does exercise that power now.

In addition, my bill would open up the process by which the Judicial Conference adopts rules so that the rules promulgated will have the benefit of widespread comment from the bar and the public. Specifically, the bill would require that the Judicial Conference establish regular procedures—through publication in the Federal Register—for promulgating rules. It would further require that when the Judicial Conference decides to consider rules changes that it publish, 90 days before their formal consideration, a list of the changes under consideration and the issues raised by such changes in the Federal Register and Federal Rules Decisions.

The Judicial Conference would be required to seek affirmatively wide ranging comment from the public and the bar, receive written comments, and hold public hearings on rule changes. It would then be required to publish a record of the votes taken within the Conference on particular rules and publish any dissenting views.

Finally, the bill provides that rules promulgated by the Judicial Conference would not go into effect until approved by the Congress.

The bill, in my judgment will substantially improve the quality of the rules promulgated for Federal courts and relieve Congress of its present burden of preventing the damage that ill-considered rules could cause.

The text of my bill follows:

H.R. 3413

A bill to amend the provisions of titles 18 and 28 that are commonly called the Rules Enabling Acts to provide a uniform method for the proposal and adoption of certain rules of court by the Judicial Conference, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Rules Enabling Act Amendments Act of 1977".

CRIMINAL CASES

SEC. 2. Chapter 237 of title 18 of the United States Code is amended to read as follows:

"CHAPTER 237—RULES OF CRIMINAL PROCEDURE

"Sec.
"3771. Power of Judicial Conference.
"3772. Effect of laws and prior rules.
"3773. Manner of prescribing rules.
"3774. Effect of rules.

"§ 3771. Power of Judicial Conference

"(a) The Judicial Conference of the United States shall have the power to prescribe from time to time, rules of pleading, practice, and procedure with respect to any or all proceedings, before or after verdict or otherwise, in criminal cases and proceedings to punish for criminal contempt in the United States district courts, in the district courts for the Districts of the Canal Zone and the Virgin Islands, in the Supreme Court of Puerto Rico, in proceedings before United States magistrates, in the United States courts of appeals.

"(b) This section does not give the Judicial Conference the power to abridge the right of the accused to apply for withdrawal of a plea of guilty, if such application is made not later than the tenth day after the date of entry of such plea, and before sentence is imposed.

"(c) Rules prescribed under subsection (a) of this section shall not abridge, enlarge, or modify any substantive rights and shall preserve the right to trial by jury as at common law and as declared by the Constitution of the United States.

"§ 3772. Effect of laws and prior rules

"(a) The right of appeal shall continue in those cases in which appeals are authorized by law, but the rules made under this chapter may prescribe the times for and the manner of taking appeals, preparing records and bills of exceptions, and the conditions on which supersedes or bail may be allowed.

"(b) Nothing in this title in any way limits, supersedes, or repeals any such rules prescribed by the Supreme Court of the United States before the date this subsection takes effect.

"§ 3773. Manner of prescribing rules

"Rules prescribed under this chapter shall be prescribed in the same manner as rules prescribed under chapter 131 of title 28.

"§ 3774. Effect of rules

"The Judicial Conference may fix the extent to which rules prescribed under this chapter shall apply to proceedings pending on the date such rules take effect."

CASES OTHER THAN CRIMINAL CASES

SEC. 3. Chapter 131 of title 28 of the United States Code is amended—

(1) in section 2071, by striking out "Supreme Court." and inserting in lieu thereof the following: "Judicial Conference of the United States under an Act of Congress.";

(2) by striking out section 2072 and all that follows through section 2076 and inserting in lieu thereof the following:

"§ 2072. Power of Judicial Conference

"(a) The Judicial Conference of the United States (hereinafter in this chapter referred to as the 'Judicial Conference') shall have the power to prescribe from time to time, by general rules—

"(1) the pleading, practice, and procedure of the district courts and courts of appeals of the United States in civil actions, including admiralty and wartime cases, and appeals in such cases;

"(2) the pleading, practice, and procedure in proceedings for the review by the courts of appeals of decisions of the Tax Court of the United States;

"(3) the pleading, practice, and procedure for the judicial review of or enforcement of orders of administrative agencies, boards, commissions, and officers;

"(4) the practice and procedure under the Bankruptcy Act; and

"(5) rules of evidence, in the form of amendments to the Federal Rules of Evidence.

"(b) Rules prescribed under subsection (a) of this section shall not abridge, enlarge, or modify any substantive rights and shall preserve the right of trial by jury as at common law and as declared by the Seventh Amendment to the Constitution.

"§ 2073. Effect of prior rules

"Nothing in this title in any way limits, supersedes, or repeals any such rules prescribed by the Supreme Court of the United States before the date this section takes effect.

"§ 2074. Manner of prescribing rules

"(a) The Judicial Conference shall publish from time to time in the Federal Register a description of the procedures the Judicial Conference adopts with respect to the functions of prescribing rules under this chapter. Such procedures shall be in conformity with this section. The Judicial Conference shall also submit such description to any appropriate private publishers of regularly issued materials published for the legal community for inclusion in such materials.

"(b) The Judicial Conference shall publish in the Federal Register, and submit to private publishers as described in subsection (a) of this section, not later than 90 days before the date on which formal consideration is to be given to a proposed rule under this chapter, a notice of such proposal, including a list of issues that the proposal raises and any copy of the proposal, if such copy is then available. No rule that concerns an issue required to be listed under this subsection shall be adopted by the Judicial Conference until after such issue is listed in such list and such list has been published in accordance with this subsection and furnished in accordance with subsection (c) of this section.

"(c) The Judicial Conference shall seek comment on the proposal from a wide variety of persons and organizations that may be affected by the adoption of the proposal. The Judicial Conference shall in addition furnish to the extent practicable the notice, list, and copy required by subsection (b) of this section to organizations representing those segments of the legal community that are concerned or have in the past indicated a concern with matters the proposal affects, and to an appropriate committee of each House of Congress.

"(d) The Judicial Conference shall accept and consider timely written comments on such proposals. The Judicial Conference shall hold hearings (and maintain available to the public a transcript of such hearings) on matters before it for consideration under this chapter.

"(e) The number of votes in favor of and opposing the adoption of a rule that is adopted by the Judicial Conference shall be recorded and published in the Federal Register and submitted to private publishers as described under subsection (a) of this section together with the adopted rule, any dissenting views submitted in a timely fashion, and an explanation of why such rule was adopted and why any changes were made if such changes were made to the rule as proposed by an advisory committee.

"(f) Rules adopted under this chapter shall not take effect until they have been approved by Act of Congress.

"§ 2075. Effect of rules

"The Judicial Conference may fix the extent to which rules prescribed under this chapter shall apply to proceedings pending on the date such rules take effect."; and

(3) so that the table of sections reads as follows:

"Sec.
"2071. Rulemaking power generally.
"2072. Powers of Judicial Conference.
"2073. Effect of prior rules.
"2074. Manner of prescribing rules.
"2075. Effect of rules."

AVOIDING INEQUITABLE DUPLICATE EXACTION OF EMPLOYMENT TAXES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ROSTENKOWSKI) is recognized for 10 minutes.

Mr. ROSTENKOWSKI. Mr. Speaker, today, I am introducing the solution to a persistent, recurring, and increasingly important problem which arises among related employers of the same employee, namely, the inequitable duplicate exaction of the same employment taxes. The taxes involved are payroll taxes for social security and Federal unemployment—sometimes referred to as "FICA" and "FUTA" taxes.

The Federal Insurance Contributions Act and the Federal Unemployment Tax Act each impose a tax on employers which is a percentage of wages paid to employees. The FICA tax is limited to the first $16,500 of wages paid by the employing corporation and the FUTA tax is limited to the first $4,200 of such wages. The reason for these limitations is that benefits paid out of funds provided by taxes are based upon the amount of wages earned by an employee up to the specific statutory limit. If an employee remains employed by a single employer during the entire year, both the employee and employer pay a FICA tax limited to wages of $16,500 while the employer alone pays a FUTA tax limited to wages of $4,200.

If, however, an employee earns more than $16,500 by performing services concurrently for more than one employer, the FICA tax will not be limited to wages of $16,500 and the FUTA tax will not be limited to wages of $4,200—even if the employers are part of a single enterprise under common ownership or management. Indeed, the two payroll

taxes will not infrequently be doubled despite the fact that the employee enjoys no increase in his benefits.

This illogical result—which is clearly contrary to the reason underlying the wage limitations—obtains because, under present law, each employer is considered to have paid as wages the amount attributable to the services performed by the employee for that employer. When two or more employers employ an individual concurrently, each must pay the applicable payroll tax with respect to the first $16,500—$4,200 in the case of FUTA—of services rendered to it by the employee.

This means, for example, that if an individual is concurrently employed by two related corporations which each pays that individual $16,500, both must pay the maximum amount of payroll taxes that may be imposed on an employer with respect to any one employee. Thus, the tax is imposed, not on the first $16,500 of wages, but on the first $33,000 of wages—double the amount paid in ordinary situations. If the employee performs services concurrently for three or four corporate employers—which is often the case in some industries—the tax can be tripled or quadrupled.

This duplication of payroll taxes is a particularly serious problem for industries which are structured in such a manner that a great many employees work for more than one corporation. Further, this burden of excess tax is becoming increasingly heavy. The maximum FICA tax has, for example, increased approximately thirtyfold since 1949. For the first 13 years, 1937–49, the FICA tax rate was only 1 percent, applied to the first $3,000 of earnings—a maximum of $30. By 1960 the rate had climbed to 3 percent, and the wage base was $4,800. By 1970 the rate was 4.8 percent and the base was $7,800. In the past 4 years, accelerations in the rate and wage base have been even more rapid. Today, in 1977, the rate is now a sizable 5.85 percent, the base is $16,500, having more than doubled in 6 years, and further increases are scheduled in the future. When the tax was small, duplication of tax could perhaps be overlooked as a minor imperfection in the system. But at present levels it creates major inequities and can no longer be quietly condoned.

Prior proposals to deal with the problem of duplication of FICA and FUTA taxes have included proposals for the elimination of double taxation among members of the same affiliated group of corporations, defining the "affiliated group" by means of the 80-percent stock ownership test used for determining eligibility to file consolidated returns. That approach, however, failed to recognize that employers of the same employee may be under common control by management, financial interests other than stock ownership, or by other means, and that the discriminatory multiple tax upon employers may be just as severe in these cases even though there is not the requisite stock ownership to file a consolidated return.

Another prior proposal would allow two or more employers of the same employee, upon notice to the Internal Revenue Service, to enter into an agreement under which each of the FICA and FUTA taxes would be imposed only once, with the employers allocating liability for it among themselves. This proposal was incorporated in H.R. 6176 which I introduced in the last Congress. However, there has been concern that it might create significant administrative problems. For example, it would obviously require some type of auditing of the agreements made between the employers with respect to an employee.

I have, therefore, refined my prior proposal into one which would provide comparable relief against duplicate imposition of the same tax while eliminating the objections described above. As written, H.R. 3363 amends relevant provisions of the Internal Revenue Code which relate to the imposition of the FICA and FUTA taxes to provide that, where two or more corporations concurrently employ the same individual and compensate such individual through a common paymaster, each corporation will be considered to have paid as remuneration to such individual only the amount actually disbursed by it to such individual.

If enacted, H.R. 3363 would enable related corporate employers to avoid the duplication of payroll taxes in the following manner. One of the related corporations would become the common paymaster. Since it would be the only entity disbursing wages for an employee concurrently employed by it and other related corporations, it would be the only entity liable for payment of FICA or FUTA taxes.

In effect, it would be treated as if it were the only employer of this one employee. The revenues are fully protected, because all wages paid are accounted for once, but only once. Collection problems are simplified for the Treasury because one corporation is liable for the entire tax and potential difficulties in determining which portion of the tax is attributable to which corporation are eliminated. In short, my proposal solves the duplicate payroll tax problem faced by related employers who concurrently employ an employee without the difficulties inherent in prior proposals.

It is also timely in view of the present consideration by the Carter administration of proposals to increase employment through a mechanism of social security tax wage credits. Obviously, it would be highly desirable to eliminate this duplicate payroll tax problem from employers in order to remove the adverse impact it may have on hiring additional employees. My bill does so.

I am pleased to be joined once again in this effort by my colleagues on the Committee on Ways and Means, Messrs. ARCHER, BURLESON of Texas, CONABLE, and WAGGONNER.

Hopefully, the committee will be able to give prompt consideration to this proposal.

RESPONSE TO SENATOR NUNN

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. ASPIN) is recognized for 5 minutes.

Mr. ASPIN. Mr. Speaker, I commend Senator SAM NUNN for his reply to my speech on "A Surprise Attack on NATO: Refocusing the Debate," which appeared in Monday's RECORD. I welcome this opportunity to debate one of the major issues in defense spending that Congress will examine this year.

In my address, I pointed out that a new threat was being postulated for Europe: that of a massive surprise attack by the Warsaw Pact.

I mentioned that Soviet forces—just like NATO's forces—have improved in recent years. However, I also stated that significant obstacles remain before the pact would be able to launch such an assault.

For example, I noted that half of the 54 divisions that would supposedly participate in the short notice attack belonged to the Soviets' allies. These divisions have serious readiness problems, as illustrated by their low manning levels, have much lower quality equipment, and are of dubious reliability.

I also pointed out that the 27 Soviet divisions deployed in the three East European countries could not participate en masse in a surprise attack because of maldeployment problems and logistics deficiencies, and because some would have to remain in Poland and Czechoslovakia in an occupation role to assure allied cooperation.

Overcoming these difficulties would give NATO adequate warning. Moreover, there are several other activities—naval and strategic force activities were mentioned in my speech—that would assure early indications of an attack under preparation.

Senator NUNN did not address the majority of these points. He did, however, say that Soviet category I divisions are manned at greater than 75 percent of their authorized strength. I never claimed Soviet divisions were undermanned. I did state in my report that—

> The 27 "Category I," that is "top-rated," divisions maintained by Russia's three allies in the Center Region are no more than three-quarters manned.

I also did not "misconstrue" the Institute for Strategic Studies. "The Military Balance 1976–77," on page 12, clearly states that the Czech, Polish and East German Category I divisions are defined differently from Soviet category I divisions; they "are up to three-quarters of establishment strength."

The Senator also says that I ignored my own warning that the rapid introduction of 100,000 replacement Soviet troops could be used to flush out the understrength Russian divisions. First, they could not flush out the understrength Eastern European divisions. Second, my point was that we ought to try the political route to get the Russians to change their rotation program rather than spend billions to match it without having tried the political route.

Senator NUNN also objects to my claim that "the Soviets are still faced with a deficient logistics structure." He says this claim was based primarily on Soviet performance in the 1968 invasion of Czecho-

slovakia. This is not the case. My assessment was based on current Soviet abilities and on recent studies. Indeed, I noted that there had been changes in recent years in Soviet logistics abilities. But despite these changes there remain many problems that existed in 1968, such as a dependence on rail-based support.

Senator NUNN disparages my reliance on Leo Heiman's Military Review article about the Czech invasion. Because it was written 7 years ago, the article was brought to my attention by Jeff Record who quoted from it in his study, "Sizing Up the Soviet Army" on page 46. Mr. Record is a very able analyst who now assists Senator NUNN on defense matters and who accompanied the Senator on his recent inspection of our European forces. If Mr. Record thought the article was valid enough to use in a book published in late 1975, I do not see why he and Senator NUNN object to my citing the same article in early 1977.

Thus, Mr. Speaker, I remain convinced that a massive no-notice attack is, as I said Monday, "pretty unlikely." But Senator NUNN wonders why I favor using the MBFR talks to increase warning time when I argue that a large surprise attack is such a low probability. There are several reasons why these stands are not inconsistent, but let me mention just a few.

First, just because I do not think a large surprise attack is a credible threat today, that does not mean it could not over a number of years become a more likely contingency. I thus favor a negotiated approach to preclude the development of a credible pack ability to launch a massive no-notice attack.

Second, I agreed with Senators NUNN and BARTLETT that a lack of political will to respond to pact preparations could be a problem. Thus, even though there would most likely be early and sufficient indications of an impending assault, there is still a need to assure that those indicators lead to NATO action. NATO action is more likely if pact activities are seen to be a violation of an MBFR agreement.

Finally, there is obviously no wide consensus about the nature of the threat. Reasonable men can reach different assessments, and given the uncertainties there will be pressures to hedge our bets with added forces. As a result, I favor the MBFR approach if only to stave off the tremendously expensive and potentially destablilizing military solution that seems to be gaining some acceptance. As noted in my speech, the prescriptions of General Hollingsworth and Senators NUNN and BARTLETT call for the wholesale restructuring of our European forces. This would involve massive budget allotments on the order of tens of billions of dollars. In the end, depending on the pact response, both sides could end up with forces on a dangerous, "hair trigger" status.

Mr. NUNN has one other criticism. In his speech he states:

> He (Mr. Aspin) implies that Senator Bartlett and I have chosen to ignore MBFR as a preferable means of countering the new Soviet threat.

Although Senator NUNN may so infer, I neither stated nor implied that the Senators had ignored the use of the MBFR talks. But since Senator NUNN has raised the issue, I am happy to address it.

In the first place, while not ignoring the diplomatic approach, Senators NUNN and BARTLETT have given it short shrift. They do state that they will address the issue in a later report, which I look forward to with great interest. But thus far, only two paragraphs of their 20-page report and of all their previous statements on this issue have been addressed in any way to MBFR talks or a negotiated solution. The rest have focused primarily on military issues and solutions, including 14 paragraphs of specific recommendations for our military force structure in the latest study. And despite their mention of MBFR, the Senators found it "imperative that NATO alter its own conventional force posture;" I do not.

In their one-sentence prescription for a negotiated approach, they stated:

> In our opinion the main objectives should be to reduce Soviet firepower in the Guidelines Area, to provide the necessary verification means to ensure it is not reintroduced, and to take steps which would improve early warning of impending attacks.

Only the last part is consonant with my proposals. The first two are focused on reducing Soviet firepower. But an emphasis on firepower leads directly to a focus on tanks and troops which has plagued our existing MBFR approach. The 1975 proposal by the United States to get 1,700 Soviet tanks out of Eastern Europe was nothing if not an attempt to reduce Pact firepower; it did not prove to be very fruitful.

In summary, Mr. Speaker, the obstacles to a successful and massive surprise attack by the Warsaw Pact remain formidable despite some improvements in Soviet forces in Eastern Europe. To counter militarily the exaggerated threat of a large no-notice attack would not only cost billions but could actually increase the risk of war in Europe. A safer and inordinately cheaper way to preclude the possibility of such an assault is a diplomatic approach, which can also address the problem of political will. I thank Senator NUNN for his comments, which have provided an opportunity to reaffirm these conclusions.

A BILL TO ESTABLISH A SYSTEM OF REGIONAL PRIMARIES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Indiana (Mr. HAMILTON) is recognized for 15 minutes.)

Mr. HAMILTON. Mr. Speaker, the Presidential primaries of 1976 are now behind us, and in their aftermath we may very well question whether we choose our Presidential candidates in an efficient way.

I do not mean to imply that the present system of primaries has not served us reasonably well over the years. Indeed, for a people who presume to elect their President democratically it has many indispensable features. Among other things, it gives national exposure to the contenders, tests them on the issues, challenges their physical and mental stamina, tries their organizational ability, displays their proficiency in promoting their points of view and winnows out those who are less committed to seeking high office. Furthermore, it allows the candidates to get acquainted with the voters and, perhaps most importantly, provides the voters with the information necessary for an informed choice. In short, the present system of primaries brings the candidates and issues into sharper focus and gives the people an opportunity to express their initial preferences.

For all its obvious benefits, however, the system is seriously flawed. Its haphazard development down through the years has made it too long, too costly, too confusing and too disjointed. A brief look at the facts will convince us that it is in desperate need of reform.

During the 15-week period last year, from February 24 to June 8, voters in 29 States and the District of Columbia voiced their preferences for the candidates and selected slates of delegates to the national conventions. The entire process cost Presidential hopefuls and the taxpayers an estimated $65 million. Worse still, each primary took place according to different and constantly changing rules, and in two States the voters did not know which slates of delegates were pledged to whom.

The duration, cost and confusion of any election are surely matters of concern to all of us, but perhaps what troubles us most about the present system of primaries is its disjointedness. The 30 primaries of 1976, scheduled in the absence of any common plan, had candidates shuttling from one State to another at a furious pace. The chaos reached its height in the final weeks of the primary season: on June 8 primaries were held in California, New Jersey, and Ohio, and during the preceding week four other primaries had taken place in other regions of the country.

The disjointed character of the present system of primaries has several undesirable consequences. Perhaps most important among these is the debilitating effect on Presidential contenders. How can a candidate adequately convey his points of view when he spends most of his time criss-crossing the country? A premium is placed on the candidate's physical and mental endurance, to the exclusion of his intelligence, his familiarity with the issues, his commonsense and his capacity to lead.

Another undesirable consequence is the incentive for demagoguery. A candidate who does not have the endurance to enter all the primaries may be tempted to seize on emotional issues in order to grab headlines. Yet another undesirable consequence is the disproportionate influence of those few States whose primaries come first. An early victory in a small State may not truly reflect any national trend, but the benefits of publicity that attach to such a victory may be enormous.

No one will deny that the duration, cost, confusion, and disjointedness of the

present system of primaries detract from the purpose of the primary process—the choosing of the most qualified candidates for the highest office in the land. But if the purpose of this process is not fulfilled in an efficient way, the best interest of the Nation is not served. In order to make the process more efficient I am introducing today a bill to establish a new system of regional primaries.

Under the provisions of my bill the 50 States, the District of Columbia, Guam, Puerto Rico, the Canal Zone, and the Virgin Islands would be divided into six geographical regions, each with common interests, approximately the same number of electoral votes and approximately the same number of Presidential primaries. A region would hold its primary on one of the six Tuesdays beginning in the last week of March and ending in the second week of June. Specific dates would be randomly assigned to regions by the Federal Election Commission on the last Tuesday in October of the year preceding a Presidential election year. The States would retain the right to determine whether they would hold a primary.

However, if a primary were held in a State it would have to be held on the date assigned to that States region. Individual primaries would continue to be conducted in accordance with the laws of the States, except that cross-over voting would be prohibited and the ballots for selection of slates of delegates would indicate the candidate to whom delegates would be pledged. The bill would also require that a candidate enter at least one primary in each of the regions.

The advantages of a system of regional primaries are many. It would save money, some of which comes from the taxpayer's pocket. It would spare the candidates' time and effort, most of which would be better spent in dialog with the voters. It would reduce the temptation of demagoguery and diminish the value of minor victories. Lastly, it would emphasize regional issues and stimulate the discussion of regional problems. Voter participation would very likely increase.

Mr. Speaker, the present system of primaries is in disarray. It is incumbent upon us to reform it and bring order to the process through which we choose Presidential candidates. The bill that I offer will accomplish this. I urge its careful consideration.

UNITED STATES AND MEXICO

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. FASCELL) is recognized for 5 minutes.

Mr. FASCELL. Mr. Speaker, I wish to take special note of two acts by the administration which augur well for its relations with Latin America. I refer to the Secretary of State's announcement that negotiations for a new Panama Canal Treaty will recommence on February 10. He indicated that every effort will be made to conclude a treaty and was optimistic that it would be completed by this summer. As I indicated in the CONGRESSIONAL RECORD on January 26, I believe a new treaty is vital to all concerned.

The second matter to which I wish to call attention is the visit of Mexico's President Jose Lopez Portillo. It is significant that the first head of state to visit the United States in the Carter administration comes from our next door neighbor to the South. The visit demonstrates both the bond of friendship between our two countries and the desire of our two Presidents to insure that there is an understanding of the policies and aspirations of each.

President Lopez Portillo came to his office from a distinguished academic and government service background. He is a man of letters, having authored books, and most recently served his country as Secretary of Treasury.

As President Carter has been confronted with the energy crisis in the early days of his administration, President Lopez Portillo likewise met with a crisis upon taking over the reins of his government. Mexico's crisis stemmed from economic and financial pressures. Both Presidents have quickly demonstrated their capacity for effective actions and have inspired renewed confidence among their countrymen.

During this period of preparation for President Lopez Portillo's visit, I would like to share with the House some of my personal perceptions concerning United States-Mexican relations.

First and foremost is the blunt historical fact that for all too many years our two nations were not friendly neighbors. There was mutual suspicion and hostility that led to a major war in the 1840's. Beginning in the 1930's, however, our relations began to improve and in 1938 took an important step forward with the peaceful resolution of the dispute sparked by Mexico's expropriation of U.S. private oil investments. From that settlement both nations learned that more was to be gained by negotiations than by hostile confrontation.

Another important factor in our relation is the great strength and dynamic quality of Mexican culture and the Mexican people who have successfully resisted all attempts at domination since independence. Today the United States recognizes and respects the independent course the Mexican people have chosen and the revolutionary principles upon which rest their search for greater economic justice for all peoples. Moreover, the strength and value of Mexico's history increasingly is recognized throughout the world as Mexico assumes a leadership role she has earned and deserves.

One can sum up the present attitude of the United States by saying that we have faith in Mexico, in its people and in its capacity to resolve its own problems. But there are also many mutual problems to be solved and opportunities for mutual advantage to be seized. These will require joint planning and joint decisions and require that both our countries not tolerate any attitude that might obscure the imperative of a positive, constructive, friendly relationship. This is why I am so pleased and encouraged that our two Presidents are meeting. We can and should be examples of good neighborliness, acting together in international forums and organizations to promote peace and justice. In the area of bilateral relations, we must proceed with respect for each other, showing that we have confidence that solutions and progress are ours to be had. We do not have difficult issues which are outstanding—the Chamizal settlement is behind us, as is the problem of salinity from the Colorado River—but we do have a full agenda before us.

High on the agenda for discussion must be the welfare of the citizens of each country who are visiting or residing in the other country. Of particular concern are those who encounter legal difficulties. It is never pleasant when laws are violated; this is particularly true in any country when a noncitizen is involved. With Mexico and the United States, laws have similar basic intent but there are different procedures. In the international community it is customary for these procedural differences to be adjusted through consular conventions to insure that a nation's citizens are accorded treatment compatible with international standards and norms. A vital aspect of our consular convention with Mexico is prompt notification of the detention of a citizen and the right of the proper consular official to see the detainee. Perhaps, the time has come for Mexico and the United States to update its consular convention so that there is no misunderstanding and so that neither one's rightful interests are being jeopardized. These are important understandings and have been particularly germane recently with the large number of U.S. citizens running afoul of Mexico's narcotics laws. I am pleased to note that one aspect of this overall problem is on its way to resolution. Our two nations have signed a treaty which would permit convicted U.S. citizens in Mexican jails and Mexicans in U.S. jails to be returned to their respective countries for parole or completion of their sentences. This treaty is further evidence of two friendly nations facing issues and finding solutions. There is need, however, for speedy ratification and implementation of the treaty. The President will surely want to discuss ways and means to overcome obstacles to fulfilling this agreement.

The problems in Mexico encountered by hundreds of our citizens are only one aspect of a larger issue between our two countries as a result of the U.S. market for illicit and dangerous drugs. This insidious traffic is almost impossible to eradicate from any source. It is particularly difficult to combat in Mexico, because of its geographical location, because some undesirable drugs flourish there—and as elsewhere, it is a fantastically profitable business. We are not home free—perhaps, we never will be—in fighting the Mexican connection. Nevertheless, Mexico's attitude and cooperation has contributed immeasurably in trying to control the problem.

Another set of issues confronting our two nations are economic. Included are matters relating to trade and commerce,

U.S. private investment in Mexico, and the transfer of technology. These are areas which require constant attention to changing conditions and needs—they are sensitive, complicated areas which will profit from Presidential review to insure clear policies for equitable, mutual gain.

Another important area of concern is immigration—a policy issue characterized by mounting concern within the United States. We are constantly being made aware of the large number of illegal residents in our country. We are by no means at peace with ourselves on this subject, but at the same time we recognize that this issue is the most potentially dangerous problem between our two countries. Mexico's population growth rate is a primary factor. It will require a superhuman effort by Mexico to adequately provide for its citizenry. This is not a criticism. It is a fact. Another fact is that so long as inequitable opportunity exists between the two countries there will be efforts to take advantage of it. Short of unacceptable measures the northward flow apparently cannot be stopped; however, joint consideration should be given at the highest level for programs which are humane, acceptable, and feasible for containing the problem over the long run. Options should be considered but first such fundamentals must be studied as the size of a manageable population for Mexico and how it can be attained. For our part we should seek to identify the areas of our experience that complement the desires and aspirations of Mexico for creating conditions in Mexico which would tend to keep its citizens from leaving in large numbers. I do not believe Mexico's best minds and ours have turned their attention together in this direction.

We should do so, for our two countries stand to suffer more by doing nothing than by facing up to the need for taking immediate steps for an action program.

There are two other matters which I would like to mention. One is the border area. On each side of the border we have excellent examples of each nation's efforts for self-improvement. Also, there are fine examples of bilateral cooperation, particularly with water control, but the border lacks the careful attention it should have from two countries working together. The border population is growing rapidly in the "sister cities." Relations are friendly and cooperative on civic and social affairs but increasingly are in competition for the sparse natural resources each must have for its welfare. Attention should be given the area now before competition becomes confrontation.

Finally, I commend to Presidential attention a study of the expendable natural resources of each country which are important to the welfare of each. I am thinking of water, energy materials, and certain metals. How can the two countries work together to meet their respective needs in the future of these items become scarce? Neither can be selfish about this. We should be looking for viable ways in the future for providing each other materials which may be in short supply with one but in adequate supply in the other. If it were to be done successfully, it would insure a brighter prospect for each country and contribute to new and innovative diplomatic methods.

In closing I would like to welcome President Lopez Portillo and to express my hope that his talks with President Carter will be mutually productive for both Mexico and the United States.

PROHIBITING CONVERSION OF CAMPAIGN CONTRIBUTIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Iowa (Mr. BEDELL) is recognized for 5 minutes.

Mr. BEDELL. Mr. Speaker, I am today reintroducing a bill which I introduced in the last session which would make it illegal for a political candidate to convert political contributions for personal use.

The Congress has gone a long way recently in establishing rules and laws which can help to restore the confidence of the people in their elected officials. This bill will be another step in that direction. People who contribute toward a political campaign mean to contribute to help elect a candidate in whom they believe. They expect their contribution to be used for that purpose, and not to increase a person's personal wealth. My bill would require that political contributions to an individual be used in that person's current campaign or in the next campaign for the same or higher office, by the same individual; returned to the contributors; or contributed to the Presidential Election Campaign Fund.

Although this legislation was not considered in the last Congress, the objective was nearly accomplished by an amendment added to a bill in the Senate. Unfortunately, the amendment was dropped in conference, because of the objection of one of our Members. With the need to restore the public's confidence in our political system, I urge the House to consider this matter at the earliest possible moment.

AUTOMOTIVE TRANSPORT RESEARCH AND DEVELOPMENT ACT OF 1977

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. BROWN) is recognized for 10 minutes.

Mr. BROWN of California. Mr. Speaker, the Automotive Transport Research and Development Act of 1977, H.R. 784, and others, which was passed by the House, but not the Senate over former President Ford's veto late last year, will be reintroduced again shortly after we return from the recess which begins today. As I have said in earlier statements, this bill is quite important, and deserves our urgent attention. The chairman of the subcommittee which has jurisdiction over this bill, Mr. MCCORMACK, has been one of its strongest advocates, and has pledged early action on the bill in this Congress.

I do not wish to repeat the reasons why this bill is important here today, but would urge any interested Members to contact the Committee on Science and Technology, or my office, if they have any questions. Suffice it to say that this bill is a major energy conservation measure which is intimately involved with our effort to develop a national energy policy and program. In addition, the Automotive Transport Research and Development Act of 1977 is supportive and complementary to our national environmental programs.

At this time I wish to list the current cosponsors of this legislation:

LIST OF COSPONSORS FOR AUTOMOTIVE TRANSPORT RESEARCH AND DEVELOPMENT ACT OF 1977

Congressman George E. Brown, Jr. of California.
Congressman Mike McCormack of Washington.
Congressman Olin E. Teague of Texas.
Congressman Don Fuqua of Florida.
Congressman Dale Milford of Texas.
Congressman Ray Thornton of Arkansas.
Congresswoman Marilyn Lloyd of Tennessee.
Congressman David Emery of Maine.
Congressman Charles H. Wilson of California.
Congressman Joe Moakley of Massachusetts.
Congressman John J. Duncan of Tennessee.
Congressman Robert F. Drinan of Massachusetts.
Congressman Charles J. Carney of Ohio.
Congressman Romano L. Mazzoli of Kentucky.
Congressman William J. Hughes of New Jersey.
Congresswoman Helen S. Meyner of New Jersey.
Congressman Paul N. McCloskey, Jr. of California.
Congressman Gerry E. Studds of Massachusetts.
Congressman Austin Murphy of Pennsylvania.
Congressman Bob Edgar of Pennsylvania.
Congressman Harold C. Hollenbeck of New Jersey.
Congressman John M. Murphy of New York.
Congressman John Conyers, Jr. of Michigan.
Congressman Richard L. Ottinger of New York.
Congressman Daniel J. Flood of Pennsylvania.
Congressman James M. Jeffords of Vermont.
Congressman James J. Howard of New Jersey.
Congressman William Lehman of Florida.
Congressman John Breckinridge of Kentucky.
Congressman Christopher J. Dodd of Connecticut.
Congressman Jerome A. Ambro of New York.
Congressman Tom Harkin of Iowa.
Congressman Frederick Richmond of New York.
Congressman Henry Waxman of California.
Congressman Timothy Wirth of Colorado.
Congressman Gary Myers of Pennsylvania.
Congressman Paul Simon of Illinois.
Congressman Claude Pepper of Florida.
Congressman James Scheuer of New York.
Congressman Carlos Moorhead of California.
Congressman Herb Harris, of Virginia.
Congressman Lester L. Wolff of New York.
Congressman Abner J. Mikva of Illinois.

Congressman Robert Duncan of Oregon.
Congressman Don Edwards of California.
Congressman Cecil (Cec) Heftel of Hawaii.
Congressman Leon E. Panetta of California.
Congressman Max Baucus of Montana.
Congressman Glenn M. Anderson of California.
Congressman Manuel Lujan, Jr. of New Mexico.
Congressman Silvio O. Conte of Massachusetts.
Congressman Millicent Fenwick of New Jersey.
Congressman William R. Cotter of Connecticut.
Congressman Thomas J. Downey of New York.
Congressman Edward R. Roybal of California.
Congressman Norman D. Dicks of Washington.
Congressman Ronnie G. Flippo of Alabama.
Congressman Joshua Eilberg of Pennsylvania.
Congressman Samuel S. Stratton of New York.
Congressman Jonathan B. Bingham of New York.
Congressman Robert J. Cornell of Wisconsin.
Congressman George E. Danielson of California.
Congressman Charles Wilson of Texas.
Congressman James C. Corman of California.
Congressman Jerry M. Patterson of California.
Congressman Berkley Bedell of Iowa.

LEGISLATION TO PERMIT AWARD OF REASONABLE COSTS FOR PUBLIC PARTICIPATION IN PROCEEDINGS BEFORE FEDERAL AGENCIES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. RODINO) is recognized for 5 minutes.

Mr. RODINO. Mr. Speaker, the gentleman from New York (Mr. KOCH) and I, together with 36 other Members, have today introduced legislation that would permit the awarding of reasonable costs for public participation in proceedings before Federal agencies and for some types of litigation concerning agency decisions.

This measure would provide funds to accomplish what has already been envisioned by the Congress through statutes intended to open to public view and participation the proceedings of Federal regulatory and administrative agencies such as the Federal Trade Commission, the Securities and Exchange Commission, the Food and Drug Administration, and many others.

For years consumer and public interest groups, small businesses, and private citizens have protested that they are denied equal participation in the decision-making process of Federal agencies. These groups and individuals have argued, persuasively, that their inability to pay for representation before the agencies effectively keeps their voice from being heard.

Big businesses, major trade associations, and special-interest groups have suffered no such restriction, however. Their treasuries are large enough to pay the costs of representation.

A number of laws have been enacted guaranteeing those affected by agency decisions to be heard. But this assurance does no good until the necessary funds are there.

This bill would provide those funds. The total costs are expected to be less than $2 million a year—a reasonable sum when one considers the good that should come from the opening of Commission proceedings to all those with a valid interest.

Under this legislation, the payment of reasonable costs would be authorized by the agency involved only when a significant contribution was made by those appearing. In legal actions contesting regulatory agency decisions, attorneys' fees, and other costs would be provided only when the plaintiffs substantially prevailed.

These procedures could, conceivably, result in an overall cost reduction for the Government. By insuring adequate public participation before regulatory agencies and commissions, we can reasonably expect better decisions and fewer challenges that consume both time and money.

Mr. Speaker, we believe this is needed legislation to complete a process of public participation that already has begun.

INTRODUCTION OF NATIONAL COMMUNITY HEALTH WEEK JOINT RESOLUTION

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from California (Mrs. BURKE) is recognized for 5 minutes.

Mrs. BURKE of California. Mr. Speaker, today I wish to introduce a joint resolution designating March 13 to 19, 1977, as National Community Health Week.

A growing number of communities are already observing National Community Health Week under the sponsorship of the Community Health Association, Inc. This organization is headed by my good friend, Dr. Ruth Temple of Los Angeles, who has devoted an inordinate amount of time and energy to the establishment of community health centers.

Community health centers have been established under the auspices of Federal, State, and local governments to insure that no individual or community is denied health services, because of unavailability, inadequate financial resources, or other such barriers. Yet, today, many Americans still suffer needlessly, because they are unaware of the resources available to them through such community health centers.

Designation of a National Community Health Week would provide an opportunity for a united effort in health education by the participation of business, labor, religious, and civic groups as well as individual citizens. This would encourage swift identification, diagnosis, and treatment of persons having health problems by increasing community awareness of the services available through community health centers.

I urge my colleagues to join me in this endeavor.

CREATING JOBS—GET BACK TO BASICS

(Mr. WAGGONNER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WAGGONNER. Mr. Speaker, unemployment is a very real and urgent problem in our economy today. It is a legitimate concern of people of all political opinions, but the crucial question remains of how to create jobs for the unemployed. Here is where the solutions differ.

I would like to commend to our colleagues an editorial that appeared recently in the Enterprise, published in Mansfield, La. With a few words, Editor John Blanchard has given readers the most eloquent description of how the free enterprise system works—or is hampered from working, as the case may be. As he so correctly points out, jobs in the private sector are created by investment which comes from savings. Since the Government has no savings, thanks to ever-increasing budget deficits and over spending, the only way the Government can create new jobs is by increasing taxes or borrowing the money necessary to put people to work. Borrowing by Government removes revenues available for private enterprise from the money market. Here is where the difference lies. He comments:

> In the process of creating government jobs, the government reduces the ability of the private sector to create jobs. Worse yet, the jobs created in the private sector are those for which there is a genuine demand, whereas the jobs created by government are to "cure" unemployment (and) are likely to be more of a drag on the economy than a stimulus.
>
> A healthy private sector, then, is the best source of new jobs. To get that, we need a few less government programs, not a few more.

Unfortunately, too many economists seem to have forgotten this truism of basic American economics. We would all do well to get back to basics and remember some valuable lessons we may have forgotten. We are blessed with the greatest and most productive economic system ever devised by man. It will continue to work, if we allow it to. John Blanchard may be a country newspaper editor, but he is endowed with intelligence and a great deal of commonsense.

I include the full text of Mr. Blanchard's editorial following my remarks:

[From the Enterprise, Jan. 18, 1977]

CREATING JOBS

"Creating jobs" is a topic much in the news these days. Various special-interest groups are pressuring the President to launch a massive federal employment program of some sort.

High levels of unemployment are not in anybody's best interest. But the way the problem is tackled is of critical importance.

Before you can create a job, you have to know how jobs are created. That sounds obvious enough. Nevertheless, it's positively amazing how many otherwise intelligent proponents of federal jobs programs seem to have overlooked the acquisition of this rather basic knowledge.

Jobs are created by investment. If you

want to open a store, for example, you need a lot of start-up money; money for such things as rent, stock, advertising, and pay for your staff until the cash starts coming in. The same principle applies to heavy industry, only more so. Big industrial processes require big, expensive machines. On the average, it takes $40,000 today to create one blue-collar job.

Where does this investment money come from? Ultimately, from savings. Yours, if your store is small and your bank account large. On a somewhat larger scale, the money may be borrowed from a bank. Then, the savings of many of the bank's depositors will be involved. Or, savings may be borrowed directly from individuals through the sale to them of stocks or bonds. And finally, a going concern may pay for diversification or expansion with its own savings, usually called "retained earnings."

Why should people risk their savings in this job-creating process? To earn a profit on their investment, of course. Which means that the product or service offered must be sufficiently attractive to the consumer.

That, in a peanutshell, is the story of our economy. From it, you can deduce that job creation requires both consumer demand and adequate savings to finance the means of meeting that demand.

Now, let's take a look at that mythical federal product: "Instant Jobs" (just add money and stir).

The first thing we can tell about such jobs is that they will be producing something for which there is little individual consumer demand—otherwise, the private economy would already have created them.

The next thing we can tell about the "Instant Jobs" is that they will—like all jobs—require investment. But where will the money come from? The government doesn't have any savings (except on those increasingly rare occasions when there is a budget surplus).

There are only two ways for the government to get the money: Higher taxes or borrowing.

Now consider the effect of those two alternatives on private job-creation. Higher taxes discourage savings. And government borrowing reduces the amount of savings available for private borrowing. Therefore, in the process of creating government jobs, the government reduces the ability of the private sector to create private jobs. Worse yet, the jobs created in the private sector are those for which there is a genuine demand, whereas the jobs created by government are to "cure" unemployment [and] are likely to be more of a drag on the economy than a stimulus.

A healthy private sector, then, is the best source of new jobs. To get that, we need a few less government programs, not a few more.

It's a fascinating subject, and an important one.

FTC COMMISSIONER PAUL RAND DIXON SHOULD BE IMPEACHED

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, along with 10 Members of the House, I am today introducing a resolution of impeachment against Federal Trade Commissioner Paul Rand Dixon for his having called Ralph Nader "a son of a bitch" and "a dirty Arab." I do not have the right nor can I control Commissioner Dixon's personal prejudices, but when he gives vent to them as a public official, then I believe that Congress must not only seek to control him, but also to seek his removal. Assume for a moment that he had referred to some other individual as a "dirty Christian" or "dirty Jew," would not there have been a storm of outrage from this Chamber?

I do not take this resolution of impeachment lightly. Commissioner Dixon has publicly insulted an exceptionally able and dedicated individual, Ralph Nader, by derogating his ethnic heritage. The greatness of our country rests upon a toleration of differences. Paul Rand Dixon has shown a venomous and intemperate nature which has no place in our Government, especially in a quasijudicial regulatory position that demands judicial temperament and restrained disposition.

Public officials have a duty to set a proper tone for public discussion. No person is free of prejudice, but we must expect that when an individual assumes a public office, he or she will to the extent possible set aside those prejudices in the performance of official duty. Paul Rand Dixon has clearly shown that he cannot do so. We must, therefore, take action. For citizens who are alarmed by the word impeachment," because of the Nixon connotation, they should know that impeachment is the constitutional method required to remove a regulatory commissioner.

I should also note that I have received a letter from Mr. Dixon in response to the letter I signed along with 15 other Members of the House. I am appending that letter in the CONGRESSIONAL RECORD so as to allow Mr. Dixon to speak for himself. In all candor I must say that his letter does not satisfy my concerns, and certainly does not excuse his actions:

FEBRUARY 4, 1977.

HON. EDWARD I. KOCH,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN KOCH: I am writing in response to the letter of February 1 signed by you and fifteen other members of the House of Representatives, calling upon me to resign as Commissioner of the Federal Trade Commission. I respectfully decline to do so.

I have spent my entire working life at the Federal Trade Commission, with the exception of military service and four years as a congressional committee staff member. As a Commissioner I have tried to perform my duties with concern for the interests of consumers and others whom our laws are designed to protect, and with concern for the rights of all who must obey those laws. I believe that I have performed my duties capably and efficiently, and that any review of my record as a Commissioner will bear this out.

Recently in answering a question before a small audience I spoke wrongly and with poor judgment in referring derogatorily to the ethnic background of Ralph Nader. I deeply regret any harm my remark has caused, and I have apologized for having made it.

I do not believe, however, that as the result of this unfortunate and regrettable remark I have become unqualified or unable to continue my service as a Commissioner. I have always tried to resolve issues on the basis of the law and the public interest as I have seen it and my record over the past several years can leave no doubt that in dealing with issues before the FTC, whether raised by Mr. Nader or anyone else, I have lived up to that standard.

I deeply believe in the mission of the Federal Trade Commission and in the purposes of the laws it was created to enforce. I remain eager and able to assist in fulfilling those purposes and for these reasons I plan to continue my service as Commissioner.

Sincerely,

PAUL RAND DIXON,
Commissioner.

ON INVESTIGATING NAZI WAR CRIMINALS IN THE UNITED STATES

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, over the years there have been reports that former Nazis and Fascists have emigrated to the United States and received sanctuary here, even though they would have been tried as war criminals, if they had been apprehended in their own country. There have also been allegations that sanctuary in the United States has been made available to a number of individuals as the result of an "Odessa" operation having infiltrated agencies such as the Immigration and Naturalization Service and the Department of Justice.

These agencies are responsible for screening those who apply for permanent status in the United States, and in an important new book by Howard Blum it is alleged that they have been derelict in excluding former Nazis and have even been supportive of those former Nazis discovered in the United States. Howard Blum alleges that of 59 suspected Nazi war criminals known to be in the United States 5 years ago, only one has been brought to trial. Blum documents cases against four alleged Nazis who have not been brought to trial, alleging that investigations and prosecutions of those individuals have been continuously blocked by INS and the Department of Justice.

I personally do not know whether the allegations made by Blum's book are true, but it is clear that they must be thoroughly investigated. After reading Blum's book, I sent a letter to former Attorney General Edward Levi and then to his successor Attorney General Griffin B. Bell urging an investigation of the charges made by Blum of official complicity in the failure to investigate and prosecute these former Nazis.

I am appending my correspondence with Attorney General Griffin Bell. Attorney General Bell stated that he is continuing a review of the previous Department of Justice investigations into these allegations "to determine whether further investigation by the Department would be appropriate." In view of the serious charges raised by Howard Blum's book, I hope the Department of Justice does a very thorough review of its past investigations and investigates any substantial new charges raised.

I also urge my colleagues to support needed changes in the Immigration and Naturalization Act to make it clear that the United States can deport and exclude Nazi war criminals or others who

have engaged or assisted in the prosecution of others because of race, religion, or national origin.

I am a cosponsor of legislation introduced by Congresswoman ELIZABETH HOLTZMAN to effect this change, and I urge my colleagues support for it.

The correspondence follows:

HOUSE OF REPRESENTATIVES,
Washington, D.C., January 21, 1977.

GRIFFIN BELL,
Attorney General Designate, Department of Justice, Washington, D.C.

DEAR MR. BELL: Upon taking office, I want to bring to your attention the book "Wanted" authored by Howard Blum. It concerns itself with individuals who allegedly participated in Nazi atrocities, and notwithstanding this, they entered the United States and received sanctuary here.

If the allegations in the book concerning complicity and coverup on the part of the United States Department of Justice and Immigration and Naturalization Service officials are true, then surely something must be done to root out such corruption. I believe it incumbent upon your taking office to investigate the matter.

I urge you to read the book and if you do, I am convinced that you will direct that such an investigation be initiated.

Sincerely,

EDWARD I. KOCH.

OFFICE OF THE ATTORNEY GENERAL,
Washington, D.C., January 31, 1977.

Hon. EDWARD I. KOCH,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN KOCH: Thank you for sending me a copy of the book "Wanted" by Howard Blum about people now living in the United States who allegedly participated in Nazi atrocities during World War II.

It is my understanding that the Department was previously made aware of allegations that persons in the Immigration and Naturalization Service obstructed investigations of Nazi war criminals living in the United States. It is also my understanding that Attorney General Levi instructed the Department's Counsel on Professional Responsibility to review previous Departmental investigations into these allegations to determine whether further investigation by the Department would be appropriate. That review has been started and you have my assurance that it will continue.

Again, thank you for bringing Mr. Blum's book to my attention.

Sincerely,

GRIFFIN B. BELL,
Attorney General.

PARAGUAY: THE REPRESSION CONTINUES

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, in some respects Paraguay represents the saddest case of government which consistently terrorizes its own people. Alfredo Stroessner, the dictator of that country, presides over a primitive but brutally effective system of repression and has, for the most part, intimidated the populace into passive submission.

A particularly horrible example of officially sponsored government repression has come to light in the torture and death of Joelito Filartiga, a 17-year-old boy.

However, this is also a story of tremendous courage by the father of this boy. Dr. Joel Filartiga has spoken out against this crime, refusing to be intimidated by the thugs who run Paraguay.

For the interest of my colleagues I am appending an article from America by Alberto Cabral, in which the complete case of Joelito Filartiga is described.

I do not understand why the United States continues to provide military and economic aid to the Stroessner regime in the face of overwhelming evidence of a "consistent pattern of gross violations of internationally recognized human rights."

As a member of the Foreign Operations Subcommittee of the Appropriations Committee, I intend to scrutinize any requests that are made in the fiscal year 1978 budget for Paraguay, and all other countries which show no regard for the human rights of their people.

The America article, "Political Murder in Paraguay," is appended:

POLITICAL MURDER IN PARAGUAY

Shortly before midnight on March 29, 1976, seventeen year old Joelito Filártiga was quietly kidnapped from his home in Asunción, Paraguay. Four hours later two uniformed officers from a nearby police station awoke his sister and escorted her to the neighboring house of a police inspector, where she found the whipped, slashed and electric shocked corpse of her brother.

As gruesome as this incident may appear, today it is literally an everyday occurrence throughout Latin America, especially in the right wing military dictatorships of Brazil, Chile, Argentina, Uruguay, Bolivia and Paraguay. In their attempt to eliminate actual or potential opposition, and to generally terrorize the people into submission, the use of Torture as State Policy has come to characterize these totalitarian regimes.

Because of fears of further reprisals, the families of the victims rarely mount any protest. On the contrary, most often they do all that they can to discretely bury their dead without revealing the true causes. This reaction of a terrorized people is brilliantly revealed in the classic novel One Hundred Years of Solitude: in the passage after the soldiers had shot hundreds of workers at the banana plantation, Garcia Marquéz depicts their frightened neighbors refusing to acknowledge that the killings had taken place, even as the bodies were being carried away in the railroad cars. After the 1968 slaughter at the Plaza of Tlateloco in Mexico City and the 1972 massacre at Trelew, Argentina, I tried in vain to interview the families of the victims, who most often denied that they had recovered the bodies of their loved ones even to distant relatives and friends.

Although difficult for outsiders to believe, and nearly impossible for them to understand, daily kidnappings, torture and murder by the secret police or semi-official Death Squads are commonplace throughout Latin America. Likewise, the "cover-up" of these atrocities is so widespread that it has now become an identifiable part of these cultures.

The kidnapping, torture and murder of Joelito Filártiga is not in the least uncommon; what is unusual is that his father, Dr. Joel Filártiga, a noted medical philanthropist and artist of international reputation, did not quietly bury his son in the conventional manner. Instead, he has used every means available to publicize the fact and to dig out the truth of the matter. Dr. Filártiga laid the naked body in state so that the hundreds of people that passed through his home to offer their condolences would see the torture wounds. He also distributed photographs of his son's multilated cadaver to the newspapers, exhumed the body so that three prominent physicians could conduct an honest autopsy, spoke to everyone who would listen, and filed a homicide suit against the police inspector and three other members of the Death Squad.

As the months passed the official police version that the murder was nothing more than just another "crime of passion"—the Paraguayan authorities contend that Joelito was caught in bed with a neighbor's wife and killed on the spot by the irate husband—became so completely discredited that when in early September the alleged cuckolded husband, Hugo Duarte, finally "confessed" to the crime, the Asunción newspaper Aquí ran the following headline: Durate said "I killed Filártiga" (But Nobdy Believes Him) *

Even the United States Embassy evidently has been moved to break with its long established policy of ignoring the constant violations of human rights that have characterized the twenty-two year long rule of General Alfredo Stroessner. In a clear display of their disapproval of this particularly clumsy job by the dictator's secret police, in late September it sponsored a widely published exhibition of Dr. Filártiga's art work at the USIS Paraguayan American Cultural Center. If the photograph of Ambassador George Landu shaking hands with Dr. Filártiga that was carried in the newspapers the morning after opening night did not get the message across to Stroessner, the fact that the exhibition's brochure dedicated the event to Joelito left little doubt as to the Embassay's displeasure.

Together with such efforts in Paraguay, the Filártiga case has recently gained international recognition through the publication of several articles in the United States and Europe, and an Amnesty International report. Such pressure, which includes petitions and letters expressing solidarity, has had the effect of preventing further violence against the Filártiga family.

In recent months numerous people, encouraged by the Filártiga's ability to oppose the police state apparatus, and repulsed by the sadistic murder of his son, have come forward to confidentially provide much valuable information. Thus, it is only now, nine months after Joelito's death that it is possible to reconstruct the complex political and personal intrigue that has grown to become Paraguay's major scandal.

On March 27, 1976, Paraguayan police killed several guerillas shortly after they had crossed the Argentine border and entered Paraguay. The next week, on April 3, several other members of the newly formed guerilla group, the Political Military Organization (OPM) ** died in an Asunción shootout; and three days later police raided the Catholic Cristo Rey High School, which they claim was the center of guerilla operations. In the following months security forces carried out the most brutal and massive wave of repression in recent Paraguayan history. Using the opportunity to eliminate all opposition, they directed their attacks against Church, peasant and student organizations. Killing scores of people and arresting several thousand more, the police routinely torture virtually everyone in their custody. Not uncommonly, the mutilated bodies of people who have been arrested, such as the peasant leader Arturo Bernal and the opposition newspaper vender Mario Arzamenda, are later returned to their families without any official explanation.

But in mid-March, when the police first began receiving reports about the OPM, they were still attempting to gather information

---

* For the Spanish translation: the actual headline is Lo Dijo Duarte "Yo Mate a Filártiga" (Pero Nadie Le Cree).

** For Spanish translation: Organización Político Militar.

and identify their targets. Because of Dr. Filártiga's notoriety as an outspoken critic of the regime, he and his family immediately came under suspicion.

For the past sixteen years Dr. Filártiga has offered free medical services to the impoverished inhabitants of the Ybycuí Valley in South Eastern Paraguay, thereby becoming a widely respected leader of many of the region's 40,000 peasants. Moreover, his art work, which has been exhibited throughout the hemisphere and Europe, powerfully depicts the oppression and suffering of his people: his message-carrying art has not only won him international recognition, but also the enmity of the dictatorship which has imprisoned him on three separate occasions.

Adding to the authority's suspicions was Filártiga's exhibition and lecture tour through California and Mexico in February 1976, during which his art work and speeches drew attention to the repression and poverty of the continent's poorest nation. Furthermore, the family's frequent trips to visit Mrs. Filártiga's mother in Posadas, Argentina, from where guerilla reinforcements reportedly were infiltrating, contributed in making the Filártiga's prime suspects.

Along with these political elements, a number of personal reasons also entered into the picture. Shortly after Filartiga returned from the North American tour, Americo Peña, the police inspector who several weeks later organized the kidnapping and torture of Joelito, unsuccessfully pressured Dr. Filártiga for a U.S. $1,500 "loan", Peña is a neighbor, living only two houses away from the Filártiga resident in Asunción with his concubine Juana Villalba, and her eight children. Even though she is a mother and married to Hugo Duarte (who also lived in the same house), one of the Villalbo children, seventeen year old Rosario, was the object of Peña's sexual ambitions: in fact, he had attempted to rape her in January. Being high school classmates and friends, Rosario confided in Joelito who sided with her in the ensuing family squabble. Thus, not only were the Filártiga's politically suspect, they were also a source of personal frustration to the ambitious police inspector Americo Peña.

According to recent information provided by various informants, it was this combination of political and personal factors that led Peña to seek permission for the kidnapping from his superiors, namely the Chief of the Secret Police, Pastor Coronel, and the Minister of the Interior, Sabino Agosto Montanaro. It was decided that because of Dr. Filártiga's international reputation it would be too risky to kidnap him, especially since he suffers from an acute heart condition that might not have withstood the torture. Therefore, Joelito, young and without the political experience of his father (who had steadfastly remained mute while being tortured during his last arrest in 1966) emerged as the logical victim. Indeed, Peña was so confident that Joelito would confirm his suspicions that his father and possibly even the boy himself, was involved with the guerillas, that a tape recording was made of the one-and-one-half-hour long torture session. With such evidence, Dr. Filártiga and Joelito would have been convicted of sedition, Peña would have eliminated a personal enemy, gaining great prestige, most likely even a promotion, for his initiative in uncovering the subversives.

But the plan failed miserably because Joelito had nothing to confess. According to two people who actually have heard the recording, Joelito could only repeat over and over again to the torturers "I do not know anything. Why are you doing this to me?" Infuriated by his refusal to "confess", Peña and the three other torturers intensified the beatings and application of the electric shocks to Joelito's finger tips and through a wire inserted into his penis. So strong were the electric shocks, that, unexpectedly, Joelito suddenly died of a cardiac arrest.

Unprepared for this eventuality, Peña and the others now found themselves in the potentially explosive situation of having murdered Joelito without extracting any incriminating evidence. In a state of near panic, they decided to pass the murder off as a crime of passion. After severing the major arteries with a bayonet so that the body could not be embalmed, they brought the bloody corpse back to Peña's house and threw it into Rosario's bedroom. At the same time they called her husband, who worked as a night clerk in the downtown Hotel Guarani to tell him that there was an emergency and to return home immediately. Upon arriving, Hugo Duarte agreed to cooperate—after being given a beating and promises that he would be out of jail in a week. In fact it was reasonable assumption. Paraguayan law is filled with such precedents involving the murder of an adultress and/or her lover. With the expected silence of the Filártiga family, it seemed that all would shortly be forgotten; especially since the coroner, Dr. Hernán Molines, had been summoned to the house where he made out a false medical report, and the Judge that would try the case, Diogénes Martínez, was also present to legalize the falsified death certificate.

Hugo Duarte was arrested on the spot and his wife, Rosario, was detained as a material witness. But on April 7, Judge Martínez released Rosario. Five days later, after sending a note to the Filártiga's saying that she wanted to talk with them, she disappeared and has not been heard from since. Yet due to the enormous public interest and sympathy for the Filártigas, not even the elimination of the principal witness, nor the unabashed collaboration of the corrupt judge—(finally in mid-September, Martínez was forced to remove himself from the case as he was so clearly involved in the cover-up)—has been sufficient to gain Duarte's release. Likewise, two motions to have the case dismissed, the first in late June and the other in mid-December, were denied by the Appellate Court.

Even the strong arm tactics of Americo Peña and his cohorts have been thwarted. On September 30, Filártiga's lawyer, Horacio Galeano Perrone, an apolitical attorney with high level governmental influence, was arrested and shackled to the wall of what he describes as a cage in the Central Police Headquarters. Although Galeano Perrone's connections secured his release within eight hours, it was not before Peña had the opportunity to pay him a visit in his cell. At that time, Peña threatened to kill him, Dr. Filártiga and his thirteen year old daughter, and anyone else involved, if they continued to push the case. They are continuing to push the case.

Presently the confrontation is a standoff. The new judge, Rojas Via, seems to be stalling the case in the courts, evidently awaiting further developments. Peña's Death Squad is being restrained by General Strossner, who has come under increasing national and international criticism for the massive wave of arrests, kidnappings, torture and executions which began last April. At this time Strossner is particularly vulnerable to world opinion because he has lost even the veneer of democracy that has so thinly disguished his dictatorship for the past fifteen years: all four legal opposition parties have voted to boycott the mid-February charade of a Constitutional Convention which will duly pass an amendment permitting Strossner to be "re-elected" as President for another five year term. Morever, given the current attitude of the United States Congress, further criticism of human rights violations in Paraguay could very well mean the end of military and economic aid, as well as hinder foreign loans and investments. In fact, there are strong indications that the international pressure may already be affecting "el jefe's" attitude toward the case; persistent rumors here began in mid-December that Strossner is anxious to see the Filártiga case resolved.

Indeed, it now seems clear that only political pressure will resolve this political murder. Certainly Strossner is reluctant to take punitive action against any part of the powerful police apparatus because its loyalty is essential for him to remain in power. Yet, if the damage to his international reputation proves to be sufficient, there is no doubt that the shark will sacrifice a few sardines. In essence, it is a question of which course of action will result in the least damage to his power base.

Every mention of the Filártiga case in the foreign press is another stain on Paraguay's bloody record of human rights violations. Every petition sent to Strossner demanding justice in the Filártiga case is another reminder that the world is watching. Every letter or telegram expressing solidarity with Dr. Filártiga's struggle sent to Ybycuí, Paraguay, is another weight placed on the scale in his favor.

Even if the balance has not yet tipped, every indictation shows that the international pressure that is now building up will be the deciding factor in who will survive the Peña-Filártiga confrontation.

THE PUBLIC PARTICIPATION IN FEDERAL AGENCY PROCEEDINGS ACT

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, I am pleased again to be the prime House sponsor, along with Judiciary Chairman PETER RODINO, of the Public Participation in Federal Agency Proceedings Act. I was pleased to work on this important legislation in the 94th Congress when the bill had over 70 House cosponsors, and I am hopeful that the legislation will be enacted in this Congress.

The legislation was reported favorably by the full Senate Judiciary Committee in the last Congress and has been introduced in the Senate this session as S. 270 by Senator KENNEDY and 14 other Senators.

Mr. Speaker, so much attention has been focused on improving our Federal agencies but few of the pending proposals would more than provide for additional studies and commissions. The Public Participation in Federal Agency Proceedings Act is based on the premise that existing agencies can be improved now by providing them with the benefit of a larger range of views when making policy decisions.

The Public Participation in Federal Agency Proceedings Act would permit the award of attorneys' fees and other costs to those parties whose participation in agency proceedings would "substantially contribute to a fair determination of the issues" and whose economic interest in the case is small or whose resources are so small that without an award they could not participate. The bill applies to all rule making, licensing and rate making cases and to such other agency proceedings which involve issues relating to health, safety, civil rights, en-

vironment and consumer pocketbook issues.

A similar program has already been implemented at the Federal Trade Commission where the Commission has a budget of $500,000 to distribute to groups who qualify by representing a significant viewpoint that would not otherwise be represented. This program enabled a national senior citizens' group to participate in the FTC proceedings concerning guidelines for the manufacturing of hearing aids. Obviously, the senior citizens of this country have a profound interest in the quality of hearing aids and it was generally agreed that their participation in the proceeding was most valuable to the FTC.

Other agencies including the National Highway Traffic Safety Administration, the Food and Drug Administration, the Civil Aeronautics Board, and the Environmental Protection Agency are at various stages of considering regulations for "public participation" programs. These developments are to be applauded, and are strong evidence that such programs are viewed by many agencies as needed and helpful reforms. Our legislation would insure, however, that public participation would not only be permitted before agencies that took their own initiative to create such programs, but permitted in all Federal regulatory agencies.

In addition to the fact that several agencies are developing public participation programs, an important development is that members of the business community have joined consumer, environmental and public interest groups in support of the bill, as reflected by the J. C. Penney Co.'s endorsement of the legislation.

Mr. Speaker, the Public Participation in Federal Agency Proceedings Act is an important first step toward broader citizen participation in our agency process. It comes at a time when the American people are no longer convinced that Government is working in the public's best interests, nor do the majority of the American people have the resources to effectively represent their position against a well-funded and powerful bureaucracy.

I believe that the American people are entitled to short-term relief to improve their access to Federal agencies. I believe the Public Participation in Federal Agency Proceedings Act will not only provide this relief but also will aid Federal agencies by presenting the point of view of underrepresented consumers, small businessmen, and others who normally cannot afford to participate in drawn out and costly proceedings. It will also increase the ability of Federal agencies to arrive at fair decisions and assist them in avoiding court challenges which have been based on a lack of consideration of the public's perspective.

I am hopeful that the bill will progress quickly in both Houses of the Congress, and that we can enact legislation which will both aid our Federal agencies and at the same time restore public confidence in them.

The initial cosponsors are: MAX BAUCUS of Montana; YVONNE BRATHWAITE BURKE of California; JOHN L. BURTON of California; PHILLIP BURTON of California; RONALD V. DELLUMS of California; CHRISTOPHER J. DODD of Connecticut; THOMAS J. DOWNEY of New York; ROBERT F. DRINAN of Massachusetts; DON EDWARDS of California; HAMILTON FISH, Jr. of New York; DANIEL FLOOD of Pennsylvania; HAROLD E. FORD of Tennessee; DONALD M. FRASER of Minnesota; ELIZABETH HOLTZMAN of New York; BARBARA JORDAN of Texas; JOHN J. LAFALCE of New York; WILLIAM LEHMAN of Florida; ANDREW MAGUIRE of New Jersey; ABNER J. MIKVA of Illinois; PARREN J. MITCHELL of Maryland; JOE MOAKLEY of Massachusetts; ANTHONY TOBY MOFFETT of Connecticut; JAMES L. OBERSTAR of Minnesota; RICHARD L. OTTINGER of New York; FERNAND J. ST GERMAIN of Rhode Island; FREDERICK W. RICHMOND of New York; BENJAMIN S. ROSENTHAL of New York; JAMES H. SCHEUER of New York; JOHN F. SEIBERLING of Ohio; STEPHEN J. SOLARZ of New York; GLADYS NOON SPELLMAN of Maryland; FORTNEY H. STARK of California; LOUIS STOKES of Ohio; MORRIS K. UDALL of Arizona; HENRY A. WAXMAN of California; and LESTER L. WOLFF of New York.

A brief summary of the bill and of the significant revisions which have been made in the new version follow:

A BRIEF DESCRIPTION OF THE PUBLIC PARTICIPATION IN FEDERAL AGENCY PROCEEDINGS ACT OF 1977

I. AGENCY DECISIONS

Each agency is authorized to award reasonable attorney fees, expert witness fees, and other costs of participation when public participation can reasonably be expected to promote a full and fair determination of the issues involved in the proceeding.

To be eligible a person or class of persons must be reasonably expected to substantially contribute to a fair determination of the proceeding, *and* where either the person or classes' economic interest in the case is small or their resources are so small that they couldn't participate without an award.

The act applies to all licensing, ratemaking, rulemaking proceedings and such other agency proceedings which involve issues relating to health, safety, civil rights, environment and consumer pocketbook issues.

Each agency makes the determination of eligibility under this section prior to the commencement of any proceeding, unless that is impractical.

A person or organization who receives funds shall be liable for repayment if there is a finding that the person or class has not provided the contemplated representation or has acted in an obdurate, dilatory, or mendacious fashion or for oppressive reasons.

There are provisions to bring a civil action to review an agency action which has denied or insufficiently awarded or reimbursed attorney fees. Agencies are required to adopt regulations to take effect within six months after enactment.

There are reporting requirements for each agency head to make an annual report to Congress on the nature and disposition of all proceedings in which fees and costs were sought under this Act.

The bill provides for a three-year authorization for the program.

II. APPEALS FROM AGENCY DECISIONS

Furthermore, any party or intervenor in a civil action for judicial review of agency action shall be entitled to collect reasonable attorney's fees where the court accords the relief sought, and the court determines that an important public purpose was served; and the economic interest in the case is small or their resources are so low that without an award under this section they could not have participated. Promulgation of rules and a reporting system are also established under this section of the Act.

RECENT SUBSTANTIVE CHANGES IN THE PUBLIC PARTICIPATION IN FEDERAL AGENCY PROCEEDINGS ACT

Clarification of the type of agency activities to which the provisions of the Act are to be applied.

Express statement that the bill does not authorize funds for merely attending, as opposed to participating in, agency proceedings, nor for proceedings where costs are minimal.

Elimination of provisions for funding of class actions in agency proceedings.

Emphasizes, that bill does not alter present agency rules governing standing.

Amendment to eligibility test to preclude funding of groups which seek to represent interests which are already adequately represented by a participant other than the agency itself.

Express authorization that agencies require consolidation of duplicative presentations, and to select one or more effective representations, offer compensation only for certain categories of expenses, or compensate jointly persons representing identical or closely-related viewpoints.

OIL COMPANY DIVESTITURE

(Mr. SEIBERLING asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SEIBERLING. Mr. Speaker, today Congressman MORRIS K. UDALL and I, along with 29 other Members are introducing the Energy Industry Divestiture Act, which is intended to restore competition to the energy industries. The American consumer needs adequate supplies of energy at reasonable prices. In the long run, that goal can be accomplished only through a free marketplace and vigorous competition.

The Seiberling-Udall bill contains these principal elements:

First. It would require horizontal divestiture in the major energy industries; that is, it would prohibit any company from controlling mineral deposits in more than one major energy class—coal, uranium, and oil/natural gas.

Second. It would require vertical divestiture in the oil and gas industry; that is, prohibit any company from engaging in more than one stage of the oil and gas process—control and production of mineral deposits, refining, transportation, and retail sales.

Third. It would prohibit joint ventures between any of the 11 major oil companies which produce, refine, transport, or sell more than 1.6 million barrels of oil daily. The bill would permit two or more such companies to participate on a joint venture if the Attorney General approved it and if it was operated in compliance with regulations he would promulgate to insure competition.

The Energy Industry Divestiture Act is not an immediate solution to the current natural gas crisis. That must be the subject of separate legislation. However, if enacted, it would help America move from an excessive dependence on oil and gas toward greater use of lower cost coal and, if its safety problems are resolved,

nuclear power. We must make that shift within the next two decades. However, we cannot be sure that this kind of shift will succeed as it is hoped, so long as the oil companies continue to control vast reserves of coal and uranium.

The 94th Congress took several positive steps toward insuring that the executive branch land leasing policies promote rather than hinder competition. The Naval Petroleum Reserves Production Act (Public Law 94–258) and the Federal coal leasing amendments (Public Law 94–377) contain a number of pro-competition provisions, including requirements that: First, the Attorney General participate in formulating regulations concerning the production and sale of Elk Hills petroleum and concerning coal leasing; and second, the Attorney General be given the opportunity to review Elk Hills contracts and proposed coal leases and to challenge any he believes to be anticompetitive. Similar provisions were contained in the Outer Continental Shelf Lands Act amendments, which died in the final hours of the 94th Congress when the House ordered that bill recommitted to conference. It is abundantly clear that Congress is demanding that the energy industry be competitive rather than monopolistic.

Mr. Speaker, the text of Congressman UDALL's and my published remarks on the Energy Industry Divestiture Act are inserted immediately following:

STATEMENT OF CONGRESSMEN SEIBERLING AND UDALL

In our private enterprise system, we must rely primarily on competition to keep prices low. A main purpose of our antitrust laws is to ensure competition and to prevent collusion. Unfortunately, for many years now, the power of the huge oil companies has succeeded in thwarting effective enforcement of the antitrust laws in the oil industry. The result has been the development of an oil industry structure that seriously impairs competition.

The oil industry today is dominated by "vertically integrated" companies, which means those companies which perform every step from exploration through production to retail sales at the gas pump. Government inability to stop this growing dominance has hindered the ability of the independent oil companies to provide effective competition to the majors. Government regulation cannot replace the marketplace and, as is dramatically illustrated by the current natural gas crisis, the large petroleum companies end up getting the price they demand.

Vertical integration also means that each major oil company owns its own oil reserves. Every time OPEC raises oil prices, the value of every oil company's petroleum reserves takes a huge upward jump. In these circumstances, the vertically-integrated companies have little or no financial incentive to bargain for lower OPEC prices, since high OPEC prices keep the value of the oil companies' holdings high. High oil company profits are also ensured by high OPEC prices.

In addition, the government's inability to take effective antitrust action against the oil companies has encouraged them to collaborate with each other rather than compete. Over half of the oil produced by U.S. oil companies is through joint ventures, containing from 2 to 8 companies as partners. About 85% of Mobil's woldwide crude oil production is through joint ventures. These oil company joint ventures involve the sharing of risks, capital, data and profits in a manner unlike any other American industry. This intricate web of joint venture arrangements and relationships reflects the "soft" nature of competition in the oil industry, and it makes the industry far more monopolistic than the large number of oil companies might otherwise imply.

Equally disturbing is the trend toward oil company control of the coal and uranium industries. Currently, the oil companies own or control 5 of the 7 largest coal companies, over 35% of the nation's privately-held coal reserves, and well over 50% of the nation's privately-held uranium reserves. The result is that the oil companies are increasingly able to make fundamental decisions about the prices and production levels of the energy resources which are the primary competitors with oil. This dangerous trend must be halted.

The current natural gas crisis is only the latest warning that we must decrease our dependence upon oil and gas. The necessary shift to environmentally-sound coal use and safe nuclear power could be obstructed by the oil industry if it owns the coal and uranium industries. If the oil companies gain further control over the coal industry, for example, they might well conclude that their overall profits would be maximized by keeping oil prices high and by restricting the production of coal. America's energy needs require that Congress prevent the oil companies from taking over the coal and uranium industries. Only divestiture can ensure that the oil, coal, and uranium industries will become independent and that energy policy will be set by the Congress and the President instead of by the giant energy conglomerates.

We are asking the Secretary of the Interior to consult with the Attorney General to develop regulations under which competition will be promoted rather than hindered by the Government's leasing of oil, coal, and uranium lands. The Government should do nothing to further fuel the lack of competition within the energy industries. We hope that President Carter will continue the support for horizontal divestiture which he voiced during his campaign.

TAX CREDIT SPECIFICALLY FOR MODERNIZING OLDER MANUFACTURING PLANTS

(Mr. SEIBERLING asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SEIBERLING. Mr. Speaker, today I am introducing a bill to increase the present 10-percent investment tax credit to 20 percent to modernize older manufacturing plants over 25 years old—or build new ones in nearby locations—within 10 miles of an existing plant.

Joining me in introducing the bill are 28 of our colleagues whose names are printed at the conclusion of my statement.

The purpose of the bill is to provide incentives to encourage manufacturing industries to remain in their established communities rather than relocate. The economic decline of many parts of the Middle West and Northeast is due in part to the fact that these areas are built around industrial plants that are obsolescent to the point that they are no longer competitive with newer plants in other parts of the country or in foreign countries.

Yet many of these newer plants have been financed partly through special tax incentives. This bill, along with other steps I hope this Congress will take, can help to make these older industrial areas competitive with the rest of the country again. Certainly it is in the national interest to forestall the economic decline and possible economic collapse of these areas.

There are, unfortunately, too many tragic examples in the Northeast and Middle West of what happens to a city when jobs are lost permanently as a result of industrial plant relocations. Although such problems may seem to be "local" in nature, the costs of decaying cities are borne by all taxpayers in the form of increased welfare payments, unemployment compensation, rising crime, increased medical costs, and the costs of retraining workers and relocating families. Although it is difficult to estimate how much this bill would cost in lost revenues, I think it is reasonable to assume that the costs would be more than offset by savings in the areas mentioned above.

Certainly this bill will not solve the problems of industrial plant relocation and general economic decline in the Northeast and Middle West. It is offered only as a partial solution. However, while other Federal and local efforts are needed, I believe this bill can have important results for the older manufacturing centers of our country. Our colleague from Massachusetts (Mr. HARRINGTON), as chairman of the Northeast-Midwest Economic Coalition, is leading a major effort to help in formulating proposals which will aid in the economic recovery of that part of the country, and I believe this bill dovetails with that effort.

Finally, I want to emphasize, Mr. Speaker, that Federal aid alone will not do the job. State and local governments as well as business, organized labor, and the financial community, must redouble their efforts to make the older urban areas as attractive and as competitive as other parts of the country.

I include the cosponsors and the text of the bill in the RECORD at this point:

H.R. 3372

A bill to amend the Internal Revenue Code of 1954 to encourage the modernization of manufacturing plants by providing an additional investment credit for machinery placed in service in existing manufacturing plants or in nearby plants

Be it enacted by the Senate and House of Representatives of the United States of

America in Congress assembled, That this Act may be cited as the "Investment Tax Credit Act of 1977".

SEC. 2. (a) Subsection (c) of section 46 of the Internal Revenue Code of 1954 (relating to qualified investment) is amended by adding at the end thereof the following new paragraph:

"(6) Machinery and equipment placed in service in existing manufacturing plants or in nearby plants.—

"(A) In the case of section 38 property which is qualified machinery and equipment, the amount of the qualified investment shall be 200 percent of the amount determined under paragraph (1).

"(B) For purposes of this paragraph, the term 'qualified machinery and equipment' means any machinery or equipment which is placed in service by the taxpayer on or in connection with a qualified manufacturing facility.

"(C) For purposes of this paragraph, the term 'qualified manufacturing facility' means any plant or facility which is used by the taxpayer in a trade or business of manufacturing or producing goods—

"(i) if—

"(I) such plant or facility is, on the date of the enactment of the Investment Tax Credit Act of 1977, owned by the taxpayer and used by him in such a trade or business,

"(II) such plant or facility has been so owned and used by the taxpayer for 25 or more calendar years, and

"(III) without new machinery and equipment, such plant or facility will have sufficiently higher production costs so that it will be unable to compete effectively with other plants or facilities producing such goods; or

"(ii) if such plant or facility is located within 10 miles of a plant or facility described in clause (i).

Such term does not include any plant or facility used predominantly in a trade or business described in paragraph (3)(B).

"(D) For purposes of this paragraph—

"(i) members of the same affiliated group of corporations (as defined in section 1504 (a)) which file a consolidated return for the first taxable year ending after the date of the enactment of the Investment Tax Credit Act of 1977 and for each taxable year thereafter shall be treated as one taxpayer, and

"(ii) assets acquired by the taxpayer after the date of the enactment of the Investment Tax Credit Act of 1977 in a transaction to which section 381(a) applies shall be treated as not owned by the taxpayer on such data.".

(b)(1) Subsection (a) of section 47 of such Code (relating to certain dispositions, etc., of section 38 property) is amended by redesignating paragraph (4) as paragraph (5) and by inserting after paragraph (3) the following new paragraph:

"(4) PROPERTY CEASES TO BE QUALIFIED MACHINERY AND EQUIPMENT.—If during any taxable year any section 38 property taken into account as qualified machinery and equipment (as defined in section 46(c)(6)(B)) in determining qualified investment ceases to be used on or in connection with a qualified manufacturing facility (as defined in section 46(c)(6)(C)), then the tax under this chapter for such taxable year shall be increased by an amount equal to the aggregate decrease in the credits allowed under section 38 for all prior taxable years which would have resulted solely from not treating such property, for purposes of determining qualified investment, as qualified machinery and equipment (after giving due regard to the period before such change in use). If the application of this paragraph to any property is followed by the application of paragraph (1) to such property, proper adjustment shall be made in applying paragraph (1).".

(2) Paragraph (5) of such subsection (a) (as redesignated by paragraph (1)) is amended by striking out "paragraph (1) or (3)" and inserting in lieu thereof "paragraph (1), (3), or (4)".

(3) Paragraph (6)(B) of such subsection (a) is amended by striking out "paragraph (4)" and inserting in lieu thereof "paragraph (5)".

SEC. (a) The amendments made by section 2(a) of this Act shall apply to property—

(1) which is acquired by the taxpayer on or after the date of the enactment of this Act; or

(2) the construction, reconstruction, or erection of which is completed by the taxpayer, on or after such date, except that there shall be taken into account only the portion of the basis which is properly attributable to construction, reconstruction, or erection on or after such date.

(b) The amendments made by section 2(b) of this Act shall apply to taxable years ending after the date of the enactment of this Act.

CONGRESSMAN STRATTON'S TESTIMONY BEFORE THE SENATE FOREIGN RELATIONS COMMITTEE OPPOSING THE NOMINATION OF PAUL WARNKE AS CHIEF SALT NEGOTIATOR

(Mr. STRATTON asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. STRATTON. Mr. Speaker, yesterday afternoon I testified before the Senate Foreign Relations Committee in opposition to the nomination of Paul Warnke as Director of the Arms Control and Disarmament Agency and chief SALT negotiator.

Because the Paul Warnke who emerged yesterday in Mr. Warnke's own testimony before the committee was so diametrically different from the Paul Warnke who has been speaking and writing extensively on defense and arms limitation matters in the Washington area these past 8 years, I believe that Members may find my testimony of interest.

The testimony follows:

TESTIMONY OF REPRESENTATIVE SAMUEL S. STRATTON, FEBRUARY 8, 1977

Mr. Chairman, I appear here, as one who has spent 18 years as a member of the House Armed Services Committee concentrating on national security and foreign policy questions, to oppose most emphatically the nomination of Mr. Paul Warnke as Director of the Arms Control and Disarmament Agency and chief negotiator in the forthcoming SALT II negotiations.

My opposition is based on Mr. Warnke's published views on national security issues, on the nature of the Soviet threat, and on the handling of SALT negotiations. Mr. Warnke as chief SALT negotiator would in my judgment be the wrong man in the wrong job at the wrong time.

Of course the power to confirm executive nominations resides exclusively in the Senate. But in today's strategic environment the selection of a chief SALT negotiator must be a matter of grave concern as much to every member of the House as to every member of the Senate. Indeed, if previous practices are adhered to, any agreement resulting from these negotiations must be approved by both the House and the Senate. Since the outlook of the chief negotiator will obviously have a major impact on the shape of whatever agreement emerges from these negotiations, all of us in the Congress must exercise extreme caution in the person whom we approve to exercise that responsibility.

To appreciate the disturbing implications of the Warnke nomination, let me review briefly the strategic situation between ourselves and the Soviets as it has been developing over the past few years. With the end of the Viet Nam war a strong anti-military bias set in here in the Congress, as a result of which substantial cuts were made in the defense budget over a period of four or five years, culminating with a whopping $9 billion cut in FY 1976. In the process America's defense capabilities, ships at sea, men under arms, and vital research and development effort all went into a steady decline.

Meanwhile the Soviet Union was continuing its policy of rapid military development on every front, fielding during that same period a number of advanced design weapons—planes, tanks, missiles, and nuclear missile submarines. Many military experts concluded that with American power steadily declining and Soviet military power steadily increasing, the Soviets had either already achieved military superiority over us or were on the verge of attaining such superiority.

And then last year, for reasons that are still not entirely clear, the Congress unexpectedly made a 180 degree turn and approved a defense budget for fiscal 1977 almost as substantial as the one submitted to us by the Ford Administration.

That action was a legislative landmark, because after six or seven years of steady decline America's military strength had finally begun to move upwards again. Congress had been warned that if we had any interest in trying to keep up with the feverish pace of Soviet military advance, defense spending would have to increase between 2 to 4 percent each year, discounting inflation. Even at that we would not be moving towards superiority, only towards maintaining what Secretary Rumsfeld had called "rough equivalence" with the Soviets.

So the question before Congress and the country in February 1977 is, Where do we go from here? Do we continue the trend set in motion last year? Or do we go back to the old habit of hacking away at defense in the belief that it's already too big, and the money in it would be better spent on social and welfare programs?

At the very time when America has repudiated its earlier policy of repeated defense cuts and made the conscious decision not to let the Soviets get ahead of us, it makes no sense at all for us to name as our principal representative in the most sensitive and far-reaching negotiations of all, a man who, regardless of what hard-lined views he may now be giving to this committee, has at each step of the way over the last 8 years repeatedly and consistently opposed every new weapon or improved military capability we have undertaken.

In 1972, as the head of the McGovern Panel on National Security and a top defense adviser to Presidential candidate McGovern, Paul Warnke joined in opposing the MIRVing of our ballistic missiles, opposing Minuteman III, favoring dismantling of all Titan ICBM's, favoring a stop to the conversion of Polaris submarines to Poseidons, opposing the B-1, opposing the safeguard ABM, and favoring a 50 percent cut in the Army's air defense missiles. A later report of the same McGovern Panel on National Security also opposed improvements in missile accuracy, opposed development of a hard-target capability, opposed the cruise missile, opposed the ABM, opposed bomber defense, opposed the AWACs, opposed MIRVing our Polaris/Poseidon missiles, and opposed development of the Trident submarine.

In fact, as has already been pointed out by Senator Nunn and others, over the years—whatever he may be saying now as he moves

from one Senate office to another—Mr. Warnke has opposed development of virtually all the current components of our nuclear deterrent, which will be the key issue in the forthcoming SALT negotiations—weapons whose destructive power, ironically, have been primarily responsible for bringing the Soviets to the negotiating table in the first place.

Two years later, in 1974, Mr. Warnke was still on the same track. In testimony before the Senate Appropriations Committee he opposed the B–1, opposed the F–14, opposed the Navy's base at Diego Garcia, favored a 200,000 man cut in our military personnel, favored a cut in our NATO troops, opposed the Trident submarine, opposed improving the accuracy and yield of our nuclear missiles, favored a slow down in the development of nuclear attack submarines, and opposed the SAM–D missile.

Last year, in 1976, it was once again the same consistent story of negativism on defense. Testifying before the Senate Budget Committee, Mr. Warnke opposed the B–1 bomber, and opposed the Trident submarine. two of the very few efforts we have made over the past decade in upgrading and modernizing our nuclear deterrent force to offset all of the myriad improvements which the Soviets made over the same period.

One of the organizations on which Mr. Warnke has been active—he was its chairman—was the Advisory Commitee of the *Project on Budget Priorities*. In 1974 that group issued a pamphlet entitled "A Report to Congress: Military Policies and Budget Priorities, FY 1975." The letter transmitting this report was signed by Mr. Warnke, and the pamphlet lists him as "convenor" of the reporting committee. The report states the following:

"The effort to gain Congressional control of the defense budget in FY 1975 should, first of all, accept the view supported in this report that the world situation will not require, for the foreseeable future, constant dollar increases . . .

"Congress however should go beyond merely holding the budget constant and should begin to require the Pentagon to squeeze the fat out . . . This efficiency program could be implemented by a 3 percent reduction in appropriations, in constant dollars, for each of the next 5 years."

In other words, while the nation's top defense officials were telling us we must increase the defense budget by at least 2 percent a year in constant dollars if we are to maintain even "rough equivalence" with an expanding Soviet military posture, Mr. Warnke was proposing to decrease that budget by 3 percent a year over a 5-year period. If that particular Warnke plan had been adopted in 1974—fortunately it wasn't—our defense budget today would be $28.8 billion below the one submitted by the Ford Administration. A cut of $28.8 billion, in other words, contrasted with a cut of only $2.8 billion now being considered by the Carter Administration.

Mr. Chairman, on the basis of these consistent and repeatedly espoused views, the nominee reveals himself to be clearly outside the mainstream of current American defense thinking, both in the Congress and in the country. Last December Opinion Research reported that 71 percent of the American people believed our defense budget was adequate or should be increased. Only 16 percent favored reducing it. A Gallup Poll taken about the same time showed 63 precent either in favor of the present budget or wanting a larger one, compared to only 27 percent favoring defense cuts.

The sweeping cuts which Mr. Warnke has been espousing, year after year, regardless of what was taking place in other areas of the world, prove him manifestly unqualified for the special responsibility for which he has been nominated. This kind of cut-defense thinking was highly fashionable four or five years ago. Today it is dangerously obsolete. Oh, of course, Mr. Warnke will be assuring you that he espouses an "adequate defense." But how odd that over the years, whenever the chips were down, he has always managed to come down, year after year, in opposition to virtually every new military development and improvement this country has put forward.

How could such a person possibly defend, with a straight face, across the table from all those tough, unsmiling, hard-nosed, implacable Soviet negotiators that always surface at every disarmament negotiation, the maintenance of all these weapons which he has so consistently opposed, and which today, despite his persistent opposition over the years, comprise the real strength of our nuclear arsenal which in virtually every other category is numerically inferior to the Soviets?

He just couldn't do it. The Russians would quote his own words right back to him—and the American position, at least as far as our own point man was concerned, would be devastated.

Mr. Chairman, all of us recognize the importance of the upcoming SALT II negotiations, and all of us are hopeful they will succeed. Obviously there is no real point in escalating the level of nuclear deterrent so long as we can be sure of maintaining a genuine balance in our capabilities, and so long, as I have said, the agreement that spells out that balance is unambiguous, verifiable, and self-enforcing.

We made a start in achieving such a mutual balance in the SALT I agreement, a document widely hailed at the time. But in subsequent years we have come to realize that there were so many ambiguities in SALT I that we can no longer be certain it actually represents a real balance today. One of the first requirements of a SALT II agreement is that it ends those ambiguities and loopholes in SALT I. The only way to provide such certainty is with a very precise document, carefully spelled out, with all the t's crossed and all the i's dotted.

But here again, the record shows that Paul Warnke is emphatically in no position to preside over the kind of negotiations that lead to a precise written agreement.

He gave us a very revealing insight into his view on this particular question an an article in the Spring 1975 issue of Foreign Policy, entitled, "Two Apes on a Treadmill." Here are Mr. Warnke's precise proposals for conducting nuclear negotiations, and I suggest they be taken seriously, since Mr. Warnke has just reprinted them this morning on the Op-Ed page of The New York Times:

"In trying to end this irrational arms competition, total reliance is now placed on negotiations looking toward formal agreement . . . But the ongoing process seems to aggravate the problem . . . Rather than creating a climate in which restraint can be practiced, the existence of the negotiations themselves has been an occasion for acceleration of strategic arms development . . .

"The question inescapably arises whether, under our current defense policies, we can afford to negotiate about arms control . . . If we must accept the insistence that the momentum of our strategic weapons programs must be maintained in order to bargain effectively, the talks have become too expensive a luxury . . . Insofar as formal agreements are concerned, we may have gone as far as we can now go . . .

"As a start, we might inform the Soviet Union both privately and publicly that we have placed a moratorium on further MIRVing of our land- and sea-based missiles. We should also announce that a hold has been placed on development of the Trident submarine and the B–1 strategic bomber. We should advise the Soviet Union that this pause will be reviewed in six months in the light of what action the Soviet Union takes during that period . . .

"If the Soviet Union responds by some significant slowing of its own strategic arms build-up, we can at the end of the first six months announce additional moves . . . If reciprocal action is taken by the Soviet Union, such as the elimination of some of its older missile-carrying submarines and a freeze on the development of the new family ICBMs, other low-risk initiatives are available to us. We can and should, for example, substantially reduce the number of tactical nuclear weapons now deployed in Europe. The number—over 7,000—is many times in excess of that useful in any remotely conceivably contingency.

"The chances are good, moreover, that highly advertised restraint on our part will be reciprocated . . . The steps we can take in trying to start a process of reciprocal restraint are not drastic. They would create no risk in our national security."

These may be noble sentiments for an essay in a learned journal, Mr. Chairman, but I submit to you that they cannot possibly be taken as serious proposals for the conduct of our upcoming SALT negotiations. This is not a prescription for a treaty. This is a choreography for a minuet. A delightful and erudite fantasy, perhaps, but certainly not a formula for responsible statesmanship in a still dangerous world. How, for instance, under this plan do we eliminate the ambiguities that plagued us in SALT I? If matching restraint is the only guideline, what happens to the weapons totals already agreed to at Vladivostok? And how do we get any verification at all? Under the Warnke plan it would be impossible to know whether the agreement had ever been violated.

Not only that but, you realize, Mr. Chairman, Mr. Warnke is seriously proposing that we unilaterally halt all further progress on two vital nuclear deterrent improvements, the B–1 and the Trident submarine, for a period of six months—with nothing in writing, no commitment from the Soviets, no quid pro quo at all.

Who says that such an action would create no risk to our national security? Have the Joint Chiefs of Staff agreed this would entail no risk? Mr. Chairman, how can we entrust our vital SALT negotiations to someone who would deal so flippantly and cavalierly with our national security, particularly at a time when the precise degree of our relative nuclear balance with the Soviets is such a burning issue! Certainly there was no mandate in the last election for such Alice-in-Wonderland treatment of our vital nuclear deterrent.

Mr. Chairman, I can appreciate the desire for a fresh new approach in a new Administration. There have been many defense critics around Washington—going all the way back to Henry Wallace—who have felt that all our national security problems stem from the fact that we Americans have been too beastly to the Russians. Mr. Warnke is only one of the more recent, and certainly one of the more poetic, of that breed. But though we have a new Congress and a new Administration in Washington, the world itself has not really changed.

Mr. Warnke is not the first to think that all that is needed to achieve peace and security is a pure heart and infinite restraint. Harry Truman went to Potsdam talking about "good old Joe" Stalin, and ended up with the Truman Doctrine and Korea. John Kennedy wanted a test ban treaty, but after he met Krushchev personally in Vienna he came home and predicted it would be "a long, cold winter"—as indeed it proved to be, both in Cuba and Viet Nam. Lyndon Johnson tried the same thing at Glassboro, with sweet reasonableness and the persuasiveness of Bob McNamara. But the Russians refused to

budge for an ABM treaty until we finally started building an ABM of our own. We've already tried that approach. It doesn't work.

The history of the last 32 years has amply demonstrated that in dealing with the Soviets the path to peace and stability lies only through firmness and strength. Negotiator after negotiator has come back with the same story. Ask Paul Nitze.

In my judgment the most important thing that Congress could do today to insure world peace and stability would be to give the Soviets and the rest of the world a clear and unmistakable signal that we intend to continue to do whatever is necessary to maintain our rough military balance with them; and that any agreements entered into with them either for limiting or reducing that strength must be mutual, unambiguous, verifiable, and self-enforcing.

The confirmation of Paul Warnke as chief nuclear arms limitation negotiator would send out the wrong signal and could well set our progress towards a stable nuclear balance back several years.

George Santayana once wrote that "those who refuse to learn from history are condemned to repeat it." Mr. Chairman, by rejecting this nominee the committee will spare us the prospect of having to repeat all the many bitter lessons of the past 32 years.

I urge the committee to reject Mr. Warnke's nomination, and urge the Senate to do likewise.

HAS CONGRESS REALLY LOST ITS POWER?

(Mr. OBEY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. OBEY. Mr. Speaker, it has almost become an article of faith among Washington observers that Congress has gradually lost much of its influence and power to the executive branch. But Alan P. Balutis of the State University of New York at Buffalo has marshalled some pretty convincing arguments that the contention is more myth than fact. His study lists a number of specific measurements to disprove that myth. I think this is must reading for both Members and observers of Congress:

CONGRESS: REPORTS OF ITS DEMISE HAVE BEEN GREATLY EXAGGERATED

(By Alan P. Balutis)

THE DECLINE OF CONGRESS: MYTH OR REALITY

With but few exceptions, there appears to be general agreement today that Congress has declined in power vis-a-vis the President. Our national legislature, according to an increasing number of journalists, academicians, and responsible senators and representatives, has grown unresponsive to national needs and abdicated or otherwise lost critically important powers to the Presidency. As Warren Weaver, veteran *New York Times* reporter, puts it:

"[If] Washington is the hub of government, Congress is no longer the hub of Washington. History has left it at the center of the great original plan for citizen self-rule, but power and prestige have moved elsewhere. The Capital is a hall of illusions, peopled by the myths that the legislative branch remains proudly coequal, that Congress continues to serve the nation well, that the old ways are sufficient to the tasks of the new day." [1]

And Neil MacNeil, chief Congressional correspondent for Time, has questioned whether Congress can continue to survive as a truly viable, independent institution and noted "signs that the President and his branch of the Government may become so all-powerful in the immediate decade ahead that Congress consequently may become merely superfluous." [2] Russell Baker has argued that Congress:

". . . has soaked so long in the juices of its own mediocrity that its confidence has withered. It is fearful of Presidents and therefore, deferential to a fault. It knows how to vote its powers away to Presidents, and how to complain when they use them, but it has been a long time since it seriously considered itself in the imperial weight class with Presidents." [3]

The fear that Congress may be incapable of coping with the nation's problems and needs has even penetrated the mind of Congress itself. Senator Charles Mathias, Republican of Maryland, has termed Congress impotent and antiquated. Senator Abraham Ribicoff, Democrat of Connecticut, contends that Congress has surrendered its rightful leadership role in the legislative process and thus "Pennsylvania Avenue has become a one-way street." Frustration reached a high point in 1974 when a record 46 senators and representatives simply opted not to seek reelection. Even the initial optimism that greeted the opening of the 94th Congress has waned appreciably. It is hard to remember now that ten months ago the phrases were "landslide election," "veto-proof Congress," "a new day in Congress," and "congressional government." Today we find anger and disillusionment among members of Congress and the press. Mary McGrory charged that the 94th Congress was well on the way to compiling a record of "impotence, incompetence, and avarice." "When I first came down here," said freshman congressman Toby Moffett of Connecticut, "I thought we could change a lot. But then when Congress came into session, I had to administrate a large staff and attend four sub-committees. Now I feel that I don't even have time to think." [4] And Representative Barber Conable wrote about the anomaly of finding that "an unelected President, alleged by his congressional critics to be disorganized and not very bright, his initiatives and motives rejected out of hand by the scornful victors of last autumn's elections, seems to have won almost every confrontation with Congress." [5]

Many academic observers also seem to feel that Congress has become subordinated to the executive branch, and that it is incapable of functioning as an equal partner to the President. Professor Samuel Huntington has written that, "Since 1933 . . . the initiative in formulating legislation, in assigning legislative prioritiies, in arousng support for legislation, and in determining the final content of legislation has clearly shifted to the executive branch." [6] Americans living in the twentieth century have, according to Dennis Palumbo," seen wars and internal crises give new dimensions to the President's power—under circumstances that have narrowed the legislative scope of Congress in ways undreamed of by the men who wrote the Constitution." [7]

Several years ago Thomas Cronin noted the manner in which recent textbook versions of the presidency had presented inflated and unrealistic interpretations of presidential competence and beneficience and exaggerated past presidential performance.[8] If we have been misled by the image of an omnipotent, omnicompetent, benevolent "textbook presidency", then it seems equally obvious that we have presented a "textbook Congress" characterized by paralysis, impotence, incompetence, and obtuseness. The following are illustrative:

Congress legislates less than it ratifies, formulates less than it adopts, and leads less than it responds. Legitimate community policies require that congressional majorities be mobilized behind them, but the policies usually are initiated elsewhere.[9]

For a variety of reasons Congress during the twentieth century has lost or surrendered much of its power and influence to the President.[10]

Congress . . . has not been a match for the power of the President. It is the first pressure point of the big interest groups—and their efforts are well rewarded. It has systemic troubles which seem to defy rapid reform. It refuses to establish an ethical code of conduct for its members and conflicts of interest are legion among its members. It is guilty of the practice of "boodle," or pork barrel . . . Congress is slow to meet the needs of minorities, but rushes with the majorities—at times unwisely.[11]

Congress looks increasingly to the President for policy leadership, for fiscal guidance, for party direction and cohesion, and for seeing to it that his programs win congressional and popular support. Congress also increasingly limits itself to defining policy in broad terms, with the expectation that the President will supply the many, and often critical, details.[12]

Thus Congress is criticized from the left:

Looking specifically at the United States Congress, one is struck by how effectively the diffusion of power has operated for undemocratic purposes.[13]

And from the right:

. . . the decline of Congress has been among the most dolorous of political development in the twentieth century. Although denied on occasion by such as Lippman and Fulbright, this enfeeblement is generally acknowledged by our political scientists. Some think it is a bad thing, others think it rather good, but nearly all are agreed that it has happened . . .[14]

The image of Congress is that of "the broken branch," "the sapless branch," or "a broken twig." Probably a majority of political scientists concede that the scales of power have tipped drastically and probably permanently toward the White House and away from Capitol Hill.

Such assessments have been repeated so often that their tentative nature is in danger of being forgotten. As Gary Orfield has noted, "The assumptions about the sorry state of Congress have often been so pervasive that observers don't even bother to look at the evidence." [15] The problem remains then of providing empirical verification of this thesis on the "decline" of Congress. A number of years ago, K. C. Wheare suggested that any meaningful evaluation of the "decline" of legislatures ought to first establish what form the alleged decline has taken, and the standard against which it is measured. Is it a decline in power? Or is it a decline in efficiency? Is it a decline in public esteem that is alleged? Or is it a decline in public interest? Or, finally, is it a decline in manners, in standards of behavior which is being asserted? Once the form of the "decline" has been established, it is necessary to clarify the standard by which the alleged decline is being measured? Is it being alleged that legislatures have declined in relation to their own former position (i.e., from some previously unspecified "golden age") or in relation to other political or social institutions? [16] It is to a discussion of several of these issues that we now turn.

INFLUENCE AND POWER

The term "influence" and its close ally "power" are among the classic concepts of political science. Although used frequently by political scientists, they rarely are specifically defined. In the absence of specific definitions one might assume that standard dictionary usage is being followed. Dictionary definitions, however, often raise more questions than they answer. Rather than open the Pandora's box of definitional debate,

Footnotes at end of article.

then, I will move from a discussion of the "power" of Congress (a discussion which, in all likelihood, is beyond the scope of this paper in any case) to an examination of the role of Congress in initiating legislation.[17] As was implied above, there appears to be general agreement that the "decline" in the "power" of Congress is most visible in that body's "decline" as an initiator of legislation and an innovator of public policy. In his discussion of the declining role of Congress, for example, Huntington has gone so far as to say that "the President now determines the legislative agenda of Congress almost as thoroughly as the British Cabinet set the legislative agenda of Parliament."[18] To my knowledge, however, this viewpoint has been put to only two empirical tests, both of which indicate not that Congress has declined, but that it is underrated as an innovator in our political system.

In his extensive study of ninety major pieces of legislation enacted during a fifty-year period preceding World War II, Lawrence Henry Chamberlain sought to identify the persons who exercised greatest influence upon their form and substance. On the basis of the detailed study of the ninety laws selected they were allocated to four categories: laws in which the influence of the president was dominant; laws in which the influence of Congress was dominant; laws in which the influence of both the President and the Congress was sufficiently great that they must be given joint credit; and laws in which the influence of outside groups transcended that of either the President or the Congress. Chamberlain found that the President could be given credit for approximately twenty percent of the laws; roughly forty percent were chiefly the product of Congress; about thirty percent fell into the joint presidential-congressional category; and slightly less than ten percent were identified as primarily the handiwork of external pressure groups. The legislative imprint was especially marked in tariff and immigration measures. The President proved consistently strong in the field of national defense legislation. Chamberlain noted the difficulty in identifying the real "initiator" of a policy alternative in complex society interwoven with communications of all kinds. In fact, one of the points brought out most clearly by the case studies was the depth of the roots of most important statutes. Yet it is interesting to note that 77 of the 90 laws originated, in one fashion or another, in the legislature. In addition, while presidential influence had been dominant in the case of nineteen laws, twelve of these had been originally initiated by Congress and had been the subject of extensive hearings. Chamberlain notes the joint character of the American legislative process, but concludes:

"These figures do not support the thesis that Congress is unimportant in the formulation of major legislation. Rather, they indicate, not that the president is less important than generally supposed, but that Congress is more important."[19]

Unfortunately, Chamberlain's findings usually have been ignored or cited as evidence of the state from which Congress had fallen. Huntington, for example, utilizes the study to conclude that "Congress has conceded not only the initiative in originating legislation" but also has "lost the dominant influence it once had in shaping the final content of legislation."[20] James A. Robinson finds from his review of Chamberlain's study a decline of Congress, an increase of the Presidency in the initiation of legislation, and an increase in joint participation of Congress and the Presidency. And he goes on to assert that, "An extension of Chamberlain's study from 1945 to 1960 would be expected to show that joint collaboration has given way to virtually exclusive initiation by the executive."[21] Roger Davidson concurs: "Unquestionably a similar examination of post-war lawmaking would yield rather different conclusions."[22]

Recently, Ronald C. Moe and Steven C. Teel replicated (to some degree) Chamberlain's study for the period 1940 to 1967 to provide another, updated, test of the "decline of Congress" theme. Using a large number of case studies of legislation that had appeared since the publication of Chamberlain's study, Moe and Teel attempted to test whether his results held true:

"We would like to ask, therefore, whether in the years since Chamberlain's work appeared, Congress has maintained its influence over the substance of the legislation it handles, or whether the "legislative roots of most important statutes" have, indeed, been entirely displaced by the resources of executive innovation."[23]

In spite of the admitted shortcomings of the approach, the authors concluded that the existing literature was "sufficiently complete to allow us to draw some conclusions about the state of Congress as a policy-maker and the relative strength of Congress and the president in policy formulation."[24] Their major conclusion is that there is a sound empirical basis for challenging the conventional wisdom that the president has come to play an increasingly predominant role in national policy-making. "The evidence," they say, "does not lend support to Huntington and his thesis that Congress ought to recognize its declining state and forego what remains of its legislative function. Quite the contrary, the evidence suggests that Congress continues to be an active innovator and very much in the legislative business."[25] The findings presented, then, tend to confirm those of the Chamberlain study 25 years earlier.

While these studies do not "prove" anything, they do suggest a questioning of our standard assumptions about the legislative-executive relationship, particularly because they stand alone as attempts to question empirically the conventional wisdom of American political scientists. In a number of other recent works, various political scientists have called into question the sweeping generalizations about Congressional weakness and presidential-executive strength. David E. Price, for example, in his study of three committees and thirteen bills in the 89th Congress (1965–66) demonstrates "the past and continuing potential of the United States Congress as an arena for political action, a center for the examination and publicizing of pressing national needs and for the development of creative legislative responses."[26] Orfield has argued that Congress possesses a substantial capacity to initiate new national policies and that those policies may well be more "progressive" or "responsive" than positions taken by a President.[27] And John R. Johannes has written extensively on legislative initiation, arguing that Congress does indeed initiate—probably more often and on more important matters than is commonly realized.[28] Despite these works and a large number of case studies that delineate the role of Congress as an initiator of legislation and innovator of public policy,[29] many political scientists (especially those who author introductory American government texts) seem content with the "President proposes and Congress disposes" mode of legislative-executive relations. The frustration one can experience with this simple model of legislative-executive relations is detailed by one young Senate staff man seeking to complete an undergraduate thesis.

The thesis concerned certain aspects of the Senate and how it functions, and I based my argument primarily on my own observations. To pass academic inspection, however, the thesis needed to demonstrate what scholars call "a familiarity with the literature" on the Senate, and as my deadline drew near, I spent many nights in the Congressional Reading Room of the Library of Congress. The disconcerting result of this last-minute research was that the books I read seemed to describe a wholly different institution from the one I worked in and had come to know, if only imperfectly, a block away.[30]

Redman found two major misconceptions in the literature: a view of power as a "zero-sum game" in which the President had been continually gaining and Congress had been continually losing; and a failure to take into consideration the extensive staff system of Congress. The notion that the President had eclipsed the Congress in the performance of the legislative function proved particularly confusing:

"One professor I had respected in college expressed this view most starkly when he wrote that Congress had become merely a place to "amend and delay." The Executive Branch, he went on, had become the "aggressive spirit" in the American legislative process, and Congress was now little more than a vestigial legislative body, capable of "asserting its powers or passing laws—but not both." Such pronouncements were surprising to say the least, when I read them in early 1970. Congress was then bursting with legislative initiative; if anything, the President and his subalterns lived by the creed of "amend and delay." It seemed the scholars had been a bit hasty in driving the last nails into Congress' coffin: Congress was not yet dead as a legislative force, and seemed in fact to be enjoying a hearty rejuvenation, despite the post-New Deal growth of Presidential power that evidently dazzled the scholars so."

EFFICIENCY

According to a familiar set of charges, Congress is slow, inefficient, archaic, and "out of touch with the twentieth century." The cumbersome legislative process is one of the reasons, given for the contemporary decline of the powers of Congress.[32] James MacGregor Burns has contended that the system is "designed for deadlock and inaction."[33] Congress is "ill-organized to meet many of the most insistent challenges of today"[34]—an institution "overwhelmed by its great responsibilities, operating under its ancient ritual."[35] Many of the critics are disingenuous in their pleas for reform. The reforms they propose are designed to enable Congress to more "efficiently" further the reformers' short-range political values and objectives.

Yet the accuracy of the description of Congress as "inefficient" seems obvious.[36] The Founding Fathers never listed speed and efficiency among the virtues of a legislative assembly. And what could be more inefficient than entrusting the business of passing laws to two separate houses, engaging in the long hours of committee referrals, hearings, studies, floor debates, amendments, joint conference committees, and so on. James Burnham, however, has warned that when anything seems all that obvious we ought to suspect that some factor may have been dropped:

"A whale would look slow on the Santa Anita racetrack, but in his ocean he can beat any horse in the stable. An octopus would be clumsy at a computer console, but he does well enough on his rocks. It is necessary to check both the meaning and relevance of the terms we use. Congress is 'slow' and 'inefficient.' Compared to what? And if so, why not?"[37]

While the results of its activities, what it does, is the final arbiter of worth, the sheer business of Congress is at least statistically impressive.[38] Four hundred and thirty-five men and women sit in the House of Representatives and one hundred in the Senate. The Senate of the 93rd Congress was in ses-

Footnotes at end of article.

sion for 2,152 hours and 22 minutes on 352 days between January of 1973 and December, 1974. It passed 1,564 measures, an average of one every 1.4 session-hours. The House met on 334 days for 1,603 hours and 22 minutes and passed 1,524 measures. In all, 649 public laws and 123 private laws were passed.

The measures passed by the Senate included 526 that were Senate bills and 469 that had originated in the House. There were 73 joint resolutions of the Senate, and 47 of the House. Fifty-six Senate and 78 House concurrent resolutions were passed. The Senate governed itself and expressed itself alone in 257 simple resolutions. A similar record would describe the House's work. Thirty-nine bills were vetoed by the President. The Senate confirmed 131,254 appointments to federal government posts.

In spite of the Watergate scandals, major legislation occurred in a number of areas. Congress signaled its determination to recapture its constitutional power when it overrode then-President Nixon's veto to enact a bill restricting the president's power to make war. In 1974 it went on to pass a budget reform bill that gave it a mechanism to regain its historic control over the public's pursestrings. It took the initiative in passing a campaign finance reform bill, setting limits on political contributions and spending and mandating the first use of public money to finance presidential election campaign costs. New laws included the first major housing bill since 1968, the first minimum wage increase since 1967, federal standards for private pension plans, and an independent government corporation to provide legal services for the poor. Congress also approved a six-year, $11.9-billion program of aid to mass transit systems and a major trade reform act. Before it adjourned, Congress also had overridden four of Ford's twelve vetoes of public bills; not since 1948 had any president suffered as many defeats in a single year.[39]

Behind this record of legislative achievement stood the 26,222 measures that were introduced—each representing at least some minor effort and some of them resulting from weeks or months of work and energy. A congressman's work is not confined solely to the introduction and passage of legislation. There are millions of calls, letters, and visits from constituents; hundreds of thousands of contacts with the executive branch on behalf of constituents. In 1970, members of Congress mailed more than 190 million letters and packages.

During the second session alone the congressmen added 42,937 pages of proceedings, speeches, and extensions of remarks to the Congressional Record. Hundreds of committee and subcommittee meetings were held, resulting in reports and recommendations which (added to those emanating from executive agencies, interest groups, and the White House) had to be read or reviewed. In both 1968 and 1969, slightly more than 52 percent of the members made at least one trip abroad learning about international conditions, and all traveled widely and frequently in the United States—campaigning for reelection, inspecting government facilities, attending conferences and so on. The point should be clear.

Efficiency, as the term is used in administration, is an internal measure of the relationship of output to input (e.g., miles per gallon). Cost per unit of work done is one measure of efficiency. The congressional budget is a relatively modest one; the appropriation for operations of the legislative branch for fiscal 1975 was $708,275,650—as Burnham notes, a fraction of one percent of the executive budget, and much less than the expenses of hundreds of private corporations. Members of Congress are paid $44,625 per year, less than Cabinet members, Supreme Court justices, or the executives of a large corporation.

Is Congress slower and less efficient than the bureaucracy? Comparison is difficult. Yet Alfred de Grazia presents ten criteria of coordination, integration, and efficiency in the form of questions comparing Congress and the Executive Office.

1. Which body's members know more about what their co-members are doing?
2. Whose members know more about what the other body is doing?
3. Whose members know more about what the bureaucracy is doing?
4. Whose members know more about what is going on in the country?
5. In what body does an idea have the greatest chance of being born, and once born, or achieving some consideration?
6. In which body does an idea that is to be ultimately adopted pursue a path that a group of outside scientists and experts on logic, intelligence operations, and administrative procedure would say bring to bear the more powerful interests and instruments of intelligence?
7. In which group does an order by the top leadership obtain the quickest response throughout the group?
8. Which group's ordinances obtain the quickest response in the country and in the executive establishment at large?
9. In which group is a policy originated and processed into final form most quickly?
10. Which group can give the most ready and thorough response to problems arising out of the operations of the executive establishment? [40]

To every one of these ten questions, de Grazia argues, the general answer might very well be: "Congress." And if a case can be made for this answer, then a serious indictment can be read to the numerous analysts who over the years have condemned Congress as slow, inefficient, and archaic. Moreover, one could make the argument that the fact that Congress makes up its mind in public has much to do with the appearance of inefficiency.[41] Or one could contend that the public interest may be served by a Congress that does not move hastily and instantly.[42] In any case, indictments of Congress as having declined in "efficiency" require additional specification, qualification, and verification.

PUBLIC ESTEEM

Where argued that public esteem and public interest do not necessarily go together.

"The activities of a legislature may provide a great deal of news: legislators may often be in the public eye; their proceedings may be notorious. But they may stand low in public esteem." [43]

Adopting this view, let us examine *opinions of Congress* before turning to a discussion of the amount of *news about Congress*. Public confidence in and information about Congress (and government institutions in general) is currently quite low. In a recent survey by Louis Harris for Senator Edmund Muskie's Subcommittee on Intergovernmental Relations, 6 percent of the total public expressed the view that Congress was made up only of the House of Representatives; 4 percent thought that Congress was just the Senate; and a rather high 20 percent thought Congress consisted of the House, the Senate, and the U.S. Supreme Court. Only 59 percent of the American people could correctly state the name of at least one U.S. Senator from their state; only 39 percent could name the second Senator from their own state correctly. Congressmen did not fare much better. No more than 46 percent could accurately identify the congressman from their district. The amount of confidence Americans place in the U.S. Senate declined from 42 percent in 1966 to 21 percent in 1972, although rising slightly to 30 percent in 1973. The House of Representatives went from 42 percent in 1966 to 21 percent in 1972, before rising to 29 percent in 1973.[44]

It is extremely difficult to analyze cyclical changes in the American public's view of Congress. Survey data is available only from 1943 and is sporadic and difficult to compare.[45] Certain correlates of Congressional popularity have been suggested, however. First, public approval is usually highest when domestic political controversy is muted. When partisan controversy grows or when Congress appears slow in resolving legislation, public disaffection increases. Second, the public expects Congress to pass rather than hold up legislation. Randall Ripley, for example, has noted that popular estimates of Congress tend to vary as the productivity of Congress varies.[46] Specialized sub-publics tend to evaluate Congress in terms of their own policy concerns. Finally, a distinct parallel exists in the public's assessment of Congress and their evaluation of the President. It seems that the public's views of Congress are vague and contradictory. * * *

"Congress apparently presents an ambiguous image to most of the general public. As a primary institution in the governmental system, it benefits from the general esteem which Americans hold for their public institutions. Beyond this, the patterns of public attitudes are complex and contradictory.

"The public's ignorance of Congress results in assessments of congressional performance that vary considerably over time and are probably a function of party identification, interest-group identification, or identification with the Presidency." [47]

Thus, it seems that it would be extremely difficult, utilizing public opinion data, to determine any change in public esteem for Congress. It may be possible to do so, however, by examining the views of a group that has a generalized, long-term interest in congressional performance—media representatives. As a profession, this group is uncommonly close to the legislative process. By nature as well as by profession, they are very willing to state their assessments of these processes. And they have regular access to rather wide and often important audiences.[48]

An examination of past newspaper stories, magazine articles, and so on indicates the verity of Lord Bryce's nineteenth century observation that "Americans are especially fond of running down their Congressmen." Belittling Congress is part of the American political folklore. It would be easy to print citations from the press in every decade of our history bewailing the decay of the legislative branch of our government. A few examples should suffice:

"The United States is facing a constitutional crisis. That branch of Government that most closely represents the people is not yet broken, but it is bent and in danger of snapping." [49]

"About the only people who like the way Congress is run are the people who run Congress—and even some of these are unhappy. There is a growing belief, said a Washington observer last summer, that Congress just won't do." [50]

"What the American people have to deal with now is a situation that admits of no national complacency; the legislative machinery, which is the heart of democracy, is breaking down. The American Congress is foundering." [51]

"They are saying, in this year of war and elections, that the Congress of the United States is a worn-out institution that is log-rolling itself into its grave. They are saying it is losing the war or doing nothing to win it; that it talks too much or not enough; that it should be composed of statesmen and, instead, is made up of political hacks." [52]

"The President is right in saying that what

Footnotes at end of article.

we need is democracy—and more democracy. But when we look about for the agencies of government through which the majority will is to express itself, we find—Congress. And if the past session of Congress were the test of democratic government, the friends of democracy might well tremble for its future.[53]

"It is perhaps true . . . that Congress 'has long been the most incompetent, the most shiftless, and the most irresponsible branch of the Federal Government.' " [54]

"Another cause, and not the least of the causes of the popular contempt for Congress, is its inability to perform one of the primary duties of a modern government, namely, to regulate the finances and protect the credit of the country." [55]

One could go on and on but the basic point is simply that year in and year out for over 180 years, American journalists (and citizens) have criticized and abused their Congress. Moreover, it has long been a popular pastime to poke fun at Congress. Political wit in the United States, from Petroleum V. Nasby to Herblock, has always singled out Congress for special attention. As Davidson and his colleagues have noted:

"The other two branches of our government have nothing quite comparable to the public image of Senator Snort, the florid and incompetent windbag. Mark Twain, Will Rogers, Finley Peter Dunne, H. L. Mencken, Al Capp, and George Lichty all have contributed to the colorful literature of congressional denigration, presumably to the great amusement of their readers." [56]

Members of Congress themselves seem to enjoy criticizing and joking about their organization. A standard way for a congressman to begin a speech is to recount how the chaplain of the House invariably opens the session by looking out at the members and then praying for the safety of the country. Moreover, as Richard Fenno has noted, many Congressmen portray themselves as the gallant fighters against the manifest evils of Congress; they "run *for* Congress by running *against* Congress." [57]

That Congress is unpopular, that it always has been unpopular, and that it always will be unpopular seems assured. If Congress passes a large number of laws, it is denounced as being a "busy-body" and "meddlesome." If it fails to pass legislation, it is denounced as being "incompetent" or a "do-nothing Congress." [58]

If Congress follows the President, passes his legislation, and heeds his vetoes, then it is called a "rubber stamp" or a "machine," composed of a "flock of sheep." If Congress defies the President and overrides his vetoes, it is called "obstructionist" or "disloyal," a group of "demagogues." It is criticized for being unorganized and unrepresentative and for being a "steamroller" catering to "special interests." The Congress is thus "damned if it does and damned if it don't." An examination of the nature and causes for this tradition of criticism is beyond the scope of this paper. What seems clear though is that the first Congress that met was subject to all the external criticisms that haunt the 94th Congress. David B. Truman summarized the situation well: "Criticism of the Congress is a hardy perennial of American life." [59]

PUBLIC INTEREST

A variety of powers, formal and informal, are available to the legislative and executive branches in their struggles for political hegemony—Senate confirmation of presidential appointments, congressional investigation, presidential veto, formulation of the budget, and so on. One of the most potent weapons, however, may be the standing of the President with the American people and his position as a focal point of the mass media. According to Dorothy Buckton James, "No individual in public or private life receives the media coverage that is given to the President." Through it, he is greatly advantaged "in being able to define the issues and initiate consideration of appropriate alternatives from his point of view." [60] The President, according to another observer, has "achieved an omnipresence in the general flow of news and in the awareness of the average citizen which in itself has vast implications for the shaping both of national opinion and of public policy." [61] In *The Fourth Branch of Government*, Douglass Cater argued, "Nothing affects more the balance of power between Congress and the President than whether the one or the other is the principal source of news and explanation and opinion." The argument was put most starkly by the Congressional Research Service:

"A significant parallel exists between the growth of the executive power and the greater use of the techniques of mass communication by the Executive. If, as many persons now believe, a dangerous imbalance exists between the effective governing power of the Executive and Legislative branches, the Executive's greater and more effective use of mass communications media, and techniques must be considered as a factor in causing this imbalance." [62]

The problem remains, however, of providing empirical verification of this thesis on the "decline" of Congress and the expanding Presidential image. Unfortunately, once again, there is very little research on this matter. One of the few attempts to examine the matter empirically was made by Elmer Cornwell, who analyzed the news content of the mass media from 1885 to 1957 to determine whether the expansion of the Presidential image had really gone on to the extent suggested.[63] Cornwell contended that if the process of the expansion of the Presidential image had gone on to the extent suggested—as focus of the public's attention and expected source of initiative—an analysis of the news content of the mass media relating to the President should reveal the fact. One could infer that a content analysis of this kind, showing a rising curve of prominent Presidential news, "reflected a rising tendency for the public to focus primary attention on the President at the expense of the other parts of the national government." [64]

The ideal research strategy would have entailed a review of a representative sample of all the important media. Practical considerations, however, dictated the use of only one—the newspaper. Availability and usefulness for sampling purposes led to the choice of two newspapers for Cornwell's research, the *New York Times*—the nearest thing the United States has to a "national" newspaper in news orientation—and the *Providence Journal*—a medium-sized daily with a normal preoccupation with state and local news. Cornwell examined every eighth year, that is the year following every second Presidential election year, for the *New York Times* sample, beginning with 1885 and ending with 1957, or a total of ten years. Within each year, the first full week (starting with Sunday) in the months of January, March, May, July, September, and November was used. For the *Journal* sample, one year was selected from the term in office of each of the twelve individuals who occupied the White House from 1889 to 1957. In each of the years chosen the same months were sampled as for the *Times* but a different week in each—the last full week in the month.

Examination of the papers was limited to the front pages of each newspaper on the assumption that "front pages tend to attract more reader attention that the average inside page and that the front page was reserved in the two newspapers for the most important news during the period under examination." [65] Headlines were examined for the word "President," "Presidency," "White House," or the name of the incumbent President; and for the words "Congress," "Senate," "House," and the names of specific Congressional committees. Headlines containing "Congressman" or "Senator" were not tabulated if none of the other words appeared since usually the articles involved related only to one individual and not to Congress as an organizational entity. If one or more of the above words appeared in any of the levels of headlines before the dateline of the article the story was included and its column inches on the front page recorded.[66] When headlines contained both a Presidential word and a Congressional one, the article was put into a separate "both" category. When the headline did not contain one of the words being tabulated—even when the article obviously contained some news of Congress or the President—the article was not included in the sample. This was done because the purpose of the study was to attempt to measure the impact of the Presidency (and Congress) on the consciousness of the reader. Thus, the sample was limited to those articles that would *immediately* suggest either of the institutions even if little more than the headlines were read. Finally, column inches occupied by pictures of the President also were included on the theory that "such pictures had at least as much impact as a comparable number of inches of headlines and text." [67]

The data obtained from the two samples are found in Table 1 and are arranged on bar graphs in Table 2.

Source: Elmer E. Cornwell, Jr., "Presidential News: The Expanding Public Image" Journalism Quarterly, vol. 36 (summer, 1959), p. 278.

The Times portion of Table 2 shows the pattern graphically: the very marked upward trend of Presidential news in contrast with the limited increase of Congressional news and less consistent upward trend of the latter. The study shows clearly that Presidential news increased more rapidly than either national government news as a whole or Congressional news. The pattern is one of short term fluctuations but a long term upward trend in overall Presidential news, both in absolute terms and relative to Congress. Cornwell concludes that—

"The data presented indicate that Presidential news, and by inference the public's image of the Presidency and its relative governmental importance, has increased markedly and more or less steadily in this century, particularly since World War II." [68]

Much has happened since Cornwell's research was conducted. During the period 1958–1975, there have been five Presidents, three Republicans and two Democrats. There have been several recessions, a war, a strong

Footnotes at end of article.

third party movement, "landslide" and very narrow presidential elections, "active" and "passive" Presidents, and divided and unified governments. A President has been assassinated, another chose not to seek re-election, and a third was driven from office under threat of impeachment. The current Chief Executive bears only the most indirect mandate from the people. Congress, meanwhile, has moved to reform its internal organization, reassert its independence, and regain its power over fiscal affairs and foreign policy. How has this been reflected in media coverage? What difference, if any, has it made in the relative attention given to Congress and the President?

An update of Cornwell's research, using the Buffalo Evening News instead of the Providence paper and sampling every year from 1958 to 1974, is revealing.[69] These data are found in Table 3 and are arranged on bar graphs in Tables 4 and 5.

[Tables 4 and 5 not printed in RECORD.]

1973	789	107	132	687	18	126
974	748	72	241	700	126	212

The pattern discerned by Cornwell in 1959 remains—as is seen most clearly in the New York Times data. There continues a marked dominance of Presidential news in contrast to a noticeable decline of Congressional news. In all but one of the years sampled, straight Presidential news represented more column inches than the other two categories combined. The decline in news about Congress is even more striking when compared with the lengthening of the legislative session. During the period surveyed by Cornwell, Congress was in session an average of about six and a half months each year. During 1958–1974, Congress moved toward remaining in session (and presumably making news) almost the entire year—yet the amount of news about our national legislature declined.

As was noted above in our brief review of opinions about Congress, criticism of that body is a hardy perennial of American life. It may be, however, that the content of the media messages is not so important as the mere extent of media coverage. Paul Lazarsfeld and Robert Merton, for example, have noted the "status conferral function"[70] of the media. Carl Hovland has also remarked upon this "halo" effect of media prestige and called for further research on its processes and components.[71] Miller and Stokes' conclusion concerning voters' awareness of congressional candidates may also hold true for Congress as an institution: "In the main, recognition carries a positive valence; to be perceived at all is to be perceived favorably."[72] If this is true, then the media face a major challenge in achieving some balance in coverage between Congress and the Presidency.

STANDARDS OF BEHAVIOR

It seems clear that Congress has been tarnished by scandal, and by the questionable activities and ethics of some of its members. In 1967, Senator Thomas Dodd of Connecticut was censured because he had retained for his personal use $116,000 of the $450,000 received from political fund-raising dinners. Congressmen are criticized for "junkets" abroad, for having relatives on their office payroll, for accepting speaking fees from lobbyists.[73] Michael Parenti states the case against Congress:

"From 1968 to 1972 eight Congressmen or their aides were convicted of bribery, influence-peddling or perjury. In this century, twenty-four Senators and Representatives have been indicted for crimes; sixteen were convicted and one case is pending. And these are only the few clumsy enough to get caught."[74]

Perhaps it is a decline in manners, in standards of behavior, in the quality of the individual members of Congress that is being asserted. As George Galloway has argued:

"To the frequent query: "What's wrong with Congress?" a favorite retort is: "Congress itself!," meaning the members themselves. Some critics of representative government allege that its basic fault is to be found not in its antiquated machinery or archaic methods or excessive work-load, but in the personnel of the legislature."[75]

Thus critics of Congress often refer to the great men of the past—to men like Daniel Webster, John C. Calhoun, Henry Clay, and others—and assert that, in comparison, members of Congress today are of small caliber. Is that proof of a decline of Congress? Several points may be raised in this regard.

First, it is worth remembering that the nineteenth-century "legislative giants"—Henry Clay, John C. Calhoun, Daniel Webster, Stephen A. Douglas, and others—were "giants" with respect to only a handful of issues. As Charles A. Beard, a close student of American history noted, "It is pertinent to note that, in spite of their oratory, these mighty men of old could not resolve the sectional issue of their time and let the nation drift into a civil war."[76] In contrast, today's congressmen must consider a wide variety of domestic issues as well as world-encompassing issues.

Moreover, in addition to a change in the scope of the legislative agenda, there has been a tremendous increase in the volume and complexity of legislative business.[77] The following comparison of the 1st and the 93rd Congress is instructive:

	1st Congress	93d Congress
Number of Bills Introduced	268	21,950
House of Representatives	142	17,690
Senate	126	4,260
Number of Laws Enacted	118	772
Public bills	108	649
Private bills	10	123
Number of Members	91	535
Representatives	65	435
Senators	26	100
Number of Days in Session	519	352
Nominations Confirmed	211	131,254

The sheer bulk of bills introduced has increased over eighty-fold, while the number of members available to meet the added work load multiplied only about six times. The early Congresses usually met for only nine or ten months out of the biennium, taking long summer recesses[78] (See Table 6).

TABLE 6.—*Selected sessions of congress*

Congress:	Length in days
1st	519
2d	316
3d	311
4th	266
5th	394
6th	271
88th	626
89th	579
90th	614
91st	704
92d	606
93d	688

Third, one could certainly argue that man for man, recent Congresses have been no worse than dozens of their predecessors, and better than many. Critics often overlook a Paul Douglas or a William Fulbright, who would have graced any Congress in our history. They ignore able Senators like Birch Bayh, Frank Church, Philip Hart, Hubert Humphrey, Mike Mansfield, and many others; they overlook such capable Representatives as John Anderson, Richard Bolling, Phillip Burton, Barber Conable, Ken Hechler, John Moss, Peter Rodino, and numerous others. In contrast to this distinguished group, there occasionally are crackpots, crooks, and misfits. These are a veritable godsend to the cynics and critics of Congress. Yet, in comparing congressmen of today and those who loom large in our history we often select a few great names and forget the abundant mediocrity. One thing is certain. That is that any observer can find in the personnel who are serving and have served in the Congress of the United States the very thing that he is looking for.

Finally, there is a tendency, when dealing with public men of the past, to cast a halo over their heads and, by either perverting or ignoring the facts, to regard them as demigods. Previous warnings prove interesting to those who would argue that Congress has declined in manners, standards of behavior, or quality:

". . . but let them beware of the luster which departing years shed upon the alleged giants of other days, and let them not turn to contemporary letters like that of John Hay to Joseph H. Choate in which, after denouncing the "howling lunatics" of the Senate, he bemoaned the fact that Senator "W" has been divorcing his wife . . . last week, "X" had delirium tremens, Bacon broke his ribs, Pettigrew had the grippe, and Hale ran off to New York on 'private business,' and the whole Senate stopped work until they got around again."[79]

"Talk of the degeneracy of the Senate to men who remember the time when a Vice President was inaugurated in a state of maudlin intoxication; or the earlier days when Foote uttered in debate his threat to Hale, that he should be hung on the highest tree in the forest if he should come to Mississippi; when the same man drew his pistol on Benton in the Senate Chamber; when Butler poured out his loose expectoration, and Mason gave exhibitions of his arrogant plantation manners; . . ."[80]

Those who complain that the Congress no longer contains such giants as Clay, Calhoun and Webster are referred to the similar complaint of Alexis de Tocqueville. When these great men still spoke in the land, the astute French observer sadly lamented that "the race of American statesmen has evidently dwindled most remarkably in the course of the last fifty years."[81] That would seem to imply that if we have been going downhill, the decline began in 1789. For surely we could "expect to find unalloyed patriotism, the recognition of merit, the victory of virtue, among the demigods who created the nation."[82]

Fisher Ames may speak for the House of Representatives. In a letter to a friend on March 23, 1790, he wrote of—

". . . the violence, personality, low wit, violation of order, and rambling from the point, which have lowered the House extremely in the debate on the Quaker memorial. The Quakers have been abused, the eastern States inveighed against, the chairman rudely charged with partiality. Language low, indecent, and profane has been used; wit equally stale and wretched has been attempted; in short, we have sunk below the General Court in the disorderly moment of the bawling nomination of a committee, or even of country (rather Boston) town-meeting."[83]

These were the words of a patrician—a Massachusetts aristocrat. Perhaps Ames'

Footnotes at end of article.

opinion was overly critical of those less privileged than himself. For a different perspective, let us examine the journal of an individual more democratic in his views, William MacClay of Pennsylvania. Writing of the first American Senate on August 29, 1789, MacClay said:

"With the Senate I certainly am disgusted. I came here expecting every man to act the part of a god; that the most delicate honor, the most exalted wisdom, the most refined generosity, was to govern every act and be seen in every deed. What must my feeling be on finding rough and rude manners, glaring folly, and the basest selfishness in almost every public transaction! They are not always successful, it is true; but is it not dreadful to find them in such a place?" [84]

In conclusion, it appears clear that the golden age—which is always at least a generation behind—was not so golden as we often seem to think. And the dross that characterizes our current state is not so unrelieved by better qualities as we are tempted to imagine.

THE STANDARDS OF DECLINE

As was noted a number of years ago, and has been intimated above, much of the discussion of the so-called "decline" of Congress is based on the assumption that decline was possible. It is based, in part, on the idea that there once existed a "golden age" of legislatures—a time when "wisdom and oratory and gentlemanly behavior and public spirit all seemed somehow to flourish and to flourish together." [85] Normally, however, evidence for the existence of this golden age is not presented. Moreover, it often seems, on more careful inspection, that it is merely time which has thrown a romantic aura around the past and made contemporary institutions seem drab by comparison.

Again, it is often contended that Congress has declined in certain important respects and particularly in power in relation to the Presidency. It may be, however, that the question of who is more powerful, Congress or the President, is an improper one. The actual pattern of power in Washington, as we have sought to indicate, is both complicated and kaleidoscopic. Viewing the situation as a zero-sum game in which the President has steadily been gaining power and Congress steadily losing it is simplistic, as Chamberlain noted years ago:

"The legislative process is not like a seesaw where as one end goes down the other must automatically go up. It is, rather like a gasoline engine which operates most efficiently when all of its cylinders are functioning. When the president becomes unusually active, there is a tendency to assume that the congressional cylinder has ceased to function. Such is not necessarily the case." [86]

CONCLUDING OBSERVATIONS

No one any longer questions the fact, but only the degree and the merits of the decline of Congress and the aggrandizement of the Presidency. So the textbooks of American government would have us believe.' It has been suggested here that while the "decline" of Congress may be an interesting question to discuss in very general terms, it becomes exceedingly complicated when one tries to establish what form the alleged decline has taken, and the standard against which that decline is being measured. We have sought to examine the "decline" of Congress in terms of a decline in power (initiation), efficiency, public esteem, public interest, and manners or standards of behavior. We have found that only in terms of public interest (as indicated by a decline in newspaper coverage) can we discern any evidence for a congressional decline.

The fact of the decline of Congress needs to be demonstrated, not assumed, and this paper suggests that statements about this so-called decline should be examined with care. It may, of course, be the case that Congress has declined in influence, efficiency, or whatever, but this remains a thesis in need of empirical verification. And I would suggest that, like reports about the death of Mark Twain, reports about the imminent demise of Congress are greatly exaggerated.

DECEMBER OMB PROPOSAL A STACKED DECK FOR BIG BUSINESS

(Mr. OBEY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. OBEY. Mr. Speaker, I would like to bring to my colleagues' attention one of the most incredible proposals put forward by a group of bureaucrats during my 8 years in Washington. On page 53724 of the Federal Register, volume 41, No. 237 of Wednesday, December 8, 1976, the following Office of Management and Budget circular appeared:

ATTACHMENT A

CIRCULAR NO. A-------

To: The Heads of Executive Departments and Establishments

Subject: Interaction with Commercial Standards-Setting Bodies

1. *Purpose.* This Circular establishes policy to be followed by executive branch agencies in working with commercial standards-setting bodies to develop, improve, and use standards for materials, products, systems, and services.

2. *Background.* The Federal Government purchases many products and services and regulates many activities which affect health, safety, and the national economy. To insure that such products possess appropriate quality characteristics, the Federal Government must depend upon reliable standards for product specification, quality control analysis, and performance testing. For example, the widely accepted standard for Portland cement (Federal Document SSC–1960–3) is used to guarantee consistent quality in this important construction material. Over the years, an effective system of voluntary consensus standards activities has developed under the leadership of the American Society for Testing and Materials, American Society of Mechanical Engineers, American National Standards Institute, and many others. In this voluntary system, a wide range of interests meld their expertise and compromise their differences, with the result that the standards produced are solidly based and widely accepted. Federal reliance on such standards, whenever practicable, will reduce the cost of developing standards and minimize confusion among those who deal with them.

3. *Coverage.* This Circular applies to all executive agency involvement in commercial standardization activities, both domestic and international.

4. *Objectives.* The objectives are to insure maximum practicable use of commercial standards by the Federal Government and active participation of the Federal Government in development of such standards.

5. *Definitions.* As used in this Circular:

a. *Executive agency* (hereinafter referred to as agency) means an executive department, a military department, and an independent establishment within the meaning of sections 101, 102 and 104(1) of Title 5, United States Code, and also a wholly owned Government corporation within the meaning of section 101 of the Government Corporation Control Act (31 U.S.C. 846).

b. *Commercial standards-setting bodies* are domestic and international standardization bodies, including nonprofit organizations, operating outside of the Federal Government or its agencies. They do not include the development and adoption of professional standards of conduct and standards of private companies; nor the United States' participation in international standardization activities pursuant to treaties.

c. *Commercial standard* means a prescribed set of rules, conditions, or requirements established by commercial standards-setting bodies, as defined in 5b, concerning definition of terms; classification of components; specification of materials, performance, or operations; delineation of procedures; or measurement of quantity and quality in describing materials, products, systems, services, or practices.

d. *Standardization and standards-setting activities* mean the process of developing the rules, conditions, and requirements defined in 5c above.

e. *Cooperative testing* means testing by interested parties to establish such things as precision, accuracy, and reliability of standards.

6. *Policy.* It is the policy of the Federal Government to rely on commercial standards, both domestic and international, whenever feasible. The policy embodied in the five elements below is consistent with and in furtherance of the Federal Government's general policy of using commercial products whenever feasible and relying on the private enterprise system to supply Government needs for products and services, as enunciated in OMB Circular No. A–76. Agencies will: a. Participate in commercial standards-setting activities when such participation is in the public interest and is compatible with the agency's missions and authorities. Participation by agency personnel shall have the approval of appropriate officials and shall be consistent with the agency's regulations issued pursuant to paragraph 7a of this Circular, but of itself does not connote agency agreement with or endorsement of decisions reached. Such participation, where the agency's budget permits, may include:

(1) Direct financial support, e.g., grants, sustaining memberships, and contracts;

(2) Indirect or administrative support, e.g., travel cost, and document preparation; and

(3) Technical support, e.g., cooperative testing for standards evaluation.

b. Encourage commercial standards-setting bodies with which they interact to observe rules and procedures that ensure prompt and full consideration of the views and interests of all who might be materially affected by their actions, and evaluate participation in these bodies in light of their adherence to such rules and procedures.

c. Use commercial standards in lieu of in-house standards when they will serve the agency's purpose and are consistent with applicable laws and regulations, and give such commercial standards preference in procurement actions unless use of such standards would result in higher cost to the Government.

d. Cite applicable commercial standards in FEDERAL REGISTER publications, regulatory orders, or related in-house documents.

e. Plan jointly with the commercial sector to ensure a coordinated effort in resolving priority standardization problems.

7. *Responsibilities:* a. Each agency will, within six months of the date of this Circular, implement the policy principles in paragraph 6 to the extent compatible with its mission responsibilities. In taking this action, the agency should recognize the positive contribution of standardization and related activities, such as product and compliance testing and certification. It must, however, be recognized that these activities, if improperly conducted, could suppress free and fair competition; impede innovation and technical progress; exclude safer and less expensive products; or otherwise adversely affect trade, commerce, health, or safety. Full account shall be taken of applicable Federal laws, policies, and national objectives including, for example, laws and regulations relating to antitrust, national security, product safety, and conflict of interest.

b. The Department of Commerce shall be responsible for coordinating the implementation of said policy principles through an Interagency Committee on Standards Policy established to foster cooperative participation by the Federal Government and U.S. industry and other private organizations in standards activities, including the related activities of product testing, compliance, and certification programs. The Department of Commerce shall, through said interagency committee, periodically advise OMB concerning implementation of the policy principles set forth in this Circular.

8. *Inquiries.* For information concerning this Circular, contact the Office of Management and Budget, Office of Federal Procurement Policy, telephone number (202) 395–3336.

Director.

[FR Doc.76-36013 Filed 12-7-76;8:45 am]

In essence, this circular states that Federal regulations to protect workers and consumers and to determine Government purchasing practices should be based on the work and recommendations of industry-paid scientists rather than scientists employed by the Federal Government. Instead of conducting independent research and reaching independent decisions, OMB says that Federal agencies should be dependent on standards set by the very industries that will be affected by those decisions.

The circular argues that "Federal reliance" on the recommendations of commercial standard-setting bodies "will reduce the cost of developing standards and minimize confusion among those who deal with them."

There is no question that in rare instances—such as technical assessments and performance specifications of certain products used as well as produced by major corporations—a sufficient diversity of interests may exist on commercial standard-setting bodies to make reliance on their recommendations practical. However, in the vast majority of regulatory situations it is the worker or the general public who will suffer as a result of weak or inadequate standards and the corporations whose scientists dominate these commercial standard-setting boards that will profit.

The implications this proposal holds for worker health are truly ominous. Three years ago when it was learned that vinyl chloride was causing cancer in workers, industry representatives gave their solemn assurances that it was economically and technically unfeasible to reduce workplace exposure levels to below 25 parts of vinyl chloride per million parts of air. They warned that further reductions would be highly inflationary and would perhaps even shut the industry down. Fortunately, Government scientists and regulators ignored that advice and imposed a standard of one part per million. Not only was industry able to meet the standard but the commercial price of vinyl chloride actually has gone down and the health of thousands of workers and the general public is being better protected.

Consumers could also be placed in a precarious situation as a result of this policy. I, for one, would not want Government regulators to rely on industry advice in determining the safety of the car I drive, the toys my children play with, or the groceries my family buys. It would be unconscionable to delegate such responsibility to groups dominated by those whose economic self-interest would obviously be at stake.

This policy proposal has grave implications as well for small businessmen. They would have no guarantee that their interests would be protected in the deliberations of standard-setting bodies. There is no question that a small manufacturer with 40 or 50 employees may have as big a stake proportionately in the establishment of Federal regulations as a huge corporation, but there is simply no way that he could afford to maintain his own scientific staff to represent him on standard-setting groups. It is conceivable, for instance, that a commercial standard-setting body dominated by major corporations could recommend guidelines for the Federal purchase of a product which were constructed in such a way as to cut small, independent manufacturers completely out of the running for a particular Government contract.

In addition, this policy could well make a travesty of the open process by which the Federal Government is supposed to arrive at such decisions. It offers absolutely no assurances that commercial standard-setting bodies will abide by any of the "sunshine" provisions which are required of Federal advisory committees.

Finally, we should not forget that safety standards established by private consensus organizations which were adopted as Federal standards at the insistence of industry when the Occupational Safety and Health Act was passed are the very standards that industry complains about so bitterly today.

In short, this proposal is a disaster and I have written to the new director of the Office of Management and Budget, Thomas B. Lance, to ask that he take whatever steps are necessary to insure that it is not implemented. The following is a list of the members of the Interagency Committee on Standards Policy which drafted the proposal and the agencies which they represent:

Eddie F. Kimbrell, Department of Agriculture.
Vincent Travaglini, Department of Commerce.
L. James Sharman, Consumer Product Safety Commission.
Lester Fox, Department of Defense.
Martin B. Biles, Energy Research and Development Administration.
Walter Barber, Environmental Protection Agency.
Julian T. Dixon, Federal Communication Commission.
Robert J. Lewis, Federal Trade Commission.
Roger D. Daniero, General Service Administration.
William F. Randolph, Department of HEW.
William J. Werner, Department of Interior.
Neil E. Roberts, Department of Justice.
Silvio C. Patti, Department of Labor.
Walter Williams, National Aeronautics and Space Administration.
Robert B. Minogue, Nuclear Regulatory Commission.
Martin E. Sorte, U.S. Postal Service.
William A. Black, Small Business Administration.
William B. Kelly, Jr., Office of the Special Representative for Trade Negotiations.
William W. Geimer, State Department.
Herbert H. Kaiser, Jr., Department of Transportation.
James B. Clawson, Department of the Treasury.

SUBCOMMITTEE ON PARTICIPATION ON OUTSIDE STANDARDS DEVELOPMENT ACTIVITIES

Robert O. Gliden, Department of Agriculture.
William E. Andrus, Jr., Department of Commerce.
Phyllis J. Williams, Department of Commerce.
L. James Sharman, Consumer Product Safety Commission.
Edward J. Vallario, ERDA.
Sidney S. Verner, Environmental Protection Agency.
John T. Fischback, Federal Trade Commission.
Roger D. Daniero, General Services Administration.
William F. Randolph, Department of HEW.
Frank E. Clarke, Department of Interior.
Daniel J. Pearlman, Department of Justice.
Carl Johnson, Nuclear Regulatory Commission.
William A. Black, Small Business Administration.
Hiram T. Lawrence, Office of the Special Representative for Trade Negotiations.
Donald R. Mitchell, State Department.
Herbert H. Kaiser, Jr., Department of Transportation.

GRAIN ALCOHOL RESEARCH UTILIZATION ACT

(Mr. SEBELIUS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SEBELIUS. Mr. Speaker, energy experts tell us today that we are witnessing the end of the fossil fuel era and embarking upon what may be a rocky road to a new energy era. Without question we should be in the business of exploring, testing, and utilizing all forms of basic technology that will provide us the energy systems of the future.

The bill I am introducing today would amend the Energy Reorganization Act of 1974 to provide research and development into the possible industrial use of grain alcohol and its use as an alternate fuel that could reduce our dependence upon foreign oil and benefit our agriculture economy. The source of fuel that I believe deserves consideration is ethyl alcohol—ethanol—derived from grain for use as a reactive component or extender in synthetic plastics and as an extender in gasoline.

Probably the greatest nationwide potential for grain alcohol lies in its industrial use. Currently about 22 billion pounds of plastics and about 5 billion pounds of synthetics are produced annually in the United States from petrochemicals. Ethanol could replace the costly imported oil that is currently being used in plastics production.

However, use of alcohol in automotive fuel can also be successful on a limited basis and where economically feasible. When petroleum supplies were interrupted during World Wars I and II, automobiles in Europe operated on mixtures of alcohol and gasoline. Both Brazil and Cuba are reported to use alcohol

from sugarcane to power their vehicles to reduce their need for imported oil.

The obvious benefit regarding this concept is that grains such as wheat, corn, and grain sorghum are a renewable resource while fossil fuels are not. Within the past 2 years, the United States has produced the two largest wheat, corn, and grain sorghum crops on record. Carryover stocks are ample in each crop and in fact, by June 1, we are expected to have a burdensome wheat surplus of more than 1 billion.

Significantly, it seems as if the use of "gasohol" becomes a serious and timely topic only when American agriculture enters into a period of surplus along with all of the problems connected with rising production costs and lower prices. In my opinion, I believe the seasonal political resurrection of this proposal during times of surplus has damaged serious consideration of the use of grain as a fuel substitute and extender in its own right. Our energy problems today are such that we should proceed with this research in a consistent and practical manner instead of talking about this concept during times of grain surplus and dismissing it when supply comes more in line with demand.

In 1971 I introduced legislation that would have encouraged the production and use of ethanol or "gasohol" as a substitute for lead as an extender in gasoline. That legislation would have amended the Internal Revenue Code of 1954 to authorize the Secretary of Treasury to refund gasoline dealers 2 cents a gallon for the tax they collect when selling gasoline containing grain alcohol. The bill also stipulated that the tax reduction must be passed on to the consumer. I again introduced this legislation January 26 of this year and believe such an amendment to the Internal Revenue Code can help determine the feasibility of this concept.

Let me point out the State of Nebraska has already taken the lead in regard to economic encouragement of this concept. Legislation was passed by the State of Nebraska that provides a 3-cent-per-gallon reduction in the State gasoline tax on any such fuel sold to make it competitive with that of unleaded gasoline.

In fact, a feasibility study by the University of Nebraska Department of Chemical Engineering on November 3, 1976, discovered that the pump price of gasohol—with the 3 cents tax reduction per gallon—was competitive with the median price of no-lead gasoline in Lincoln, Nebr.

Gasohol is a blend of 10 percent anhydrous ethanol made from such grain as wheat, corn, and sorghum and 90 percent lead free gasoline. It has been extensively road tested by the Nebraska Agricultural Products Industrial Utilization Committee in cooperation with the Cooperative Refiners Association in Phillipsburg, Kans.

Results have been encouraging. Fuel consumption of gasohol appears to be at least as good for unleaded gasoline. No unusual engine wear or carbon buildup has been found and the drivers report no problems of starting, vapor lock, or drivability.

Mr. Speaker, despite the fact that gasohol has been technologically feasible for some time, it has not been economically feasible. Research by the North Dakota Agricultural Experiment Station has found that there is no way to produce more than 2.5 to 2.7 gallons of alcohol from a bushel of wheat, corn, or sorghum and that when the energy expended in the production and transportation of these grains is added to the energy needed for the distillery operation—heat, electricity, steam for drying byproducts—the sum of energy input is two to three times that recovered by burning alcohol as a fuel. Energy savings are not realized until the straw, stalks, et cetera are collected, burned, and utilized.

However, a pilot project is underway in a community within my district, Pratt, Kans., that would utilize the wheat straw from the surrounding farmland to supply that community's source of energy. If projects of this type were to become widespread and the principal byproducts—distillers dried grains and distillers dried solubles—were to be utilized as livestock feed the economic cost-benefit ratio could make this entire concept feasible. At present, utilization of these byproducts as a livestock feed in rations at the 10-percent to 25-percent level, are roughly equivalent to good alfalfa hay. Anhydrous ethyl alcohol distilleries could be constructed in the major grain producing areas and as an additional plant to sugar beet and sugar cane mills.

However, the greatest potential of this concept lies in producing gasohol within a wheat fractionation plant, a new process developed by Far-Mar-Co at Hutchinson, Kans. This process separates vital gluten, starch, bran, and germ from whole kernel wheat with minimum damage to the functional, chemical, or biological values of these components. The process is technically sound and economically feasible. It is being tested at Far-Mar-Co's pilot plant in Hutchinson. Starch from the kernel could be distilled into ethanol and the remaining parts, vital gluten, bran, and germ, could be processed into highly marketable foods and industrial products.

Experimentation and production by Midwest Solvents Co., Inc., at Atchison, Kans., has found that wheat starch is a fine industrial product accepted by users as superior in many respects and applications to corn or milo starch. This is contrary to the historical assumption that wheat starch is a low quality product produced only during times of market stress.

Nationwide use of a gasohol blend of 10 percent ethanol and 90 percent gasoline would annually require over 10 billion gallons of anhydrous ethyl alcohol. Such consumption would replace approximately 181.8 million barrels of imported oil at a savings to our Nation of more than $2 billion. However, this requirement would no doubt consume too much of our grain stocks at a time when our food production capability needs to be flexible to meet domestic and worldwide needs. The important point is that this utilization offers practical possibilities on a State and regional basis and for vehicles that could be confined to areas using gasohol.

Mr. Speaker, the future of using grain alcohol in a gasoline blend will be determined by the price of gasoline, the price of grain and the value of the byproducts from the fractionation and alcohol manufacturing process. But, with continued escalation of petroleum costs and the need for energy conservation, we should be prepared to implement this fuel alternative. Such use would provide our Nation with an additional energy source and provide stimulus to our farm economy as well.

I am today again introducing legislation to amend section 103 of the Energy Reorganization Act of 1974 to direct the Administrator of Energy, Research and Development Administration to insure that research and development into the industrial use of grain alcohol and its use as an alternate fuel with particular consideration of its economic and environmental effects. Such study shall also include the potential uses of byproducts resulting from the manufacture of grain alcohol.

I am hopeful that we can see action on this legislation in 1977. Had we embarked upon this research in 1971, when I first introduced this legislation, perhaps we would be less dependent upon foreign oil and we would have a stabling influence within our agriculture economy with a consistent marketable use for grain and its byproducts.

SPECIAL GRAZING AND HAY PROGRAM FOR WHEAT ACREAGE ACT

(Mr. SEBELIUS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SEBELIUS. Mr. Speaker, farmers in the Great Plains face a paradox of enormous irony. Winter wheat production on the Great Plains, which accounts for nearly three-fourths of our Nation's wheat crop, is in poor to fair condition because of persistent dry weather. Soil moisture is perilously low. Unfavorable weather last fall prevented normal top growth and root development.

Most of this vast acreage was not lush enough to be grazed by beef cattle. The extremely cold temperatures have undoubtedly caused kill and many parts of the High Plains have insufficient snow cover to protect topsoil from wind erosion. We are already beginning to experience severe blowing problems and if these dry conditions persist we may soon see headlines proclaiming a return to the "dust bowl" days.

Yet, on the other hand, worldwide we have just harvested a record wheat crop. World stocks are at record highs and the latest USDA supply demand estimates indicate that the wheat carryover in the United States will exceed 1 billion bushels by June 1 and could soar to 1.7 billion bushels by the end of the 1977–78 crop year. This mountain of grain has already served as a severe market depressant keeping prices below production costs.

In addition, hay and forage supplies for livestock feed in the Great Plains are

in short supply and expensive. Some cattlemen may be forced to sell if additional forage is not obtained. This cattle liquidation would ultimately be reflected in higher meat price and consumer costs.

Given these conditions, I am introducing a bill to provide for a wheat graze out and hay program which will benefit producers immediately and which will be helpful to both consumers and taxpayers over the long run. It would encourage beef production, stimulate demand for feeder calves and conserve energy by permitting cattle to harvest wheat fields that may not be productive enough to make combine harvesting economically feasible.

This legislation is similar to S. 650, introduced by the Honorable HENRY BELLMON, Senator from Oklahoma. It would authorize the farmer to select up to 40 percent of his allotted acres for use as livestock pasture or for hay production. As an incentive to encourage farmers to take advantage of this provision, the bill provides authorization for the Secretary of Agriculture to pay farmers $1 per bushel based upon established average yield. This information is currently maintained by the county offices of the USDA Agricultural Stabilization and Conservation Service.

Mr. Speaker, when Senator BELLMON introduced this legislation he said:

> The purpose of this program is to aid in the prevention of additional surplus accumulations and the associated costs to consumers, taxpayers, and grain producers. Based upon past experiences, the immediate cost to the Treasury will be nominal and the long-range savings will be considerable.

Mr. Speaker, in order for this bill to be most effective, it must receive immediate attention. Normally, the winter wheat crop comes out of dormacy sometime after mid-February in the Southern Plains. Waiting to consider this legislation as part of the 1977 farm bill deliberation will be too late.

COMMEMORATING 100th BIRTHDAY OF VIRGINIA DEPARTMENT OF AGRICULTURE AND COMMERCE

(Mr. WAMPLER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WAMPLER. Mr. Speaker, on Tuesday, March 29, 1977, the Virginia Department of Agriculture and Commerce will be 100 years old. This agency deals with most phases of economic life in Virginia, and touches the lives of all citizens of the Commonwealth. Since its inception in 1877, this department has been a vital agency of the Virginia State government, and since 1972 has been headed by Commissioner S. Mason Carbaugh.

I would like to recognize this State agency for its many contributions that have made Virginia a better place in which to live.

Virginia hams, apples, peanuts, and tobacco are known around the world; and the industry of agriculture remains the biggest industry in the State because of the services that have been available from the department during this 100 years of progress.

The list of accomplishments is long, varied, and certainly most noteworthy as Virginia has been a leader among State departments of agriculture in many phases of agricultural development and regulatory work.

The industry of agriculture is the Commonwealth's leading industry, as it has been since the establishment of the Colony at Jamestown in 1607. It continues to have significant improvements in total output per farm, monetary values of farm production, and the ability of farm production to generate off-farm related employment.

FARM PRODUCTION

Farm production has continued to increase as evidenced by the fact that cash receipts from farm marketings have increased 100 percent over the past 10 years and reached over $1 billion in both 1975 and 1976. However, increases in cash receipts alone are not a true measure of farmers' well-being in view of reduced purchasing power caused by inflation. Current cash receipts—in terms of 1966 dollars—indicate a 22-percent gain in real cash income from marketings of Virginia agricultural products. Most of this increase is due to increased farm productivity, although some commodity prices were higher in 1976. We should remember that our farm industry is one of the few remaining industries that continues to approximate the market conditions of pure competition.

Gross production and production efficiency of principal crops and livestock continue to increase in Virginia. Although total land in farms has declined, harvested acreage of principal crops has increased 12 percent over the past few years. This increase is very significant, and occurred primarily as a result of the Federal Government moving from a policy with strict supply controls to a policy oriented toward full production. This has resulted in the farmer being the decionmaker in 1976, whereas the Federal Government was the principal decisionmaker in the past.

In 1976, there were 72,000 farms with a total full-time equivalent farm labor force of approximately 89,000. Total land on farms approximates 43 percent of the 25,459,520 acres of land in Virginia.

Virginia has a very favorable climate for agriculture, and possesses variations in terrain and soil types which are very conducive for a mix of agricultural and horticultural crops, horses, sheep, beef, swine, dairy and poultry operations across the Commonwealth. The State's agricultural economy and its general economy are mixed; therefore, the effect of major economic changes are less severe than in many other sections of the Nation.

The State continues to rank high nationally in the production of tobacco, peanuts, sweet potatoes, apples, vegetables, broilers, and turkeys. Based on recent trends, Virginia is expected to continue its high production ranking in these commodities, and will have significant opportunities for grain, beef, dairy, and hog production. Virginia's close proximity to 50 percent of the U.S. population and rapid improvements in the transportation and marketing of grains and livestock will provide the potential for significant improvements in these areas.

Farm and forest production are basic to Virginia's economy. Manufacturing industries; that is, food and fiber and forest products as raw materials, account for more than one-half of the State's total manufacturing plantworkers. Wholesalers and retailers of agriculturally related products employ nearly one-fourth of the total wholesale and retail workers. Transportation, communications and other service industries also have an important stake in Virginia's agricultural products.

I would like to call attention to a number of significant programs the Virginia Department of Agriculture and Commerce has developed over the years. These programs are effective because of exemplary leadership and management in the Virginia Department of Agriculture and Commerce and because of full cooperation and support from our Federal agencies.

INNOVATIVE PROGRAMS

In 1966 an International Trade Office was established in the Department and the first full-time overseas agricultural representatives from a State was sent to Brussels, Belgium.

Since its creation, the International Trade Office has made significant accomplishments by promoting Virginia agricultural products, participating in trade shows, and bringing foreign buyers to Virginia. Agriculture exports from Virginia ports are continuing to increase and their value exceeded $600 million in 1975. Approximately one-third of these products were produced on Virginia farms.

Virginia's delivery of more than 25 different agricultural products to over 100 nations around the world is making a vital contribution to the balance of trade for imports of petroleum and other raw products that are so valuable to the national economy.

Department personnel provided leadership for the development and establishment of a livestock export facility at Richmond's Deepwater Terminal. This terminal is the only U.S. Department of Agriculture-approved export facility on the east coast.

Virginia took the leadership in organizing international marketing associations among other States. The most recent such association is the Southern United States Trade Association, whose membership is made up of the 15 Southeastern State departments of agriculture. The objective of this association is to pool the resources of the various States, as well as to reduce the duplication of individual efforts.

To exemplify the department's efforts in this area, Commissioner S. Mason Carbaugh received the President's "E" Award in 1976 on behalf of the department's successes of its International Trade Office for outstanding contributions in exporting Virginia products. Only one other State has received similar

recognition from the U.S. Department of Commerce.

The Virginia Department of Agriculture and Commerce was the first to develop the Tel-O-Auction in which various livestock are sold by telephone, sight unseen by the buyer. Grades, conditions, health, and weights of livestock sold through the system are certified by the department. This system effectively brings together the supply and demand for livestock. The department received a distinguished service award from the U.S. Department of Agriculture for this innovative effort, and many other States have subsequently adopted the Tel-O-Auction system in marketing various commodities.

Virginia was one of the first States to have their State plan for the certification of commercial and private applicators of restricted use pesticides given full approval as submitted. The plan they developed has been used as the basis for other States in developing their own programs.

Since 1967, the department has been working under agreements with the Federal Food and Drug Administration to cooperatively inspect various segments of the food industry of Virginia, and to eliminate duplicate inspections.

Virginia was the first State to enact a paint law; and the first State to create a sod law.

Virginia is hog cholera and brucellosis free.

Virginia was the fifth State to create a division of markets.

Virginia was the first State to have a full-time retail market news reporter.

Virginia was one of the first States to have a full-time consumer affairs officer. The General Assembly of Virginia created an office of consumer affairs in 1970 and this office was assigned to the department.

The department's work in grading, inspection, and weighing of agricultural commodities has greatly expanded. This work is supported by voluntary fees and reached approximately 13 million tons in 1976. These activities have been essential to the total marketing efforts of farmers, agribusiness firms, and exporters. Accurate grades, weights, and inspection activities are a necessary prerequisite to the flow of agricultural commodities in the channels of trade—both domestic and foreign.

A system of allocating sales opportunity to flue-cured tobacco warehouses was developed which has enabled flue-cured tobacco growers in all production areas to sell their tobacco when it is ready for sale at the warehouse of their choice at a rate in line with producers in other production areas. This system significantly reduces growers' marketing costs, and enables buyers to more accurately appraise production in all areas. It also rewards warehousemen who provide services desired by growers.

The Virginia Department of Agriculture and Commerce has been instrumental in developing and supporting a good number of farmer action programs. These are programs of various commodities which tax themselves to raise moneys for research, education, planning, and promotion. The apple, peanut, pork, poultry, seed potato, soybean, sweet potato, bright flue-cured tobacco and dark-fired tobacco industries have all created such commissions. In addition, the Virginia Agricultural Foundation was established along these same lines but with the overall goal of supporting all phases of agriculture in Virginia.

From its earliest inception, the Virginia Department of Agriculture and Commerce has been a forerunner in product and commodity regulation through programs to insure quality, truthful labeling and purity of foods, fertilizers, pesticides, feed and seed. These programs contributed to the growth and prosperity of Virginia agribusinesses, while affording its citizens consumer protection. Virginia is known for having one of the strongest weights and measures programs in the country, and many States have adapted their programs after Virginia's.

AGRICULTURAL AND RURAL RESOURCE DEVELOPMENT

This year as the Virginia Department of Agriculture and Commerce celebrates a century of progress, they are continuing to develop programs that benefit all citizens of the State.

With the leadership of Commissioner S. Mason Carbaugh, the Virginia Department of Agriculture and Commerce was one of the first southern departments of agriculture to establish a planning and development unit. The establishment of this unit allows the department to become more long-run oriented and interdisciplinary in its planning process and development of programs and services. Commissioner Carbaugh brought in Dr. Berkwood M. Farmer, the first full time economist, with advanced degrees in agricultural economics to direct this unit.

The newest program deals in the area of planning and development. This past August the department obtained a $118,000 grant from the National Science Foundation to study the "Capacity Building Needs of Rural Areas in Virginia." This study is unique and the only one of its kind in the country. This study will give Virginia the potential of taking the leadership role in demonstrating how a state can serve as a catalyst to integrate research and technological resources into the governing activities of local communities and to improve the effectiveness of areawide levels of government. It is anticipated that the results of this study can be used in other rural areas throughout the country.

The board of agriculture and commerce and the department is continuing to make adjustments in the organization and services provided the industry of agriculture, to others in commerce, and to consumers. Department services are becoming increasingly interdisciplinary in efforts to promote the industry of agriculture, conserve resources, improve the environment, and meet the needs of the general public. For the future, the welfare of the Commonwealth is expected to become increasingly dependent upon further growth and efficiency in the production, assembly, processing, and distribution of renewable resources such as food, fiber, and forest products. Further adjustment in the department's services will be necessary to catalyze and guide the development of these vital industries.

The Virginia Department of Agriculture and Commerce is an example of all State agencies that are full partners in the Federal/State system of government which is so essential to a strong and progressive future.

With an industry of agriculture that is growing in importance and value, with the development of programs that can benefit not only agriculture but all segments of the State's economy, it seems fitting to salute the Virginia Department of Agriculure and Commerce on its 100th birthday.

RULES FOR THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE OF THE HOUSE OF REPRESENTATIVES, 95TH CONGRESS

(Mr. STAGGERS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. STAGGERS. Mr. Speaker, pursuant to rule XI, clause 2(a), of the Rules of the House of Representatives, the rules of procedure of the Committee on Interstate and Foreign Commerce are submitted for publication in the CONGRESSIONAL RECORD:

RULES FOR THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE OF THE HOUSE OF REPRESENTATIVES, 95TH CONGRESS

Rule 1. *Rules of the House.* The Rules of the House are the rules of its committees and its subcommittees so far as is applicable, except that a motion to recess from day to day is a motion of high privilege in committee and subcommittees. Written rules adopted by the committee, not inconsistent with the Rules of the House, shall be binding on each subcommittee of the committee. Each subcommittee of the committee is part of the committee and is subject to the authority and direction of the committee. Rule XI of the Rules of the House which pertains entirely to committee procedure, is incorporated and made a part of the rules of this committee, which are supplementary to Rules of the House.

Rule 2. *Time, Place of Meetings.* (a) The committee shall meet on the fourth Tuesday of each month and at such other times as determined by the chairman, or pursuant to subparagraph (b), in Room 2123 of the Rayburn House Office Building, at 9:45 a.m. for the consideration of bills, resolutions, and other business, if the House is in session on that day. If the House is not in session on that day and the committee has not met during such month, the committee shall meet at such time and place on the first day thereafter when the House is in session.

(b) The chairman may call and convene, as he considers necessary, additional meetings of the committee for the consideration of any bill or resolution pending before the committee or for the conduct of other committee business. The committee shall meet for such purposes pursuant to that call of the chairman.

(c) If at least three members of the committee or subcommittee (whichever is applicable) desire that a special meeting of the committee or subcommittee (whichever is applicable) be called by the chairman or subcommittee chairman, those members may file in the offices of the committee their written request to the chairman or subcommittee chairman for that special meeting. Such request shall specify the measure or matter to be considered. Immediately upon the filing of the request, the clerk of the committee

shall notify the chairman or subcommittee chairman of the filing of the request. If, within 3 calendar days after the filing of the request, the chairman or subcommittee chairman does not call the requested special meeting to be held within 7 calendar days after the filing of the request, a majority of the members of the committee or subcommittee (whichever is applicable) may file in the offices of the committee their written notice that a special meeting of the committee or subcommittee (whichever is applicable) will be held, specifying the date and hour thereof, and the measure or matter to be considered at that special meeting. The committee or subcommittee (whichever is applicable) shall meet on that date and hour. Immediately upon the filing of the notice, the clerk or the committee shall notify all members of the committee or subcommittee (whichever is applicable) that such meeting will be held and inform them of its date and hour and the measure or matter to be considered and only the measure or matter specified in that notice may be considered at that specified meeting.

(d) If the chairman of the committee or subcommittee is not present at any meeting of the committee or subcommittee, the ranking member of the majority party on the committee or subcommittee who is present shall preside at that meeting.

(e) Each meeting of the committee or any of its subcommittees for the transaction of business, including hearings and the mark-up of legislation shall be open to the public except when the committee or subcommittee in open session and with a quorum present determines by rollcall vote that all or part of the remainder of the meeting on that day shall be closed to the public. This paragraph does not apply to those special cases provided in the Rules of the House where closed sessions are otherwise provided.

Rule 3. *Agenda.* The agenda for each committee or subcommittee meeting (other than a hearing), setting out all items of business to be considered, shall be provided to each member of the committee by delivery to his office at least 36 hours in advance of such meeting.

Rule 4. *Procedure.* (a) The date, time, place, and subject matter of any meeting of the committee or any of its subcommittees shall be announced—

(1) in the case of a hearing, at least 1 week in advance of the commencement of such hearing, unless the committee or subcommittee determines in accordance with such procedure as it may prescribe, that there is good cause to begin the hearing sooner;

(2) in the case of a meeting (other than a hearing) scheduled on a Tuesday, Wednesday, or Thursday when the House will be in session, at least 36 hours in advance of the commencement of such meeting, and

(3) in any other case, at least 72 hours in advance of the commencement of such meeting.

(b) Each witness who is to appear before the committee or subcommittee shall file with the clerk of the committee, at least two working days in advance of his appearance, fifty (50) copies of a written statement of his proposed testimony and shall limit his oral presentation at his appearance to a brief summary of his argument, unless this requirement, or any part thereof, is waived by the committee or subcommittee chairman presiding.

(c) The right to interrogate the witnesses before the committee or any of its subcommittees shall alternate between majority and minority members. Each member shall be limited to 5 minutes in the interrogation of witnesses until such time as each member who so desires has had an opportunity to question witnesses. No member shall be recognized for a second period of 5 minutes to interrogate a witness until each member of the committee present has been recognized once for that purpose. While the committee is operating under the 5-minute rule for the interrogation of witnesses, the chairman shall recognize in the order of appearance members who were not present when the meeting was called to order after all members who were present when the meeting was called to order have been recognized in the order of seniority.

(d) No bill, recommendation, or other matter reported by a subcommittee shall be considered by the full committee unless the text of the matter reported, together with an explanation, has been available to members of the committee for at least 36 hours. Such explanation shall include a summary of the major provisions of the legislation, an explanation of the relationship of the matter to present law, and a summary of the need for the legislation. All subcommittee actions shall be reported promptly by the clerk of the committee to all members of the committee.

Rule 5. *Waiver of Notice, Agenda, and Lay-over Requirements.*

Requirements of Rule 3, 4(a) (2) and (3), and 4(d) may be waived by a majority of those present and voting (a majority being present) of the committee or subcommittee, as the case may be.

Rule 6. *Quorum.* Testimony may be taken and evidence received at any hearing at which there are present not fewer than two members of the committee or subcommittee in question. In the case of a meeting other than a hearing, the number of members constituting a quorum shall be one-third of the members of the committee or subcommittee, except that a matter may not be reported by the committee or a subcommittee unless a majority of the members thereof is actually present.

Rule 7. *Proxies.* No vote by any member of the committee or any of its subcommittees with respect to any measure or matter may be cast by proxy unless a proxy authorization is given in writing by the member desiring to cast a proxy, which authorization shall assert that the member is absent on official business or is absent due to personal illness and is thus unable to be present at the meeting of the committee or subcommittee and shall be limited to a specific measure or matter and any amendments or motions pertaining thereto. Each proxy to be effective shall be signed by the member assigning his/her vote and shall contain the date and time of the day that the proxy is signed. No proxy shall be voted on a motion to adjourn or shall be counted to make a quorum or be voted unless a quorum is present.

Rule 8. *Journal, Rollcalls.* The proceedings of the committee shall be recorded in a journal which shall, among other things, show those present at each meeting, and include a record of the votes on any question on which a record vote is demanded and a description of the amendment, motion, order or other proposition voted. A copy of the journal shall be furnished to the ranking minority member. A record vote may be demanded by one-fifth of the members present or in the apparent absence of a quorum by any one member. No demand for a rollcall shall be made or obtained except for the purpose of procuring a record vote or in the apparent absence of a quorum. The result of each rollcall vote in any meeting of the committee shall be made available in the committee office for inspection by the public, as provided in Rule XI, clause 2(e) of the Rules of House.

Rule 9. *Filing of Committee Reports.* If, at the time of approval of any measure or matter by this committee, any member or members of the committee give notice of an intention to file supplemental, minority, or additional views, that member shall be entitled to not less than three (3) calendar days (exclusive of Saturdays, Sundays, and legal holidays) in which to file such views in writing and signed by that member or members with the committee. All such views so filed shall be included within and shall be a part of the report filed by the committee with respect to that measure or matter.

Rule 10. *Subcommittees.* There shall be such standing subcommittees with such jurisdiction and size as determined by the majority party caucus of the committee and, in addition, a Subcommittee on Oversight and Investigations. Such committees shall, to the maximum extent practicable, be of equal size. The Subcommittee on Oversight and Investigations shall coordinate its work with the work of the other standing subcommittees and shall maintain regular communication with the standing subcommittees and the Chairman of the full committee in order to obtain advice on subjects for investigation. The standing subcommittee shall maintain regular communication with the Subcommittee on Oversight and Investigations to advise the Subcommittee on Oversight and Investigations of subjects for investigation.

Rule 11. *Powers and Duties of Subcommittees.* Each subcommittee is authorized to meet, hold hearings, receive testimony, mark-up legislation, and report to the committee on all matters referred to it. Subcommittee Chairmen shall set hearing and meeting dates only after consultation with the chairman of the full committee with a view toward assuring availability of meeting rooms and avoiding simultaneous scheduling of committee and subcommittee meetings or hearings wherever possible.

Rule 12. *Reference of Legislation and Other Matters.* All legislation and other matters referred to the committee shall be referred to the subcommittee of appropriate jurisdiction immediately unless, by majority vote of the members of the full committee within five (5) legislative days, consideration is to be by the full committee. In the case of legislation or other matter within the jurisdiction of more than one subcommittee, the chairman of the committee shall have the same authority to refer such legislation or other matter to one or more subcommittees as the Speaker has under clause 5(c) of Rule X of the House of Representatives to refer a matter to one or more committees of the House. Such authority shall include the authority to refer such legislation or matter to an ad hoc subcommittee appointed by the chairman, with the approval of the committee, from the members of the subcommittees having legislative or oversight jurisdiction.

Rule 13. *Ratio of Subcommittees.* The majority caucus of the committee shall determine an appropriate ratio of majority to minority party members for each subcommittee and the chairman shall negotiate that ratio with the minority party, provided that the ratio of majority party members on each subcommittee shall be no less favorable to the majority than that of the full committee, nor shall such ratio provide for a majority of less than two majority members.

Rule 14. *Subcommittee Membership.* (a) Subject to the requirements of the Manual of the Democratic Caucus of the House of Representatives, each majority member other than the chairman of the full committee or the chairman of a subcommittee shall in order of committee seniority be entitled to membership on two subcommittees of said member's choice. A member (other than an ex officio member) may serve on more than two subcommittees only if such service is necessary in order to comply with Rule 13. Proceeding in order of seniority on the committee, each majority member, other than the chairman of the full committee and the chairmen of the several subcommittees, shall be entitled to select one subcommittee position each. The subcommittee selection process shall then continue in sequence of

committee seniority, including the chairmen of the several subcommittees, for succeeding rounds of selection until all subcommittee positions are filled. The subcommittee selection process shall be conducted at a meeting of the majority party caucus of the committee held prior to any organizational meeting of the full committee. Subcommittee selections of each member shall be recorded by the clerk as made and shall be available for examination by the members.

(b) Minority subcommittee membership shall be selected as determined by the minority.

(c) The chairman and ranking minority member of the committee shall be ex officio members with voting privileges, of each subcommittee of the committee of which they are not assigned members.

Rule 15. *Subcommittee Chairman.* (a) Majority members of the committee shall have the right, in order of full committee seniority to bid for subcommittee chairmanships. Any such request shall be subject to approval by a majority of those present and voting, by secret ballot, in the majority party caucus of the committee. If the caucus rejects a subcommittee chairmanship bid, the next senior majority member may bid for the position as in the first instance. The subcommittee chairmen shall be elected by the full committee from nominations submitted by the majority party caucus of the committee.

(b) Subcommittee chairmen shall manage legislation reported from their subcommittees on the House floor.

Rule 16. *Committee Professional and Clerical Staff Appointments.*

(a) Whenever the chairman of the committee determines that any professional staff member appointed pursuant to the provisions of clause 6 of rule XI of the House of Representatives, who is assigned to such chairman and not to the ranking minority members, by reason of such professional staff member's expertise or qualifications will be of assistance to one or more subcommittees in carrying out their assigned responsibilities, he may delegate such member to such subcommittees for such purpose. A delegation of a member of the professional staff pursuant to this subsection shall be made after consultation with the subcommittee chairmen and with the approval of the subcommittee chairman or chairmen involved.

(b) Professional staff members appointed pursuant to clause 6 of rule XI of the House of Representatives, who are assigned to the ranking minority party member of the committee and not to the chairman of the committee, shall be assigned to such committee business as the minority party members of the committee consider advisable.

(c) In addition to the professional staff appointed pursuant to clause 6 of rule XI of the House of Representatives, the chairman of the committee shall be entitled, subject to the approval of the majority party members of the committee, to make such appointments to the professional and clerical staff of the committee as may be provided within the budget approved for such purposes by the committee. Such appointees shall be assigned to such business of the full committee as the chairman of the committee considers advisable.

(d) Subcommittee chairmen, subject to the approval of the majority party members of the committee, shall be entitled to make such appointments to the professional and clerical staff of the committee as may be provided in the budgets approved for such purposes by the subcommittees and incorporated into the committee budget as provided for in rule 18 of these rules. Such professional and clerical appointees shall be delegated to the appropriate subcommittee for the purposes of assisting such subcommittee in the discharge of its assigned legislative responsibilities and may be removed and their compensation fixed by the subcommittee chairman subject to the approval of the majority members of the committee.

(e) The chairman of the Subcommittee on Oversight and Investigations subject to the approval of the majority party members of the committee, shall be entitled to make such appointments to the professional and clerical staff of the subcommittee as may be provided in the budget approved for such purpose in accordance with rule 18 of these rules. Such professional and clerical appointees may be removed and their compensation fixed by the chairman of such subcommittee subject to the approval of the majority members of the subcommittee.

(f) In addition to appointments made pursuant to other subsections of this rule, (1) the subcommittee chairman of each of the committee's subcommittees is authorized to appoint, in accordance with such rules as the majority party caucus may prescribe, one staff person who shall serve at the pleasure of such subcommittee chairman, and (2) the ranking minority member of each such subcommittee is authorized to appoint, in accordance with such rules as the minority party caucus may prescribe, one staff person who shall serve at the pleasure of such ranking minority member. Remuneration of any staff person appointed under this subsection shall be governed by paragraph (d) of clause 5 of rule XI of the House of Representatives.

(g) Any contract for the temporary services or intermittent services of individual consultants or organizations to make studies or advise the committee or its subcommittees with respect to any matter within their jurisdiction shall be deemed to have been approved by a majority of the members of the committee if approved by the chairman and ranking minority member of the committee and, if funded by a subcommittee, by the chairman and ranking minority member of that subcommittee. Such approval shall not be deemed to have been given if at least one-third of the members of the committee request in writing that the committee formally act on such a contract, if such request is made within 10 days after the latest date on which such chairman or chairmen, and such ranking minority member or members approve such contract.

Rule 17. *Supervision, Duties of Staff.* (a) The professional and clerical staff of the committee delegated to subcommittees of the committee pursuant to rule 16 shall be subject to the supervision and direction of the chairman of the subcommittee to which they are assigned with respect to matters before the subcommittee, who shall establish and assign the duties and responsibilities of such staff members and delegate such authority as he determines appropriate. The professional and clerical staff assigned to the minority shall be under the supervision and direction of the minority members of the committee who may delegate such authority as they determine appropriate. Subject to subsection (b), the professional and clerical staff of the committee not delegated to a subcommittee pursuant to rule 16(d) or to the minority shall be under the supervision and direction of the chairman, who shall establish and assign the duties and responsibilities of such staff members and delegate such authority as he determines appropriate.

(b) The professional staff member who is assigned principal responsibility by a subcommittee chairman with respect to a matter before such subcommittee chairman's subcommittee shall continue to assume principal staff responsibility during any consideration before the full committee, the Rules Committee, the House, and Conference Committees of any matter which is reported by such subcommittee.

Rule 18. *Committee and Subcommittee Budgets.* (a) The chairman of the committee after consultation with the ranking minority member of the committee, shall for each session of the Congress prepare a preliminary budget for the committee. Such budget shall include necessary amounts for professional and clerical staff, travel, investigation, and miscellaneous expenses under his direction and supervision. The chairman of each standing subcommittee, after consultation with the members of the subcommittee, shall prepare a preliminary budget which shall include funds for professional and clerical staff, travel, investigation, and miscellaneous expenses and which shall be adequate to fully discharge its responsibilities for legislation and oversight. Thereafter, the chairman of the full committee shall combine such proposals into a committee budget, which shall state separately the budgeted amounts for the full committee and for each of the subcommittees. Such budget shall be presented to the majority party caucus of the committee and thereafter to the full committee for its approval.

(b) The chairman shall take whatever action is necessary to have the budget as finally approved by the committee duly authorized by the House. No proposed committee budget may be submitted to the House Administration Committee unless it has been presented to and approved by the majority party caucus and thereafter by the full committee. The chairman of the full committee or the chairmen of the standing subcommittees may authorize all necessary expenses in accordance with these rules and within the limits of their portion of the budget as approved by the House.

(c) Committee members shall be furnished a copy of each monthly report, prepared by the chairman for the Committee on House Administration, which shows expenditures made during the reporting period and cumulative for the year by committee and subcommittees, anticipated expenditures for the projected committee program, and detailed information on travel.

Rule 19. *Broadcasting of Committee Hearings.* Any meeting or hearing that is open to the public may be covered in whole or in part by radio or television or still photography, subject to the requirements of rule XI, clause 3 of the Rules of the House of Representatives. At all such meetings or proceedings, coverage by radio, television or still photography will be allowed unless specifically forbidden by a record vote of the committee or subcommittee. The coverage of any hearing or other proceeding of the committee or any subcommittee thereof by television, radio, or still photography shall be under the direct supervision of the chairman of the committee, the subcommittee chairman, or other member of the committee presiding at such hearing or other proceeding and, for good cause, may be terminated by him.

Rule 20. *Comptroller General Audits.* The chairman of the committee is authorized to request verification examinations by the Comptroller General of the United States pursuant to Title V, Part A of the Energy Policy and Conservation Act (Public Law 94–163), after consultation with the members of the committee.

Rule 21. *Subpenas.* The full committee, or any subcommittee, may authorize and issue a subpena under clause 2(m)(2)(A) of Rule XI of the House of Representatives, if authorized by a majority of the members voting of the committee or subcommittee (as the case may be), a quorum being present. In addition, the chairman of the full committee may authorize and issue subpenas under such clause during any period for which the House has adjourned for a period in excess of three days. Subpenas may be issued over the signature of the chairman of the full committee, or any member of the committee authorized by such chairman and

may be served by any person designated by such chairman or member.

RULES OF COMMITTEE CN BANKING, FINANCE AND URBAN AFFAIRS

(Mr. REUSS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. REUSS. Mr. Speaker, as chairman of the Committee on Banking, Finance and Urban Affairs, I submit herewith for printing in the CONGRESSIONAL RECORD the rules of the Committee on Banking, Finance and Urban Affairs, which were adopted on January 27, 1977, in accordance with clause 2(a)(3) of House rule XI:

RULES FOR THE COMMITTEE ON BANKING, FINANCE AND URBAN AFFAIRS

RULE NO. I—GENERAL PROVISIONS

(a) The Rules of the House are the rules of the committees and subcommittees so far as applicable, except that a motion to recess from day to day is a motion of high privilege in committee and subcommittees. Each subcommittee of the committee is a part of the committee, and is subject to the authority and direction of the committee and to its rules so far as applicable.

(b) The committee is authorized at any time to conduct such investigations and studies as it may consider necessary or appropriate in the exercise of its responsibilities under rule X of House Rules and (subject to the adoption of expense resolutions as required by rule XI, clause 5 of House Rules) to incur expenses (including travel expenses) in connection herewith.

(c) The committee is authorized to have printed and bound testimony and other data presented at hearings held by the committee. All costs of stenographic services and transcripts in connection with any meeting or hearing of the committee shall be paid from the contingent fund of the House.

(d) The committee shall submit to the House, not later than January 2 of each odd-numbered year, a report on the activities of the committee under rules X and XI of House Rules during the Congress ending at noon on January 3 of such year.

(e) The committee's rules shall be published in the Congressional Record not later than 30 days after the Congress convenes in each odd-numbered year.

RULE NO. II—REGULAR AND SPECIAL MEETINGS: OPEN COMMITTEE MEETINGS

(a) Regular meetings of the committee shall be held on the first and third Tuesday of each month while the Congress is in session. When the chairman believes that the committee will not be considering any bill or resolution before the full committee and that there is no other business to be transacted at a regular meeting, he will give each member of the committee, as far in advance of the day of the regular meeting as the circumstances make practicable, a written notice to that effect and no committee meeting shall be held on that day.

(b) The chairman may call and convene, as he considers necessary, additional meetings of the committee for the consideration of any bill or resolution pending before the committee or for the conduct of other committee business. The committee shall meet for such purpose pursuant to that call of the chairman.

(c) If at least three members of the committee desire that a special meeting of the committee be called by the chairman, those members may file in the offices of the committee their written request to the chairman for that special meeting. Such request shall specify the measure or matter to be considered. Immediately upon the filing of the request, the clerk of the committee shall notify the chairman of the filing of the request. If, within 3 calendar days after the filing of the request, the chairman does not call the requested special meeting to be held within 7 calendar days after the filing of the request, a majority of the members of the committee may file in the offices of the committee their written notice that a special meeting of the committee will be held, specifying the date and hour thereof, and the matter to be considered at that special meeting. The committee shall meet on that date and hour. Immediately upon the filing of the notice, the clerk of the committee shall notify all members of the committee that such meeting will be held and inform them of its date and hour and the measure or matter to be considered; and only the measure or matter specified in that notice may be considered at that special meeting.

(d) If the chairman of the committee or subcommittee is not present at any meeting of the committee or subcommittee the ranking member of the majority party on the committee or subcommittee who is present shall preside at that meeting.

(e) The committee may not sit, without special leave, while the House is reading a measure for amendment under the 5-minute rule.

(f)(1) Each meting for the transaction of business, including the markup of legislation, of the committee or each subcommittee thereof shall be open to the public except when the committee or subcommittee, in open session and with a majority present, determines by rollcall vote that all or part of the remainder of the meeting on that day be closed to the public: Provided, however, That no person other than members of the committee and such congressional staff and such departmental representatives as they may authorize shall be present at any business or markup session which has been closed to the public. This paragraph does not apply to open committee hearings which are provided for by clause 4(a)(3) of House Rule X or by subparagraph (2) of this paragraph, or to any meeting that relates solely to internal budget or personnel matters.

(2) Each hearing conducted by the committee or each subcommittee thereof shall be open to the public except when the committee or subcommittee, in open session and with a majority present, determines by rollcall vote that all or part of the remainder of that hearing on that day shall be closed to the public because disclosure of testimony, evidence, or other matters to be considered would endanger the national security or would violate any law or rule of the House of Representatives: Provided, however, that the committee or subcommittee may by the same procedure vote to close one subsequent day of hearing.

RULE NO. III—RECORDS AND ROLLCALLS

(a) There shall be kept in writing a record of the proceedings of the committee and of each subcommittee, including a record of the votes on any question on which a rollcall is demanded. The result of each such rollcall vote shall be made available by the committee for inspection by the public at reasonable times in the offices of the committee. Information so available for public inspection shall include a description of the amendment, motion, order or other proposition and the name of each member voting for and each member voting against such amendment, motion, order, or proposition, and whether by proxy or in person, and the names of those members present but not voting. A record vote may be demanded by any three of the members present or, in the apparent absence of a quorum, by any one member. With respect to each record vote by the committee to report any bill or resolution, the name of each member voting for and voting against the motion to report, and whether by proxy or in person, and the names of those members present but not voting, and the names of those members absent, shall be included in the committee report.

(b) All committee hearings, records, data, charts, and files shall be kept separate and distinct from the congressional office records of the member serving as chairman of the committee; and such records shall be the property of the House and all Members of the House shall have access thereto.

RULE NO. IV—PROXIES

(a) No vote by any member of the committee or any of its subcommittees with respect to any measure or matter may be cast by proxy unless a proxy authorization is given in writing by the member desiring to cast a proxy, which authorization shall assert that the member is absent on official business or is absent due to personal illness and is thus unable to be present at the meeting of the committee or subcommittee and shall be limited to a specific measure or matter and any amendments or motions pertaining thereto. Each proxy to be effective shall be signed by the member assigning his/her vote and shall contain the date and time of the day that the proxy is signed. No proxy shall be voted on a motion to adjourn or shall be counted to make a quorum or be voted unless a quorum is present.

(b) Proxies shall be in the following form:

Hon. _____,
House of Representatives,
Washington, D.C.

DEAR _____: I will be absent on official business/ due to personal illness and thus unable to be present at the meeting of the committee or subcommittee. I hereby authorize you to vote in my place and stead in the consideration of _____ _____ and any amendments or motions pertaining thereto. The official business that necessitates my absence is _____.

_____,
Member of Congress.

Executed this the ____ day of _____, 19____, at the time of _____ p.m./a.m.

RULE NO. V—POWER TO SIT AND ACT; SUBPENA POWER

(a) For the purpose of carrying out any of its functions and duties under House Rules X and XI the committee, or any subcommittee thereof, is authorized (subject to subparagraph (b)(1) of this paragraph)—

(1) to sit and act at such times and places within the United States, whether the House is in session, has recessed, or has adjourned, and to hold such hearings, and

(2) to require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memorandums, papers, and documents as it deems necessary. The chairman of the committee, or any member designated by the chairman, may administer oaths to any witness.

(b)(1) A subpena may be authorized and issued by the committee or subcommittee under subparagraph (a)(2) in the conduct of any investigation or activity or series of investigations or activities, only when authorized by a majority of the members voting, a majority being present. The power to authorize and issue subpenas under subparagraph (a)(2) may be delegated to the chairman of the committee pursuant to such limitations as the committee may prescribe. Authorized subpenas shall be signed by the chairman of the committee or by any member designated by the committee.

(2) Compliance with any subpena issued

by the committee or subcommittee under subparagraph (a)(2) may be enforced only as authorized or directed by the House.

(c) Each witness who has been subpenaed, upon the completion of his testimony before the committee or any subcommittee, may report to the office of counsel of the committee, and there sign appropriate vouchers for travel allowances and attendance fees. If hearings are held in cities other than Washington, D.C., the witness may contact the counsel of the committee, or his representatives, prior to leaving the hearing room.

RULE NO. VI—QUORUMS

A majority of the members of the full committee or subcommittees shall constitute a quorum of the full committee or subcommittees for the reporting of a measure or recommendation: Provided, that the number of members constituting a quorum for the taking of any action other than the reporting of a measure or recommendation shall be one-third of the members of the committee or subcommittee, and any two members shall constitute a quorum for the purpose of taking testimony and receiving evidence.

RULE NO. VII—HEARING PROCEDURES

(a) The chairman, in the case of hearings to be conducted by the committee, and the appropriate subcommittee chairman, in the case of hearings to be conducted by a subcommittee, shall make public announcement of the date, place, and subject matter at least one week before the commencement of that hearing unless the committee determines that there is good cause to begin such hearing at an earlier date. In the latter event the chairman or the subcommittee chairman whichever the case may be shall make such public announcement at the earliest possible date. The clerk of the committee shall promptly notify all members of the committee and the Daily Digest Clerk of the Congressional Record as soon as possible after such public announcement is made.

(b) So far as practicable, each witness who is to appear before the committee or a subcommittee shall file with the clerk of the committee, at least 24 hours in advance of his appearance, 100 copies of his proposed testimony and may be required to limit his oral presentation to a summary of his statement.

(c) When any hearing is conducted by the committee or any subcommittee upon any measure or matter, the minority party members on the committee shall be entitled, upon request to the chairman by a majority of those minority members before the completion of such hearing, to call witnesses selected by the minority to testify with respect to that measure or matter during at least one day of hearing thereon.

(d) Upon announcement of a hearing, the Clerk and Staff Director shall cause to be prepared a concise summary of the subject matter (including legislative reports and other material) under consideration which shall be made available immediately to all members of the committee. In addition, upon announcement of a hearing and subsequently as they are received, the chairman shall make available to the members of the committee any official reports from departments and agencies on such matter.

(e) All other members of the committee may have the privilege of sitting with any subcommittee during its hearings or deliberations and may participate in such hearings or deliberations, but no such member who is not a member of the subcommittee shall vote on any matter before such subcommittee.

(f) Committee members may question witnesses only when they have been recognized by the chairman for that purpose, and only for a 5-minute period until all members present have had an opportunity to question a witness. The 5-minute period for questioning a witness by any one member can be extended only with the unanimous consent of all members present. The questioning of witnesses in both full and subcommittee hearings shall be initiated by the chairman, followed by the ranking minority party member and all other members alternating between the majority and minority. In recognizing members to question witnesses in this fashion, the chairman shall take into consideration the ratio of the majority to minority members present and shall establish the order of recognition for questioning in such a manner as not to disadvantage the members of the majority. The chairman may accomplish this by recognizing two majority members to each minority member recognized.

(g) The following additional rules shall apply to investigative hearings:

(1) The chairman at any investigative hearing shall announce in an opening statement the subject of the investigation.

(2) A copy of the committee rules and this clause shall be made available to each witness.

(3) Witnesses at investigative hearings may be accompanied by their own counsel for the purpose of advising them concerning their constitutional rights.

(4) The chairman may punish breaches of order and decorum, and of professional ethics on the part of counsel, by censure and exclusion from the hearings; and the committee may cite the offender to the House for contempt.

(5) If the committee determines that evidence or testimony at an investigative hearing may tend to defame, degrade, or incriminate any person it shall—

(A) receive such evidence or testimony in executive session;

(B) afford such person an opportunity voluntarily to appear as a witness; and

(C) receive and dispose of requests from such person to subpena additional witnesses.

(6) Except as provided in subparagraph (5), the chairman shall receive and the committee shall dispose of requests to subpena additional witnesses.

(7) No evidence or testimony taken in executive session may be released or used in public sessions without the consent of the committee.

(8) In the discretion of the committee, witnesses may submit brief and pertinent sworn statements in writing for inclusion in the record. The committee is the sole judge of the pertinency of testimony and evidence adduced at its hearing.

(9) A witness may review and photostat a copy of his or her testimony given at a public session or, if given at an executive session, when authorized by the committee.

RULE NO. VIII—PROCEDURES FOR REPORTING BILLS AND RESOLUTIONS

(a)(1) It shall be the duty of the chairman of the committee to report or cause to be reported promptly to the House any measure approved by the committee and to take or cause to be taken necessary steps to bring the matter to a vote.

(2) In any event, the report of the committee on a measure which has been approved by the committee shall be filed within 7 calendar days (exclusive of days on which the House is not in session) after the day on which there has been filed with the clerk of the committee a written request, signed by a majority of the members of the committee, for the reporting of that measure. Upon the filing of any such request, the clerk of the committee shall transmit immediately to the chairman of the committee notice of the filing of that request.

(b)(1) No measure or recommendation shall be reported from the committee unless a majority of the committee was actually present.

(2) With respect to each record vote by the committee to report any bill or resolution, the name of each member voting for and voting against the motion to report, and whether by proxy or in person, and the names of those members present but not voting, and the names of those members absent, shall be included in the committee report.

(c) The report of the committee on a measure which has been approved by the committee shall include—

(1) the oversight findings and recommendations required pursuant to the last sentence of clause 2(b)(1) of rule X of the House separately set out and clearly identified;

(2) the statement required by section 308 (a) of the Congressional Budget Act of 1974, separately set out and clearly identified, if the measure provides new budget authority or new or increased tax expenditures;

(3) the estimate and comparison prepared by the Director of the Congressional Budget Office under section 403 of such act, separately set out and clearly identified, whenever the Director (if timely submitted prior to the filing of the report) has submitted such estimate and comparison to the committee; and

(4) a summary of the oversight findings and recommendations made by the Committee on Government Operations under clause 2(b)(2) of rule X of the House separately set out and clearly identified whenever such findings and recommendations have been submitted to the legislative committee in a timely fashion to allow an opportunity to consider such findings and recommendations during the committee's deliberations on the measure.

(d) Each report of the committee on each bill or joint resolution of a public character reported by the committee shall contain a detailed analytical statement as to whether the enactment of such bill or joint resolution into law may have an inflationary impact on prices and costs in the operation of the national economy.

(e) If, at the time of approval of any measure, matter or any report or submission to be made to the House or to the Committee on the Budget under subclauses (g), (h), and (i) of clause 4 of Rule X of the Rules of the House of Representatives by the committee, any member of the committee gives notice of intention to file supplemental, minority, or additional views, that member shall be entitled to not less than 3 calendar days (excluding Saturdays, Sundays, and legal holidays) in which to file such views, in writing and signed by that member, with the clerk of the committee. All such views so filed by one or more members of the committee shall be included within, and shall be a part of, the report filed by the committee with respect to that measure or matter. The report of the committee upon that measure or matter shall be printed in a single volume which—

(1) shall include all supplemental, minority, or additional views which have been submitted by the time of the filing of the report, and

(2) shall bear upon its cover a recital that any such supplemental, minority, or additional views (and any material submitted under subdivisions (3) and (4) of subparagraphs (c)) are included as part of the report. This subparagraph does not preclude—

(A) the immediate filing or printing of a committee report unless timely request for the opportunity to file supplemental, authority, or additional views has been made as provided by this subparagraph; or

(B) the filing by any such committee of any supplemental report upon any measure or matter which may be required for the correction of any technical error in a previous report made by that committee upon that measure or matter.

(f) If hearings have been held on any such measure or matter so reported, the committee shall make every reasonable effort to have such hearings printed and available for distribution to the Members of the House prior to the consideration of such measure or matter in the House. This subparagraph shall not apply to—

(1) any measure for the declaration of war, or the declaration of a national emergency, by the Congress; or

(2) any executive decision, determination, or action which would become, or continue to be, effective unless disapproved or otherwise invalidated by one or both Houses of Congress.

RULE NO. IX—OVERSIGHT SUBCOMMITTEE

(a) In order to assist the House in:

(1) its analysis, appraisal, and evaluation of (A) the application, administration, execution, and effectiveness of the laws enacted by the Congress, of (B) conditions and circumstances which may indicate the necessity or desirability of enacting new or additional legislation, and

(2) its formulation, consideration, and enactment of such modifications or changes in those laws, and of such additional legislation, as may be necessary or appropriate, there shall be established in conformity with rule XV an Oversight Subcommittee.

(b) The Oversight Subcommittee shall review and study, on a continuing basis, the application, administration, execution, and effectiveness of those laws, or parts of laws, the subject matter of which is within the jurisdiction of the committee, and the organization and operation of the Federal agencies and entities which have responsibilities in or for the administration and execution thereof, in order to determine whether such laws and the programs thereunder are being implemented and carried out in accordance with the intent of the Congress and whether such programs should be continued, curtailed, or eliminated. In addition, the Oversight Subcommittee shall review and study any conditions or circumstances which may indicate the necessity or desirability of enacting new or additional legislation within the jurisdiction of the committee (whether or not any bill or resolution has been introduced with respect thereto), and shall on a continuing basis undertake future research and forecasting on matters within the jurisdiction of the committee. The Oversight Subcommittee shall in no way limit the responsibility of the subcommittees from carrying out their oversight responsibilities.

(c) The Oversight Subcommittee shall review and study on a continuing basis the impact or probable impact of tax policies affecting subjects within the jurisdiction of the committee.

RULE NO. X.—REVIEW OF CONTINUING PROGRAMS; BUDGET ACT PROVISIONS

(a) The committee shall, in its consideration of all bills and joint resolutions of a public character within its jurisdiction, insure that appropriations for continuing programs and activities of the Federal Government and the District of Columbia government will be made annually to the maximum extent feasible and consistent with the nature, requirements, and objectives of the programs and activities involved. For the purposes of this paragraph a Government agency includes the organizational units of government listed in clause 7(d) of Rule XIII of the House Rules.

(b) The committee shall review, from time to time, each continuing program within its jurisdiction for which appropriations are not made annually in order to ascertain whether such program could be modified so that appropriations therefor would be made annually.

(c) The committee shall, on or before March 15 of each year, submit to the Committee on the Budget (1) its views and estimates with respect to all matters to be set forth in the concurrent resolution on the budget for the ensuing fiscal year which are within its jurisdiction or functions, and (2) an estimate of the total amount of new budget authority, and budget outlays resulting therefrom, to be provided or authorized in all bills and resolutions within its jurisdiction which it intends to be effective during that fiscal year.

(d) As soon as practicable after a concurrent resolution on the budget for any fiscal year is agreed to, the committee (after consulting with the appropriate committee or committees of the Senate) shall subdivide any allocations made to it in the joint explanatory statement accompanying the conference report on such resolution, and promptly report such subdivisions to the House, in the manner provided by section 302 of the Congressional Budget Act of 1974.

(e) Whenever the committee is directed in a concurrent resolution on the budget to determine and recommend changes in laws, bills, or resolutions under the reconciliation process it shall promptly make such determination and recommendations, and report a reconciliation bill or resolution (or both) to the House or submit such recommendations to the Committee on the Budget in accordance with the Congressional Budget Act of 1974.

RULE NO. XI.—BROADCASTING OF COMMITTEE HEARINGS

Any meeting or hearing that is open to the public may be covered in whole or in part by radio or television or still photography, subject to the requirements of Rule XI, clause 3 of the Rules of the House of Representatives. At all such meetings or proceedings, coverage by radio, television or still photography will be allowed unless specifically forbidden by a record vote of the committee or subcommittee. The coverage of any hearing or other proceeding of the committee or any subcommittee thereof by television, radio, or still photography shall be under the direct supervision of other member of the committee presiding at such hearing or other proceeding and, for good cause, may be terminated by him/her.

RULE NO. XII—COMMITTEE AND SUBCOMMITTEE BUDGETS

(a) The chairman, in consultation with the majority members of the committee shall, for each session of the Congress, prepare a preliminary budget. Such budget shall include necessary accounts for staff personnel, for necessary travel, investigation, and other expenses of the full committee, and after consultation with the minority membership, the chairman shall include amounts budgeted to the minority members for staff personnel to be under the direction and supervision of the minority, travel expenses of minority members and staff, and minority office expenses. All travel expenses of minority members and staff shall be paid for out of the amounts so set aside and budgeted.

(b) (1) The chairman of each subcommittee, in consultation with the majority members thereof, shall prepare a budget to include funds for staff, travel, investigations, and miscellaneous expenses as may be required for the work of the subcommittee.

(2) The chairman of each subcommittee shall control the funds provided for in the subcommittee budget.

(c) The chairman shall combine the proposals of each subcommittee with the preliminary budget of the full committee into a consolidated committee budget, and shall present the same to the committee for its approval. The chairman shall then take all action necessary to bring about its approval by the Committee on House Administration and by the House.

(d) Authorization for the payment of additional or unforeseen committee and subcommittees' expenses may be procured by one or more additional expense resolutions processed in the same manner as set out herein.

(e) The chairman or any chairman of a subcommittee may initiate necessary travel requests as provided in Rule XIV within the limits of their portion of the consolidated budget as approved by the House and the chairman may execute necessary vouchers thereof.

(f) Once monthly, at the regularly scheduled meetings, the chairman shall submit to the committee, in writing, for its approval, or other action, a full and detailed accounting of all expenditures made during the period since the last such accounting from the amount budgeted to the full committee. Such report shall show the amount and purpose of each expenditure and the budget to which such expenditure is attributed.

RULE NO. XIII—COMMITTEE AND SUBCOMMITTEE STAFF

(a) The professional and clerical staff assigned to the minority shall be appointed and their remuneration determined in such manner as the minority members of the committee shall determine within the budget approved for such purposes by the committee; provided, however, that no minority staff person shall be compensated at a rate which exceeds that paid his or her majority party staff counterpart.

(b) The professional and clerical employees of the committee not assigned to a subcommittee or to the minority under the above provision shall be appointed, and may be removed, and their remuneration determined by the chairman in consultation with and with the approval of the majority members of the committee within the budget approved for such purposes by the committee.

(c) The professional and clerical staff assigned to the minority shall be under the general supervision and direction of the minority members of the committee who may delegate such authority as they determine appropriate.

(d) The professional and clerical staff of the committee not assigned to a subcommittee or to the minority shall be under the general supervision and direction of the chairman, who shall establish and assign the duties and responsibilities of such staff members and delegate such authority as he determines appropriate.

(e) It is intended that the skills and experience of all members of the committee staff be available to all members of the committee.

(f) (1) The chairman of such standing subcommittee of this committee is authorized to appoint one staff member who shall serve at the pleasure of the subcommittee chairman.

(2) The ranking minority member of each standing subcommittee on this committee is authorized to appoint one staff person who shall serve at the pleasure of the ranking minority party member.

(3) The staff members appointed pursuant to the provisions of subparagraphs (1) and (2) shall be compensated at a rate determined by the subcommittee chairman not to exceed (A) 75 per centum of the maximum established in paragraph (c) of clause G of the House Rule XI; provided, however, a staff person appointed by a ranking minority member shall be compensated at a rate not to exceed that paid his or her majority party staff counterpart.

(4) Subparagraphs (1) and (2) and (3) shall apply to six subcommittees only, and no member shall appoint more than one person pursuant to the above provisions.

(5) The staff positions made available to the subcommittee chairmen and ranking minority party members pursuant to sub-

paragraphs (1) and (2) shall be made available from the staff positions provided under clause 6 of House Rule XI unless such staff positions are made available pursuant to a primary or additional expense resolution.

(6) Except as provided by the above provisions, the professional and clerical members of the subcommittee staffs shall be appointed, and may be removed, and their remuneration determined by the subcommittee chairman in consultation with and with the approval of a majority of the majority members of the subcommittee, and with the approval of a majority of the majority members of the full committee, within the budget approved for the subcommittee.

(7) The professional and clerical staff of a subcommittee shall be under the supervision and direction of the chairman of that subcommittee.

RULE NO. XIV—TRAVEL OF MEMBERS AND STAFF

(a) Consistent with the primary expense resolution and such additional expense resolution as may have been approved, the provisions of this rule shall govern travel of committee members and staff. Travel to be reimbursed from funds set aside for the full committee for any member or any staff member shall be paid only upon the prior authorization of the chairman. Travel may be authorized by the chairman for any member and any staff member in connection with the attendance of hearings conducted by the committee of any subcommittee thereof and meetings, conferences, and investigations which involve activities or subject matter under the general jurisdiction of the committee. Before such authorization is given there shall be submitted to the chairman in writing the following:

(1) The purpose of the travel;

(2) The dates during which the travel is to be made and the date or dates of the event for which the travel is being made;

(3) The location of the event for which the travel is to be made;

(4) The names of members and staff seeking authorization.

(b) In the case of travel of members and staff of a subcommittee to hearings, meetings, conferences, and investigations involving activities or subject matter under the legislative assignment of such subcommittee to be paid for out of funds allocated to such subcommittee, prior authorization must be obtained from the subcommittee chairman and the chairman. Such prior authorization shall be given by the chairman only upon the representation by the applicable chairman of the subcommittee in writing setting forth those items enumerated in (1), (2), (3), and (4) of paragraph (a) and in addition thereto setting forth that subcommittee funds are available to cover the expenses of the person or persons being authorized by the subcommittee chairman to undertake the travel and that there has been a compliance where applicable with Rule VII of the committee.

(c)(1) In the case of travel outside the United States of members and staff of the committee or of a subcommittee for the purpose of conducting hearings, investigations, studies, or attending meetings and conferences involving activities or subject matter under the legislative assignment of the committee or pertinent subcommittee, prior authorization must be obtained from the chairman or, in the case of a subcommittee from the subcommittee chairman and the chairman. Before such authorization is given, there shall be submitted to the chairman, in writing, a request for such authorization. Each request, which shall be filed in a manner that allows for a reasonable period of time for review before such travel is scheduled to begin, shall include the following:

(A) the purpose of the travel;

(B) the dates during which the travel will occur;

(C) the names of the countries to be visited and the length of time to be spent in each;

(D) an agenda of anticipated activities for each county for which travel is authorized together with a description of the purpose to be served and the areas of committee jurisdiction involved; and

(E) the names of members and staff for whom authorization is sought.

(2) Requests for travel outside the United States may be initiated by the chairman or the chairman of a subcommittee (except that individuals may submit a request to the chairman for the purpose of attending a conference or meeting).

(3) At the conclusion of any hearing, investigation, study, meeting or conference for which travel outside the United States has been authorized pursuant to this rule, each subcommittee (members and staff attending meetings or conferences) shall submit a written report to the chairman covering the activities and other pertinent observations or information gained as a result of such travel.

(d) Members and staff of the committee performing authorized travel on official business shall be governed by applicable laws, resolutions, or regulations of the House and the Committee on House Administration pertaining to such travel.

RULE NO. XV.—NUMBER AND JURISDICTION OF SUBCOMMITTEES

(a) There shall be ten standing subcommittees as follows: Subcommittee on Domestic Monetary Policy; Subcommittee on Housing and Community Development; Subcommittee on Economic Stabilization; Subcommittee on Consumer Affairs; Subcommittee on International Development Institutions and Finance; Subcommittee on Financial Institutions Supervision, Regulation and Insurance; Subcommittee on International Trade, Investment and Monetary Policy; Subcommittee on General Oversight and Renegotiation; Subcommittee on Historic Preservation and Coinage; and Subcommittee on the City. All proposed legislation and other matters related to the subcommittees listed under standing subcommittees names below shall be referred to such subcommittees respectively.

Subcommittee on Domestic Monetary Policy

The jurisdiction of the Subcommittee on Domestic Monetary Policy extends to all matters relating to monetary policy and agencies which directly or indirectly affect monetary policy, including the effect of such policy and other financial actions on interest rates, allocation of credit, and the structure and functioning of domestic and foreign financial institutions.

Further, the jurisdiction of the Subcommittee on Domestic Monetary Policy extends to all private foundations and charitable trusts.

Subcommittee on Housing and Community Development

The jurisdiction of the Subcommittee on Housing and Community Development extends to all matters relating to housing and mortgage credit (except programs administered by the Veterans' Administration), including mortgage and loan insurance pursuant to the National Housing Act; FHA mortgage interest rates; rural housing; housing assistance programs; secondary mortgage market programs and all other activities of FNMA, GNMA, and FHLMC; private mortgage insurance; housing construction and design standards; housing-related energy conservation; housing research and demonstration programs; financial and technical assistance for nonprofit housing sponsors; counseling and technical assistance; regulation of the housing industry (including landlord-tenant relations); real estate lending powers of financial institutions (including regulation of settlement costs); and interest charges for members of the Federal Home Loan Bank System.

The jurisdiction of the subcommittee further extends to matters relating to community development and community planning, training and research, including community development block grants; urban renewal; model cities; rehabilitation loans and grants; neighborhood facilities grants; open space land and urban beautification grants; water and sewer facilities grants; public facilities loans; national, urban or community development banks; advance acquisition of land programs; new communities assistance programs; national urban growth policies; comprehensive planning (including land use and areawide programs); community development training and fellowships; and urban research and technologies.

Further, jurisdiction of the subcommittee extends to flood insurance and related land use controls, urban property protection and reinsurance, crime insurance, and regulation of interstate land sales.

Subcommittee on Economic Stabilization

The jurisdiction of the Subcommittee on Economic Stabilization shall extend to all matters relating to financial aid to all sectors and elements within the economy, all matters relating to economic stabilization, and all defense production matters as contained in the Defense Production Act of 1959, as amended, and all related matters thereto.

Subcommittee on Consumer Affairs

The jurisdiction of the Subcommittee on Consumer Affairs shall include all matters relating to consumer credit, including those matters in the Consumer Credit Protection Act dealing with truth-in-lending, extortionate credit transactions, restrictions on garnishments, reports of the National Commission on Consumer Finance, and fair credit reporting. The jurisdiction shall further include collection practices, discrimination in the extension of consumer credit, creditor remedies and debtor defenses, Federal aspects of the Uniform Consumer Credit Code, and credit cards.

The jurisdiction of the subcommittee shall further extend to matters relating to the price consumer goods, services, and commodities; the rationing of consumer products; and hoarding.

Subcommittee on International Deveolpment Institutions and Finance

The jurisdiction of the Subcommittee on International Development Institutions and Finance extends to all matters relating to all multilateral development lending institutions, including activities of the National Advisory Council on International Monetary and Financial Policies as related thereto; and monetary and financial developments as they relate to the activities and objectives of such institutions.

Subcommittee on Financial Institutions Supervision, Regulation and Insurance

The jurisdiction of the Subcommittee on Financial Institutions Supervision, Regulation and Insurance extends to all agencies which directly or indirectly exercise supervisory or regulatory authority in connection with, or provide deposit or other insurance for financial or other institutions, the establishment of interest rate ceilings on deposits, and all auxiliary matters affecting or arising in connection with the Federal Deposit Insurance Corporation, the Federal Savings and Loan Insurance Corporation, the National Credit Union Share Insurance Fund, the Federal Home Loan Bank Board, the Federal Reserve Board and System, the National

Credit Union Administration, and the Comptroller of the Currency, together with those activities and operations of any other agency or department which relate to both domestic or foreign financial institutions.

Further, jurisdiction extends to and includes, with respect to financial institutions and the department and agencies which regulate or supervise them, all activities relating to and arising in connection with the matters of chartering, branching, mergers and acquisitions, consolidations, and conversions.

Subcommittee on International Trade, Investment and Monetary Policy

The Subcommittee on International Trade, Investment and Monetary Policy shall have jurisdiction over all matters within the jurisdiction of the committee relating to international trade, including but not limited to the activities of the Export-Import Bank.

Further, the jurisdiction of the subcommittee shall extend to international investment policies, both as they relate to U.S. investments for trade purposes by citizens of the United States and investments made by all foreign entities in the United States.

Further, the subcommittee shall have jurisdiction over the International Monetary Fund, its permanent and temporary agencies, and all matters related thereto.

Subcommittee on General Oversight and Renegotiation

The Subcommittee on General Oversight and Renegotiation shall assist the House Committee on Banking, Finance and Urban Affairs in appraising the administration of the laws and regulations under the jurisdiction of the committee and present such recommendations as deemed necessary to the appropriate subcommittee(s) of the committee.

Further, the subcommittee shall exercise continuing oversight of the execution by the administrative agencies concerning any of the laws the subject matter of which reside within the jurisdiction of the committee and shall study all pertinent reports, documents and data pertinent to the jurisdiction of the committee and make the necessary recommendations or reports thereon to the appropriate subcommittee(s) of the committee.

Further, the subcommittee shall have full jurisdiction over the Renegotiation Act of 1951, as amended.

Subcommittee on Historic Preservation and Coinage

The jurisdiction of the Subcommittee on Historic Preservation and Coinage includes FHA property improvement loans under title I of the National Housing Act which can be used to finance the preservation of historic structures; community development block grant funds authorized under title I of the 1974 Housing Act which can be used to finance the acquisition and preservation of historic properties; and section 701 comprehensive planning grants to public bodies which can be used to finance surveys of historic sites and structures.

Further, the subcommittee's jurisdiction extends to all matters relating to coins, coinage, currency and medals, including commemorative coins, commemorative medals, proof and mint sets and other special coins, Coinage Act of 1965, gold and silver, including coinage thereof (but not the par value of gold), gold medals, counterfeiting, and currency denominations and designs.

Subcommittee on the City

The Subcommittee on the City shall be a non-legislative subcommittee to study, investigate, report on and make recommendations concerning the problems of the cities.

(b) The committee may provide for such additional subcommittees as determined to be appropriate; Provided, however, that such additional subcommittees are approved by a majority of the majority members on the committee.

(c) A member serving as chairman of any subcommittee on this committee shall not also serve as the chairman of a subcommittee on any other standing committee; Provided, however, that this provision shall not apply to members serving as subcommittee chairman on the Budget Committee; House Administration Committee; Joint Committees; or on the Small Business Committee who served as a Subcommittee chairman on the Select Committee on Small Business as of October 8, 1974.

RULE NO. XVI—POWERS AND DUTIES OF SUBCOMMITTEES

(a) Each subcommittee is authorized to meet, hold hearings, receive evidence, and report to the full committee on all matters referred to it or under its jurisdiction. Subcommittee chairmen shall set dates for hearings and meetings of their respective subcommittees after consultation with the chairman and other subcommittee chairmen and with a view toward avoiding simultaneous scheduling of full committee and subcommittee meetings or hearings whenever possible.

(b) Whenever a subcommittee has ordered a bill, resolution, or other matter to be reported to the committee, the chairman of the subcommittee reporting the bill, resolution, or matter to the full committee, or any member authorized by the subcommittee to do so, may report such bill, resolution, or matter to the committee. It shall be the duty of the chairman of the subcommittee to report or cause to be reported promptly such bill, resolution, or matter, and to take or cause to be taken the necessary steps to bring such bill, resolution, or matter to a vote.

(c) No bill or joint resolution approved by a subcommittee shall be considered by the committee unless such measure, as approved, has been made available to all members at least two calendar days prior to the meeting, accompanied by a section-by-section analysis of such measure. The provisions of this paragraph may be suspended by the committee by a two-thirds vote.

(d) All committee or subcommittee reports printed pursuant to legislative study or investigation and not approved by a majority vote of the committee or subcommittee, as appropriate, shall contain the following disclaimer on the cover of such report.

"This report has not been officially adopted by the Committee on Banking, Finance and Urban Affairs (or pertinent subcommittee thereof) and my not therefore necessarily reflect the views of its members."

(e) Bills, resolutions, or other matters favorably reported by a subcommittee shall automatically be placed on the agenda of the committee as of the time they are reported and shall be considered by the full committee in the order in which they were reported unless the committee shall by majority vote otherwise direct: Provided, that no bill reported by a subcommittee shall be considered by the full committee unless each member has been provided with reasonable time prior to the meeting to analyze such bill, together with a comparison with present law and a section-by-section analysis of the proposed change, and a section-by-section justification.

RULE NO. XVII—REFERRAL OF LEGISLATION TO SUBCOMMITTEE

(a) Each bill, resolution, investigation, or other matter which relates to a subject listed under the jurisdiction of any subcommittee named in Rule XV referred to or initiated by the full committee shall be referred to the subcommittee of appropriate jurisdiction within 2 weeks unless, by majority vote of the majority members of the full committee, consideration is to be by the full committee.

(b) Referral to a subcommittee shall not be made until 3 days shall have elapsed after written notification of such proposed referral shall be made unless one or more subcommittee chairmen shall have given written notice to the chairman of the full committee and to the chairman of each subcommittee that he intends to question such proposed referral at the next regularly scheduled meeting of the committee, or at a special meeting of the committee called for that purpose at which time referral shall be made by the majority members of the committee. All bills shall be referred under this rule to the subcommittee of proper jurisdiction without regard to whether the author is or is not a member of the subcommittee. A bill, resolution, or other matter referred to a subcommittee in accordance with this rule may be recalled therefrom at any time by a vote of the majority members of the committee for the committee's direct consideration or for reference to another subcommittee.

(c) Committee reports shall be filed at such times as the committee shall determine with reasonable time allowed for members to file supplemental, individual, dissenting or other views.

(d) In carrying out Rule XVII with respect to any matter, the chairman may refer the matter simultaneously to two or more subcommittees, consistent with Rule XV, for concurrent consideration or for consideration in sequence (subject to appropriate time limitations in the case of any subcommittee after the first), or divide the matter into two or more parts (reflecting different subjects and jurisdictions) and refer each such part to a different subcommittee, or refer the matter pursuant to Rule X to a special ad hoc committee appointed by the chairman (from the members of the subcommittee having legislative jurisdiction) for the specific purpose of considering that matter and reporting to the full committee thereon, or make such other provisions as may be considered appropriate.

RULE NO. XIII—SIZES AND PARTY RATIOS ON SUBCOMMITTEES AND CONFERENCE COMMITTEES

(a) To the extent that the number of subcommittees and their party ratios permit, the size of all subcommittees shall be established so that the majority party members of the committee have an equal number of subcommittee assignments: Provided, however, that a member may waive his or her right to an equal number of subcommittee assignments on the committee; and provided further, that the majority party members may limit the number of subcommittee assignments of the chairman and the subcommittee chairmen and the minority party members may limit the number of subcommittee assignments of ranking minority party members in order to equalize committee workloads.

(b) On each subcommittee there shall be a ratio of at least two majority party members for each minority party member, plus one majority party member. In calculating the ratio of majority party members to minority party members, there shall be included all ex-officio voting members of the subcommittees.

(c) Following shall be the sizes and majority/minority ratios for subcommittees:

(1) Subcommittee on Domestic Monetary Policy: Total—10. Majority—7. Minority—3.

(2) Subcommittee on Housing and Com-

munity Development: Total—25. Majority—17. Minority—8.

(3) Subcommittee on Economic Stabilization: Total—16. Majority—11. Minority—5.

(4) Subcommittee on Consumer Affairs: Total—10. Majority—7. Minority—3.

(5) Subcommittee on International Development Institutions and Finance: Total—13. Majority 9. Minority—4.

(6) Subcommittee on Financial Institutions Supervision, Regulation and Insurance: Total—19. Majority—13. Minority—6.

(7) Subcommittee on International Trade, Investment and Monetary Policy: Total—19. Majority—13. Minority—6.

(8) Subcommittee on General Oversight and Renegotiation: Total—10. Majority—7. Minority—3.

(9) Subcommittee on Historic Preservation and Coinage: Total—7. Majority—5. Minority—2.

(10) Subcommittee on the City: Total—10. Majority—7. Minority—3.

(d) The full committee chairman, or a member designated by a majority of the majority members on the committee, shall recommend to the Speaker as conferees the names of those members (1) selected by the majority party members of the committee in a manner determined by them, and (2) selected by the minority party members of the committee in a manner determined by them. Provided, however, that recommendations of conferees to the Speaker shall provide a ratio of at least two majority party members for each minority party member, plus one majority party member.

LEAVE OF ABSENCE

(By unanimous consent, leave of absence was granted to:)

Mr. CORMAN (at the request of Mr. WRIGHT), for today, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. PRICE (at the request of Mr. STRATTON), for 10 minutes today.

(The following Members (at the request of Mr. CORCORAN of Illinois), to revise and extend their remarks, and to include extraneous matter:)

Mr. CRANE, for 30 minutes, today.

Mr. KEMP, for 60 minutes, today.

Mr. GOLDWATER, for 60 minutes, today.

Mr. STOCKMAN, for 10 minutes, today.

Mr. WHALEN, for 5 minutes, today.

Mr. TREEN, for 5 minutes, today.

Mr. BAUMAN, for 60 minutes, on February 16.

Mr. BAUMAN, for 60 minutes, on February 17.

Mr. MCDADE, for 5 minutes, today.

Mr. EDWARDS of Oklahoma, for 10 minutes, today.

(The following Members (at the request of Mr. PEASE), to revise and extend their remarks, and to include extraneous matter:)

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. KOCH, for 5 minutes, today.

Mr. PATTERSON of California, for 5 minutes, today.

Mr. ASPIN, for 5 minutes, today.

Mr. AUCOIN, for 10 minutes, today.

Mr. FRASER, for 10 minutes, today.

Ms. HOLTZMAN, for 15 minutes, today.

Mr. ROSTENKOWSKI, for 10 minutes, today.

Mr. ASPIN, for 5 minutes, today.

Mr. HAMILTON, for 15 minutes, today.

Mr. FASCELL, for 5 minutes, today.

Mr. BEDELL, for 5 minutes, today.

Mr. BROWN of California, for 10 minutes, today.

Mr. DODD, for 5 minutes, today.

Mr. RODINO, for 5 minutes today.

Mrs. BURKE of California, for 5 minutes, today.

SENATE ENROLLED BILL AND JOINT RESOLUTION SIGNED

The SPEAKER announced his signature to an enrolled bill and a joint resolution of the Senate of the following title:

S. 649. An act to authorize payment of salaries of certain members of Senate committee staffs at the rates paid to them on January 4, 1977, and

S.J. Res. 10. Joint resolution to extend the period of time in which the American Indian Policy Review Commission must submit its final report and to increase the authorization of appropriations for such Commission.

JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. THOMPSON, from the Committee on House Administration, reported that that committee did on February 8, 1977, present to the President, for his approval a joint resolution of the House of the following title:

H.J. Res. 227. Joint resolution making urgent power supplemental appropriations for the Department of the Interior, Southwestern Power Administration for the fiscal year ending September 30, 1977, and for other purposes.

ADJOURNMENT TO WEDNESDAY, FEBRUARY 16, 1977

Mr. PEASE. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

The SPEAKER. In accordance with House Concurrent Resolution 106, the Chair declares the House adjourned until 12 o'clock noon on Wednesday, February 16, 1977.

Thereupon (at 1 o'clock and 53 minutes p.m.), pursuant to House Concurrent Resolution 106, the House adjourned until Wednesday, February 16, 1977, at 12 o'clock noon.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DENT: Committee on House Administration. House Resolution 261. Resolution to provide for the expenses of investigations and studies to be conducted by the Committee on House Administration (Rept. No. 95-13). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. AKAKA (for himself and Mr. HEFTEL):

H.R. 3316. A bill to amend title 5 of the United States Code to prohibit the consideration of certain matters in the determination of cost-of-living allowances for employees stationed outside the continental United States; to the Committee on Post Office and Civil Service.

By Mr. ALLEN:

H.R. 3317. A bill to amend title 15, United States Code, secs. 717 et seq., the Natural Gas Act, so as to extend the regulatory authority of the Federal Power Commission, to vest certain extraordinary and other powers in the President, to encourage the exploration and drilling for natural gas, to encourage the conservation of natural gas, and for other purposes; to the Committee on Interstate and Foreign Commerce.

Mr. ANDERSON of Illinois:

H.R. 3318. A bill to amend the act of August 25, 1958, as amended (72 Stat. 838; 3 U.S.C. 102, note) by amending provisions relating to the staffs of former Presidents of the United States; to the Committee on Post Office and Civil Service.

By Mr. BALDUS:

H.R. 3319. A bill to provide for monitoring of soil moisture in drought-prone areas, to provide information thereon and accelerate financial and technical assistance to lessen impact of drought on farming and ranching operations; to the Committee on Agriculture.

By Mr. BEDELL:

H.R. 3320. A bill to amend the Federal Election Campaign Act of 1971 to require candidates for Federal office in certain circumstances to return excess campaign contributions to the persons making such contributions or to deposit such contributions in the Presidential Election Campaign Fund, and for other purposes; to the Committee on House Administration.

By Mrs. BOGGS:

H.R. 3321. A bill to provide recognition to the Women's Air Forces Service Pilots for their service to their country during World War II by deeming such service to have been active duty in the Armed Forces of the United States for purposes of laws administered by the Veterans' Administration; to the Committee on Veterans' Affairs.

By Mr. CARTER:

H.R. 3322. A bill to establish the Department of Health; to the Committee on Government Operations.

By Mr. CHAPPELL:

H.R. 3323. A bill relating to the withholding on the proceeds of certain wagers with respect to horse races, dog races and jai alai; to the Committee on Ways and Means.

By Mr. DON H. CLAUSEN:

H.R. 3324. A bill to amend the Immigration and Nationality Act to permit adoption of more than two children; to the Committee on the Judiciary.

H.R. 3325. A bill to provide that rates of pay for Members of Congress shall not be subject to adjustment under the Federal Salary Act of 1967 or subject to any other automatic adjustment; to the Committee on Post Office and Civil Service.

By Mr. COHEN (for himself, Mr. LEACH, Mr. MURTHA, Mr. O'BRIEN, Mr. COLLINS of Texas, Mr. PURSELL, Mr. PRITCHARD, Mr. MARTIN, Mr. RANGEL, Mr. BUCHANAN, Mr. LENT, Mr. BOLAND, Mr. FORSYTHE, Mr. HILLIS, Mr. JENRETTE, Mr. ANDERSON of Illinois, Mr. MOTTL, Mr. LUNDINE, Mr. ABDNOR, Mrs. PETTIS, Mrs. SPELLMAN, and Mr. BADILLO):

H.R. 3326. A bill to amend the Internal Revenue Code of 1954 to encourage greater conservation of energy in home heating and cooling by allowing individuals a credit of 25 percent of amounts paid or incurred for the installation of more effective insulation and heating equipment in existing residential structures; to the Committee on Ways and Means.

By Mr. CORMAN:

H.R. 3327. A bill to amend title 28 of the United States Code to permit the resignation with the right to continue receiving pay to certain Federal judges at age 65 who have completed 15 years judicial service; to the Committee on the Judiciary.

By Mr. CRANE (for himself, Mr. BADHAM, Mr. BEARD of Rhode Island, Mr. BURGENER, Mr. COHEN, Ms. COLLINS of Illinois, Mr. COLLINS of Texas, Mr. DERWINSKI, Mr. DORNAN, Mr. EDWARDS of Oklahoma, Mr. FAUNTROY, Mr. GILMAN, Mr. GOLDWATER, Mr. GRASSLEY, Mr. HANSEN, Mr. JENRETTE, Mr. KEMP, Mr. KETCHUM, Mr. LAGOMARSINO, Mr. LOTT, Mr. MARTIN, Mr. MINETA, Mr. MCDONALD, Mr MOORHEAD of California, and Mr. MURTHA):

H.R. 3328. A bill to provide for the confidentiality of medical and/or dental records of patients not receiving assistance from the Federal Government, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. CRANE (for himself, Mr. DAVIS, Mr. DERWINSKI, Mr. DORNAN, Mr. KETCHUM, Mr. KINDNESS, Mr. LAGOMARSINO, Mr. MCDONALD, Mr. SYMMS, Mr. TREEN, Mr. WHITEHURST, and Mr. CHARLES WILSON of Texas):

H.R. 3329. A bill to amend title XI of the Social Security Act to repeal the provision for the establishment of Professional Standards Review Organizations to review services covered under the medicare and medicaid programs; jointly to the Committee on Ways and Means, and Interstate and Foreign Commerce.

By Mr. CRANE (for himself, Mr. BADHAM, Mr. BURGENER, Mr. CLEVELAND, Mr. COLLINS OF TEXAS, Mr. DAN DANIEL, Mr. DORNAN, Mr. DUNCAN of Oregon, Mr. DUNCAN of Tennessee, Mrs. HOLT, Mr. KINDNESS, Mrs. LLOYD, of Tennessee, Mr. MARTIN, Mr. MCDONALD, Mr. MOLLOHAN, Mr. MOORHEAD of California, Mr. QUIE, Mr. ROBINSON, Mr. SEBELIUS, Mr. SIMON, Mr. SYMMS, Mr. TONRY, Mr. TREEN, and Mr. WHITEHURST):

H.R. 3330. A bill to provide for congressional review of all regulations relating to costs and expenditures for health care, reimbursements to individuals or providers of health care, and for other purposes; jointly, to the Committees on Interstate and Foreign Commerce, Ways and Means, and Rules.

By Mr. CRANE (for himself, Mr. KELLY, Mr. NEAL, Mr. PURSELL, Mr. ROSE, Mr. ROUSSELOT, Mr. SNYDER, Mr. STARK, and Mr. SYMMS):

H.R. 3331. A bill to provide for the confidentiality of medical and/or dental records of patients not receiving assistance from the Federal Government, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. DANIELSON:

H.R. 3332. A bill to amend the Internal Revenue Code of 1954 to disallow deductions from gross income for salary paid to aliens illegally employed in the United States; to the Committee on Ways and Means.

By Mr. DE LA GARZA:

H.R. 3333. A bill to amend the Small Business Act to authorize the Small Business Administration to make loans with respect to certain economic disasters; to the Committee on Small Business.

By Mr. DERRICK (for himself, Mr. BRECKINRIDGE, Mr. MILLER of California, Mr. STANTON, Mr. MOAKLEY, Mr. NEAL, Mr. LEHMAN, Mr. MOTTL, Mr. HANNAFORD, Mr. WHITEHURST, Mr. MCHUGH, Mr. BRODHEAD, Mr. BROYHILL, Mr. BURGENER, Mr. SCHEUER, Mr. CHARLES WILSON of Texas, Mr. DUNCAN of Oregon, Mr. FOUNTAIN, Mr. GEPHARDT, Mr. LEACH, Mr. DUNCAN of Tennessee, Mr. SEBELIUS, Mr. ROSENTHAL, and Mr. AKAKA):

H.R. 3334. A bill to amend the Internal Revenue Code of 1954 to allow a refundable tax credit equal to 50 percent of the wages paid to certain new employees; to the Committee on Ways and Means.

By Mr. DIGGS (for himself and Mr. MCKINNEY):

H.R. 3362. A bill to amend chapter 5 of title 5, United States Code (commonly known as the Administrative Procedure Act), to permit awards of reasonable attorneys' fees and other expenses for public participation in Federal agency proceedings, and for other purposes; to the Committee on the Judiciary.

By Mr. ROSTENKOWSKI (for himself, Mr. CONABLE, Mr. BURLESON of Texas, Mr. WAGGONNER, and Mr. ARCHER):

H.R. 3363. A bill to amend the Internal Revenue Code of 1954 to avoid duplication of tax imposed under the Federal Insurance Contributions Act and the Federal Unemployment Tax Act in the case of certain concurrent employers of the same employee; to the Committee on Ways and Means.

By Mr. ST GERMAIN:

H.R. 3364. A bill to amend the Tariff Schedules of the United States in order to provide for the duty-free importation of loose glass prisms used in chandeliers and wall brackets; to the Committee on Ways and Means.

By Mr. ST GERMAIN (for himself, Mr. REUSS, Mr. HANLEY, Mr. PATTERSON of California, Mr. LAFALCE, and Ms. OAKAR):

H.R. 3365. A bill to extend the authority for the flexible regulation of interest rates in deposits and accounts in depository institutions, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

By Mr. SEBELIUS:

H.R. 3366. A bill to amend the Agricultural Act of 1949 for the purpose of providing extended periods for the repayment of nonrecourse loans made under title I of such act with respect to wheat and feed grains, and for other purposes; to the Committee on Agriculture.

By Mr. SEBELIUS:

H.R. 3367. A bill to provide a special grazing and hay program for wheat acreage; to the Committee on Agriculture.

By Mr. SEBELIUS:

H.R. 3368. A bill to provide that research and development with respect to alternate fuels shall include research into the use of mixtures of grain alcohol and gasoline; to the Committee on Science and Technology.

By Mr. SEBELIUS (for himself, Mr. GLICKMAN, Mrs. KEYS, Mr. SKUBITZ, Mr. WINN, Mr. THONE, Mr. JEFFORDS, Mr. GRASSLEY, Mr. MARLENEE, Mr. HIGHTOWER, Mr. BEDELL, Mr. ENGLISH, Mr. ABDNOR, Mr. ANDREWS of North Dakota, Mr. KINDNESS, Mr. TRAXLER, Mr. BROWN of Ohio, Mr. FINDLEY, and Mrs. SMITH of Nebraska):

H.R. 3369. A bill to establish an advisory committee to provide consultation and advice to the Administrator of the Federal Grain Inspection Service and to amend the United States Grain Standards Act with respect to supervision fees and recordkeeping requirements; to the Committee on Agriculture.

By Mr. SEIBERLING (for himself, Mr. UDALL, Mr. BADILLO, Mr. BONIOR, Mr. BROWN of California, Mr. CORRADA, Mr. DELLUMS, Mr. EDWARDS of California, Mr. EILBERG, Mr. GIBBONS, Mr. HAWKINS, Mr. MIKVA, Mr. ROYBAL, Mr. RYAN, Mr. SCHEUER, Mrs. SPELLMAN, Mr. STARK, Mr. STOKES, Mr. VAN DEERLIN, Mr. WEAVER, and Mr. ZEFERETTI):

H.R. 3370. A bill to amend the Clayton Act to prohibit undue concentration in the energy-producing industries, and for other purposes; to the Committee on the Judiciary.

By Mr. SEIBERLING (for himself, Mr. REUSS, Mr. THOMPSON, Mr. HARRINGTON, Mr. BINGHAM, Mr. BLANCHARD, Mr. CARNEY, Mr. DIGGS, Mr. EDGAR, Mr. EILBERG, Mr. FORD of Michigan, Mr. GILMAN, Mr. HUGHES, Mr. KOSTMAYER, Mr. LAFALCE, Mr. MITCHELL of Maryland, Mr. MITCHELL of New York, Mr. MOORHEAD of Pennsylvania, Mr. MURPHY of New York, Mr. PEASE, Mr. PURSELL, Mr. RYAN, Mr. SARASIN, Mr. STANTON, and Mr. WALSH):

H.R. 3371. A bill to amend the Internal Revenue Code of 1954 to encourage the modernization of manufacturing plants by providing an additional investment credit for machinery placed in service in existing manufacturing plants or in nearby plants; to the Committee on Ways and Means.

By Mr. SEIBERLING (for himself, Mr. ASHLEY, Mr. LUKEN, Mr. MOTTL, and Mr. REGULA):

H.R. 3372. A bill to amend the Internal Revenue Code of 1954 to encourage the modernization of manufacturing plants by providing an additional investment credit for machinery placed in service in existing manufacturing plants or in nearby plants; to the Committee on Ways and Means.

By Mr. SIKES:

H.R. 3373. A bill to extend for an additional temporary period the existing suspension of duties on certain classifications of yarns of silk; to the Committee on Ways and Means.

By Mr. SLACK:

H.R. 3374. A bill to provide for the protection of franchised distributors and retailers of motor fuel; to encourage conservation by requiring that information regarding the octane rating of automotive gasoline be disclosed to consumers; and to prevent deterioration of competition in gasoline marketing; to the Committee on Interstate and Foreign Commerce.

H.R. 3375. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

H.R. 3376. A bill to amend title 38 of the United States Code to make certain that recipients of veterans' pension and compensation will not have the amount of such pension or compensation reduced because of increases in monthly social security benefits; to the Committee on Veterans' Affairs.

By Mr. STEED (by request):

H.R. 3377. A bill to authorize the Wichita Indian Tribe of Oklahoma, and its affiliated bands and groups of Indians, to file with the Indian Claims Commission any of their claims against the United States for lands taken without adequate compensation, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. STOKES:

H.R. 3378. A bill to require that discharge certificates issued to members of the armed forces not indicate the conditions or reasons for discharge, to limit the separation of en-

listed members under conditions other than honorable, and to improve the procedures for the review of discharges and dismissals; to the Committee on Armed Services.

H.R. 3379. A bill to require that any person holding a federally related home mortgage shall provide certain services and follow certain procedures before instituting foreclosure proceedings with respect to such mortgage; to the Committee on Banking, Finance and Urban Affairs.

H.R. 3380. A bill to establish a program providing financial assistance to low- and moderate-income households with regard to utility costs incurred by such households; to the Committee on Interstate and Foreign Commerce.

H.R. 3381. A bill to provide a special program for financial assistance to national community-based organizations of demonstrated effectiveness, in order to provide 1 million new jobs and job training opportunities, and for other purposes; jointly to the Committees on Education and Labor, and Ways and Means.

By Mr. TAYLOR:

H.R. 3382. A bill to amend title II of the Social Security Act to permit the payment of child's insurance benefits to a great-grandchild legally adopted by a retired or disabled worker, the same as such benefits would be payable under present law to the worker's legally adopted grandchild; to the Committee on Ways and Means

By Mr. THOMPSON (for himself and Mr. SCHEUER):

H.R. 3383. A bill to amend the National Labor Relations Act to give to employers and performers in the performing arts the same rights given by section 8(f) of such act to employers and employees in the construction industry; to the Committee on Education and Labor.

By Mr. THOMPSON:

H.R. 3384. A bill to amend the National Labor Relations Act to provide that any employee who is a member of a religion or sect historically holding conscientious objection to joining or financially supporting a labor organization shall not be required to do so; to the Committee on Education and Labor.

By Mr. VANIK (for himself, Mr. TUCKER, Mr. ZEFERETTI, Mr. EILBERG, Mr. BRODHEAD, Ms. MIKULSKI, Mr. DE LA GARZA, Mr. CORNELL, Mr. DANIELSON, Mr. FRASER, Mr. WAXMAN, Mr. HOWARD, Mr. ASHLEY, Mr. HUGHES, Mr. ICHORD, Mrs. SPELLMAN, Mr. CHARLES WILSON of Texas, Mr. VAN DEERLIN, Mr. ROBERTS, Mr. GLICKMAN, Mr. PRICE, and Mr. OTTINGER):

H.R. 3385. A bill to amend title II of the Social Security Act to increase the amount of outside earnings which (subject to future cost-of-living adjustments) is permitted any individual each year without deductions from benefits thereunder in the case of individuals receiving less than the maximum provided for benefits of the type involved; to the Committee on Ways and Means.

By Mr. VANIK (for himself, Mr. TUCKER, Mr. ZEFERETTI, Mr. EILBERG, Mr. BRODHEAD, Ms. MIKULSKI, Mr. DE LA GARZA, Mr. CORNELL, Mr. DANIELSON, Mr. WAXMAN, Mr. HOWARD, Mr. HUGHES, Mr. ICHORD, Mrs. SPELLMAN, Mr. CHARLES WILSON of Texas, Mr. VAN DEERLIN, Mr. ROBERTS, Mr. GLICKMAN, Mr. PRICE, and Mr. OTTINGER):

H.R. 3386. A bill to amend title II of the Social Security Act to raise the amount by which an individual's social security benefits are to be increased on account of delayed retirement; to the Committee on Ways and Means.

By Mr. WAGGONNER:

H.R. 3387. A bill to continue until the close of June 30, 1980, the existing suspension of duties on synthetic rutile; to the Committee on Ways and Means.

H.R. 3388. A bill to amend Item 603.70 of the Tariff Schedules of the United States as they relate to synthetic rutile as a titanium source material; to the Committee on Ways and Means.

By Mr. WOLFF:

H.R. 3389. A bill to establish a Federal Housing Bank to purchase mortgages from Federal National Mortgage Association and the Federal Home Loan Bank System having rates of interest no higher than 6 percent, to refinance mortgages of families stricken by unemployment, to provide emergency mortgage relief, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

By Mr. WOLFF (for himself, Mr. LENT, Mr. AMBRO, Mr. WALSH, Mr. RODINO, Mr. DINGELL, Mr. NIX, Mr. EILBERG, Mr. MOAKLEY, Mr. BRODHEAD, Mr. COTTER, Ms. MIKULSKI, Mr. HOWARD, Mr. MCKINNEY, Mr. MOORHEAD of Pennsylvania, Mr. STUDDS, Mr. BURKE of Massachusetts, Mr. DRINAN, Mr. MARKS, Mr. BROWN of Michigan, Mr. SIMON, Mr. NEDZI, Mr. CONYERS, and Mr. MIKVA):

H.R. 3390. A bill to amend the Federal Water Pollution Control Act relating to the period of time for which certain funds allotted to States for the construction of treatment works shall remain available; to the Committee on Public Works and Transportation.

By Mr. WRIGHT:

H.R. 3391. A bill to authorize the Secretary of the Army, acting through the Chief of Engineers, to plan and establish wetland areas in association with water resources development projects; to the Committee on Public Works and Transportation.

H.R. 3392. A bill to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes; to the Committee on Public Works and Transportation.

By Mr. YATRON (for himself, Mr. MITCHELL of Maryland, Mr. EDGAR, Mr. DE LUGO, Mr. HAWKINS, Mr. WON PAT, Mr. MOAKLEY, Mr. MICHAEL O. MYERS, Mr. STOKES, Mr. EILBERG, Mr. DRINAN, Mr. LEDERER, Mr. BRODHEAD, Mr. SOLARZ, Mr. BADILLO, Mr. CORRADA, Ms. CHISHOLM, Mr. WEISS, Mr. BONIOR, Mrs. BURKE of California, Mr. FORD of Michigan, Mr. MOORHEAD of Pennsylvania, Mr. GAYDOS, Mr. DINGELL, and Mr. ROYBAL):

H.R. 3393. A bill to extend the Emergency Unemployment Compensation program for an additional year; to the Committee on Ways and Means.

By Mr. YATRON (for himself, Mr. RANGEL, Mr. AKAKA, Mr. MURPHY of Pennsylvania, and Mr. MCHUGH):

By Mr. PEPPER (for himself, Mr. ROYBAL, and Ms. CHISHOLM):

H.R. 3432. A bill to amend the Elementary and Secondary Education Act of 1965 to provide grants to establish demonstration programs to educate, motivate, and encourage secondary school students from disadvantaged backgrounds to pursue professional training at the graduate level in the biomedical sciences; to the Committee on Education and Labor.

By Mr. PEPPER (for himself, Mr. AKAKA, Mr. ANDREWS of North Carolina, Mr. BADILLO, Mr. BEARD of Rhode Island, Mr. BEDELL, Mr. BINGHAM, Mr. BLOUIN, Mr. BUCHANAN, Mrs. BURKE of California, Mr. PHILLIP BURTON, Mr. CLAY, Mrs. COLLINS of Illinois, Mr. CONYERS, Mr. CORRADA, Mr. DANIELSON, Mr. DAVIS, Mr. DEL-

LUMS, Mr. DENT, Mr. DIGGS, and Mr. DRINAN):

H.R. 3433. A bill to amend the Elementary and Secondary Education Act of 1965 to provide grants to establish demonstration programs to educate, motivate, and encourage secondary school students from disadvantaged backgrounds to pursue professional training at the graduate level in the biomedical sciences; to the Committee on Education and Labor.

By Mr. PEPPER (for himself, Mr. DUNCAN of Tennessee, Mr. EDWARDS of California, Mr. FASCELL, Mr. FAUNTROY, Mr. FORD of Tennessee, Mr. HAWKINS, Mr. JENRETTE, Miss JORDAN, Mr. KOCH, Mr. LEDERER, Mr. LEHMAN, Mr. METCALFE, Mrs. MEYNER, Mr. MIKVA, Mr. MITCHELL of Maryland, Mr. MOAKLEY, Mr. NIX, Mr. NOLAN, Miss OAKAR, Mr. OTTINGER, and Mr. PATTEN):

H.R. 3434. A bill to amend the Elementary and Secondary Education Act of 1965 to provide grants to establish demonstration programs to educate, motivate, and encourage secondary school students from disadvantaged backgrounds to pursue professional training at the graduate level in the biomedical sciences; to the Committee on Education and Labor.

By Mr. PEPPER (for himself, Mr. RANGEL, Mr. RICHMOND, Mr. RODINO, Mr. RYAN, Mr. SCHEUER, Mr. SIMON, Mrs. SPELLMAN, Mr. STARK, Mr. STOKES, Mr. WEISS, Mr. WALGREN, Mr. CHARLES WILSON of Texas, Mr. WON PAT, and Mr. ZEFERETTI):

H.R. 3435. A bill to amend the Elementary and Secondary Education Act of 1965 to provide grants to establish demonstration programs to educate, motivate, and encourage secondary school students from disadvantaged backgrounds to pursue professional training at the graduate level in the biomedical sciences; to the Committee on Education and Labor.

By Mr. PERKINS:

H.R. 3436. A bill to improve education by increasing the freedom of the Nation's teachers to change employment across State lines without substantial loss of retirement benefits through establishment of a Federal-State program; to the Committee on Education and Labor.

By Mr. PERKINS (for himself and Mr. QUIE):

H.R. 3437. A bill to make certain technical and miscellaneous amendments to provision relating to vocational education contained in the Education Amendments of 1976; to the Committee on Education and Labor.

By Mr. PERKINS (for himself, Mr. THOMPSON, Mr. DENT, Mr. HAWKINS, Mr. EDWARDS of Alabama, Mr. HAMMERSCHMIDT, Mr. MCCLOSKEY, and Mr. SPENCE):

H.R. 3438. A bill to provide a special program of financial assistance to opportunities industrialization centers in order to provide new skills training opportunities, and to other national community-based organizations to provide comprehensive employment services to create 1 million new training and job opportunities; to the Committee on Education and Labor.

By Mr. QUILLEN:

H.R. 3439. A bill to amend the Federal Civil Defense Act of 1950 to allow Federal civil defense funds to be used by local civil defense agencies for natural disaster relief, and for other purposes; to the Committee on Armed Services.

By Mr. QUILLEN (for himself, Mr. ARCHER, Mr. BEDELL, Mr. BONIOR, Mr. BOWEN, Mr. CLEVELAND, Mr. DORNAN, Mr. DOWNEY, Mr. DRINAN, Mr. DUNCAN of Tennessee, Mr. FRASER, Mr. HALL, Mr. ICHORD, Mr. KETCHUM, Mr. KINDNESS, Mr. LAGOMARSINO, Mr. LENT, Mrs. LLOYD of Tennessee, Mr. LOTT, Mr. MATHIS, Mr. MIKVA, Mr. PANETTA, Mr. SCHULZE, Mr. VANDER JAGT, and Mr. WINN):

H.R. 3440. A bill to amend title 38 of the United States Code to revise certain administrative requirements of the veterans' educational programs, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. QUILLEN (for himself, Mr. LONG of Maryland, and Mr. WOLFF):

H.R. 3441. A bill to amend title 38 of the United States Code to revise certain administrative requirements of the veterans' educational program, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. RHODES (for himself, Mr. HORTON, Mr. ERLENBORN, Mr. BROWN of Ohio, Mr. MCCLOSKEY, Mr. THONE, and Mr. PRITCHARD):

H.R. 3442. A bill to reestablish the period within which the President may transmit to the Congress plans for the reorganization of agencies of the executive branch of the Government, and for other purposes; to the Committee on Government Operations.

By Mr. RINALDO:

H.R. 3443. A bill to amend the Federal Salary Act of 1967, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 3444. A bill to provide that pay adjustments for Members of Congress may take effect no earlier than the beginning of the Congress next following the Congress in which they are approved; to the Committee on Post Office and Civil Service.

By Mr. RUPPE:

H.R. 3445. A bill to provide that the recommendations for adjustments of certain executive, legislative, and judicial salaries shall not take effect unless both Houses of Congress approve by resolution such increase; to the Committee on Post Office and Civil Service.

By Mrs. SMITH of Nebraska (for herself, Mr. MOORHEAD of California, Mr. BROWN of Ohio, Mr. HAGEDORN, Mr. KEMP, Mr. SEBELIUS, Mr. DERWINSKI, Mr. BURGENER, Mr. KINDNESS, Mr. FRENZEL, Mr. QUIE, Mr. TRIBLE, Mr. BUTLER, and Mr. TREEN):

H.R. 3446. A bill to repeal the carryover basis provisions added by the Tax Reform Act of 1976; to the Committee on Ways and Means.

By Mrs. SPELLMAN:

H.R. 3447. A bill to amend chapter 83 of title 5, United States Code, to grant an annuitant the right to elect within 1 year after remarriage whether such annuitant's new spouse shall be entitled, if otherwise qualified, to a survivor annuity, and to eliminate the annuity reduction made by an unmarried annuitant to provide a survivor annuity to an individual having an insurable interest in cases where such individual predeceases the annuitant; to the Committee on Post Office and Civil Service.

By Mrs. SPELLMAN (for herself and Mr. FOUNTAIN):

H.R. 3448. A bill to provide that Members of Congress shall be separated from the provisions of any law which affects the annual or quadrennial rates of pay of Federal employees; to the Committee on Post Office and Civil Service.

By Mrs. SPELLMAN (for herself, Ms. MEYNER, Mr. CORMAN, Mr. KOCH, Mr. WEISS, Mr. REUSS, Ms. CHISHOLM, Mr. STOKES, Mr. BEDELL, Mr. MINETA, Mr. ROSENTHAL, Mrs. BOGGS, Mr. HAWKINS, Mr. SCHEUER, Mrs. COLLINS of Illinois, Mr. RICHMOND, Mr. PATTERSON of California, Mr. PEPPER, Mr. CHARLES WILSON of California, Mr. HARKIN, Mr. BINGHAM, Mr. OTTINGER, Mr. METCALFE, Mr. BAUCUS, and Mr. MIKVA):

H.R. 3449. A bill to amend title VIII of the Act commonly called the Civil Rights Act of 1968 with respect to the awarding of attorney's fees and the authority of the Department of Housing and Urban Development to initiate a civil action to enforce the provisions of such title; to the Committee on the Judiciary.

By Mr. STEIGER:

H.R. 3450. A bill to establish a National Commission on the Social Security Program; to the Committee on Ways and Means.

By Mr. STEIGER (for himself, Mr. OBEY, Mr. CONTE, Mr. MCEWEN, Mr. SEBELIUS, Mr. MURPHY of New York, Mr. CHARLES WILSON of Texas, Mr. COCHRAN, Mr. SIMON, Mr. HAGEDORN, Mr. COHEN, Mr. ABDNOR, Mr. ROYBAL, Mr. CORRADA, Mr. GILMAN, Mr. VANDER JAGT, Mr. SISK, Mr. HANLEY, Mr. MURTHA, Mr. LEACH, Mr. BARNARD, Mr. BALDUS, Mr. ANDREWS of North Dakota, Mr. MOAKLEY, and Mr. KINDNESS):

H.R. 3451. A bill to provide the American consumer the assurance that foreign dairy products marketed in the United States meet minimum standards of quality by requiring the inspection of these products at the U.S. ports of entry, at the foreign milk processing plants which provide dairy products for export to the United States, and at the foreign dairy farms which supply milk to foreign milk processing plants for the production of dairy products to be exported to the United States; to the Committee on Agriculture.

By Mr. STEIGER (for himself, Mr. OBEY, Mr. MITCHELL of New York, Mr. SCHULZE, Mr. CORNELL, Mr. JENRETTE, Mr. TRAXLER, Mr. MCCORMACK, and Mr. SCHEUER):

H.R. 3452. A bill to provide the American consumer the assurance that foreign dairy products marketed in the United States meet minimum standards of quality by requiring the inspection of these products at the U.S. ports of entry, at the foreign milk processing plants which provide dairy products for export to the United States, and at the foreign dairy farms which supply milk in foreign milk processing plants for the production of dairy products to be exported to the United States; to the Committee on Agriculture.

By Mr. TREEN (for himself and Mr. MOORE):

H.R. 3453. A bill to amend the Coastal Zone Management Act of 1972 in order to improve the coastal energy impact program, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. UDALL:

H.R. 3454. A bill to designate certain endangered public lands for preservation as wilderness, to provide for the study of additional endangered public lands for such designation, to further the purposes of the Wilderness Act of 1964, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 3455. A bill to authorize appropriations to the Nuclear Regulatory Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended and section 305 of the Energy Reorganization Act of 1974, as amended, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. UDALL (for himself and Mr. CORMAN):

H.R. 3456. A bill to amend the Small Business Act (Public Law 83-536); to the Committee on Small Business.

By Mr. WHITTEN:

H.R. 3457. A bill to protect the national security and economic well-being (including the Nation's present supplies and undeveloped sources of energy, fuel, food, and fiber) from damage due to arbitrary or unsound regulations, orders, or decisions issued by executive departments, agencies, and commissions, and for other purposes; to the Committee on the Judiciary.

By Mr. BEDELL:

H.J. Res. 249. Joint resolution proposing an amendment to the Constitution of the United States to provide 4-year terms for Members of the House of Representatives and

to limit the number of consecutive terms that Representatives and Senators may serve, and for other purposes; to the Committee on the Judiciary.

By Mrs. BURKE of California:

H.J. Res. 250. Joint resolution to designate March 13 to 19, 1977, as "National Community Health Week"; to the Committee on Post Office and Civil Service.

By Mr. CEDERBERG (for himself, Mr. BURGENER, Mr. COLLINS of Texas, Mr. CONTE, Mr. COUGHLIN, Mr. DAVIS, Mr. DIGGS, Mr. FRENZEL, Mr. HUGHES, Mr. HYDE, Mr. KINDNESS, Mr. LATTA, Mr. LEACH, Mr. LAGOMARSINO, Mr. MICHEL, Mr. PURSELL, Mr. PATTERSON of California, Mr. O'BRIEN, Mr. ROE, Mr. SARASIN, Mr. TREEN, Mr. VANDER JAGT, Mr. STEIGER, Mr. WYDLER, and Mr. YOUNG of Florida):

H.J. Res. 251. Joint resolution to provide for the establishment of a Joint Committee on Intelligence; to the Committee on Rules.

By Mr. CHAPPELL:

H.J. Res. 252. Joint resolution authorizing the President to proclaim September 8 of each year as "National Cancer Day"; to the Committee on Post Office and Civil Service.

By Mr. FRENZEL:

H.J. Res. 253. Joint resolution proposing an amendment to the Constitution of the United States relating to the election of the President and Vice President; to the Committee on the Judiciary.

By Mr. GLICKMAN (for himself and Mr. STOCKMAN):

H.J. Res. 254. Joint resolution proposing an amendment to the Constitution of the United States providing for staggered 4-year terms for Representatives, for a limitation on the number of terms a person may serve in the House of Representatives or the Senate, and for other purposes; to the Committee on the Judiciary.

By Mr. METCALFE (for himself, Ms. BURKE of California, Mr. CLAY, Ms. CHISHOLM, Ms. COLLINS of Illinois, Mr. CONYERS, Mr. DELLUMS, Mr. DIGGS, Mr. FAUNTROY, Mr. FORD of Tennessee, Mr. HAWKINS, Ms. JORDAN, Mr. MITCHELL of Maryland, Mr. NIX, Mr. RANGEL, and Mr. STOKES):

H.J. Res. 255. Joint resolution to recognize the heritage of black citizens of the United States; to the Committee on Post Office and Civil Service.

By Mr. MURTHA:

H.J. Res. 256. Joint resolution to authorize the President to proclam the 22d day of April of each year as Queen Isabella Day; to the Committee on Post Office and Civil Service.

By Mr. HANLEY:

H. Con. Res. 111. Concurrent resolution recommending the creation by the President of a special task force to report on factors relating to the need to deregulate the price of natural gas in interstate commerce; to the Committee on Interstate and Foreign Commerce.

By Mr. LE FANTE:

H. Con. Res. 112. Concurrent resolution expressing the sense of Congress that the killing of three priests and four nuns at the Musami mission in Rhodesia was an unwarranted and atrocious act of violence; to the Committee on International Relations.

By Mr. ROE (for himself and Mr. KEMP):

H. Con. Res. 113. Concurrent resolution concerning the safety and freedom of Valentyn Moroz, historian, writer, and spokesman for the cultural integrity of the Ukrainian people; to the Committee on International Relations.

H. Con. Res. 114. Concurrent resolution to seek the resurrection of the Ukrainian Orthodox and Catholic Churches in Ukraine; to the Committee on International Relations.

H. Con. Res. 115. Concurrent resolution expressing the request of the U.S. Government that the Government of the Union of Soviet Socialist Republics provide Valentyn Moroz with the opportunity to accept the invitation of Harvard University; to the Committee on International Relations.

H. Con. Res. 116. Concurrent resolution expressing the sense of the Congress that the President, acting through the U.S. Ambassador to the United Nations Organization, take such steps as may be necessary to place the question of human rights violations in the Soviet-occupied Ukraine on the agenda of the United Nations Organization; to the Committee on International Relations.

By Mr. HEFNER:

H. Res. 272. Resolution disapproving the recommendations of the President with respect to the rates of pay of Federal officials transmitted to the Congress in the budget for the fiscal year ending September 30, 1978; to the Committee on Post Office and Civil Service.

By Mr. KETCHUM (for himself, Mr. FREY, Mr. FISH, Mr. VANDER JAGT, Mr. MEEDS, Mr. FORSYTHE, and Mrs. HECKLER):

H. Res. 273. Resolution amending rule XXII of the rules of the House of Representatives to remove the limitation on the number of Members who may introduce jointly any bill, memorial, or resolution and to provide the addition and deletion of names of Members as sponsors after the introduction of a bill, memorial, or resolution; to the Committee on Rules.

By Mr. KOCH (for himself, Mr. BRODHEAD, Mr. EILBERG, Mr. KREBS, Mr. MAGUIRE, Mr. MITCHELL of Maryland, Mr. MURPHY of Pennsylvania, Mr. RAHALL, Mr. RANGEL, Mr. ROSENTHAL, Mr. SCHEUER, Mr. WAXMAN, and Mr. WEISS):

H. Res. 274. Resolution impeaching Paul Rand Dixon, a Commissioner of the Federal Trade Commission, of a high misdemeanor in office; to the Committee on the Judiciary.

By Mr. JOHNSON of California (for himself and Mr. HARSHA):

H. Res. 275. Resolution to provide funds for the expenses of investigations and studies authorized by the Committee on Public Works and Transportation; to the Committee on House Administration.

By Mr. LATTA:

H. Res. 276. Resolution disapproving the recommendations of the President with respect to the rates of pay of Federal officials transmitted to the Congress in the budget for the fiscal year ending September 30, 1978; to the Committee on Post Office and Civil Service.

By Mr. MOLLOHAN:

H. Res. 277. Resolution to disapprove the salary increases proposed by the President for Members of Congress and certain other legislative officers; to the Committee on Post Office and Civil Service.

By Mr. MOORHEAD of California:

H. Res. 278. Resolution disapproving certain recommendations transmitted by the President on January 17, 1977, concerning rates of pay for Members of Congress; to the Committee on Post Office and Civil Service.

By Mr. PERKINS (for himself, Mr. DENT, Mr. ERLENBORN, and Mr. QUIE):

H. Res. 279. Resolution to provide funds for the expenses of the investigation and study of welfare and pension plans to be conducted by the Committee on Education and Labor; to the Committee on House Administration.

By Mr. REUSS:

H. Res. 280. Resolution to provide for the expenses of investigations and studies to be conducted by the Committee on Banking, Finance and Urban Affairs; to the Committee on House Administration.

By Mr. RINALDO:

H. Res. 281. Resolution disapproving the salary increase for Members of Congress proposed by the President; to the Committee on Post Office and Civil Service.

By Mr. SATTERFIELD:

H. Res. 282. Resolution insisting upon retention of undiluted U.S. sovereignty over the Canal Zone and the Panama Canal; to the Committee on International Relations.

By Mr. STAGGERS:

H. Res. 283. Resolution to provide funds for the expenses of the investigations and studies to be conducted by the Committee on Interstate and Foreign Commerce; to the Committee on House Administration.

By Mr. STEIGER (for himself, Mr. BOLLING, Mr. CLEVELAND, Mr. ERLENBORN, Mr. FRASER, Mr. FRENZEL, Mr. FREY, Mrs. KEYS, and Mr. SISK):

H. Res. 284. Resolution to require that the Congressional Record contain a verbatim account of remarks actually delivered on the floor, and for other purposes; to the Committee on Rules.

By Mr. WYLIE:

H. Res. 285. Resolution directing the Attorney General of the United States to furnish to the House of Representatives certain information and documents respecting communications made by Kim Sang Keun of the Republic of South Korea to officials of the Department of Justice relating to Members and employees of Congress; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. AKAKA:

H.R. 3458. A bill for the relief of Librado Perez; to the Committee on the Judiciary.

By Mr. AMBRO:

H.R. 3459. A bill for the relief of the survivors of Brian Murray; to the Committee on the Judiciary.

By Mr. DANIELSON:

H.R. 3460. A bill for the relief of William J. Elder and the estate of Stephen M. Owens, deceased; to the Committee on the Judiciary.

By Mr. DICKS:

H.R. 3461. A bill for the relief of Chin-Ho An; to the Committee on the Judiciary.

By Mr. HANNAFORD:

H.R. 3462. A bill for the relief of Jaime Caro Gregorio and Helen Ilan Gregorio; to the Committee on the Judiciary.

H.R. 3463. A bill for the relief of Peter J. Montagnoli; to the Committee on the Judiciary.

By Mr. HUGHES (by request):

H.R. 3464. A bill for the relief of Madeline (nee Schaefer) Broomall Condon; to the Committee on the Judiciary.

By Ms. KEYS:

H.R. 3465. A bill for the relief of Romeo A. Provencal; to the Committee on the Judiciary.

By Mrs. MEYNER:

H.R. 3466. A bill for the relief of Mr. Harold J. Applin; to the Committee on the Judiciary.

By Mr. HAGEDORN:

H. Res. 286. Resolution to refer H.R. 2557, "A bill for the relief of Robert H. Carleton", to the Chief Commissioner of the Court of Claims pursuant to sections 1492 and 2509 of title 28, United States Code; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII:

44. The SPEAKER presented a petition of Julian Edge, Columbus, Ga., relative to the location of a proposed southeastern regional national cemetery, which was referred to the Committee on Veterans' Affairs.

EXTENSIONS OF REMARKS

ALL VOLUNTEER FORCE—CURRENT STATUS AND PROSPECTS (II)

HON. WILLIAM A. STEIGER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. STEIGER. Mr. Speaker, yesterday I began printing in the CONGRESSIONAL RECORD an important document detailing the progress to date of the all-volunteer force. "The All-Volunteer Force—Current Status and Prospects" was prepared last December by Defense Department officials as a transition paper for the incoming Carter administration.

An important part of the document was its discussion of the current status of the active force. Many have suggested that the Volunteer Army is inferior to its draft-induced predecessor. The facts prove otherwise.

The military services use two yardsticks to measure quality of enlistees—level of education and standardized test scores. The report shows that the proportion of high school graduates has been increasing since 1974, comparing favorably to the pre-Vietnam conflict 1964 period. A study of standardized test scores shows a steady increase in enlistees with above average scores, a moderate increase in those with average scores, and, most important, a substantial decrease in enlistees with below average scores.

Chapter 3 of the transition report follows. The figures contained in its tables bear the most careful attention of all of us:

CHAPTER 3.—CURRENT STATUS OF THE ACTIVE FORCE

QUANTITY

All Services were manned at or near their end strength objectives in FY 1976, FY TQ (Transition Quarter) and the first month of FY 1977.

TABLE 1.—TOTAL ACTIVE MILITARY STRENGTHS, OFFICER AND ENLISTED MEN AND WOMEN, FISCAL YEARS 1976-77 (OCTOBER)

[Obj. in thousands]

	Fiscal year 1976		Fiscal year TQ		Fiscal year 1977 (October)	
	Obj.	Actual (percent)	Obj.	Actual (percent)	Obj.	Actual (percent)
Army	782	99+	790	99	784	99
Navy	525	100	532	99	531	99
Marine Corps	196	98	196	97	192	99
Air Force	584	100	584	99	582	100
All services	2,087	99+	2,102	99	2,090	99

Recruiting goals were achieved, or nearly achieved, by all Services in FY 1976, FY TQ and the first month of FY 1977.

TABLE 2.—NONPRIOR SERVICE ENLISTED ACCESSIONS MEN AND WOMEN, FISCAL YEAR 1976-77 (OCTOBER)

[Obj. in thousands]

	Fiscal year 1976		Fiscal year TQ		Fiscal year 1977 (October)	
	Obj.	Percent	Obj.	Percent	Obj.	Percent
Army	192.1	100	59.4	96	16.9	94
Navy	101.6	100	35.2	95	10.2	99
Marine Corps	53.1	100	15.4	95	4.4	86
Air Force	73.3	101	21.0	101	6.3	103
All services	420.1	100	131.0	97	37.8	96

Despite the overall success in meeting recruiting goals, the Services continue to have difficulties in attracting or retaining men for certain "critical skills". These skills are jobs that are hazardous or otherwise unattractive (combat arms or involuntary sea duty) or that demand higher entry standards (electronics, etc). In both instances current levels of compensation are not sufficient to attract enough volunteers with the desired qualifications; therefore, a bonus is required. $171.6 million was expended in FY 1976 for enlistment and reenlistment special skill bonuses.

TABLE 3.—SPECIAL SKILL BONUSES, FISCAL YEAR 1976

Type bonus	Cases	Cost (millions)
Enlistment:		
Deferred: [1]		
$1,500 combat arms	928	$1.4
$2,500 combat arms	10,042	25.1
$1,500 technical skills	790	1.2
$2,500 technical skills	1,015	2.5
Subtotal	12,775	30.2
New:		
$1,500 combat arms	2,229	3.3
$2,500 combat arms	12,352	30.8
$1,500 technical skills	1,259	1.9
$2,500 technical skills	542	1.6
Subtotal	16,482	37.6
Total, enlistment bonuses	29,257	67.8
Total, reenlistment bonuses	([2])	103.8
Total, bonuses	([2])	171.6

[1] Deferred enlistment, bonus reflects payment of bonus upon graduation from initial training during fiscal year 1976 for those enlisting in fiscal year 1975.
[2] Not available.

In addition to bonus payments, adjustments in recruiting policies with respect to special skills have recently been made. For example, recruitment for the less attractive skills, i.e. combat arms, is currently receiving additional emphasis.

The large shortfall in physicians, which was feared at the inception of the AVF, has not occurred. As of 30 September 1976, 96% of physician billets were filled. Currently, the Services rely on a combination of voluntary enlistments, and for the next several years, those still liable for duty under the draft motivated Berry plan.

TABLE 4.—DOD MEDICAL CORPS ACCESSIONS: FISCAL YEARS 1973-80

	Fiscal year—								
	1973	1974	1975	1976	TQ	1977	1978	1979	1980
Draft	117	0	0	0	0	0	0	0	0
Berry plan	2,299	2,082	1,751	1,437	991	511	219	25	2
AFHPSP [1]	25	150	345	388	360	660	727	1,018	1,015
Volunteers	205	132	454	[2] 726	([3])	([3])	([3])	([3])	([3])
Other	779	728	497	311	157	194	128	133	93
Total	3,425	3,092	3,047	[2] 2,862	([3])	([3])	([3])	([3])	([3])

[1] Armed Force health professions scholarship program.
[2] Estimate.
[3] Unknown.

Several programs have been initiated aimed at more efficient use of physicians. Among these are the use of paraprofessional and clerical personnel to relieve doctors of nonprofessional details and the automation of various health care functions.

In addition, emphasis has been placed on the retention of doctors. A Variable Incentive Pay (VIP) of up to $13,500 per year was authorized in 1974 in an attempt to assure the recruitment and retention of the necessary additional physician manyears. Recent evidence indicates that the VIP has been effective in increasing physician retention. However, the long-term situation is still uncertain concerning VIP effectiveness and future physician requirements.

QUALITY

Two yardsticks used by the Services to assess quality of enlistees are level of education (whether or not the enlistee has completed high school) and standardized test scores.

The Services have attempted to attract a high proportion of volunteers who have completed high school. One reason for the emphasis on high school graduate accessions is that they exhibit fewer disciplinary problems. Trends indicate that the proportion of high school graduates have been increasing since 1974, comparing favorably to the 1964 period.

TABLE 5.—NONPRIOR SERVICE ENLISTED ACCESSIONS, MEN AND WOMEN, FISCAL YEAR 1964, 1974-TQ

[In thousands]

Fiscal year	Percent high school diploma graduates				
	Army	Navy	Marine Corps	Air Force	All services
1964 [1]	67	58	61	84	68
1974	50	52	50	92	61
1975	58	71	53	91	66
1976	59	76	62	89	69
TQ	60	77	76	87	71

[1] GED's included.

Additionally, standardized test scores are used by the Services to indicate quality. These scores are obtained by the Armed Services Vocational Aptitude Battery (ASVAB). The test covers such areas as arithmetic reasoning, word knowledge, tool knowledge, pattern analyses, general science, etc. On the basis of ASVAB test scores, applicants are divided into mental groups ranging from a high military aptitude (Category I) to a low military aptitude (Category V). The test (as well as tests used prior to the ASVAB) differentiates among above average (Mental Groups I & II), average (Mental group III) and below average (Mental Groups IV). Mental Group V applicants are disqualified by law from military service. Quality has been maintained and, in some instances, has improved significantly between the 1964 to TQ period.

TABLE 6.—PERCENT SHARE OF MALE NONPRIOR SERVICE ENLISTED ACCESSIONS IDENTIFIED BY MENTAL CATEGORY, FISCAL YEAR 1964, 1974–TQ

Fiscal year	Army			Navy			Marine Corps			Air Force			All Services		
	I and II	III	IV	I and II	III	IV	I and II	III	IV	I and II	III	IV	I and II	III	IV
1964	38.0	54.8	7.2	41.1	48.0	10.9	37.5	53.3	9.2	49.9	45.8	4.3	42.0	50.3	7.7
1974	31.0	51.1	17.8	34.7	61.8	3.5	33.4	59.1	7.5	45.6	53.9	.6	34.9	54.9	10.2
1975	34.8	55.1	10.1	38.0	57.1	4.8	36.7	59.7	3.5	44.0	55.6	.4	37.5	56.3	6.1
1976	35.3	57.3	7.4	43.8	52.1	4.1	40.4	56.7	2.9	51.0	48.5	.5	40.8	54.4	4.8
TQ	33.5	57.6	8.9	48.5	48.5	3.0	44.6	51.5	3.9	63.9	35.8	.3	44.1	50.7	5.3

As can be seen from Table 6 above, there has been a steady increase in enlistees with above average scores, a moderate increase in those with average scores, and, of most importance, a steady decrease in enlistees with below average scores.

ATTRITION

The Services enlist a sizeable number of individuals who are separated prior to completing their enlistment obligations. These separations are costly because early separations must be replaced by new accessions. This, in turn, leads to increased accession requirements; higher recruiting, training and travel costs; reduced average experience levels; and increased unit turbulence. High early attrition also makes it more difficult to maintain high school graduates at a satisfactory proportion of accessions and to recruit sufficient numbers of combat arms personnel.

With the advent of the AVF, there is greater latitude in discharging personnel. Tighter management of this licence may be required.

In FY 1976, approximately 80,000 individuals who had not completed one year of service were separated from the enlisted ranks. This number is about 20% of the average FY 1975–76 non-prior service accession intake. Table 7 shows attrition both during the first six-month period and during the first year for selected accession groups beginning in 1973. Based on loss data current as of June 1976, Army and Marine Corps attrition in the first year of service is increasing while Navy and Air Force attrition is decreasing (A Navy pilot project initiated in 1976 may reveal a method to separate early those who would be discharged later, thus possibly reversing this downward first-year attrition trend.) For the latest available accession group, July-December 1975, 13.3% of DoD accessions were seperated during the first six months of service. A 20% reduction in first year attrition could reduce annual accession requirements by 16,000 and a 20% reduction in total first term attrition could reduce annual accession requirements by 24,000.

TABLE 7.—ATTRITION DURING THE 1ST YEAR OF SERVICE [1]

	Army		Navy		Marine Corps		Air Force	
	0 to 179 days	0 to 365 days	0 to 179 days	0 to 365 days	0 to 179 days	0 to 365 days	0 to 179 days	0 to 365 days
July to December 1973:

INTRODUCTION OF A BILL TO END SPECULATION OF EXCESS LAND PURCHASED IN FEDERAL RECLAMATION PROJECTS

HON. JOHN KREBS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. KREBS. Mr. Speaker, I am pleased today to be introducing a measure designed to put an end to speculation in connection with excess land purchased in Federal reclamation projects. My bill seeks to accomplish this by imposing certain restrictions on future sales of excess reclamation lands.

Under present law, an individual possessing more than 160 acres of land serviced by a Federal water project is required to pledge to divest himself of that excess acreage within a set period of time—usually 10 years. The Secretary of the Interior must approve that sale price, which is fixed on the basis of the appraised bona fide value of the land in question—separate and apart from the value added by virtue of existing or proposed reclamation project works. Unfortunately, however, subsequent sales of the land are not overseen by the Interior Department.

In my part of the country, an unfortunate phenomenon has been occurring. Speculators purchase excess acreage from the original owner at the approved price and soon thereafter sell that acreage at fair market value—frequently twice the previous price.

My bill would eliminate this speculative activity by mandating that the individual initially purchasing the excess tract file an affidavit with the county recorder's office after the sale price is approved by the Secretary of the Interior. The affidavit would state that water rights would not be carried over to sales occurring during the next 10 years, unless the Secretary of the Interior approved the sale price on the same basis as previously—that is, without reference to the construction or proposed construction of any reclamation project works. After the 10-year period had passed, it would be almost certain that any resale advantages would have evaporated as a result of taxes and water charges assessed.

In this manner, I hope to assure that unreasonable gains, which are incurred at the expense of the American taxpayer who of course subsidizes these projects, would not result from the resale of excess lands. There is little doubt in all quarters that this type of reform is long overdue.

FLOODING DISASTER

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. WHALEN. Mr. Speaker, last November, the National Oceanic and Atmospheric Administration predicted below-normal temperatures throughout a large part of the country east of the Continental Divide. Now, as we endure the most severe winter we have seen in years and the worst natural gas shortage to date, it seems that perhaps we should have given more serious consideration to the NOAA seasonal temperature outlook.

It is not too late, however, to examine closely and act on the National Weather Service's predictions for spring flooding. The Service advises that four factors re-

lated to our hard winter may contribute to heavy flooding in Pennsylvania, West Virginia, and my own State of Ohio.

First, the water content of snow falling around the Canawha River in West Virginia reached record levels this winter. As this drains, the water level in tributaries of the Ohio River below Pittsburgh will no doubt be high.

Second, smaller rivers have frozen more completely than in the past. Ice on many is between 6 to 20 inches thick, and some West Virginia rivers have frozen solid. As these thaw, water levels will rise.

Third, frozen ground could contribute to flooding. Areas not covered by snow have frozen as deep as 3 to 4 feet. If rain falls on this frozen ground in February and March, flooding will increase. The Service predicts that if temperatures rise normally, water draining from the frozen ground will create a "bank full" condition. In other words, rivers will be just about at flood stage.

Fourth, the Weather Service warns of ice jams as frozen rivers start to thaw. These could seriously hinder the delivery of coal and other essentials to the very States that have been hardest hit by the present weather crisis.

Local National Weather Services offices are taking readings of flood conditions and issuing summaries twice a week now. At both the local and national levels, they are meeting with agencies such as the Federal Disaster Assistance Administration, the Corps of Engineers, the Geological Survey, and the Red Cross to chart plans to reduce flooding and to deal effectively with possible emergencies.

Next week these agencies will present to Congress their recommendations for dealing with flooding. I urge my colleagues in the affected areas to study their suggestions carefully and encourage local officials to utilize them. In this respect, I must commend Ohio Gov. James Rhodes, who has been working actively to ward off possible disasters associated with the predicted flooding of the Ohio River. If others take a similar approach, we may be able to save homes, property, crops, energy supplies and lives. We have been forewarned, and we now have an opportunity to minimize the effects of severe flooding. We cannot afford to let this opportunity slip by.

TRIBUTE TO JOHN ROBSON, CHAIRMAN OF THE CIVIL AERONAUTICS BOARD

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. ANDERSON of California. Mr. Speaker, Mr. John E. Robson, Chairman of the Civil Aeronautics Board, has submitted his resignation to President Carter, effective April 30, 1977.

In my judgment, the foremost accomplishment of Chairman Robson's tenure has been to lead the Board to a position of unanimous support for regulatory reform legislation. Chairman Robson insisted that the Board not take a position hastily, but only after a thorough and searching examination of the regulatory process which the agency administers. The examination was conducted without preconceptions, and without any defensiveness over the agency's record. The results were well worth the time taken. Under Chairman Robson's leadership the Board reached a conclusion which is highly unusual, if not unprecedented, for a Government agency; that less regulation and more competitive freedom for the regulated industry would best serve the interests of the industry and the passengers and shippers it serves.

Chairman Robson's tenure has also been notable for the substantial efforts which the Board has made to administer the existing law for the benefit of the consumer. For the first time in its history the Board is now seriously considering allowing new entrants into the trunkline industry, and these new entrants are proposing to offer fares well below the level now prevailing. The Board has also allowed existing carriers to experiment with substantially reduced offpeak fares. In a related area the Board has expanded the availability of low-cost charter service, by authorizing one-stop inclusive tour charters and advance booking charters.

Chairman Robson has taken many steps to insure the integrity and openness of the Board's activities. He has maintained a public log which discloses all visitors to his office and the subjects they discuss. The Board's recent regulations under the so-called sunshine legislation go considerably farther than is legally required in opening the work of the Board to public observation.

These are only the highlights of the accomplishments which have marked Chairman Robson's tenure at the CAB. The Board has changed dramatically during his administration, and the changes promise great benefits to the traveling public.

Mr. Speaker, John Robson's expertise and dedicated service to the public will be missed by us all. Now, though, he has more time to spend with his lovely wife, Margaret, and their two sons, Matthew and Douglas.

My wife, Lee joins me in wishing John Robson and his family all the best that life has to offer in the years ahead.

A TRIBUTE TO MRS. DELMA McCOURT

HON. DOUGLAS APPLEGATE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. APPLEGATE. Mr. Speaker, it is with special pride that I take this opportunity to pay special tribute to the outstanding community service rendered by one of my constituents, Mrs. Delma McCourt, Jefferson County extension economist.

Mrs. McCourt is retiring this year after devoting her entire career toward helping to educate others and to raise their standard of living. She has served for 23 years in Jefferson County as county extension home economist, 7 years as home economist in Brooke County, W. Va., and 4 years working with FHA in Noble and Monroe Counties. She was a member of the steering committee to organize the meals on wheels program in the Steubenville area.

She initiated the restoration and renovation with the help of the Jefferson County Home Council of Fernwood State Forest and the St. James Cemetery as an historical landmark in Jefferson County.

She has worked with low income and minority groups in Jefferson County helping to educate and raise their standard of living.

She initated and conducted the expanded food and nutrition program in the county.

She is respected by all community organizations for her cooperation and support of their programs.

She is loved and respected by the youth in the county for her many years of working with 4–H clubs and by the homemakers for her dedicated commitment to improve their way of life.

For those who are familiar with the excellent quality of the Jefferson County Extension Service, they know the immeasurable contributions which have been made by Mrs. McCourt.

My wife, Betty, joins with me in wishing Delma and her husband, Mac, well and every happiness in the future. We will miss her, but know she will never cease her selfless assistance to others.

ST. ED'S UNIVERSITY INVOLVED IN INNOVATIVE EDUCATION

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. PICKLE. Mr. Speaker, during the last few years, college administrators throughout the country have begun minicourses to fill the void between the traditional Christmas break and the beginning of the spring term.

Among these innovative educational institutions has been St. Edward's University in Austin, Tex., a liberal arts school with a rich history.

The Christian Science Monitor carried a story about the minisemester adventures of one group of St. Ed's students. It was written by a very fine Austin journalist, Anita Brewer:

TEXANS IN "JANUARY TERM" BREAK TRAVEL TO SCOTLAND YARD

(By Anita Brewer)

AUSTIN, TEX.—During the January term, some 70 criminal justice students from Sam Houston State University and St. Edward's University flew from Texas to England's Scotland Yard. In Texas, police carry guns; in England they do not. Why?—was the assignment.

Don Doyle of the Austin Police Department, a graduate student in criminal justice at St. Edward's University, says the Texans' interest in Commander Gideon and Inspector Roger West, of mystery story fame, was no stronger than the Britishers' interest in TV's Kojak, Marshal Dillon, and Policewoman Angie Dickinson.

During the last decade "Jan. terms," or short, intensive college-credit courses fitting into the period between Christmas and the beginning of the spring semester in colleges and universities throughout Texas have proliferated. Many of these—like the visit to Scotland Yard—involve international travel. Nearly 200 college students were on the chartered flight to London. The 130 who were not criminal justice students were mostly English majors on their way to walk where Shakespeare had walked.

Don Post, chairman of the St. Edward's University division which includes criminal justice, says the January term program was so successful he is working with Scotland Yard to set up another for late May.

"With those majoring in criminal justice, were accounting and sociology students," Mr. Post explains. "One of the great values of January term courses is that they allow students in one discipline to sample for a short time an academic interest outside their major. We believe it expands educational possibilities and choices considerably."

Officers from Scotland Yard lectured the visitors in the conference rooms at the Penta Hotel. After the lecture sessions, the American students in small groups visited Old Bailey, Scotland Yard itself, laboratories, jails, and courts. They asked questions. They read. They looked. They listened. They scanned annual reports.

They learned—learned facts, learned philosophies of law enforcement, and learned of common problems: that crime is increasing in London as in cities in the United States. According to the annual report of the Metro Police in London, the number of serious crimes in London has risen by 450 percent since 1950.

Among the "good ideas" the students brought back with them are alternatives to traditional probation and parole. In London, as a condition of probation, some offenders are required to do public service work in their spare time—up to 240 hours within a year, working in hospitals, on playgrounds, in park maintenance, painting and repairing public buildings.

Often probationers are required to live in a hostel—work outside the hostel and pay for their own room and board.

"Of course, we learned a lot," the students agree, "but more than facts, the experience was personally expanding."

THE PEACE CORPS SERVICE OF JEAN AND PHIL HOLMES

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. REUSS. Mr. Speaker, I want to share with my colleagues the fine letter, dated January 31, which I have received from Jean and Phil Holmes of Beloit, Wis., telling me of their Peace Corps service in Peru. From 1971 to 1973, Mrs. Holmes served in a clinic for crippled children, and Mr. Holmes worked in agricultural research. I am particularly pleased to note that they began their Peace Corps service somewhat late in life, after their children had been raised.

As the original sponsor of legislation to establish the Peace Corps, I think that Mr. and Mrs. Holmes' comments are important testimony to the continued need for the Corps. The text of their letter follows:

JANUARY 31, 1977.

Congressman HENRY REUSS.

DEAR SIR: Just had opportunity to read the Peace Corps article in Oct. 3 Milwaukee Journal. I wish I could tell you all about the experience of my wife Jean and I while in Peace Corps Peru from '71 to '73, but it would take volumes.

We were right at about 50 years of age and had completed 30 years milking cows on our 300 acre dairy farm in Rock County and had raised our 3 children to 18 years or more. Since our return we have made at least 70 group presentations with slides and narrations. It was such an enlightening experience we are always eager to make such presentations.

Neither of us have a college background which was a bit of a deterrent at the outset; however, Jean has experience in doctor's offices and has passed all of the CMA (certified medical assistants) courses and examinations. She spent her time in a clinic for crippled poor children. Her work included sorting of medicines and supplies donated by U.S. church missions—all in English, which no one in the clinic could read. It was a continuing process translating and cataloging medicines and directions.

I found ever increasing work of variety. Of course there was my official assignment which was with the Ag. Research Department. I also found tremendous opportunity with private enterprises such as a large dairy company in Arequipa with their fieldmen out in the countryside which was virtually all through the Andes mountains of southern Peru. In addition I worked with farm machinery importers and retail dealers.

They have just not had the experience with farm machinery that we take for granted here in the U.S. and I might add they consulted frequently and readily accepted what I could offer.

Another type of work, I thought, was a 6 month assignment of just plain agriculture extension type work in remote valleys where the Peruvian government was apparently unable to provide extensionists. Peru is very poor compared to the U.S. and it shows up in the extent they can provide extension workers for their people.

By the end of the 2 years we were so exhausted and anxious to get home we could hardly wait to leave Peru. But now I realize that experience has affected every day of my life.

I hope you do not lose heart for the Peace Corps. I regret it is no longer accepted in Peru. Upon final retirement from our farm, I hope to return to something similar. If not to Peru, perhaps to another Peace Corps assignment. It depends on my state of health because it is a vigorous experience compared to being put on a shelf in a retirement home. But, oh, so much more rewarding.

Thank you for the Peace Corps. Please keep it alive and unadulterated. We were suspected by some of being CIA agents.

If you feel any of your colleagues might benefit from a letter of testimony in behalf of Peace Corps support I would be pleased to oblige.

Sincerely,

PHIL HOLMES.

ANNIVERSARY OF THE BIRTH OF TADEUSZ KOSCIUSZKO

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. DERWINSKI. Mr. Speaker, during the month of February, we pay tribute to the memory of George Washington, who led our Nation to independence; and to Abraham Lincoln, who led our Nation to war to preserve its union from dissolution. I feel that it is appropriate that we also remember the birth of Tadeusz Kosciuszko, a "hero of two worlds."

Kosciuszko began his education as a member of the corps of cadets in Poland and later furthered his military career in Italy, France, and Prussia.

Attracted by the ideals of the American colonists in their quest for independence, this Polish-born patriot arrived in Philadelphia in 1776, and was engaged by the Philadelphia Defense Committee to assist in the fortification of the Delaware River.

Commissioned as a colonel in the Continental Army, he became associated with several major campaigns of the American Revolution. As a result of his military ingenuity, Congress granted him an appointment as a brigadier general after the Revolutionary War.

He can also be remembered for the design of military defenses at West Point, and his name has proudly been linked with the earliest beginnings of our U.S. Military Academy.

After the second partition of his native country, he returned to Poland in 1784. Kosciuszko led a national uprising which was successful in its early stages against the Russian invaders, but finally collapsed to be followed by the final partition which erased Poland from the map of Europe.

However, Kosciuszko who is rightly honored as the "hero of two worlds," helped Americans secure their independence and did his utmost in a vain effort to save Poland from extinction.

Tadeusz Kosciuszko, as a native of a foreign land, made a great donation to our American heritage for his efforts in our struggle for freedom. Let us salute his valor and determination as a champion of freedom and rights of man.

TRIBUTE TO GERALD FORD VISIT TO SAN GABRIEL MISSION

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. ROUSSELOT. Mr. Speaker, I thank our distinguished minority leader, Mr. RHODES, for taking a special order in order that I may pay appropriate tribute to a man who served our country well, Gerald R. Ford.

The four qualities that come to my mind relating to the man Gerald Ford both as the President and as a public servant are decency, fairness, balance, and integrity. These are noble qualities that he brought to the Office of the Presidency at a time when such qualities were needed.

Many Members have already spoken of his integrity and his openness. Those worthy attributes were especially needed at the time he was sworn in as President. His most vociferous critics easily

granted him his due credit on running an open Presidency. Almost no one challenged his integrity. But I, as Representative, and many of my fellow Americans, felt that President Ford's consistent evenhandedness and sense of decency in dealing with all segments of our country were very apparent qualities to even those with whom he disagreed. Even when President Ford stood firm or took a definitive position on an issue, he always treated all people with a sense of decency. He expected his associates and subordinates to do the same. I do not think that anybody in this country can quarrel with his obvious fairness.

President Ford knew the importance of balance in Government. He long ago realized that no branch of Government should dominate the scene. Through his experience in the House and later as Presiding Officer of the Senate, he had a full recognition that the Congress held a proper and appropriate role in the affairs of our country. He knew, because he had served here for so many years, that it was important to have the balancing effect and the input of the Congress. He encouraged that balance of power and especially contributed to its importance in the affairs of Government.

He constantly encouraged Members of this House, individually and collectively, to come to the White House and be heard. He listened. Many times he came to the Capitol to listen. In that respect he did restore a sense of balance in the whole equation of Government power and decisionmaking as defined in our Constitution.

I am reminded that during the last week of the 1977 campaign, President Ford came to California and felt it was important to attend a church someplace in the San Gabriel Valley area. The President decided that the historic mission of San Gabriel, which has been such an important part of our history, not only in California, but in the whole Nation, would be the church he would attend. The President was touched by the service, its parishioners, and the symbols of history. I can remember the throngs that came out to not only say thanks to him, but to see him first hand. I can recall the tremendous response that came from all of those people, people who had stood for better than an hour outside of that church just to see their President and to hear him. He, of course, immediately went over to say hello to them and they in turn to say hello to him as he left the church. All reached out to touch him and he to greet them and return the gesture of outreach. This was not a new or unusual scene in Presidential politics, but both my wife, Vyonne, and I and many others felt that warmth and openness that so characterized the Presidency of Gerald Ford. Jerry Ford did recognize the importance of making the Presidency accessible to all people of all faiths and opinions all the time.

He remarked on that occasion how important it is for a President to make himself totally accessible to the people of this country who respect the Office of the Presidency and want to feel close to the man and the office.

I guess that is the best example I can give as to the total feeling he had for the Office of the Presidency. Gerald Ford deeply felt that responsibility. He did that by his actions on that Sunday morning in San Gabriel, Calif.

Again I thank my colleague, the gentleman from Arizona (Mr. RHODES) for giving me this chance to express in definitive words what all of us felt when Jerry Ford gave us his closing State of the Union address here in this Chamber a few weeks ago. It was a warm, deserved reception for a man who did indeed give it his all.

INTRODUCTION OF LEGISLATION TO ESTABLISH A SEPARATE DEPARTMENT OF HEALTH

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. CARTER. Mr. Speaker, today I am reintroducing legislation I sponsored in the last Congress that would establish within the Executive Department, at the Cabinet level, a separate Department of Health which would be responsible for the administration of all programs relating to health now under the jurisdiction of the Department of Health, Education, and Welfare. The Secretary of this Department of Health would be a properly qualified doctor of medicine appointed by the President, with the confirmation of the Senate.

Mr. Speaker, I believe this change is needed to assure more efficient and coordinated delivery of health services to the people of this country. In my view, the Department of Health, Education, and Welfare is simply too large and unwieldy to manage our Nation's health affairs, much less establish a realistic health policy for the Nation. Despite the well-meaning actions of capable individuals with the Department, HEW has outgrown its ability to coordinate and administer health programs effectively.

Since its establishment by President Eisenhower in 1953, HEW has grown into a bureaucracy of about 136,400 employees with an overall budget of more than $128 billion, one-third of the entire Federal budget. More than 300 categorical grant programs are operated by the Department, some 40 of which are separate Federal health programs spending $33.4 billion on medical and health-related activities.

The lack of coordination of health programs at the Federal level accompanied by increased regulatory "redtape" has concerned me for many years. Since I first came to the Congress over 12 years ago, the situation has worsened as the scope of Federal involvement has increased. Without a doubt, HEW's cumbersome, disjointed structure leads to inefficient use of taxpayer's dollars as a result of duplication and overlap within the Department. Interagency coordination is often a hit-and-miss proposition. Many agencies have little understanding of similar programs in other bureaus, or act as if they are unaware that such programs exist. I am convinced that health policy can be more rationally developed and that the health programs of our Nation better handled if they are placed under the jurisdiction of a single agency of manageable size and responsibility.

Of paramount concern is the fact that there is no national health policy to guide Federal health programs and expenditures. No central body or group exists within the executive branch that is responsible for developing Federal health policy and evaluating Federal performance in light of that policy.

My bill would establish a Coordination Commission, to be composed of the Secretary of Health and the Secretaries of other departments as the President may designate, whose duties would be the coordination of all Federal health programs within their respective departments to the end that wasteful and unnecessary overlapping and duplication of services and health resources are avoided.

Mr. Speaker, there is nothing new in this approach of establishing a separate Department of Health at the Cabinet level. Many distinguished colleagues—both here and in the Senate—have lent their support to such a measure in the past. In addition, many health professions organizations are also on record endorsing the principles of this approach. Some of these groups include: the American Medical Association, the American Dental Association, the American Nurses Association, the American Hospital Association, the American Public Health Association, the Association of American Medical Colleges, and the Association of State and Territorial Health Officers. By establishing a separate Department of Health, all levels of government which are concerned with effective management of health programs stand to benefit from the increased coordination of such reorganization.

Truly the time has now come to end the uncertain status of the Federal Government's role in health care. How can we legislate future health programs—such as national health insurance—if we continue to ignore the incontestable fact that health is of the greatest personal concern to each citizen in this country. The people of our Nation deserve better than the impersonal, complex redtape maze that now fetters much of the Federal stewardship of health affairs.

We can and must bring reason to the Federal role in health. Responsibility must be clearly delineated and a national health policy must be developed and coordinated by those who are knowledgeable in the health field. I believe these objectives can be best achieved by the establishment of a single, cabinet-level Department of Health. I commend this bill to you for your consideration. A summary of the bill's provisions follows:

DEPARTMENT OF HEALTH

This bill would create within the Executive Department, at the Cabinet level, a separate Department of Health headed by a Secretary of Health, which would administer all programs relating to health now under the jurisdiction of the Department of Health, Education, and Welfare. The Secretary of this Department of Health would have to be a doctor

of medicine, appointed by the President, with the confirmation of the Senate.

The Department would also be staffed by an Undersecretary of Health (also a doctor of medicine) and assistant secretaries (doctors of medicine or other persons with experience and background in the field of health services and health education) who would be appointed by the President and confirmed by the Senate.

The bill establishes a Coordination Commission, to be composed of the Secretary of Health and the Secretaries of other departments as the President may designate, whose duties would be the coordination of all Federal health programs within their respective departments to the end that wasteful and unnecessary overlapping and duplication of services and health resources are avoided.

CONSERVATIVE CAUCUS OPPOSES CONFIRMATION OF WARNKE

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. McDONALD. Mr. Speaker, opposition to the confirmation of Mr. Paul Warnke as Director of the Arms Control and Disarmament Agency is growing among thoughtful persons concerned over the defense of this Nation. It was notable yesterday that when Mr. Warnke testified that he did not endorse or say he would support the continuation of one single major weapons system of the United States. The inference was that all of them were "up for grabs" in any future negotiations with the Soviet Union. Therefore, I think it is particularly appropriate to place in the RECORD today, the letter of the National Director of Conservative Caucus, Mr. Howard Phillips, addressed to Chairman SPARKMAN in opposition to Mr. Warnke. The letter follows:

FEBRUARY 8, 1977.

Hon. JOHN SPARKMAN,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR SENATOR SPARKMAN: The Conservative Caucus is a nationwide organization of 210,000 dedicated Americans concerned that the Federal government is responsive, not to the views of the average citizen, but, instead, to organized, unrepresentative liberal influences.

The Statement of Principles of The Conservative Caucus is a fair reflection of the views of our members and, we believe, of the American people. We assert that: "The defense policy of the United States should be based on a goal of strategic and tactical supremacy on land, in the sea, in the air, and in space. Our foreign policy should have as its sole and overriding purpose safeguarding the national interest."

I speak for Governor Meldrim Thomson, National Chairman of The Conservative Caucus, and for myself, in conveying grave concern that the selection of Paul Warnke to be Director of the Arms Control and Disarmament Agency would be inconsistent with the national interest of the United States.

As one who has placed himself on the public record as opposed to the concept of United States military superiority, and as one who proposed unilateral armament concessions by the United States, Mr. Warnke has rendered himself totally unsuitable to serve in the position for which he has been nominated.

His views are precisely those which our Communist enemies can be expected to espouse, and precisely opposite those which most Americans believe to be in their nation's interest.

Confirmation of Mr. Warnke would jeopardize the security of our nation and the safety of every citizen. Senators who concur in this outrageous selection will have merited the opprobrium and opposition of every American who believes that officials who have sworn oaths to the Constitution owe a duty to strive for the strongest possible American defense posture.

Americans will long remember what action you and your colleagues take concerning Mr. Warnke's nomination.

Sincerely,

HOWARD PHILLIPS.

THE MAKING OF A BUREAUCRAT

HON. WILLIAM M. KETCHUM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. KETCHUM. Mr. Speaker, it will never cease to amaze me how a few short weeks in Washington can turn a perfectly sensible individual into what can only be termed the bionic bureaucrat. If my colleagues will allow me the liberty of offering a "flash-back," I will illustrate for them the metamorphosis of which I am speaking...

On October 6, 1973, the Subcommittee on Water and Power Resources of the House Interior Committee held hearings in Burley, Idaho regarding the replacement of the American Falls Dam. I was a member of that subcommittee at the time, and I was present during the hearings.

I remember very clearly that a particularly powerful statement was delivered by then Gov. Cecil Andrus on behalf of the people of Idaho. I am sure we are all aware that Mr. Andrus is now the Secretary of Interior. At any rate, Governor Andrus—then Governor Andrus—submitted a prepared statement now printed permanently in the record. In part, it read as follows and I am quoting directly from the text:

Although we seek Congressional approval to rebuild a major dam on the Snake River, we do not ask for millions of federal tax dollars to do for Idaho what Idahoans can and will do for themselves. Rather, we ask for Congressional endorsement ... which will allow spaceholders and private industry to rebuild the failing structure themselves.

As one who has long felt that the Federal Government does the best job when it leaves the States and private industry alone, I commended Mr. Andrus for his position. He responded as follows and, again, I quote from the text of those hearings:

. . . if you will just get out of our way and let us do it, we will get it done.

That was Governor Andrus, and there ends my flashback.

Secretary of the Interior Andrus, in 1977, is a horse of a different color, with all due respect. A recent article in the Wall Street Journal reported the Secretary's endorsement of "legislation to prohibit oil companies from developing competing sources of energy such as coal, nuclear power, and solar energy."

It appears that Mr. Andrus has forgotten his previous advocation of the abilities of individual States and private industry, and has somehow been converted into a true bureaucrat. He appears to have become a "believer" in the doctrine that only the Federal Government can protect business and industry from their own actions. I disagree, and I am sorely disappointed in the change.

I submit the following view to my colleagues: it makes about as much sense to prohibit oil companies from developing other sources of energy during an energy crisis as it does to prohibit farmers from growing spinach when the price of tomatoes is no good. If such logic were applied to all forms of enterprise, where in the name of God would we be?

I imagine that former Governor Andrus' onetime constituency must be asking just about the same question.

NATIONAL FUTURE HOMEMAKERS OF AMERICA WEEK

HON. BO GINN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. GINN. Mr. Speaker, the week of February 6 through February 12 has been designated National Future Homemakers of America Week, and I would like to take this opportunity to pay tribute to this outstanding organization. This year, the theme of FHA Week is "Building the Skills of America," a theme that recognizes the multiple roles individuals play in family, community, and career life.

The test of quality for any organization is the caliber of its participants, and by this and any other standard the Future Homemakers of America ranks as a tremendous asset to the people of our Nation. As part of the home economics education program, FHA translates this important area of learning into tangible and directly meaningful contributions to society.

In my own State of Georgia, there are some 15,818 FHA members in 374 chapters, and the impact of their work is felt in all of our counties. The girls who belong to this organization are proud of the fact that through it they work to bridge the distance between the classroom, the home, and the community.

For my own part, I would like to note that we can see the future of America mirrored in the faces of the young people of today, and I believe that reflection is a bright and promising one. Through organizations such as the FHA, the ability and enthusiasm of our youth is translated into action. I am proud that the FHA is a central part of my congressional district and my State and Nation.

"AMERICA'S NEW EXPATRIATES" BY HOWARD A. DENEMARK

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. REUSS. Mr. Speaker, Howard A. Denemark, a student at James Madison Senior High School in Milwaukee, has been named the Wisconsin winner of the Veterans of Foreign Wars 1976–77 Voice of Democracy Broadcast Scriptwriting Contest. Howard was sponsored by VFW Post 8292 in Milwaukee, and competed with 1948 other Wisconsin students to prepare essays on "What America Means to Me." Next month Howard will be competing in Washington with other State-wide winners.

I want to share with my colleagues Howard's winning essay, entitled "America's New Expatriates," and the text follows:

AMERICA'S NEW EXPATRIATES

(By Howard A. Denemark)

To be born in America is to be born with every advantage. Economic, educational, social, political—America is opportunity. I have lived with American freedom for so long that it is second nature to me. I am all too accustomed to the fact that America means opportunity, and I am not unique. Perhaps we all need a reminder of how much America means to us and the world. There is no better sign of America's greatness than to examine what has happened to our modern expatriates—those who left this country in search of greater opportunity.

The time was the turbulent '60's. Radicals, protesters, and draft dodgers left the United States in search of a better way. At the forefront of this outward migration was Eldridge Cleaver. In 1968 Cleaver left, criticizing the entire American system. After living in many Communist, Socialist, and even Free World countries, Cleaver returned to the United States. He faces a prison sentence of over 70 years. He may die in prison. But Cleaver returned so that his children would grow up as Americans. Ironically, Eldridge Cleaver is indicative of an upward trend in America. When one of our nation's most violent protesters discovers the greatness of America, and when our country allows him to return, it shows that socially and politically—America is opportunity.

Today, Eldridge Cleaver calls our system, "The political democracy that . . . ordinary people of countries all over the world are longing for." Abroad, the ex-Black Panther saw that nowhere else does a political system offer so much to its people. The problem is that because freedom and opportunity belong to each of us, we begin to forget how much they mean. This brings about a new kind of expatriatism that is even more tragic. It is one that threatens each of us directly—apathy.

Today, it is easy to expatriate ourselves. When a problem faces America, many citizens feel too small to help. Rather than feeling helpless, they close out concern. They just assume that the ones who always take care of everything will do so again. I call this apathetic expatriation, "The New Expatriatism." The New Expatriates drop out of decision making. Without leaving the soil, they leave the country. They subtract themselves from America. Through apathy, rights and opportunities that were fought for in the past are willingly surrendered. But like the protests of expatriates who returned to our country from abroad, apathy too is being defeated. A high voter turnout last November second shows that once more, concern is returning. Some apathy will always exist, but the column marked "no opinion" is shrinking steadily. The New Expatriates are returning from their self-imposed exile, only to discover that economically, educationally, socially, and politically, America is opportunity.

I am lucky. I was born in the United States and have never lived anywhere else. I know that America means opportunity. Even so, there are times when we all become a bit apathetic. When this new expatriation begins to creep up on us, let us remember the men like Eldridge Cleaver who left in search of something better—only to find that the best is what they left behind. We should also remember the New Expatriates. They help us keep our perspective and warn us against taking America for granted.

We are so accustomed to our American opportunity that we no longer fully appreciate it. A man who runs a jack hammer can only know how loud the noise is by seeing the people around him clap their hands over their ears. He is too used to the loudness—and we are too used to the greatness of opportunity. We too must look to others. By seeing the expatriates return to America, we can guard against the trap of apathy. That is the goal of the future—remaining Americans. If we succeed at this, then economically, educationally, socially, and politically, America shall always be opportunity.

THE NEW VIETNAM

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. MURTHA. Although all Americans are satisfied that the Vietnamese war has ended, the prediction that Vietnam would be a belligerent nation and perhaps the most active force for unrest in Indochina may be coming true according to this article which I submit for the RECORD from the January 30, 1977, Pittsburgh Press.

VIET TROOPS SEEN IN LAOS

BANGKOK.—Vietnam has sent 30,000 troops to Laos to help control the general unrest since the founding of the people's republic a year ago, travelers returning from Laos reported.

One said he was checked on a road outside Vientiane by a patrol of three soldiers in Pathet Lao uniforms, and after a friendly conversation, he realized two of them were Vietnamese.

"They were young, friendly, and didn't try to conceal their nationality. They spoke Laotian rather badly," the source added.

He said in the past few days groups of three or four Vietnamese in civilian dress have been in the Vientiane market.

Several diplomats in Bangkok have confirmed the arrival of Vietnamese troops in Laos. They said they were sent by Hanoi to reinforce the Pathet Lao civil and military administration which has reportedly been put on the defensive, particularly in the south, by a resistance movement.

Hundreds of Pathet Lao deserters reportedly have joined the rebels. They are led by former Pathet Lao Col. Boualien.

"His men are in uniform, well-armed and control the access to the two major southern cities of Savanhakett and Pakse," the sources said. They claimed that planes of the National Laotian Company, piloted by Russians ever since the westerners were obliged to leave, have been hit by bullets several times as they approached Savanhakett.

GEPHARDT DESIRES TO VOTE "NAY" ON PAY RAISE

HON. RICHARD A. GEPHARDT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. GEPHARDT. Mr. Speaker, by letter dated February 8, 1977, I have joined with my fellow Members of the 95th New Members Caucus in conveying our deep concern to Chairman ROBERT N. C. NIX of the Post Office and Civil Service Committee over the proposed pay increase for Members of Congress and the procedure by which it is being handled in the House. Our letter states:

As new members of Congress, we feel a special obligation to convey to you and the members of the Post Office and Civil Service Committee our concern regarding the proposed pay raise and its relationship to the trust and confidence of the public in the integrity of the House.

Regardless of one's position on the merits of the proposed pay raise, there can be no legitimate excuse for not having a vote on this issue on the floor of the House. The public is entitled to know where we stand. To delay deliberation on the proposal until the expiration of the 30-day disapproval period would be directly counter to the commendable trend toward honesty and openness. Should such a pay raise go into effect without a vote, it would only serve to lessen public confidence in the House and in its ability to govern itself in a fair and open manner.

In addition, the pay raise issue cannot be separated from the present concern over ethics reform. The various proposals that are now being discussed, including the elimination of office accounts and slush funds along with limitations on outside income, are clearly based on the premise that once these reforms are adopted, Congress can then legitimately move to provide itself with sufficient funds with which to operate free of outside influences. Adopting a pay raise without first enacting these reforms could very well undermine the dedication and sincerity with which these reforms will later be pursued. The two are related and should be enacted at the same time.

Finally, at a time when so many American families are being forced to reduce their standard of living just to stay even with the rate of inflation, a 28% pay raise, amounting to more than $6 million dollars a year for Members of Congress alone, is simply unjustified. While there might well be additional support for a more moderate increase, the present proposal sets a terribly inflationary example for the Nation. To the public, this is just another example of the double standard whereby Congress can talk of the desperate need for economic recovery on the one hand and on the other vote itself a healthy pay raise.

In addition, Mr. Speaker, I wish to express my strong opposition to the concept of an automatic cost-of-living raise for Members of Congress. The Constitution of the United States, article 1, section 7, gives our distinguished body the power to originate all bills for raising

revenue to finance the needs of our Nation. Through unwise spending policies, however, we inadvertently provide for our own cost-of-living raises due to higher inflation. We reward ourselves for causing a problem, rather than solving it. By such foresight, we do indeed secure the blessings of liberty to ourselves and to our posterity, but not that of the people of the United States.

In opposing a pay raise for myself and my colleagues, I do not wish to prevent a needed pay raise for the Federal judiciary or for those members of the highest levels of the executive branch of Government. We must continue to attract and retain the best qualified persons available for such offices, and we can only continue to do so if the compensation provided is adequate for their needs and competitive with their peers in the private sector or the private practice of law. I was not attracted to run for and win election to the House of Representatives on the basis of the rate of pay, but at the same time, I am and will be willing to be compensated at the pay rate in existence at the time when I did choose to run, for I knowingly did so do. Likewise, the people who voted for me in the election exhibited their intent to compensate me for representing them at the existing level of pay, not that proposed in the pending measure which we should all strongly disapprove.

In conclusion, I strongly beseech my colleagues to join in disapproving the resolution which would allow the pay raise to go into effect. I desire to vote "nay" on the pay raise, but I may never have the opportunity to do so because of our procedural rules.

TEENAGERS IDLED BY MINIMUM WAGE?

HON. BILL FRENZEL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. FRENZEL. Mr. Speaker, in todays Wall Street Journal, an excellent article by Alfred L. Malabre, Jr., explores the relationship between teenage unemployment and the minimum wage. I invite the attention of my colleagues to it, and include a portion of it, as follows:

Betty Jackson has a message for the people in Washington who want to raise the nation's minimum wage:

Drop dead.

If you suspect that Betty Jackson is a profit-greedy employer of unskilled workers who toil in some sweatshop for $2.30 an hour —the minimum allowed by federal law—you are wrong. Plump, middled-aged, black, the mother of four ranging from 17 years of age down to 11, she employs no one. She is poor, and she herself is employed, at modest pay, as a social worker by Dade County, Fla. Her job is to try to find work for jobless teenagers in a poverty-ridden area just north of Miami.

"It would be just awful for the kids if they (the federal authorities) raise the minimum wage again," the black woman says. "It's bad enough now, but if the floor goes up again, the kids simply won't ever get hired."

DROUGHT DISASTER WARNING AND ASSISTANCE ACT OF 1977

HON. ALVIN BALDUS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. BALDUS. Mr. Speaker, in light of the large volume of publicity given to the disastrous freezes in Florida and the damage they have done to citrus and vegetable crops there, I am sure that there are few Americans who are not aware of the seriousness of that situation. But I wonder how many Americans are really aware of the severe drought which is plaguing farmers in upper Midwest States such as South Dakota, Minnesota, Iowa, and Wisconsin.

The drought has already devastated crops in 1976. Judging by the extremely low level of water tables, the depth of ground frost—6 to 8 feet and more—caused by the bitter cold temperatures of the last few months, and the relatively low levels of accumulated snow, it appears as though the drought will continue through the 1977 crop season.

There is one important distinction between 1976 and 1977, however. This year farmers know that they can anticipate drought conditions and make their plans accordingly. In 1976, farmers were unable to make allowances for the drought in planning their operations for the year.

In light of the fact that we have available to us sophisticated methods for predicting droughts, I believe that it is inexcusable for us to not be making use of them. Had we predicted this drought over a year ago, the Government would have been able to save millions of dollars in disaster assistance by allowing farmers to plan ahead.

The operation of drought disaster programs in these States has been confusing, changeable, inequitable, and frustrating. Delays in declaring counties as eligible for disaster assistance programs have created problems of equity for many farmers. I have been working daily to try to iron out the problems involved in these programs, yet many of the problems have not been resolved and legislation may be required to accommodate changes which cannot be made administratively. One thing is certain, however. If we had known the drought was coming, a great many of the problems could have been avoided. Thus, while my primary efforts at this time are more properly directed toward straightening out existing problems, I would also like to make an effort to give us more warning on the occurrence of future droughts.

For that reason, I am today introducing legislation to set into place a mechanism for determining future drought disasters as they begin to develop. The Drought Disaster Warning and Assistance Act of 1977 would provide that mechanism.

To aid rural drought disaster and potential drought areas, the Department of Agriculture must know what is happening on the land. An inventory of rural resources and related conditions would establish a reference base from which quantitative measurements can be made to determine the extent and assess the impact of drought situations on farming, ranching, and other activities.

Field examination of statistically selected sample points would furnish the base data. These same sample points or a subset of the points would be monitored on a yearly, monthly, or "as needed" basis. If done on a continuing basis, the system would establish a needed drought disaster alert system and provide a means for measuring rural recovery. These follow-on efforts would be responsive to changing conditions that may require Federal, State, or local actions and program adjustments.

The rural drought disaster inventory and monitoring activities would be carried out by qualified USDA technicians located in every county or similar subdivision of the State. However, some information may be collected by other qualified technicians. Full use would be made of ADP, remote sensing, resource models, and other techniques that would satisfy and maintain quality standards. Plans would include examining the potential of and using cost-effective in situ data collection systems to supply specific data.

The surveys would provide information on the status and condition of: soils, crops, forests, ranges, and other rural areas, irrigated areas, rural water supplies, and soil moisture.

Monitoring would provide onsite data for: First, improving drought probability estimates; and second, determining drought damage and losses including but not limited to—excessive soil movement by wind, degrading productivity, low levels of available moisture for crop growth, lack of conservation on the land, dwindling water supplies for livestock, irrigation, and rural households, shelterbelt removal, fires on dry grassland forestland, overgrazing of dry pastures and rangeland, and advancing salinization.

Cost segments identified to implement and carry out the inventory and monitoring plan are: First, inventory and related costs; second, drought disaster prediction model costs; third, ADP costs—terminal, communications, and computer use; fourth, equipment costs; and, fifth, monitoring costs.

The program initially would be implemented in drought prone States consisting at the present time of the 10 Great Plains States and four other States adjoining the Great Plains, such as Wisconsin. The program would then be implemented in counties of other States where specific areas are prone to drought conditions.

The estimated cost of initially implementing the program would be about $11 million the first year, $7 million each for the second and third years, and would level off to $5 million for each following year. This expenditure would be more than offset by diminishing Federal expenditures for disaster assistance once a drought has set in.

TIMBER SALE BIDDING POLICY

HON. MAX BAUCUS

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. BAUCUS. Mr. Speaker, one of the major bills coming out of the 94th Congress was the National Forest Management Act of 1976. Given the importance of forests to the economic life of the western district of Montana, the provisions of this act have obviously been of great concern to my constituents.

Of particular interest to Montanans was the issue of competitive bidding. In order to gage the reaction to these provisions of the bill, I recently contacted 415 Montana constituents who stand to be most affected by changes in bidding policy.

I would like to share with my colleagues the views of these constituents and offer some thoughts on the directions Congress should take in overseeing the implementation of this important legislation.

You will recall, Mr. Speaker, that competitive bidding emerged as a major concern of the House during discussion of the National Forest Management Act of 1976. Section 14(e)(2) of the act requires "sealed bidding on all sales except where the Secretary determines otherwise by regulation." Subsequent interim regulations issued by the Forest Service on November 4, 1976, established sealed bidding as the "predominant" method of selling Federal timber.

Exceptions to this "predominant" method can occur—according to the interim regulations—in communities that meet certain criteria for classification as "dependent." In other words, oral bidding can resume in such communities.

I know that my colleagues are familiar with the criteria used in designating dependent communities, and that the regulations in question are indeed interim; they will expire with the issuance of final regulations on or before April 1.

Rather than dwell on the criteria themselves, I will offer considerations that are vital to setting a long term bidding policy. Because my district contains such extensive Forest Service holdings, and because my district depends so heavily on Federal timber for its economic life, I sincerely hope that the subcommittee can integrate these considerations into its actions with respect to long term bidding policy.

The first major consideration, obviously, is competitive bidding. Along with many of my colleagues, I took an active role in formulating and passing the National Forest Management Act, and can attest to the concern of our colleagues that timber sales be awarded on a competitive basis. In our efforts to insure competitive sales, however, we must not forget another major concern of Congress—the small business operator—and, precisely, the effects of our actions on the small business community. In the responses to my survey of concerned Montana constituents, I sensed a nearly uniform apprehension that sealed bidding for small sales could actually reduce competition by limiting small sales prospects to large corporate operators; the negative effect would be most dramatic in communities whose small business timber purchasers have traditionally entered oral bidding in the presence of large corporate purchasers, and have won small sales because the large purchasers declined to bid the price of the sale beyond the reach of the small purchaser. In such instances, the major firms have been content to buy these marginal volumes from the small businesses after the sale was harvested. While this classification of sales might be marginal to a company like St. Regis, for example, such volumes can hardly be termed marginal to the independent business which relies on small sales to meet payrolls.

As you well know, Mr. Speaker, potential timber purchasers—both large and small—carefully calculate their economic margins in preparing their bids. Large corporations naturally enjoy more marginal leeway than do independent loggers. This does not mean, however, that large corporations are less interested in securing logs through small sales of Federal timber. Oral bidding has traditionally allowed the independent logger to get a "piece of the action" because the oral process has provided critical information to the corporate purchaser on the ultimate price of a particular volume of logs for the corporation mill, regardless of whether that price is paid to the Federal Government or to an independent logger who wins the sale.

Community relations often compel the large corporate purchaser to allow local independent loggers to win sales—as long as a later opportunity exists for the corporation to buy the harvested logs. Oral bidding gives the corporate purchaser a chance to make such determinations. Sealed bidding, however, does not. Guaranteeing a supply of logs for the corporate mill often compels the corporation to submit sealed bids for small sales that are well beyond the reach of independent loggers.

I do not mean to imply, Mr. Speaker, that independent loggers win all sales awarded through oral bidding. Neither do I intend to minimize the importance of insuring competitive sales; I am simply concerned that Federal bidding policy might result in "throwing the baby out with the bath water," that independent loggers might endure additional hardships in the face of an already tenuous market situation.

One of my constituents, Mr. Donald M. Wood, chairman of the Montana Woodland Council, remarked on the issue of collusion among potential Federal timber purchasers, and particularly on the subject of oral versus sealed bidding.

"Opinion varies greatly between all companies, large and small, as to effects of sealed bidding versus oral," Mr. Wood writes. "However, certainly nothing prevents the dishonest from getting together beforehand." Mr. Wood goes on to emphasize the importance of language in the National Forest Management Act that is aimed at ending collusion. I must add my voice to his in calling for better monitoring and reporting procedures in order to insure that sale of federally owned timber is competitive.

Mr. Speaker, Congress has recognized the need to protect the economic stability of those areas that rely on a dependable supply of Federal timber. My district especially appreciates that recognition since approximately 43 percent of all employment and 51 percent of all income in western Montana rely, either directly or indirectly, on the wood products industry. Seventy-five percent of Montana's 23 million acres of forest is federally owned. Yet, the Forest Service found no Montana communities that are "dependent" on Federal timber according to the criteria set forth in the interim regulations, and consequently, oral bidding in Montana has ended. In my recent testimony before the Subcommittee on Forests of the House Agriculture Committee, I urged that we bear in mind that the criteria for designating dependent communities should include adequate consideration of all components related to timber industry employment, including truckers for example, and the importance of independent loggers to each community.

In closing, Mr. Speaker, I must stress that I do not presume to have all the answers to the questions of oral versus sealed bidding. My intent is to offer considerations that the subcommittee will find helpful in overseeing implementation of the new act. Having participated in passing the act, I know that Congress, while stressing the need for competitive sales, did not intend to champion competition only between large corporate enterprises. I know that Congress intended to enable the independent logger and the small business to compete as well.

Mr. Speaker, we would do well to remember this in an age characterized by the ever-growing hardships of independent and small businesspeople, not just in Montana, but throughout the Nation.

TRIBUTE TO FRANK CONSIDINE

HON. HENRY J. HYDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. HYDE. Mr. Speaker, it is a great pleasure to announce to my colleagues that Mr. Frank Considine, president and chief executive officer of the National Can Corp., has recently been elected president of the Chicago Association of Commerce and Industry. Mr. Considine has had an illustrious business career spanning the past three decades and he is uniquely well qualified to serve the association—the Nation's largest regional chamber of commerce.

Mr. Considine graduated from Loyola University of Chicago in 1943. After a tour of duty with the U.S. Navy, he became a partner in the Frank J. Hogan Talent Agency.

Mr. Considine left the entertainment business to go into packaging in 1947, when he joined the Graham Glass Co. as assistant to the president. In 1951, he

formed his own company, F. W. Considine & Co., a manufacturer's representative firm for Knox Glass, Inc.

Five years later Mr. Considine joined the Metro Glass Division of Kraftco as a vice president. In 1960, he was named president of the newly formed Great Lakes Glass Co.

He joined National Can in September of 1961 as director of sales, and was named vice president of sales within a few months. Two years later, Mr. Considine was elected senior vice president for sales and marketing. In 1966, he was named executive vice president and in 1969 he became president of National Can Corp. Mr. Considine was elected president and chief executive officer of the corporation in 1973.

In 1975, Mr. Considine was honored with the Sales and Marketing Executives Association's "Executive of the Year" award for his role in National Can's growth over the past decade. That same year, Financial World magazine named him one of the "Chief Executive Officers of the Year."

In addition to serving on National Can's board of directors since 1965, he also serves on the boards of Central Telephone & Utilities; the Maytag Co.; Culligan International Co.; the Can Manufacturers Institute; Keep America Beautiful, Inc.; the Easter Seals Society of Chicago; the Mental Health Association of Chicago; and Junior Achievement.

He is also an associate director of the U.S. Brewers Association; chairman of the board of trustees of the American Institute of Food Distribution; and a member of the board of trustees of Loyola University of Chicago and Barat College in Lake Forest. He is also a governing board member of the Illinois Council on Economic Education and vice chairman of the United States-Egypt Business Council.

As a personal friend of Frank's, I must add that in addition to all of the above, he is first and foremost a family man. He and his lovely wife, Nancy, reside in Winnetka, Ill., and are the parents of nine attractive and accomplished children.

I know my colleagues join me in congratulating Mr. Considine on his new post as president of the Chicago Association of Commerce and Industry and wishing him a most successful tenure in office.

Last year the Baltimore Evening Sun ran an Associated Press article about Mr. Considine which is indicative of both his business acumen and his personal vitality. I take pleasure in sharing this article with my colleagues:

[From the Baltimore Sun, Sept. 21, 1976]

MORE THAN JUST MONEY

NEW YORK.—Running a billion dollar-a-year business means more than just money to Frank W. Considine.

"Your most important title is that you're a human being with certain feelings of drives and values," says the president and chief executive officer of National Can Corp., third largest can maker in the United States.

"You can weave human values into your business life every day in your dealings with people," he says. "The business community cannot be involved totally all of its time in making a profit."

Considine, 55, came to the Chicago National Can 15 years ago as general sales manager, rose to president by 1969, became chief executive in 1973 and has made waves through espousal of two causes.

First is shutting off American jobs from illegal aliens. Second is explaining the workings of American business to youth.

"In 1957 this country had the highest birth rate we've ever had—4.3 million. Those people are now 19 and 20 and coming into the work force with impact," Considine said in an interview.

"We create 1.5 million jobs in this country a year. If we even have half the new jobs taken up by people coming here illegally, we are going to face economic, political and social problems we don't want to face.

"A key thing is that young people coming out of school have jobs," he said.

"Unless they're working, we're going to have big problems. I feel we have to take a hard look, yet with compassion, at the whole problem of too many people for the number of jobs this economy creates in order to provide work for young people."

In April 1975, National Can attacked the problem by placing on its job application forms the question: "Do you have the legal right to live and be in this country?"

People can lie, Considine said, but the question, plus signs in all 68 United States plants that the company cooperates with the federal government, tend to discourage illegal aliens.

Considine's other campaign—explaining capitalism to students—stemmed from a presentation by another company.

"Wouldn't it be a good thing for my children to hear this?" Considine said.

"I went home and talked to one of my daughters and she agreed. From that point, our company adopted a high school in our congressional district.

"Our executives talked to the students. We explained if you don't make profits you can't build plants and employ people.

"They understood that.

"Some of the students came to our annual meeting in 1975 and asked questions. It made our meeting much more interesting. We'll do it again this year," he said.

Some young people think of business executives as evil men just trying to get rich, Considine said, "but my concern goes beyond that.

"I feel our whole economic system is misunderstood and misinterpreted in the schools. There's a total lack of awareness what our economic system has done for us as a country and as individuals.

"You see where the consumer is in other countries in relation to where we are," said Considine. "There's very little comparison. Many young people have hostility to business. I don't feel you can overcome hostility unless you have dialogue."

Considine's belief in helping others while he helps the company carries over into its foreign operations as well.

National Can in 1969 had a small partner in Greece who once introduced Considine to a group of government officials.

"It's nice to visit with people for protocol," said Considine, "but I think as long as you're doing that, you might as well find out what they're thinking and what they need.

"I asked the minister of agriculture what our company could do to help his country, and he said, 'Help us improve our product quality.'

"So we hired food technologists who worked with canners to see that food was packed under conditions that would survive export," Considine said.

As the Greek canners worked with National experts, National cans were used. Now National has five can plants in Greece and one in Cyprus to supply cans for food exports to Yugoslavia, Western Europe and Africa.

National Can makes metal, glass and plastic containers and closures, produces pet food and cans fruit.

In 1961, National Can had 20 plants, all inside the United States. Its sales were $114.8 million and net earnings were $2.2 million. By 1975, the company had 68 domestic (two in Baltimore) and 13 foreign factories. Sales were $854 million and earnings were $18.7 million. They are expected to reach $1 billion this year.

Considine says that while he presides over the company's growth, he hasn't neglected his duties toward his family—a wife and nine children.

He prefers, on domestic air trips, to be able to return home at night.

And he says he's shunned moving from his native Chicago, despite better-paying offers elsewhere. The move would have uprooted his family too much.

TAX REFORM ACT

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. STEERS. Mr. Speaker, in the past weeks, my office has been inundated with protests from constituents who face a substantial increase in their taxes, at a time when many of them are not able to face these rising expenses. This tax increase for the retired, disabled Federal employees is a result of an unfair provision of the Tax Reform Act of 1976.

Unless these laws are changed, these citizens will be forced to pay back taxes and penalties on a regulation that had a retroactive effective date for earlier than the issuance date. To make matters even worse, these people do not know if they will have to make this large lump sum payment, because they have been promised by the Congress that the inequities of the present tax law might be changed.

I remind my colleagues that April 15 is the deadline for tax payment, and I urge my colleagues to act speedily and justly on this matter.

DOCTOR: WORSE THAN WAR

HON. MARTY RUSSO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. RUSSO. Mr. Speaker, courage is a word often used and seldom defined. The occasion and the person determine its meaning and thus its forms are many.

Is it the swaggering bravado of youth, mindless of danger, but of themselves as well? Is it the force that impels a soldier forward in battle when fear grips him? Or is it the steady commitment of a friend who runs into the burning house because you are there and must be saved? And on a less dramatic level, how much courage must it take for a small child to learn to deal with those large, lurking ghosts in the room and not cry in the dark?

I am particularly struck by the quiet courage that does not demand attention for itself. It belongs to the person who approaches an awesome and frightening responsibility as matter-of-factly as others of us face a trip to the store.

We may be misled by the people who possess it, for they treat this courage as simply a part of them—like a nose or a laugh—surely nothing special to be singled out for praise. Our policemen, firemen, and doctors, for example, will often explain extraordinary actions with a mere, "It was my job."

I suspect that this is what Dr. Joseph Cari of Chicago feels about the Commonwealth Edison fire last November. Having the privilege of knowing Dr. Cari, I am aware of his humility, dedication, competence, and strength.

On November 21, Dr. Cari performed an amputation of a firefighter's leg, a firefighter who was pinned under debris on the edge of the collapsed portion of the building. The amputation was performed eight stories up and Dr. Cari had to lie over the man in order to reach across him to perform the surgery, in the dark.

It was certainly not the first emergency operation for Dr. Cari under difficult circumstances, but it was, according to him, the worst thing he had ever had to do.

As medical director of the Chicago Fire Department since 1972, Dr. Cari has worked with the Chicago Hospital Council in establishing a triage plan for emergencies. He responds to fires or other incidents as needed, such as the United Airline crash at Midway in 1972 that killed 45 people and injured 17, and the Illinois Central Railroad accident which killed 45 people and injured 300 others in October of last year.

He brings his energy and talent to his job as director as fully as he does to the emergencies he is called to. He has, for example, created a health manual, "Delivery of Medical Care," that covers all phases of physical fitness and is the most complete manual of its kind in the fire service. In creating a more complete medical division, he has established divisions for such areas as physical fitness, obesity, alcoholism, and a counselors program.

He is a fine physician and a courageous human being. Today I know my colleagues join with me in commending him, as well as the brave firemen with whom he works, for their dedication. I also want to enter in the RECORD the moving story of that November evening. It is beautifully written by Dorothy Collin of the Chicago Tribune:

DOCTOR: WORSE THAN WAR

(By Dorothy Collin)

For Dr. Joseph Cari the early hours of Monday were worse than anything he'd ever been through—worse than the landings at New Guinea, worse than the south of France, worse than Normandy's bloody Omaha Beach.

Those were the hours he tried to save the life of Walter Watroba, a fireman trapped on an 18-inch ledge more than 70 feet high in the midst of smoke and flames and tons of debris.

And those were the hours when Dr. Cari finally decided to amputate Watroba's leg to free him. He performed the operation lying across the fireman's upper body with a fire department paramedic lying on top of him, handing him instruments.

He amputated the leg at the knee. And he did it without enough light to see, relying on the sensitivity that 36 years of emergency medicine gave to his fingers. He did it in two minutes.

"It was the worst thing I ever had to do," Dr. Cari said.

The doctor, who was a combat surgeon in World War II and has worked with the Chicago Fire Department for 30 years, sat in the emergency area of Mercy Hospital where Watroba had died a few hours before and told of his attempt to save the fireman's life.

Surrounded by peach-colored curtains, reporters and other doctors and nurses, Dr. Cari looked almost like a school boy cornered by teachers. A small man, he sat quietly, enduring question after question, his old black leather doctor's bag sitting by his feet.

He told how he had been called at 9:30 Sunday night at his home. "They said a man was pinned and Battalion 29 will pick you up."

He arrived at the fire at Commonwealth Edison's generating station at 1111 W. Cermak Rd., "got on the roof and assessed the problem and then apprised Commissioner [Robert] Quinn of the situation as I always do."

The situation was that Watroba was pinned by twisted steel and cement from a coal conveyor that had collapsed on top of him. On his right was a wall that fellow firemen had tied him to so he wouldn't fall left into a crevice.

"It was very noisy, debris was falling, the roof was still on fire," Dr. Cari said. "The flames were right on top of us, two feet away."

Watroba had extensive injuries—his left leg was crushed, he had internal abdominal injuries, he was suffering from smoke inhalation, and his right leg was buried.

But fire officials decided to try to remove the debris to get him out. "With all their expertise they thought they could do it," Dr. Cari said. "We didn't want to sacrifice his leg with all that knowledge and equipment available. We wanted to give him a chance to walk out on two legs."

And Watroba was a strong man, able to stand it. "If he wasn't he would have died in the first hour," Dr. Cari said.

So the doctor ordered that the fireman be given morphine "whenever he complained of pain," and Watroba's fellow firefighters worked for hours in the snow and wind to free him.

While they worked, Dr. Cari "went up and down in a snorkel," his doctor's coat replaced by a fireman's coat and his pockets stuffed with instruments and medication.

He and Watroba talked. They even joked. "He said 'Whoever would have thought I would end up here from Dearborn Street?' " Dr. Cari said.

[Watroba was assigned to Engine 13 at Dearborn and Lake streets, a unit that normally fights fires in the downtown area.]

They talked about the Bears and "their lousy game" and the weather and what the firemen were doing, "what companies were doing what and who was coming up."

"I tried to keep him as calm as possible," Dr. Cari said. "I assured him that with any sort of a break things would work out all right. He tried to keep up the conversation. He tried to remove his legs from the debris but it was an impossibility."

The one thing they did not talk about was Watroba's family. "No, you don't talk about the family," the doctor said.

Finally, it became evident the debris was yielding only inches at a time. And the equipment being used was beginning to crack the wall the rescuers were standing on. "If it went, it could have meant the loss of five or six other lives," Dr. Cari said.

"So I made the decision to amputate. I explained it to Walter and he answered, 'Doc, do what you have to do, but get me out.' "

"I couldn't crawl in from the left because of the crevice. I had to crawl over him, over his right side in order to do it. When I got in there, I could see his leg—there was a little light in back of it. I just felt the anatomical points of the knee."

"I could feel it with my fingers," Dr Cari said.

But even with the help of the paramedic, Kevin Crowley, Dr. Cari said it was worse than anything he ever did on a battlefield. Usually when you pull someone out of a tank or treat them on a beachhead, you are on level ground, not up in the air where you can lose the man."

After the operation, Dr. Cari said: "Walter, you're free." The fireman said "I'll turn" and began to try to turn his body.

His rescuers got him into a litter and down a ladder, but he was already in shock by the time he was gently caught on the ground by dozens of firemen's upreached hands.

He died somewhere between the fire and Mercy Hospital about 6 a.m.

Seven hours later, after all the questions had been answered, Dr. Cari, who had been up since 5 a.m. Sunday, picked up his black bag and started on his rounds.

As chairman of the family practice department at Mercy he had a few calls to make there. But then he was going to other hospitals. He was going to visit sick firemen.

REMOVAL OF EARNINGS LIMITATIONS ON SOCIAL SECURITY RECIPIENTS

HON. J. HERBERT BURKE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. BURKE of Florida. Mr. Speaker, I would like to call the attention of all my colleagues to an article appearing in the January 3, 1977, edition of the New York Times entitled "Social (In)security," by Richard L. Tobin. The author says that the earnings limitation imposed upon social security recipients between the ages of 65 and 72 creates not social security, but "social insecurity."

This article is of special interest to me since I have introduced legislation in the 90th, 91st, 92d, 93d, 94th, and now the 95th Congress to repeal the earnings limitation on social security so that the elderly would be able to work without being penalized.

At the present time those between the ages of 65 and 72 receiving social security benefits can earn up to $3,000 without losing any of their benefits. But for every $2 that is earned over that figure, a person loses $1 in benefits. This amounts to a 50-percent tax on earnings for the elderly.

And yet, if those same persons were fortunate to have income from stocks and bonds, they could receive their full benefit without any such limitation being imposed on the amount of income they could receive.

Mr. Speaker, it is my opinion that since social security benefits are related directly to the contributions made by the worker himself and his employer, it should be a matter of right that the employee should upon reaching a certain age be given those benefits for which he has labored and which he anticipates. They should be treated by the Government as any other private annuity fund that an individual can or has paid into. To deny those benefits to the elderly who desire to work—for whatever reason—is unjust and contrary to the American way of life.

Mr. Speaker, as we begin to move into America's third century, let us rethink the role of the elderly in our society. Let us remove that barrier which has for so long separated them from the rest of productive society. Let us start anew and build anew a more vibrant image of our senior citizens. If given the opportunity, they can and will play a much more vital role in the fulfillment of the American dream.

I urge my colleagues in the U.S. House of Representatives to give a careful reading to the following article. Also, I urge each and every one of you to join with me in passing my bill—H.R. 2775—to amend title II of the Social Security Act so as to permit an individual receiving benefits thereunder to earn outside income without losing any of such benefits.

The article is as follows:

SOCIAL (IN) SECURITY

(By Richard L. Tobin)

If President-elect Carter wishes to become immediately popular with almost anyone over 65, he will tackle at once, and with the greatest vigor, one of the most grossly unfair Federal laws—the one that says you cannot earn a decent living after your 65th birthday and get your well-deserved Social Security at the same time.

In 1977, the maximum a beneficiary can earn will increase to $3,000 a year if he or she wants to collect his or her Social Security income. It's been $2,760 a year up to now, but the magnificent $240 rise won't do much to help those of us who have little or no pension money coming in besides our overdue Social Security benefits.

If your income derives from stock or bonds and not from a paycheck, you can collect the whole Social Security check each month. But for those of us who live from paycheck to paycheck, and whose income comes directly from the sweat of our aging brow, there is little or no chance of our beginning to collect on the Social Security benefits we've been entitled to ever since we hit 65.

Let me cite my own case, since it is typical of those—millions certainly—who are now being robbed of a chance to retire, at least in part.

I have been a dues-paying member of the Social Security system since Dec. 8, 1936, the day it began. So far as I know, my employers have never missed a payment and I know they have deducted many thousands of dollars from my paychecks over the last 40 years. Each year more has been taken out, and at present this figure runs in excess of $875 per annum.

Yet, after exactly 40 years of paying in, I cannot begin to collect. The reason is, essentially, that I worked for The New York Herald Tribune for 24 years and the Trib had no formal pension system, though it did take care of a few ancient out-pensioners while it was still operative. But the day The Tribune folded, any chance any of its staffers might have had for even a modest pension went down the drain in the welter of bankruptcy. Had the present Federal law guaranteeing pensions been in effect at that time, we staffers might have salvaged something. But the rude fact is that we did not and must therefore, continue to work to survive.

Fortunately for me, I went to work for the Saturday Review in 1960 and was soon taken in under the pension wing of McCall's, which took over the magazine in 1961. It was a good retirement plan and would have worked beautifully had SR not been sold over Norman Cousins' head, at which point I no longer had a pension plan. Fortunately, the few years under McCall's-Norton Simon ownership meant that my pension money, small as it was, had been funded and would come to me no matter who owned me. But it was small, quite naturally, since I was under its wing for less than ten years, starting at the age of 50.

When we recently got SR back, we were faced with all sorts of financial problems, most of which are now beginning to work out. We are probably breaking even—just. But there is little or nothnig left over to give us pension money. That is not anyone's fault. In a sense we're lucky to be afloat at all, and I am luckier still to be on someone's payroll at 66.

But the cruel fact is that I cannot stop working because I cannot live on Social Security and the small pension I earned those few years in the 1960's. For every $2 I earn above $3,000 (starting in January) $1 in Social Security benefit is to be taken away. Therefore, if my Social Security income (counting my wife's) is about $6,000 per year, I can forget it if I make $12,000 in salary. Since we cannot live even modestly on the $6,000 plus the small McCall's pension, I am obliged to go on working. Of course, at age 72, the law says, I can keep everything I earn and get my Social Security, too. But I've told myself not to hold my breath.

The original intent of the Social Security law limiting earnings beyond 65 was to open up the employment market for Depression youngsters. That purpose has long since eroded. I like to work. I'm a writer-editor by trade and I shall always be working at something. But I'd very much like to work a bit less for someone else and live, at least in part, on some of the money I've paid in to Washington for just such a purpose over the last four decades. I think I have it coming.

If the lawmakers can't see their way to lifting the silly ceiling on earnings altogether, then maybe they'd raise it so people like me could get a bit of what's coming to them regardless of paycheck. My wife and I would like to travel a little. When I was managing editor of SR and later associate publisher, I had the money but never could scrape together the time to do Europe or Asia. I'd like to now. And it really isn't fair that, through no fault of mine, one splendid publication on which I worked for almost a quarter of a century went to the wall and any pension with it, or that someone bought out from under us at SR, even though the story has a happy ending.

So, Mr. President-elect, if you wish to become immediately popular with at least one Republican, you will recommend immediate changes in the Social Security eligibility laws and see that Congress does something about them.

HEALTH CARE LEGISLATION AND PHILANTHROPY

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. CARTER. Mr. Speaker, at the 10th annual conference of the National Association for Hospital Development in Houston, Tex., Theodore Cooper, M.D., former Assistant Secretary for Health of the U.S. Department of Health, Education, and Welfare, received the association's achievement award for 1976 for his work on behalf of the private health care system and for his outspoken support for the role of philanthropy in that system.

Philanthropy has had a long and honorable tradition in this country in the fields of education and public service as well as in health. I am hopeful that the Congress will see its way clear to including in any national health insurance program a provision that philanthropy shall be continued and, in fact, encouraged and that the philanthropic dollar will not be the first Federal dollar provided for reimbursement.

In order that my colleagues may have the opportunity to examine Dr. Cooper's speech in depth, I include it at this point in the RECORD:

HEALTH CARE LEGISLATION AND PHILANTHROPY

(By Theodore Cooper, M.D.)

I am very grateful for the honor of having been named to receive the Association's Achievement Award for 1976. There are a great many people in this country who have made very substantial contributions to preserving private philanthropy as the keystone of the American voluntary health care system. A lot of them are in this room, and I am proud to be in your company.

The 1976 Achievement Award could rightfully go to any of you—or to all of you. But I am glad to accept this distinction because there is no one here who feels more strongly than I do that private philanthropy—for its own sake and because of what it represents in American society—is a priceless resource and one that we must never abandon, either by design or by folly.

I know quite well that there are those who believe that philanthropy has a short future in the American health system, that the certain arrival of national health insurance will mark the certain departure of voluntary giving.

Let me just say that while I understand the thinking behind that prognosis, I also understand the major and undiminished need for philanthropy in the health field. And I think I appreciate, as well as anyone does, the irreplacable loss that the health care system would suffer if national health insurance or any other manifestation of social or economic policy brought an end to the tremendous rewards that accrue from the voluntary donation of funds and personal energy in the spirit of philanthropy.

Such a loss to the health care system might be calculated in dollars, but it would be reflected in research not carried out, services not provided, and innovations not exploited.

In short, the loss of philanthropy would hit hard at the very places where our health care system is most in need of creativity and freedom, in the places where new ideas and new approaches to old problems can lead to needed change.

And without the capacity for change, the health care system would be in grave danger.

In the last decade, we have seen enacted more health legislation of more far-reaching consequences than ever before in the 200 years of our country's existence. In the spirit of assuring to every American a right to health, we have legislated and implemented vast programs that run the gamut of the whole health enterprise—from the pursuit of basic knowledge to the provision of care for millions of people who might otherwise not have equal access to it.

I do not have to recite that parade of laws—indeed there isn't even time enough for me to do it. But I would call your attention to a subtle but vastly important change that has occurred in the form and intent of this legislation.

Broadly speaking, we have moved from legislative action whose intent was primarily to make health care more plentiful and more available, to legislation that seeks to constrain the growth and function of the health care system, to increase its productivity, eliminate unnecessary utilization, and improve the quality of care.

It is not an oversimplification to say that the driving force behind these legislative measures—in fact the driving force behind virtually every health policy decision—is rising cost. We have entered a period in the evolution of the American health care system whose most distinguishing characteristic is sharply escalating expenditures for health care—expenditures by private citizens, expenditures by the Nation's hospitals, and expenditures by government at every level.

No one can seriously quarrel with the need to contain the rising cost of health care. And neither can anyone take issue with the objectives of seeing to it that we make the best use of the resources we have, avoid waste, and strive for care of the highest quality that can be achieved.

But because I happen to agree with Thomas Jefferson who held that government exists to do for people what they cannot do for themselves, I think we all have to be acutely alert to the consequences that can follow from a too-easy assumption that government can make it all come out all right—that government can keep health care costs in line, make sure that the system has everything it needs in the right place at the right time, and that everybody who seeks health care will get the best there is.

The consequences of that kind of naive thinking can be disastrous. As you people know all too well, they can literally dry up not just the philanthropic gift, but the spirit of philanthropy itself. The closer we come to the idea that government can and should assume every responsibility of the public good, the closer we come to foreclosing any form of private voluntary initiative in the health field.

For example, as urgently as we need to make health planning an effective tool for improved efficiency and productivity, we must also guard against regulation in the service of better health planning that makes it difficult for hospitals to accept philanthropic contributions. We all understand that there are times when a private donation might lead to an inappropriate capital expenditure, and we ought to be able to prevent that. But to do it through a regulatory mechanism that cuts off private support for appropriate and necessary purposes as well is simply wrong.

We don't have to throw out the baby with the bathwater, and the way to avoid that is to be able to tell the difference.

Discussions about national health insurance tend to focus on a number of key issues—the cost, both to individuals and to the Nation, the kind of benefits to be covered, the financing scheme, controls on cost and utilization, and other critically important questions the answers to which will shape not just the insurance plan, but the entire health care system for years to come.

But there are other factors that simply must not be overlooked in the rush to devise a health insurance plan that Congress will enact, the President will sign, and the country can live with.

One of those factors, of course, is the impact of national health insurance on philanthropy, an issue that very deeply concerns both the donors and the recipients of the nearly $4 billion that is contributed annually to the health care system.

There is some logic in the prediction that national health insurance will sharply reduce—if not in fact eliminate—philanthropy in the health field. From a purely economic point of view, the need for philanthropy might seem to disappear when a national health insurance scheme assures hospitals full reimbursement for all activities associated with patient care.

But such reasoning equates philanthropy with charity. And it fails to recognize that all great medical centers—and even many hospitals of more modest scope—are able to undertake projects and programs only because generous organizations and individuals are willing and able to provide the necessary support.

Furthermore, the kind of activities made possible through philanthropic donations and private grants are likely to represent innovations, in both research and services, for which public funds are often not available.

By and large, the public's money ought to be used to exploit proven advances in the provisions of social services—including health care—and to seek new knowledge in problem areas that have a major impact on individuals and society.

Moreover, at a time when Federal spending is under extremely tight restrictions, tax dollars have to be spent to make sure that mandated goals—like paying for health services for the elderly, the disabled, and the poor—are not being neglected.

What this means, of course, is that both national health insurance and tight Federal health budgets tend to make philanthropy an increasingly vital and important source of funds for the health care system—the kind of venture capital that can point the way to significant change.

I flew down to Houston today with John Grupenhoff, a man I have known and worked with for many years who ably represents your Association in Washington, and who has a deep understanding of the issues that all of us—in both the public and the private health sectors—have to wrestle with.

One of those issues, of course, is the fact that tens of millions of Americans have either no health insurance protection whatever or are covered inadequately by plans that foster expensive and inappropriate use of the Nation's limited health resources.

We have to correct these defects. But in doing that, we have to guard against devising a system that might create new problems and make old ones worse.

To foreclose private philanthropy would be a grave mistake.

To add materially to the demand for health services without making certain that the system can respond would be a grave mistake.

And to institute an insurance system that had no effective mechanisms for cost containment and quality assurance would be a grave mistake.

I am confident that many people within and outside the Federal government are well aware of these considerations. But I am equally sure that it will take the best and most enlightened leadership of the entire health industry to design a responsible health insurance system, and once it is adopted, to make it work.

That kind of leadership has to come from the Public Health Service, and I think we are increasingly able to provide it. But it has to come from the private sector as well, from people like yourselves, from the medical profession, from the insurance industry, and from parts of American society that have up until now, shown little interest in how our health care system works and what its problems are.

We have made it too easy for the American people to think that government can fix everything. Even when government policies are wrong—and sometimes they are—the public looks to government to find solutions.

Well, believe me, government doesn't have all the answers. Laws and budgets can't make everything right. Fine pronouncements about national health goals and strategies are not worth anything unless they articulate the will and command the support of private citizens, taxpayers, private industry, and those who are able to share with others in the spirit of philanthropy.

As long as I have a voice in the leadership of the Federal health effort, I intend to be as forceful as I can in the service of preserving a viable, independent, and creative private and voluntary health enterprise for this country. I feel sure you share that purpose, and I invite your help in making certain that neither government nor the private sector ever forgets it.

Again, I thank you for the honor of receiving your Achievement Award. I will do everything I can to merit your confidence.

COMMUNIST PARTY AND SOVIET UNION DEFEND WARNKE APPOINTMENT

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. McDONALD. Mr. Speaker, in a February 5 editorial in its official newspaper, the Soviet-controlled Communist Party, U.S.A.—CPUSA—has declared its support for the nomination of Paul C. Warnke as Director of the Arms Control and Disarmament Agency by slanderously lashing out at responsible critics in the Senate and private sector who point with alarm to Mr. Warnke's long-held extreme prodisarmament positions.

The hysterical Communist Party attack on responsible critics of risky unilateral disarmament parrot those heard nightly on Radio Moscow's broadcasts and printed in the Soviet Communist Party press.

The Soviets desperately want the United States to give up in a new round of strategic arms limitations talks—SALT—the cruise missile and the B–1 bomber. The Soviet Union will not be able to develop an effective counter to the cheap, versatile cruise missile for many years, and it does not want its new supersonic Backfire bombers to have competition from our B–1.

The Communists' arguments in support of Warnke and the policies he has long upheld should be of interest to all. I attach the text of Moscow Tass article on February 3, 1977; and of a Daily World editorial of February 5, 1977:

[Moscow Tass in English 1502 GMT 3 Feb 77 LD]

"THE 'HAWKS' TRY TO DICTATE THEIR TERMS"

[Text] Washington, February 3, TASS—President Carter has appointed Paul Warnke to the post of director of the Arms Control and Disarmament Agency, and head of the U. S. delegation at the Soviet-American Strategic Arms Limitation Talks.

Till 1969 Warnke was assistant secretary of defense for international security matters, and in American political circles has the reputation of an exponent of restricting the arms race.

Warnke's nomination is sharply opposed by circles close to the military-industrial complex. The "Hawks" in the Senate's Armed Forces Committee are hastily taking measures to fail his candidature. Especially zealous in this respect are such notorious opponents of detente as Senators Nunn and Jackson. An anonymous "memorandum" is now being circulated in the Senate accusing Warnke of allegedly wanting the United States unilaterally to discard several strategic weapons systems and stating that for this reason he cannot be sufficiently "firm" at Soviet-American Strategic Arms Limitation Talks.

It is already not the first time that reactionary forces in the United States are trying to prevent the approval of candidatures nom-

inated to high posts by the new administration. Last month, for instance, they launched a vicious campaign against Theodore Sorensen, a prominent American politician who is close to the Kennedy clan. As a result, Sorensen had to turn down the government post offered to him.

[From the Daily World, Feb. 5, 1977]

WARNKE APPOINTMENT

How many hundreds of thousands of jobs were lost by U.S. workers because of restrictions in the 1974 Trade Act can only be guessed at. But there is no guesswork about the responsibility of the Senator whose name is attached to the job-cutting amendment to that bill—Sen. Henry M. Jackson (D-Wash).

Jackson is still serving the military-industrial complex instead of the people of his state and the USA. He, and a gang of right-wing social democrats, zionists, such anti-Sovieteers as George Meany, Sen. Daniel Moynihan and other cold war hawks are on a rampage now to torpedo any possible arms reduction agreement with the Soviet Union. They place swelling the enormous profits of the military-industrial complex ahead of the U.S. people's needs.

Their immediate aim is to block confirmation of President Carter's nomination of Paul C. Warnke as head of the Arms Control and Disarmament Agency, on the grounds that he is "soft" on the issue. The claim is phony, a smoke-screen to hide their real objective from the U.S. people—to continue ripping off the U.S. taxpayer with ever bigger military spending, a draft military force and nuclear war threats.

The warhawks have already cost U.S. workers many jobs. They have to be stopped from putting our lives in jeopardy too. Tell your representative in Congress that you want a SALT agreement!

LESSONS TO BE LEARNED FROM THE BRITISH NHI

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. CRANE. Mr. Speaker, a number of physicians who have worked under the British National Health Service are now warning us to learn from their mistakes and preserve the private practice of medicine in this country rather than create a system of national health insurance. Dr. James Sutherland, a British expatriate practicing in Quincy, Ill., has presented an excellent analysis of the history and defects of the British system in an article I am inserting for the benefit of my colleagues. We have much to learn from this example.

[From the Worcester Medical News, May-June, 1976]

LOOK BEFORE YOU LEAP: LESSONS TO BE LEARNED FROM THE BRITISH NATIONAL HEALTH SERVICE

(By James W. Sutherland, M.D.)

THE HISTORY OF THE BRITISH NATIONAL HEALTH SERVICE

The idea of National Health Insurance is no novelty to the British people. In 1908, the Webbs, pioneers of the Fabian Socialist group, declared that Britain would never be healthy until it had a State Medical Service.

In 1911, Lloyd George, the first Welshman to leave his imprint on UK Medical care, introduced a type of NHI in which for a payment of approximately six to ten cents per week, working men and their families received a limited form of coverage. This applied only to care in the doctor's office, as at that time the hospitals were under the voluntary system, indeed some were in fact Poor Law hospitals. This type of care was loosely referred to as "being on the panel". In spite of the pejorative sound, it at least afforded poorer people the right to examination and outpatient treatment of a rough type, and referral where necessary to voluntary or municipalized hospitals.

By 1919, Poor Law hospitals in Great Britain had been municipalized and standards raised. For the ordinary citizen, being in the hospital meant being in wards of up to, and sometimes exceeding, 20 beds. Private practice meant nursing home care, some of it good, conducted in houses of large size converted for that purpose.

The principal impetus toward a National Health Service arrived with the Second World War. In 1939, Great Britain had to marshall all her medical resources to face bombing and war casualties who had returned to Great Britain from overseas. This was called the Emergency Medical Service and numerous temporary hospitals were erected for this purpose.

The final catalyst was the delivery of the Beveridge Report in 1942. Sir William (later Lord) Beveridge produced a report, "Social Insurance and Allied Services". His assumption was that in any post war social insurance plan there would be "Comprehensive Health and Rehabilitation services for prevention and cure of diseases and restoration of capacity for work, available for all in the community".

With the end of World War II, the Labor, or Socialist party, came to power and its NHS (National Health Service) Act of 1946 stated that "the medical service must be planned as a whole, must be preventive as well as curative, and must be complete and open to all so that poverty shall be no bar to health".

From the outset, the main aspects of the British National Health Service were—

It was completely comprehensive;

It was available to everybody; and

It was completely free.

Like many new ideas, the theory of this was attractive, but performance was inept. The architects believed that if health care were made available to all, fitness would so improve that costs would become less and less. Not taken into consideration was the fact that patients would live longer and that costs would be added to the service at the geriatric end of the scale. It should have been obvious to these economists that Britain, or any other country, did not have the men or the money to carry out these three components of a national health service. Nobody carried out an actuarial study of the possible costs. From its onset, the NHS was badly under-financed.

These were the flaws whose absence might have made a considerable difference to the smooth operation of the services.

First; the continued fragmentation of the medical profession: there were three branches of medicine—

The primary care doctors or general practitioners (about two thirds of the total, approximately 20 to 30,000);

The consultants or specialists (between 10 to 15,000) remain rigidly in the hospitals from which the General Practitioners are usually excluded except for social visits to patients;

The public health system of nurses and doctors who are very much a separate entity.

Never did the sectors get together, not even today.

This bright new dream got off to a bad start because it promised too much. It was felt that there would now be a completely healthy nation requiring very little care and its cost was badly under estimated. It failed to unite a divided profession to meet the problems ahead; and finally, it got under way with the wrong persons in charge since neither the doctors nor the politicians had the remotest idea of how a comprehensive national health service should operate. The doctors stood aside and let the politicians make the decisions. Worst of all, neither side had any idea that they were getting into something that required much more than they could provide in the way of men and money.

Promises were made to the General Practitioners (primary care providers) and to the Specialists or Consultants, but they could not be kept.

PRIMARY CARE PROVIDES (GPS—FAMILY PHYSICIANS)

The resistance of the family doctors was overcome by the promise that 2500 Health Centers would be provided to cover the entire country. In 1974, some 26 years after the inception of the National Health Service itself in 1948, only three hundred had been built and it was projected it would be 1980 before a total of 2000 had been reached.

Before the enactment of the NHS, each doctor owned his practice and sold it when he wanted. After 1948, practices were nationalized and taken over by the government. General Practitioners were no longer free to sell their practice nor could they move where they wanted. This could only be done by applying to the appropriate authority and by competing with the other GPs for a practice in a different part of the country. Meanwhile, they were promised they would be recompensed for the value of the practice when they retired at 65 and in the interim, they would get 2½ per cent interest per annum on the projected cost of the practice. They resisted this but since doctors in Britain are in general practice, it was the easiest of matters for the bureaucrats to hand out a health card to every citizen and ask him to choose his own doctor. At first, doctors resisted, but when they saw that colleagues were accepting these cards, they panicked and before long, the general practitioners were firmly in the fold by accepting the inevitability of government intervention, they had been roundly defeated and routed. The British Medical Association had failed to give suitable leadership and the scheme was a fait accompli.

While they waited for the promised Health Centers, they continued to practice in their own offices. The method of payment itself was reprehensible. In the beginning, they were allowed to take 3500 patients on their list and were paid $3.00 or less per head, per year, whether they saw the patients or not. So no matter how many house or office calls were made, the capitation fee remained at this figure. The harder the doctor worked, the less he earned per hour. Where he had many old people in his practice, he was clearly at times, being paid nothing for many numerous house calls, a tradition of medicine in Great Britain.

Spectacles, teeth, wigs, medicine were all free and the calls on them were so great that some small deductible was included to control it. In time, the list was reduced to 2,500 per doctor and the capitation fee at the moment is somewhere in the region of $4.00 per head, per year, with a loading fee for older people and emergencies and obstetric cases.

At the height of winter epidemics of upper respiratory disease, it was not uncommon for a doctor to see 50 to 100 patients in his office and to do 30 to 60 house calls in a day. His wife tended the phone at home and was an unpaid servant of the government. If he took a vacation he was expected to provide a replacement for his services at his own expense.

The quality of service given by British doctors has always been a very high one and many struggled for years to maintain this

standard. However, by 1966, the general practitioner was isolated from his patients in hospitals, overworked, underpaid and disillusioned.

Emigration of doctors occurred in large numbers. Hasty examination left the patient dissastisfied and one out of ten patients seen in the office were referred to the hospital, many having to wait several weeks to see a suitable consultant. Finally to quieten the revolt, the government gave them a substantial increase in capitation fee, bringing them up as closely as possible to the consultant in the hospital in terms of salary.

THE HOSPITALS AND THE SPECIALISTS

When the NHS Act became operative, the hospitals were nationalized and only one to two percent of the beds were placed aside for private practice. The Consultants were paid on a basis of half days. They were allowed to work full time for the state or on a part time basis of seven, eight or nine half days per week, the remainder of the time being allotted to private practice.

Although it had been promised that private practice would continue, there was bias against it from the outset and a theory that it was improper to have two systems operating within one framework. Waiting lists grew longer and many business executives elected to join private insurance schemes which let them choose their own specialists and to get a private bed in a hospital, thereby enabling them to receive treatment more rapidly. "Jumping the line" became common practice and it was naturally resented.

At the outset, competition for Consultant posts was intense. Even interns and residents had to compete for their posts and much time and expense was entailed in applying and appearing before selection boards. The simple idea that a doctor could take a residency, pass his specialists Boards, then go out and put up his shingle was no longer valid.

At times, as many as eighty doctors would apply for one specialist post. With growing disillusionment about promotion, many emigrated. Replacements at junior and even senior level were increasingly made by doctors from Africa, Jamaica or India who eventually filled 30 to 50 percent of the junior posts. Some of them were highly trained, well versed in English and quickly acceptable to the British people. Some had difficulty in communicating and these doctors were treated unfairly, relegated to under-doctored areas and hospitals handling large numbers of mental and geriatric patients.

The latest Labor Government has had increasing trouble with the consultants who finally began to "work to contract." Instead of doing their customary 60 or more hours per week, they delivered the hours their contract demanded, 38½ hours per week full time. The juniors were paid overtime to take the place of the seniors and the situation deteriorated in the early months of 1975 until the consultants were given an increase in salary of the order of 30 to 35 percent, at which point they stopped working to contract.

Then it was announced that the government meant to close all private beds in state hospitals and that private practice in the future would have to take place outside the system. For practical purposes, this was the death knell of private practice in Great Britain.

Now the situation is chaotic. Junior doctors, i.e. interns and residents, threatened to strike (their overtime pay has been restricted due to a national freeze on wages) and the senior doctors are greatly dissatisfied that they now can no longer practice privately within the NHS.

Other complications have been introduced by the fact that many of the non-medical staff in the hospital are unionized. They in turn resent the carrying out of private practice in hospitals and some have refused to have anything to do with any aspect of private practice in any state hospitals.

All of this serves to illustrate the inevitable consequences of the mistakes that were made in the beginning. If it had been the intent of Labor and Conservative governments in Great Britain to abolish private practice within the NHS, this should have been indicated from the outset. The hypocrisy has now come home to roost.

THE GOOD SIDE

No one can pretend that everything is bad about the British National Health Service. It may have miscalculated, promised too much and delivered too little but it is still, for all its failings, widely accepted by the people.

Doctors are free to order treatment without undue consideration of the cost invoved. The patient has freedom from medical bills and of course, this is the most attractive aspect of all and is the one that is constantly reiterated. But nothing is free, and the cost is borne by increasing taxation. As medicine becomes more sophisticated and inflation hits the whole country, the cost has increased by six times the original estimate. Consider the reaction on this side of the Atlantic if a U.S.A. National Health Service escalated from $100 billion in 1975 to $600 billion by the end of the century.

If the family practitioner in Great Britain has good relations with the consultants in hospitals, it is possible for him to get a second opinion from some of the best doctors in the world and with good luck the patient will get excellent treatment free in hospitals. If, however, the doctor has a poor working relationship with the hospital, the patient may wait many weeks before getting an appointment and months or even years before receiving treatment in the hospitals. One can appreciate very readily the difficulties encountered by a doctor from Pakistan whose English is not perfect, and who does not have the confidence or influence to secure such services for his patient.

BRITAIN HAS ALL THE ILLS OF THE UNITED STATES

On the other hand, it is only fair to say that Great Britain has practically all of the ills which afflict the United States at the moment. Maldistribution of doctors is almost as bad there as here. Under these circumstances, the Commonwealth doctors have to accept service in these areas if they wish to practice at all.

Language difficulties are now a considerable problem and Commonwealth and overseas doctors are now forced to take a language test—many of them failing at the first attempt. This has caused considerable annoyance to the well-organized Pakistanian doctors and considerable disquiet to the British public.

Costs rise inevitably and uncontrollably. The hospital bed in the National Health Service where patients may be in a large 20 bedded ward, costs $78.00 per day. The emergence of a new private hospital in London, called the Wellington, with a rate of $350 per day is enough to make even American eyebrows rise. This hospital can obviously only be used by the very wealthy, mostly from abroad and it boasts a wine list, food menu and expensive uniforms for orderlies.

BRITISH NATIONAL HEALTH SERVICE—THE BAD SIDE

Why then is the British National Health Service in such bad shape? In 1948, the profession had no idea how a national Health Service should be constructed. It stood aside and let the politicians make the decisions. The politicians did not know how to do it either. There was chaos.

Nobody had the courage to point out that it was totally impossible in terms of manpower and money to provide a comprehensive free health service to all.

NHS has always been the Cinderella of the nationalized "industries" and the financial ceiling has been kept as low as possible. New hospitals were promised, but in fifteen years only one was built. Even now, instead of building new hospitals, wings are being added to dirty, dingy, dilapidated, 19th century hospitals. The promised Health Centers have not arrived.

The salaries of the non-medical staff have been kept low until recently while the cost of the service has far exceeded what was expected, as has happened with Medicare and Medicaid.

Geriatric and mental hospitals have been the most neglected of all. In these hospitals, there may be 80 patients to a ward with inadequate nursing staff, often not as highly trained as in teaching hospitals and with a medical staff who are there because they cannot get a job in the more central, glamorous university hospitals. It is a sad state of affairs when a service which started with such high motives ends by turning its back on old and mentally sick people.

All of this has led to mass emigration which occurs in waves as discontent reaches a peak. Such a peak was reached in the late 50's and early 60's and another is in sight with a large number of British graduates taking their ECFMG each year and older consultants emigrating to other parts of the world. Part-time or full-time, the really good consultant resents the fact that he gives many hours of free time to state medicine yet is not allowed to do private practice. Even if private practice is taken out of bounds, it is fairly safe to assume that any Socialist government will do its very best to discourage the building of private hospitals and to limit as completely as they can the development of any type of health care outside the service which they regard as the best in the world.

As the general practitioners became increasingly overworked and under paid, they have less time for leisure or for continuing medical education and eventually a truculence develops in their attitude whereby they try to insulate themselves from the general public by being off call and delegating the duties to other members of their team or even to doctors who are brought in from an agency to substitute for them. The only person who suffers from this is the patient.

The general practitioner has been forced by a form of moral blackmail to over-prescribe and to issue certificates for absence from work, often for inadequate reasons. It is easy to say he should not do so, but the expectation of the patient that his doctor will provide him with every type of medicine and any type of certificate is now too firmly established.

A doctor does not, nowadays, pick up his stethoscope or his thermometer when a patient enters the consulting room. He reaches for his prescription pad or for the book of certificates that excuse patients from work. One can hardly blame him when at 9:00 P.M. he may still have 50 or 60 people to see in his office. He barely has time to sort out the dangerously ill people from the worried well. He resorts to sending one out of ten to the hospital where the miserable wait for an appointment starts and joins the mounting admission waiting list.

The British National Health Service has been reported as being more humane than medicine in America but that it certainly is more wasteful is shown by the fact that a patient who is requiring prostatic surgery may have to spend another three days in the hospital if an X-ray of the kidneys precedes the operation. Likewise, the average length of stay in British hospitals is 11 or 12 days as compared to two thirds to one half of that in the United States. The length of stay after prostatic operations is exactly twice that

which is required by the author in Illinois. In other words, the British National Health Service has a tendency to mediocrity and carelessness with public money.

THE LESSON FOR THE UNITED STATES

Our citizens would do well to look before leaping into any program of National Health Insurance.

THE DEMOCRATIC PROCESS

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. HAMILTON. Mr. Speaker, lately I have been thinking about democracy and what it requires of us. The following brief statement, entitled "The Democratic Process," is inserted in the CONGRESSIONAL RECORD for the benefit and use of my colleagues:

THE DEMOCRATIC PROCESS

I. THE FUTURE OF DEMOCRACY

We all know that the democratic way of life is on trial around the world, and although we cannot say what the ultimate verdict will be it is possible that it will not be favorable. A quick look at developments on the world scene will convince us of the magnitude of the threat.

A. Paternalistic and totalitarian government

Freedom House, a private group which has monitored political and civil liberties around the world for the past quarter century, published some alarming statistics recently. Taking freedom to consist in—

The independent rule of law.

The right to dissent.

The existence of institutional checks on the executive.

The right to choose leaders.

The independence of the news media.

The right to sue the government for redress of grievance.

The guarantee of personal privacy.

Freedom House found that of the earth's 4.063 billion inhabitants living in 158 nations and 51 dependent territories—

804 million or 19.8%, living in 40 nations and 17 territories, were fully free.

1.436 billion or 35.3%, living in 53 nations and 31 territories, were only partly free.

1.823 billion or 44.9%, living in 65 nations and 3 territories, had no freedom at all.

If one adds to these grim figures the fact that only 29 of the 40 nations where full freedom existed were democracies, then it certainly looks as if the future of democracy is bleak. The basic political and civil rights that we Americans take so much for granted have been rejected in most areas of the world.

These facts and figures have prompted many political analysts to remark that democracy may actually be a "holdover" form of government or even a relic, something of mere historical interest, something irrelevant to the future of human affairs.

Even without the Freedom House study, the daily newspapers might have led us to suspect that something was amiss. Reports of devastating setbacks to freedom have poured in from

1. Asia

A declaration of emergency 19 months ago ended the existence of democracy in India. In one fell swoop 620 million people were deprived of many of their political and civil liberties. By jailing the opposition, muzzling the press, suppressing the judiciary and ramming "constitutional reform" through an intimidated parliament, Indira Gandhi effectively crushed the growth and darkened the future of democracy in the world's second most populous land.

Other Asian nations where freedom has been either diminished or eliminated include:

Sri Lanka.

Bangladesh.

Laos.

Cambodia.

South Vietnam.

Thailand.

The Philippines.

What happened in these places is a matter of public record.

2. Latin America

One of the most stinging defeats of democracy in recent history occurred in Latin America when Chile, a nation whose vital legislature and 160-year experiment in democracy inspired pride at home and envy abroad, fell under the sway of a totalitarian military junta in 1973. It is impossible to predict whether a democratic form of government will soon be restored there.

Other Latin American countries where freedom has recently disappeared are Uruguay and Argentina. At the present time only 5 of the 21 nations in Latin America are democracies. Worse yet, only 2 of the 5 democracies are considered stable.

3. Africa

Among all the states on the vast continent of Africa only 2, Gambia and Botswana, are completely free. Other states languish under civilian dictatorships, rule by military junta, systems of apartheid and other undesirable forms of government and social policy.

4. Europe

In Europe, long a bastion of democratic institutions, the situation seems to be deteriorating. The so-called "Eurocommunists" have made significant gains in Italy and France, and their commitment to democratic proceses is questionable. The twin pressures of regionalism and political extremism threaten to delay or block moves toward democracy in Spain. The inexperienced Portuguese democracy, plagued by soaring inflation and the inability to restrain its spendthrift habits, is tottering on the brink of collapse.

B. Human rights

The increasing disregard for human rights in many parts of the world is also cause for concern.

The Universal Declaration of Human Rights states that "no one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment." This declaration is subscribed to by virtually every nation on earth. However, like many other lofty principles it is widely ignored in practice.

Amnesty International, the highly respected human rights organization headquartered in London, estimates that in the last decade the systematic violation of human rights has been official policy in some 60 countries. Last year alone there were more than 40 offending states.

Among the most publicized violations are:

Constant police surveillance and harassment.

Seizure of property.

Detainment and imprisonment without charge.

Torture.

Summary execution.

Such practices are, of course, abhorrent to those of us who believe in the democratic way of life. But it is one of the sad truths of the last decade that rarely before have such practices been so widespread.

C. The international news media

If these encroachments on human fredeom were not enough, there would be the movement to suppress the international news media.

An independent study group has warned of the danger of manipulation of the news media by governments as a tool to stimulate economic development and further political ends. Proponents of such government control are especially vocal in the third world. They argue that Western news agencies distort and downplay the importance of events in their countries, and they believe that their governments can give a more accurate picture of third world conditions.

The most controversial development in this area was the Soviet resolution introduced at the general conference of the United Nations Educational, Scientific and Cultural Organization at Nairobi, Kenya in November of last year. The resolution declared that states are responsible for the activities in the international sphere of all mass media under their jurisdiction. It may very well be passed in 1978 even though it is widely regarded as an attempt to get an agency of the United Nations to give its moral sanction to the government control of *all* news media within a country.

The demise of independent, international journalism is threatened.

D. America

The survival of democracy in America is not written in the stars, and some people believe that we ourselves may not have too many more years of freedom. These doomsayers are often regarded as extremists, but nonetheless they do cite some disturbing trends.

1. Ignorance of Government

If democracy requires a citizenry informed in things governmental, then we may be in for trouble.

In their interesting new book *Public Opinion*, Robert Lane and David Sears report the results of a survey in which they asked the following questions:

What are the three branches of the Federal government called?

How many Senators are there in Washington from your state?

What is the Electoral College?

What do you know about the Bill of Rights?

A composite of all groups polled revealed that 81%, 45%, 65% and 79% of those responding to the questions gave incorrect answers in each of the 4 instances.

The record was even more dismal when it came to individual Representatives and their stands on the issues. Only about 30% of the American public of voting age know the name of their Representative. No more than 10% know how he or she stands on major issues.

It cannot be doubted that low levels of political information and participation have adverse effects on our democratic system. For example, how is a Representative to serve the interests of his or her constituents when they either have no opinion on most issues or have so little information that their opinions on most issues are purely emotional? Worse yet, on what does the uninformed constituent base a vote in the general election? All too often the vote is based on the candidate's appearance, family, accent, etc. The ability of candidates to succeed without discussing the issues is extremely dangerous to any democracy.

2. Lack of Confidence in American Institutions

The problem of ignorance is serious, but there is also the problem of confidence.

Major polls have confirmed the sense of national drift and alienation. For example, the Harris poll recently showed that 65% of all Americans feel that their voice no longer counts. This sense of estrangement stood at 34% just 10 years ago.

Similarly, confidence in key American institutions has fallen drastically in the same period:

Executive branch: 41% in 1966; 11% today.

Congress: 42% in 1966; 9% today.
Supreme Court: 50% in 1966; 22% today.
Religious institutions: 41% in 1966; 24% today.
Major business concerns: 55% in 1966; 16% today.
Military institutions: 62% in 1966; 23% today.
Organized labor: 22% in 1966; 10% today.

Furthermore, 61% of those interviewed and responding expressed dissatisfaction with their lives, and 66% believed that lasting peace was not possible in their lifetimes. A full 67% thought that racial and religious hatred could never be eradicated.

E. Summary

Challenges to the democratic process, of course, are not new. They are with us now and they will always be with us. The histories of this nation and other democratic lands can be described, and indeed have been described; as a grand conflict between those who believe in the viability of the democratic process and those who do not.

Here in America the conflict began when the nation was born. John Adams said, "There never was a democracy that did not commit suicide," but Thomas Jefferson said, "Cherish the spirit of the people." Alexander Hamilton feared an unbridled power lodged in the majority, but Andrew Jackson feared it lodged anywhere else. Fisher Ames spoke of the tyranny of the many, Abraham Lincoln spoke of his mystical faith in the common man and the government of the people.

As I look at the number and complexity of national and international issues before Congress, I become increasingly convinced that we shall have to bring new strength to the democratic process both at home and abroad.

You will be glad to hear that it is not my intention to try to solve all the problems of democracy today. My purpose is much more limited. I would like to make a few comments on the requirements of the democratic process, what must be done if democracy is to flourish. I am not at all certain that the process is fully understood by enough of us.

II. WHAT IS THE DEMOCRATIC PROCESS?

What is the democratic process? We must first understand that it is a way of making decisions and mananging affairs, whether they be the decisions and affairs of the Federal government, the Rotary Club or Gnaw Bone, Indiana. Partisans of this process try to make decisions and manage affairs in keeping with the reasonable demands of the majority, but with the fullest possible respect for the rights of the minority.

Unfortunately, there is probably no such thing as "democratic instinct." Democratic behavior is learned by us, not born in us. In recognition of this fact the Founding Fathers, having agreed upon a set of principles and a form of government to preserve order and protect liberty, strove to develop in the people a sophisticated understanding of the democratic process. They knew that, in order to make the system work, the people had to understand what the democratic process required of them. They knew that their noble experiment would fail if an insufficient number of people failed to get into their very bones what democracy meant.

III. DEMANDS OF THE DEMOCRATIC PROCESS

What, then, does the democratic process require of us?

A. Concern for individuals

Above all things, the democratic process demands a concern for the individual.

I suspect that if we were to attempt to put into a single sentence what America is all about, most of us would say that America is a country which cares for people and gives them the opportunity to develop. The common man calls it "a chance to improve one's lot" and the sociologist calls it "upward mobility," but whatever its name it has drawn immigrants to America for over 200 years. Of course, no one will contend we fulfill this ideal perfectly, but likewise no one will contend that we do not try harder than anyone else.

Once this single demand is grasped, we can easily see what else we must do. The democratic process demands that we respect and honor individuals not on the basis of status, religion, race, wealth, and membership in a given group, but simply because they are persons. It demands that all our policies should be directed toward the well-being of individuals, not jut the ones we agree with, but all.

These demands are not to be understood in negative sense. Respect for another is more than failing to insult or abuse him, just as honor for another is more than letting him go his way alone. On the contrary, these demands mean that—

The other person's views must be considered.
His dignity must be enhanced.
His development must be promoted.
His opportunities must be widened.

Such things cannot be accomplished by passive onlookers. Democracy prevails upon us to be active.

Walt Whitman, the great poet and philosopher of American democracy, penned a line that seems to me to cut to the heart of the matter. He wrote, "The whole theory of the Universe is directed to one single individual—namely to you." What better expression is there of the essence of the democratic process? What does democracy mean if not that the individual is at the center of things?

However, we should take care not to place the person on too high a pedestal. At the heart of democracy is a person who is imperfect, who needs criticism, who makes mistakes. In a democracy no one's ideas are sacrosanct. Only by steady examination and criticism of ourselves and our points of view can our mistaken ideas be corrected and our growth assurred.

Naturally, we all have our own ideas, proposals and solutions. But, in a democracy, we must expose them to analysis by other people and, as hard as it may be to do, reject or revise them when it is apparent that we are in the wrong. We could take a lesson in this from the workings of our own Congress. What is footdragging and temporizing to some is the give-and-take of democracy in action to others. No Senator or Representative expects his or her bills to sail through Congress unobstructedly. Tough battles in the committees and on the floor are commonplace. This is as it should be in a legislature that is truly democratic.

One more point needs to be made about the relation between democracy and the individual. The democratic process really makes a little bet on each one of us. It bets that, if we are given freedom, we shall respond to the challenges of a free life. It bets that, if we are given freedom, we shall—

Improve ourselves.
Take advantage of the opportunities given us.
Live constructively.
Summon up our strengths.
Respond to challenge.
Accept the imperatives of responsibility.

Sometimes the bet is lost, but more often than not it is won.

B. Tolerance

Because of the emphasis the democratic process places on the value of individuals, it demands that we maintain an attitude of tolerance toward other people. The renowned jurist Learned Hand captured this attitude when he said, "The spirit of liberty is the spirit that is not too sure it is right." We are tolerant of others because we have set aside the smugness of the self-assured.

The democratic process requires that we respect and honor individual differences, not only individuals. It calls on us to care about people one by one, not *en masse*, allowing them their choice of life styles and their right to do things their own way. It demands something extraordinary of us: we must care about the liberty and rights of others as much as we care about our own liberty and rights. A meaningful shibboleth comes to mind: I may not agree with what you say, but I shall defend to my death your right to say it.

C. Trust

The democratic process also requires that we trust the other fellow. This trust is not blind and undiscriminating, a looking away from every action of every person. Rather, it is a prudent attitude of confidence that gives the other fellow the benefit of the doubt.

We do not police everyone. We do not scrutinize every gesture. We do not force every move. By and large, the democratic process leaves it up to you to—

Fill out your tax forms.
Stop at the stop sign.
Obey the speed limit.

Imagine what it would be like if this simple trust were absent. In his monumental work *Gulag Archipelago*, Aleksandr Solzhenitsyn documents the case of a devoted Communist who was sentenced to 10 years at hard labor for *smiling* at a picture of Josef Stalin. To us this is a gross outrage, an unconscionable violation of the sort of trust that underpins democracy.

D. Respect for rules

The democratic process also obliges us to respect the rules of the game, whether we agree with them or not.

We respect the ballot, not the bullet.

We respect fair expression, not slander.

We respect the right of peaceful assembly, not the right to riot.

E. Fight for beliefs

If we really love democracy, then we shall be expected to fight for something we believe in as hard as we can. However, if defeat comes, as it often does, we must yield to it knowing that this is best and that we may return to the fray to fight another day.

How many times have I seen one of my colleagues gracefully surrender the floor of the House to an opponent after a bitter struggle? So it should be in America.

F. Perseverance

The democratic process demands the perseverance of the true patriot and not the flagging resolve of "sunshine soldier." Some persons, when they survey the national agenda or the ramifications of a particular problem on that agenda, become too quickly discouraged. They are there for the parade, but not for the long, hard pull necessary to get things accomplished.

Examples of this requirement of perseverance are not hard to find. Extreme perseverance is necessary to the process of amending the Constitution. Delays of years are typical. Even though one may not agree with the proposed Equal Rights or Human Life amendments, one cannot but admire the tenacity of the supporters of those amendments.

G. Consent of the governed

The democratic process requires that we understand a vital principle which underlies our constitutional system: the consent of the governed. We, must be very, very clear about the meaning of that principle.

It means that public policy must be subject to broad discussion.

It means that key decisions must be arrived at openly.

It means that political leaders must be chosen in free elections.

It means that there must be freedom of speech, freedom of association and freedom to petition for redress of grievance.

It means that power will be diffused through society, with no groups insulated from competition or criticism.

It means that decision-makers will be held accountable for what they decide.

It means that individuals may organize and lobby for their interests.

It means that individuals may actively question the actions of leaders.

It means that individuals have pride enough not to be awed by authority, but humility enough to respect other points of view.

It means that those who win elections must be accepted, but those who steal elections must be opposed.

Lastly, it means that we understand that the consent of the governed, even though firmly embedded in our Constitution, is not forever secure, but must be reaffirmed by each one of us each day.

H. Compromise

The democratic process also requires of us an appreciation of the political process as the art of compromise, the "art of the possible," as Count Cavore put it more than a century ago. Without the constant exercise of compromise and accommodation, a responsive government simply cannot exist in this vast, complex diverse country of ours.

We must always remember that no single group, political party or politician has a monopoly on virtue, patriotism or knowledge. The democratic process does not provide perfect answers, but through compromise it does provide suitable answers. Compromise is the very cement that keeps this country from falling apart. The path of history is strewn with the wreckage of once democratic governments whose leaders ignored this truth.

I. Public good

Finally, we should note that the democratic process demands that each of us focus our attention on the public good. The question is not what is good for Lee Hamilton, nor what is good for the labor union, nor what is good for the entrepreneur, nor what is good for the farmer, but what in the end is good for the nation.

Democracy demands that we worry less about what happens to ourselves and the organizations we happen to cherish, and more about what happens to our country. It demands that we do in our time what the Founding Fathers did in their time: define what is meant by the public good. It demands that we ask of ourselves what President John F. Kennedy asked of us: not what our country can do for us, but what we can do for our country. Few things are more important today than our compliance with these demands.

J. Summary

As I have suggested tonight, the person who casts his or her lot with the democratic process will find that it asks difficult things. He or she must—

Act with conviction while recognizing human limitations.

Enjoy, and not merely accept, the fact that others disagree.

Fight hard, and then compromise.

Distinguish between helping others and dictating to them.

However, there are substantial rewards:

A sense of dignity.

A stake in the community and nation.

A chance to shape the environment.

A respect for others.

The satisfaction that comes from working together with one's cobelievers toward common goals.

The privilege to use intelligence, talent and energy to meet the challenges of the day with hope.

I would say that democracy is well worth the effort.

CANCER RESEARCH

HON. GENE TAYLOR

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. TAYLOR. Mr. Speaker, anyone checking the science reports from the National Cancer Institute knows that, while the world is waiting for the big breakthrough in cancer research, very important progress is being made in improving already known therapies. For instance, the historical rate of survival after 2 years from diagnosis of osteogenic sarcoma, bone cancer, is about 25 percent. But in the Sidney Farber Cancer Center in Boston an ongoing clinical trial involving several dozen patients has shown that 80 percent are disease free after 2 years, and I want to stress that is disease free.

If that result can be achieved in one major center, it can be achieved in others. As a matter of fact, Dr. Isaac Djerassi, the leader in one aspect of the new therapy used at Sidney Farber, works at Mercy Catholic Medical Center in Philadelphia. Already, therefore, several institutions are demonstrating this amazing advance from 25 percent surviving to 80 percent disease-free after 2 years even though much remains to be learned from further research. We know that many more lives could be saved if these achievements were duplicated and translated into improved patient care at the community level whenever professional and technological resources permit.

When the American Association of Community Cancer Centers met in Washington, D.C., on January 20, they invited our colleague TIM LEE CARTER who is a physician himself and ranking minority member of the Health and Environmental Subcommittee, to address their members. Because of his expertise and the merit of his speech, I offer for inclusion in the RECORD the text of the remarks prepared for that session.

I want to draw particular attention to the emphasis in the speech on community hospitals working more with the American College of Surgeons' Commission on cancer program. Some 750 hospitals already are a part of that system which helps these institutions take advantage of the best therapies that the National Cancer Institute can recommend. The American Cancer Society also works in cooperation with the surgeons' commission on cancer program to improve cancer-patient care nationwide.

I should hope that some other Members might find it useful to call this information to the attention of hospitals in their own districts.

The remarks follow:

PREPARED REMARKS OF HON. TIM LEE CARTER

It's a pleasure for me to be here with you today and to enjoy your good fellowship.

Having practiced medicine for many years in rural Kentucky I know from first-hand experience both the challenges and the rewards of being a community physician.

In fact, when I came to Congress, some claimed I had "retired"—and others said I was just plain "tired". But let me assure you that I've found my work here equally challenging in many ways.

As ranking Minority Member of our Health Subcommittee I have a real interest in what you do, in what you can tell the Congress, and what we can accomplish together.

You too face important challenges in your daily work. And there's no question in my mind that your Association has a vital role to play in making sure every cancer patient receives optimum care.

I want to warn you, however, that I do not believe that each of us trying to do our best necessarily means each of us should try to do the whole job.

This is a complex piece of work. You must see patients at a period in medical history which is sort of an in-between time.

On the one hand, science has not unlocked the key to cancer, the etiology. There are no simple remedies—no vaccines.

On the other hand, science has produced some very important palliatives. In fact, for eleven types of cancer, medicine has reason to speak of cures. But the available regimens are very, very complicated to administer.

Some say we'll find a cure before we find a cause, though it is my belief that with careful study we may actually find the cause before the cure. The challenge is immense indeed, and requires tremendous dedication and commitment. But some day we will be successful. Some day, no doubt, the therapies will be surer. They will be simpler. And like the iron lung, some of our more elaborate forms of treatment will become outmoded.

But, in this in-between time, difficult choices must be made every day. Choices about proper regimen—where it should be administered—and who should administer it. The decisions are many, but I am convinced that a multi-disciplinary team must be involved. Good things are available in diagnosis, surgery, radiology, chemotherapy, and immunotherapy. We ought to take advantage of them. We owe it to the patient to give him the best that medicine has to offer. There's so much to know—to learn—and the team approach can prove invaluable.

From my perspective as a physician and as a legislator, I think we need to maximize our potential at all levels. We need the tertiary centers—the comprehensive cancer centers. We need the specialized cancer centers—we need the research community which draws its support from N.I.H.—And we certainly need the best competence we can build at the community level.

Here there is work to be done. What is needed, I believe, is a solid base of community support and involvement in the cancer field. Since so much of cancer care begins at the community level, it is critical that we engage the energies and commitment of all those involved at the grass-roots level. This is the work you can address so well. We need your support.

Today, I would like you to consider one suggestion I feel might greatly enhance your own work. It will fit well with your program, and it will be of benefit to the cancer patient.

It concerns the American College of Surgeons' Commission on Cancer.

You have already begun to cooperate in many ways with this Commission. And I'm not going to pretend to give you pointers on how to do that job. I am only going to express my opinion that the best wisdom is to concentrate on making that aspect of your program one of the most important things you do—one of the biggest investments of your time.

You know that the 750 hospitals which have cancer programs approved by the American College of Surgeons treat about half of all cancer patients in this country.

Comprehensive cancer centers treat, maybe, fifteen percent.

This certainly puts a heavy burden on the small hospitals, and I know your Association is deeply devoted to improving cancer treatment at the community level.

That is exactly what I am suggesting. We need to work to strengthen and coordinate our capabilities at the local level. We need to develop cancer programs at the community level which provide a greater awareness among all physicians of the need for systematized detection activities. Detecting cancer early is so important for effective treatment. Continuing education programs are part of this process. Physicians need to learn about those regimens which are capable of extending life.

But just tugging at the physician's sleeve is not enough. We need to give him something practical to do. That is exactly what the College of Surgeons' Commission on Cancer does.

Through the Commission you can get involved with the establishment of hospital tumor registries and hospital education programs; you can develop standards for treatment and therapy and thereby gain approval by the College of the hospital's cancer action. You may also have a chance to participate in special studies such as the one going on now in connection with liver damage, possibly caused by oral contraceptives.

Your organization already has made an excellent beginning in this direction. I am aware of the good work you are doing.

Dr. Herbert Kerman of Daytona Beach has made a national reputation for himself as a radiotherapist. He has been a driving force in statewide cancer program coordination in Florida. You have chosen well to put him in a liaison position between your organization and the College of Surgeons.

Also, in my own state of Kentucky, we find examples of the important contributions which community cancer groups can make. Under the capable direction of Dr. David Goldenberg, the Ephraim McDowell Community Cancer Network has begun to develop an effective cancer control program for our area. District Cancer Councils have been formed for each of the nine health districts in eastern Kentucky to assess local needs in cancer management. Hospital-based cancer liaisons are being established to provide information on available resources to cancer patients. They are creating a coordinated network of resources at the community level.

There are certainly many important ways that your Association can work with the Commission to build up the local base of support that is needed to provide a truly effective cancer control program. Developing early detection programs, sponsoring cancer education programs, and building communication networks are just some of the ways to help strengthen and coordinate our resources.

Let's consider now some of the promising developments in our comprehensive cancer centers and how these advances can best be translated into improved patient care. Consider metasticised breast cancer:

The historical survival rate on single drug chemotherapy after surgery has been eight months. But recently, chemotherapy plus 5-FU, Adriamycin, cyclophosphamide, B.C.G. and immunotherapy have increased the survival rates in one trial of 45 patients to 22 months, and the trial is still underway.

That's almost triple the historical survival time. While it is too early to go out to the public with big applause for medicine—those kinds of data tell us that long-term survival is more promising now than a few years ago.

Let's look at some other results. In undifferentiated small-cell type of lung cancer, the historical remission rate of three to six months is about 5 percent. The National Cancer Institute has reported a study where 20 out of 21 patients under chemotherapy and radiotherapy showed remission—or 95 percent compared to 5 percent.

So, it is obviously important to know when to send a patient to a comprehensive setting where the complex regimens are routine.

Another example involves the Sidney Farber Center in Boston. There, in treatment of osteogenic sarcoma, they are getting over 80 percent two-year disease-free survival rates where the historical rate has been 20 to 25 percent. No patient should be denied the "citrovorum factor rescue" treatment where it is indicated. And when it comes to treatment, it's important to know our limitations at the community level. While removal of basal cell epithelioma is a procedure which can be done at the community level, (I have done it myself) the comprehensive centers are the places for the more complex regimens.

Personally, I believe that leukemia should not be treated without the supervision of a specialist. Blood tests and bone marrows must be done by pathologists who have had special training. At St. Judes in Memphis, for example, Dr. Joseph Simone is an expert in childhood leukemia. Dr. Emil Freireich is known for his development of a protocol for the treatment of childhood leukemia, Within the cancer field, there are of course other specialists. Dr. Emil Freireich has had experience with the treatment of osteogenic sarcoma, and Dr. Bernard Fisher is one of several known for his work in treating breast cancer. There are of course many others.

These individuals have made outstanding contributions to the field of cancer. They have no desire to strip communities of their patients. They already have their hands full. These specialists will provide consultation. When a regimen of treatment has been delineated by an oncologist, then followup treatment can be done in the community hospital with close communication and backup available. And when appropriate, these oncologists will treat patients.

You may have read articles in "Parade Magazine" and elsewhere saying that we should send all of the cancer patients to the comprehensive centers. Clearly that would be an unwise use of our cancer resources. That is not my view.

I believe that patients should be sent to the more comprehensive centers when that level of care is required. And the capacity to make that critical referral decision accurately is what we need to develop at the community level.

To assist in this effort, I believe that adoption of the College of Surgeons' Commission on Cancer Program should be helpful. The Commission has about 500 surgeon liaison fellows throughout the United States along with liaison associates from other disciplines. Next year they will have 1,000.

I urge you to work with them. Use their linkages with the College—and also work to strengthen your own network of resources at the community level. Show them that your organization has a unique function and that you know the community best. Continue to do all you can to integrate its capabilities into the total cancer program. In that way, referrals will be made when necessary and treatment at home will be optimized.

And now, just a few words about what's happening in Congress.

The National Cancer Act will be renewed just one year this session as a courtesy to the Administration so that the White House can have some input next year, if it so desires.

Authorizations will be increased, but not a great deal.

After the simple one-year extensions are completed, both Houses of Congress will spend a good bit of time re-examining the entire field of biomedical research funded by the Federal Government. The Senate, especially, is planning an extensive re-evaluation of this area. There are some who claim that our "returns" from the cancer field have not measured up to our investment, and there are others who challenge the merits of N.C.I.'s independence.

Personally, I think that N.C.I.'s position within N.I.H. should be preserved. I think that the categorical disease approach to research is invaluable. It provides the basis for a direct link between the laboratory and the practitioner. And in terms of funding research, I believe we should make our allocations on the relative morbidity, mortality and economic impact of these diseases. I'm working on expanding this approach currently.

Overall, we can expect a good deal of controversy and probably some changes in both the Cancer Program and biomedical research in general. You can be of service to the country and to me if you will bring me your views as this discussion moves along. If you have any fundamental changes you would like to see in the law, work them out carefully and give them to me for the next year. I promise to give your ideas careful consideration.

Now I'd like to bring up an issue of special concern to me: the Food and Drug Administration's authority over new anticancer drug testing.

For a period ranging from several months to almost two years the Food and Drug Administration has been telling the National Cancer Institute that several drugs are lacking in data so they should not be used in clinical trials. Dr. Gerald Bodey, for example, has told me personally of his experience—that several promising drugs for cancer treatment have not been released.

For many years N.C.I. and F.D.A. worked hand in glove to protect human research subjects and to push drug development. Recently changes in personnel have broken down that close partnership—and F.D.A. has begun to treat N.C.I. as if it were a for-profit firm in dire need of close surveillance.

Nevertheless, the law is the law, and of course N.C.I. should obey it.

But F.D.A.'s administration of the law has been unusual. It is criminal (some in science feel) for F.D.A. to hold up drug development on the basis of minor regulatory particulars—such as whether an investigator of Nobel-prize caliber has brought his bibliography up to date. That sort of thing has been happening.

Fortunately, after several of *us* began considering taking away from F.D.A. its authority over N.C.I. negotiations between the two government agencies turned productive. I am happy to report that nine experiemntal drugs were released about two weeks ago for clinical trials—a major victory.

This situation will bear watching. I hope the accord continues and improves. You may be sure our Subcommittee will monitor this matter. I have a deep, personal interest in it. And, I hope you will keep me informed of any drug difficulties your own community projects might encounter.

In closing, I would like to repeat that I think you have a very significant role to play. If you will expand the number of hospitals with approved cancer programs, continue to consolidate your resources at the community level and develop linkages to other levels of care, you will not only be serving the patient, but you will put your own Association in a priority position to participate in whatever the future holds. You have made an excellent beginning with good, strong leadership and I know you will keep up the good work.

Thank you.

PENALIZING THE VETERAN

HON. CECIL L. HEFTEL

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. HEFTEL. Mr. Speaker, I have introduced today under cosponsorship with Congressman AKAKA of Hawaii a bill to amend title 5 of the United States Code to prohibit the consideration of certain matters in the determination of cost-of-living allowances for employees stationed outside the continental United States.

Consider, if you will, a veteran of the U.S. Armed Forces who retires after 20 years of service and is then employed by the Federal Government as a civil servant. Imagine that sitting next to him and doing the exact same work is a nonveteran.

Then consider that the veteran is paid a good deal less for his work than the nonveteran, even though they both hold the same GS grade and length of service.

Such a situation would seem improbable and unjust, yet this is exactly what is happening in Hawaii and other communities where Federal employees receive a cost of living allowance—COLA—to compensate for their much higher living costs when compared to Federal employees working in Washington, D.C.

By administrative action, the U.S. Civil Service Commission ruled last year that retired military personnel who work for the Federal Government—and the spouses of active or retired military personnel—are not authorized to receive COLA because of their access to military PX and commissary facilities.

The commission cited statistics purporting to show that these commissary and PX benefits offset the higher cost of living in Hawaii for which Federal employees receive COLA.

At the same time, the commission increased COLA for nonveterans to 17½ percent of their base salary. COLA is now being phased out for retired veterans, and by the end of this year, they will be making 17½ percent less than other employees for comparable work.

The Civil Service Commission's action was ill-conceived for many reasons, but perhaps the most fundamental is that it penalizes military retirees for their years of service to their country.

When these people retired from 20 or more years of active duty, they did not do so under an obligation to utilize the PX and commissary system. They earned the right to enjoy these benefits if they so choose, but they were not then and should not now be obliged to shop at these facilities, as the commission's ruling implies.

In addition, the commission is wrong in its assertion that prices in military facilities are more than 17 percent lower than in civilian stores. Any wise shopper can buy goods in civilian supermarkets and drug stores at prices equal to or less than those found in the military facilities. Dozens of letters from men and women affected by the COLA ruling attest to this essential fact.

These families will continue to shop in civilian stores because they know they can meet or beat commissary prices. But they will be forced to adopt a lower standard of living because of their loss of COLA.

Still other retired persons never avail themselves of their right to shop in commissaires or PX facilities because of the distance between their homes and the nearest such facility. Many affected families testify that the cost of gasoline, which is very high in Hawaii, would be greater than any savings that they might achieve. This does not even take into account the lost time, the added congestion of an already overloaded highway system or the additional air pollution that would result.

The elimination of COLA for these families is an ironic postscript to their years of military service. It also is grossly unfair to the wives of retired servicemen.

A woman employed as a career civil servant suffers a 17½ percent reduction in pay if she marries a military retiree. This clearly could not have been the intent of the Civil Service Commission, but this is the effect of the ruling. There is no way to justify a reduction of pay for employees who have done nothing during their employment to precipitate a pay cut.

I am sure you will agree, Mr. Speaker, that the termination of an economic benefit on the basis of prior military service has the effect of penalizing the veteran. I urge my colleagues to support this bill and return a just and well-deserved employee benefit to the men and women who have served their country honorably.

THE SOVIET-UNITED STATES MILITARY BALANCE—PART I

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mrs. SCHROEDER. Mr. Speaker, the beginning of the Carter administration and the fiscal year 1978 budget provide the opportunity for a fresh review of our foreign and defense policies. Many of us believe that progressive new policies can best be fostered through a rational and open public debate in which all points of view are presented. Unfortunately the public debate thus far has been dominated largely by the strident voices urging a return to cold war policies. Through leaked intelligence estimates and implausible "worst case" scenarios their goal appears to be to constrain President Carter from taking new initiatives and to hinder Congress ability to examine critically defense spending requests.

On February 7, under the auspices of the Coalition for a New Foreign and Military Policy, Senator MCGOVERN, Representative ROSENTHAL, and myself, a seminar was held to allow four distinguished experts to present alternative views on the nature of the Soviet-United States military balance.

The participants were: Dr. Jeremy Stone, director of the Federation of American Scientists; Dr. Earl Ravenal, professor of American foreign policy at the Johns Hopkins School of Advanced International Studies; Arthur Macy Cox, a writer and consultant on foreign affairs who previously served in the State Department and the CIA; and Herbert Scoville, currently the secretary of the Arms Control Association. The thoughts and points of view of these gentlemen are ones all Members of Congress, the administration, and the public should seriously consider as we discuss the defense budget this year. I and several of my colleagues present the text of the seminar in this hope.

The text of the seminar follows:

PART I

Representative SCHROEDER. I appreciate so many of you coming and I appreciate you taking the time to begin what we think is a very important dialogue. As you know we really do have a chance to begin anew with a new administration.

We have heard of late all sorts of hysterical comments about the Russians are coming, the Russians are coming. So I guess one of the main reasons we're here is to find out whether we really should get a night light or whether there is another sign and try to open up a little bit more of a progressive debate as to what is going on.

We continually seem to get the worse case scenario. I'm hoping that the gentlemen who are with us today can give us some case other than the worse case, and see where we move from there.

I think this is an excellent program that's been set up and I want to thank the gentlemen who were here. We have Herbert Scoville, who has been active in this field since 1948. He's been the Technical Director of the Armed Forces Special Weapons Project. He's been assistant director and deputy director of the CIA, and he's been assistant director of the Arms Center and Disarmament Agency. He is currently the Secretary of the Arms Control Association. He has excellent credentials in this area.

We have Arthur Macy Cox who has served in the State Department; he's been with the CIA as a specialist on Soviet affairs. He was a senior fellow at the Brookings Institute and is now a writer and consultant on foreign affairs.

We have Dr. Earl Ravenal who was a systems analyst, Division Director in the office of the Secretary of Defense and he is currently a professor of American foreign policy at Johns Hopkins.

And we also have Jeremy Stone. He has been a fellow, a staff member, a professor at many institutions including Stanford, Harvard, Pomona College, the Hudson Institute and the Council on Foreign Relations. Since 1970, he's been the Director of the Federation of American Scientists.

I think these four gentlemen have excellent credentials. And I think what we'll do is just launch them rightaway and hopefully begin a dilaogue that will put a little more light and a little less heat on the subject. I think we'll start with you Dr. Scoville.

Dr. SCOVILLE. We have heard an awful lot of words about the Soviet threat. So far we've seen a lot of smoke and what it is really for us to decide is whether there's really some fire there or whether this is a smoke screen to hide what the real facts are. I'd like today to very briefly look at a few of the facts and see if they in any way, justify all this rheto-

ric that we are hearing about the Soviet threat. I have looked at the strategic programs in former Secretary of Defense Rumsfeld's last posture statement and looked at what he said was the Soviet threat today and compared it with what he had said that threat would be a year ago.

And instead of finding that the threat is increasing and accellerating in its pace, one actually finds out that the threat is actually less than he predicted it would be a year ago.

For example, in the most important criteria of strategic strength, which is the total number of missile warheads and bombs, last year he predicted that the Soviet Union in a 12-month period would increase its force by a factor of a thousand. As it turned out, this year he now admits that in a period of 15 months instead of a year, they only added 800 to their total force loadings. In other words, the rate was 35 percent slower than he had predicted a year ago.

Furthermore, if you look at the total numbers, the Soviets now have 3,300 such warheads and bombs while the United States has 8,400. This somehow doesn't strike me as any real occasion for great new alarm.

The numbers on the actual number of MIRVed missiles has not been given in an unclassified form, however, you can infer what this is from these numbers because all of these increases are in the MIRVed missile program, and therefore you must assume that their MIRVed missiles are also behind schedule. Undoubtedly, the number of Soviet MIRVed missiles now is somewhat less than 200—the exact number is probably classified—while we have about a thousand. So again I don't think there's any question of who is superior in this category of weapons which is an extremely important one.

Next you look at the submarine missiles which is the second element of the triad and actually the most important element from a point of view of having a secure deterrent force. Last year Rumsfeld predicted that the Soviets would add 120 submarine-launched missiles to its force. Now he admits that during the past 15 months they only added 70. In other words, the rate is really less than half as fast as was predicted or estimated a year ago. Incidentally, in terms of totals now in existence, we have about 5,000 submarine launched missile warheads while the Soviets have 800. Somehow I can't get terribly alarmed about U.S. inferiority in that particular category.

Finally in the bomber area, one does not have quite such nice comparison of numbers because it's a big argument as to whether the Backfire is a true Soviet intercontinental bomber or not, since it can only reach targets in the United States on a one-way mission flying subsonically at high altitudes or on a two-way mission, also subsonically at high altitudes, if it is refueled. The Soviets have a vastly inferior refueling capability than that of the United States.

But even if you add in all the Backfires, as Secretary Rumsfeld does, the Soviet force is only 210 bombers most of which are old, while we have about 420. So again I don't feel any great fear about Soviet superiority in this area.

While those who have been crying Russian threat have therefore had a little trouble in finding this in the actual weapons system. And so during the last 6 months or so, we've heard of a new threat. And that's the Soviet civil defense capability. I'd find this almost laughable if it wasn't for the fact that so many people take it seriously. Somehow or other it's a very dangerous thing that now the Soviet Union has provided shelters for its leadership in the event of a nuclear conflict. In other words the leaders of the Soviet government now have shelters they can go to to protect themselves. I didn't get any great feeling that the United States was planning a nuclear first strike when we dug these holes in the mountains of Maryland and Virginia and newer ones out in the Rockies. It's a very sound move if you want to have a deterrent force to try and protect your command in control.

The fact that you're providing that protection doesn't strike me as an indication that you are planning a first strike. I don't find this a very terrifying Soviet threat. They also have large numbers of civil defense manuals, and they have a large number of areas that have been set aside to mark the shelter areas. Well, our civil defense people have a lot of manuals, and if you look carefully you can find a lot of little signs saying shelter area, in our cities. But I don't think anybody in this country thinks we have a serious civil defense effort that would really accomplish anything in a real nuclear conflict. You've got to practice; you've got to train people; you've got to do all kinds of things, and these people who are crying civil defense can't find much evidence of this. This is the kind of thing you can't hide very easily because so many people have to be involved.

Then the final civil defense thing that everybody is worried about is the Soviets supposedly have plans to evacuate their civilians from their cities; have them march out to the countryside with shovels and dig themselves a little shelter and then the nuclear war goes on and then they come back into the cities and everything is going to be fine. Well I was involved in measuring nuclear weapons effects, and I just find this really ridiculous. One 15 megaton bomb out in the Pacific contaminated 5,000 square miles with lethal radioactive fallout. The only way to get protection from fallout is to be in underground or in heavy structures. Just digging yourself a foxhole might give you a little protection, but going out into the country is just the surest way in the world to expose yourself to fallout. So this kind of a tactic only will increase their casualties.

Now the people who are arguing this rationalize this on the fact that the United States will never detonate a bomb so as to produce fallout. We'd only set them off very high up in the air where they wouldn't produce casualties. Well if I was a Soviet planner, I don't think I would have that much reliance on the fact that we wouldn't use this tactic when we certainly have the capability. If our deterrent was being eroded. I doubt very much whether we wouldn't detonate our bombs close to the ground. Particularly since if you want to destroy hard military targets which the former administration was saying that it was an important military objective, you have to set them off close to the ground; you can't set them off high in the air. So I find this whole evacuation threat not a very serious one.

And then to sum it all up, the very concept that Soviet leaders would consciously launch a nuclear strike and accept the destruction of its cities, a large part of its industries, and a minimum of 20 million casualties in order to destroy the United States, I find incredible. What would they gain by destroying the United States, when they have essentially wiped out their civilization in order to do it. I find these kinds of threats that the Soviets are planning an attack are very unconvincing. I don't think they're building the weapons to give the indication that they are planning that kind of attack, and I don't think their civil defense program will support this kind of thesis either. That very briefly is my analysis of the strategic situation.

Dr. JEREMY STONE. My name is Jeremy Stone; I'm from the Federation of American Scientists. I want to compliment what Pete Scoville has told you by going into slightly greater detail on both the strategic balance and the civil defense program. I share the kind of sentiments he's expressed.

I want to say at the outset that I think one should be very vigilant about the Russians because in my experience things have always gotten worse in the 15 years I've been studying this problem. I'm not here to suggest to you that the Soviet arms build-up won't continue or that they might not for reasons I could describe—continue to go in for more and more civil defense. Both things are entirely possible and one should worry about them.

We see in our own political situation and in the budgets which come before you here, all kinds of unholy things that go on in the spending of money which never have been predicted on a prior basis. Our coalitions are held together by free discussion and by particular desires in this free market place of ideas. The Russians don't have that problem. They do have, in theory, a sound control from the center of what they do. But they have all of these coalition problems that which they are strongly imbued from secrecy and ideological virginity. There isn't much that they can do that would really surprise me in retrospect and I think therefore its worth considering all these things very seriously.

But having said that, it is certainly the tendency in America to view with greater alarm Soviet developments than they deserve and also to apply to them a double standard in assessing what the Russians sometimes viewing with great alarm while discounting entirely the fact that we are doing the same or even greater things. To give examples of that, I'd like to point to the question of hard target kill capability. Dr. Scoville talked about who has more in all these categories. That's the rhetoric in which the arms race is usually discussed. Of course it has very little to do with anything strategic.

At the moment the main thing of relevance in this strategic arena are two salient facts. One, no one sees any way of destroying our missile firing submarines. Therefore, for the worst possible case we are prepared with those alone to launch 4,000 or 5,000 nuclear warheads at the Soviet target system. If those were aimed at cities and towns in the Soviet Union, you would be destroying all of the towns down to towns of 5 to 10,000 population. That may be Plains but I think its probably Americus, Georgia. It would mean that whether the people were in those cities or not, virtually all of the shelter in the Soviet Union would be destroyed. If they were to be evacuated out beyond those cities and towns, they would have to be in rural areas where there is no place to put them. The one salient fact is this Polaris force whose invulnerability has not been successfully challenged or even I think suggested.

Now the other salient factor in this strategic situation is that the land-based missiles on the two sides are becoming vulnerable to the land-based missiles on the other side. That is, if all we had were land-based missiles on the two sides, and if that's all they had, we would be quite nervous because we would see that on paper, at least, the time is coming when we will be able to destroy their land-based missiles on paper and they will be able to destroy our land-based missiles on paper. So therefore if there were only those land-based missiles, each side would be especially worried about its deterrent. But because it has the sea-based forces it's not so worried, but still nervous.

Now in our case when we talk about this, and you can see this in Secretary Schlesinger's testimony of a few years ago, he says "well we can't destroy all of their land-based missiles, and we'll never be able to destroy flat out all of those 1,500 and therefore they don't have to worry, they'll always have some left."

This is not the criterion, however, that we are implying when considering the vulnerability of our land-based missiles. There

we apply different criteria and we say, well if they could destroy more of our missiles, then would use up in the destruction, then we're in trouble.

Now even if you want to worry about that kind of scenario, the possibility that there might be a limited but strategic nuclear war between the land-based missiles of the two sides, and that someone might say ha, ha, I destroyed all of your thousand land bases with 500 of mine, and I've got 500 left in reserve, to a country that has the bombers, we have 250 of them and these 4,000 or 5,000 nuclear warheads of submarines. It strikes me as extremely implausible. But even if you want to worry about that, the thing that has been ignored in the present debate is that we are about to bolt into an enormous lead over the Soviet Union in this very criterion about which so much concern has been expressed.

THE SOVIET-UNITED STATES MILITARY BALANCE—PART II

HON. RONALD V. DELLUMS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. DELLUMS. Mr. Speaker, I join my distinguished colleague PAT SCHROEDER in continuing the presentation of the text of the February 7 seminar on the Soviet-United States military balance.

Part II of the text follows:

PART II

Dr. STONE. The concern is usually expressed by saying, if the Russians have big missiles and the throw weight in those big missiles will produce plenty of warheads, all those MIRVed warheads will be able to destroy our land based missiles. But the fact of the matter is that throw weight is not the relevant consideration any more because accuracy has become much more important. When accuracies reach about a tenth of a nautical mile, everybody's got plenty of throw weight, and if you read the missile daily reports, see that they are predicting for the MK 12A warhead that it will have 600 foot accuracy, which is precisely 1/10 of a mile. And if you look at the Rumsfeld posture statement, on page 125, you will see that the end of fiscal 1978, an enormous increase in our hard target kill capability will arise as a result of installation of the guidance system for this warhead, and of the warhead itself. The warhead will double the yield of the Minuteman III missile and guidance will increase its accuracy by about a factor of 2.

We will leap not only into a lead over the Russians in hard target kill capability but, according to these official projections, we will have a 5-year lead. And we will not only have a lead in this category, but we will be in a position with that lead to destroy, at least on paper, substantial numbers of Soviet land-based missiles. In other words it won't just be a lead in a numbers game. It will be a lead of strategic significance if you worry about land based missiles being destroyed.

The kind of thing we are talking about is this. On half of our land based missile force with these new warheads with this new accuracy, if you believe the reports of the press, that half of the land based missile force alone will be able to fire one warhead at each of the Soviet land based missiles and that one warhead will have by itself a high probability of destroying that missile.

Of course, some of these won't go off reliably and we might, if we wanted to, and if our procedure permitted it, fire another missile into place when we saw it did go off reliably. I'm not sure exactly how well we could do this. This is called "shoot-look-shot." You see you shoot and then you look to see if it's reliable, then you shoot again. I don't know how reliably we could do that operation but I know the Russians must be worrying about it because this same posture statement says that in 25 minutes we can retarget our land based missiles now over and above the pre-positioned target in the missiles.

So the point I want to make to you is that the Soviets who have a much greater percentage of their strategic forces in their land based missile force, are simultaneously in a much tougher situation with regard to this strategic trend than we are. They've got more of their eggs in the land based missile force and we are attacking more effectively those same eggs.

If you want to know who is spurring this counter-force, hard target kill capability race, it should be said that while both sides have a large measure of guilt in this problem, and while the whole thing is a kind of race of momentum on the two sides, nevertheless, we are, as usual, ahead.

Now in the civil defense realm, I think the concern about Soviet civil defense rests upon, first, the fact that the Russians have for a long time been more interested in civil defense than we are. It was charged that for 20 years they were spending a billion dollars a year on civil defense. This is more than we spend, and it's probably true that they were for those 20 years spending that billion dollars a year. However, a billion dollars a year is $4 a person for the Russians. And $4 a person is a very standard rate of spending for European countries that have suffered through wars. It's the rate of spending in West Germany, it's the rate of spending of Swedes and the Swiss spend $50 per person on civil defense. So that in itself is not a very significant factor.

It is charged that in 1972 the Russians spurred up their civil defense program. It's not clear whether this is true or not. But if it's true, it could be easily explained by the fact that in 1972, we signed with the Russians an anti-ballistic missile treaty in which we both agreed not to defend our cities. I consider it entirely plausible, the Defense Minister in Russia said to the Polit Bureau, if you're going to force us to sign this treaty to forego defending our cities with anti-ballistic missiles, we have to do something, step up something to show some improvement in the capability of protecting people. This seems to be especially plausible because their main problem at the moment in terms of a likely war, I believe is the Chinese threat. They have a 2,000 mile border with the Chinese and a real chance of war against them. And against the Chinese, a civil defense program might look much better than it looks against the Americans.

There is an exact analogy between our interest in a thick ABM system against the Chinese when we had also decided a thick ABM system against the Russians was hopeless. So they may be caught up in this and they may therefore continue to spend more money and do more things in civil defense. I don't preclude it; I don't think there's too much evidence for it now in the public domain.

Let's assume they did, the question, is what would be the result? Now there are two possibilities at this program. One possibility is that they would use it against us and the other possibility is that they would threaten to use it against us. The first question of using it against us is the Strangeloveian scenario that Dr. Scoville referred to. Could they evacuate the cities? And then just fire and destroy the Americans and try to rebuild all these cities. This is in fact being charged by some engineers in Boeing who have done a study in which they argue the Russians could within 15 years, even if they lost half the population and, get back to the same gross national product they had before. Of course if they lose half the population and they get back to the same gross national product in 15 years, they double the GNP per capita in 15 years, which I think they could do without a war and with all their cities.

Leaving aside the fact that this study seems to have been done by economic imbeciles who have produced these kinds of curbs. I think one can address this question very precisely, and I hope it will be done in the future still more precisely to show how difficult it would be for the Russians to do anything like this.

For example, if they do this in the Spring, then they have the whole Summer to recuperate and try to get some shelter before the Winter comes. But then they have no harvest. If they do it in the Fall, they could bring in the harvest, but then they would have no shelter—and they would not survive the Winter. After the attack they will discover that there will be plagues of famine because insects are more resistant to radiation than are mammals or birds, so you are going to have a completely different ecology. The ozone layer will be blown to bits. It won't be clear that people can stay outdoors very long because of the sunburn they would get with the hole blown in the ozone layer predicted by the National Academy of Sciences. There are a whole lot of problems over and above what immediate fatalities would be if you spread people uniformly over the Soviet landscape, which in fact you can't do anyway.

I think the argument about Soviet Civil Defense has been done in a very narrow and the calculation has been done in a very amateurish way. And I think it is precisely because no one has looked at this in a long time that the studies were done so badly.

But you may say, as even the Civil Defense proponents and alarmists do say, "Well, what if they wouldn't use it against us, but what if they threaten us with it, what if they have evacuated those cities and said, 'Look, we can kill more of you than you can kill of us, at least immediately'." How about that? Well, I think one important thing to say about that is that it cannot be done more than once. That is, if the person is deterred from actually firing, it is an important, and not a sardonic comment, to say that he could not do it more than once. By that I mean, if they threatened us in ambassadorial contacts, or begin to evacuate their cities, there is no question that America would bolt into a program of further arms procurement and perhaps Civil Defense programs too, that would make it absolutely clear that no Russian would survive a future nuclear war.

We have it within our power to do that, the only question is—whether we are going to do that. It is very similar to the situation you might find if you met somebody with a knife and he pulls a knife on you. If you knew he was deterred from using it—it is an important and relevant thing to say that that guy would never pull that knife on you twice. You'd never give him a chance to do it. I think the attack can't be carried out because it is not a successful maneuver for many, many reasons and it can't be threatened because it is so much outside the reasonable range that it would just provoke another cold war and arms race to no end. There is not on the scene any political crisis to which such a threat would be relevant. The Civil Defense alarm is vastly exaggerated.

Finally, if asking what we should do, I want to pose to you a certain moral question that this whole Civil Defense alarm really

raises for all of us. We have talked in the past about the mutual assured destruction as a policy. In fact, it was never our policy. The policy always was unacceptable damage. We were saying in the past, we are going to maintain the ability to destroy a certain number of Russians and a certain amount of industrial capability so as to deter them from things we think against our interest. That policy is now threatened by some who'd like to turn it into real mutual assured destruction.

In other words, if you take seriously this Civil Defense flop and you think the relevant thing is not to detour them by threatening unacceptable damage but instead to show that no matter what the scenario is, more Americans will survive than Russians—that even if there are only three people left, two of them will be Americans and only one Russian. If you take that view, and you try to achieve that in every scenario, I can tell you as a mathematician that you will have to continually increase the number of Russians that you can destroy as their weapon capability goes up and as you consider the worse scenarios from your point of view.

So we're faced with the possibility that we might be forced in America through these alarms about Soviet Civil Defense to design a policy which is really genocidal—not just a policy that said it was going to be mutual assured destruction, but one that was really genocidal.

In this connection, the Russians are right in thinking, if they do, some will survive this war. Nuclear war is not going to destroy every last person and it is not insane to have Civil Defense procedures on a prudential basis. It is not crazy to have a fall-out shelter program in America; you may be for or against it, but it is not crazy. The point I want to make is that if we are going to view Civil Defense as a threat to us, we are going to be forced to go well beyond even the inhumanity of the posture we've designed. I think we should not do it lightly. If in fact, Soviet Civil Defense is not really a threat to us, we ought not automatically bolt to a program of putting radioactive cobalt bomb casings on our bombs, or whatever else we might decide to make sure that everybody died. That is what this thing could lead to in the end. There is no doubt in my mind that it would eventually be done to us.

With this connection, what we are risking today by exaggerating the Soviet threat is what we've been risking all this time over the last twenty years. Exaggeration of a threat has led in the end to a higher threat aaginst our own security and to a diminution of the security of our Republic.

Dr. ARTHUR MACY COX. I am Arthur Cox. I am going to talk about the problems of military power in Central Europe. I am going to talk about the growing propaganda that has developed, especially in the last year, about the Soviet threat in Central Europe and some of the facts that I haven't seen given sufficient attention.

One is that we hear about the growing threat of war in Central Europe from the Soviet position and the supposed growth of Soviet forces. Actually, the Soviet's ground forces now are more than 50% directed at China. The Soviets have 44 divisions on the Chinese borders and 31 divisions facing NATO. They have more backup divisions facing China in the interior Soviet Union than they do facing NATO.

But a very important aspect of the recent concern about Soviet buildups, so called buildups in Central Europe has been what the last two posture statements of the Pentagon have referred to as the Blitzkrieg potential of Soviet forces and the threat of a central thrust forward all the way to the Channel which could not be adequately deterred by NATO forces.

This argument of the Soviet Blitzkrieg potential I have never seen seriously developed in any of the literature in the United States. The only place where I have seen some serious analysis of a threat in Central Europe is in the Brookings Setting National Priorities For The Next Ten Years, that came out this Fall and Brookings has modified its position. Last year, Brookings talked about a possibility of a 15-billion dollar cut in our defense spending. Now they have modified that and indicate that they do not think we can cut more than 5-billion. The reason is that they too talk about a threat in Central Europe—the growing threat. The analysis set forth by Henry Owen, principal author, Director of International Studies of Brookings, though he says he does not see any real possibility of a Soviet agressive move, nevertheless, he says, "the chances of this occurring might be greater if Soviet leaders were already facing a violent challenge in Eastern Europe, in this event they might conclude that a Soviet domination in an Eastern Europe constantly exposed to the contagion of Western pluralism and influence would be difficult to preserve. That they might act to neutralize Western Europe or accept the prospect of continuing troubles in the East."

Well, that is the principal argument for justifying a buildup in NATO, a buildup in Central European force structures. I think that is one of the most preposterous estimates of Soviet intentions and Soviet capabilities that I have read anywhere. And yet, I have not seen this challenged in the press yet—this Brookings analysis and the change in their estimate of possible defense cuts has been given rather favorable commentary in the press. To think that the Soviets, threatened by resistance in Eastern Europe, would risk a strike into Central Europe and Germany is, to me, an act of suicide that the Soviets and their entire history have never manifested.

Clearly, the Soviets are very concerned about the quicksand that they live on in Eastern Europe. They are a hated occupier in East Germany, Poland and Czechoslovakia. They have four divisions in Hungary—they have had them every since 1956, when the Hungarian uprising took place. But the forces they have in Hungary are certainly not going to be available for any so-called blitzkrieg.

The forces they have in East Germany, Poland and Czechozlovakia are 27 divisions. There are 27 other divisions in the Warsaw Pact which the Soviets have very good reasons to doubt the reliability of. In 1968 when the Soviet Union moved 200 thousand men into Czechosolvakia, they had very good intelligence that the Czech military leadership was extraordinary risky. There is a long history of hatred of the Soviets in Eastern and Central Europe and just to look at the Iron Curtain and the Berlin Wall—why are they there? They are there to keep people in, they are to keep people from leaving. If there were a war, the Soviets know that there would be a sudden movement outward, there would be shots in the back. All of the intelligence that I have seen, and I used to be in CIA, demonstrates that the Soviets are extraordinary worried about maintaining their position in Eastern Europe. To think that a military force in such a circumstance would strike outward into West Germany, which now has the finest military force in all of Europe, including the Soviets and the United States, the Germans have built an incredible military structure, is to me the strangest of logic.

Yet in briefings to Congress in the last several months, and I think Congresswoman Schroeder would testify to this, the Pentagon has been telling of extraordinary dangers, the extraordinary need to build up forces because of this potential thrust of the Soviets who, by the way, are facing in the Chinese, what they say is their number one threat, and which their military forces pointing in that direction demonstrate that that is their view. Why on earth they would ever contemplate a thrust into Western Europe is beyond imagination.

Yet I have not seen what I have just been saying put out into the press. I have not seen constant challenge to this nonsense that has been perpetrated of this incredible threat. The Soviets have not increased their divisions in Central Europe since the Czech coup. They did put in 200,000 men at that time, and they have stayed. They have 31 divisions; 4 in Hungary, 27 remaining. They have put in much more effective weapons, just as we have, year by year. As the weapons come off the assembly line, they go into the forces. This is standard military practice.

But my belief is that we should keep our eye on the ball and move now to take the opportunity to negotiate a reduction of forces in Central Europe.

There is an opportunity; the Soviets are interested in it, have put it on the line, and, for those of you who haven't seen it, you might want to look at a piece I had in the Washington Post, November 21, called "Germany, Key to Europe Troop Cuts". In that piece, I talk about the importance of West Germany as the need on all sides: the balancing of West Germany forces before we will get motion in the East/West negotiations.

Dr. EARL RAVENAL. My name is Earl Ravenal. I was in the Pentagon for several years in the late 1960s and am now teaching American foreign policy.

I am not going to try to recapitulate parts of the excellent and very quantitative presentations that have preceded.

I want to try to, however, open up the debate a little bit by admitting the possibility that certain arguments that have been brought up by the other side, so to speak, the people who are exaggerating the threat, while I do not share those arguments, might be formidable enough to take account of. We are all here to discuss ways of formulating counter-arguments and counterproposals to the kinds of things we are hearing these days. So I think that, in a way, we have to, however grudgingly, begin by giving a little bit of, not credence, but weight and take seriously some of the, perhaps, distorted logic and the arguments that are being put forward by the new Hawks mostly in order to try to devise understandable and convincing counterarguments.

The arguments of the last ten years, fifteen, twenty years, that some of us are familiar with, I don't think are sufficiently weighty these days. We have to be very careful about the kinds of argumentation, kinds of strategies that we use in countering these new arguments. In other words, what I am saying is that in our debating tactics we probably need a second line of defense, a kind of "what if" argument. I want to make it clear that I thoroughly subscribe to the estimates that have been put forward today, and I am not worried about the so-called Russian threat. The numbers that we've heard and the estimates of Soviet potentialities and intentions are very convincing, but I think that we need a second line of defense, a sort of "what if" argument. And that's the kind of consideration that I want to put forward in the next couple of minutes.

Although I don't believe in worst cases at all, I think that our military organizations are being paid to hedge against worse-than-we-think cases. So really, we ought to direct our attention to answering arguments about not what they are most likely to do, but what they might do in certain crisis situations, and also what they could do if they set their minds to it. These are sort of different forms of the old suggestions of intentions and capabilities.

And I think that the way to deal with these questions, these new questions that have been brought up about Soviet inten-

tions and capabilities, is really to transcend these considerations. Because when you talk about threats that they might mount, that they might have the intention of mounting, the question is, threats to what, with regard to what American capabilities. American capabilities to do what in the world? Do what in certain military theaters?

When we look at those kinds of considerations, first of all with regard to the strategic balance, we come to the conclusion that, whether or not the numbers that are being put forward by the new Hawks are convincing, the point is, the numbers really don't matter at all. It's not the numbers that matter, the question is the stability of the strategic balance. Especially in crisis. And there probably will be some within the life of this present Administration. It is not even Soviet intentions, as such, that matter. Again it's the stability of the strategic balance.

And the kinds of things that we have to consider are first of all is what we want to do with our forces, our military forces, and secondly, what the other side can do to our forces, whatever their intentions might be. In other words, the question is not one of inferiority.

THE SOVIET-UNITED STATES MILITARY BALANCE—PART III

HON. BOB CARR

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. CARR. Mr. Speaker, I join my distinguished colleagues, PAT SCHROEDER and RON DELLUMS, in continuing the presentation of the text of the February 7 seminar on the Soviet-United States military balance.

Part III of the text follows:

PART III

Dr. RAVENAL. Therefore the arguments that are put forward to emphasize American superiority in certain categories, particularly of strategic arms, are very well taken arguments, but they're not essentially the point. We could be, in certain categories, technically inferior, and it wouldn't make very much difference.

The question is always the relevance of these numbers to the question of what we intend to do with our military forces. Because if we intend to do certain things with our military forces, such as fight limited wars, conceivably we'll never have enough missiles to accomplish these purposes. And the whole question of numbers becomes very open-ended. Whereas if we restrict ourselves to certain finite and limited kinds of intentions and uses of our nuclear forces, particularly, and I'm going to mention later on, our conventional forces, too, then we already have more than enough. And that becomes a sufficient answer to the debate.

I think that we can conceive, without too much harm, that the Soviets technically could be on the road to threatening our missiles, particularly our fixed land-based missiles, and with this I agree with some of the comments that have been made. But the question, of course, is what to do about this technological fact. Of course, this might not be the case today, but it's inconceivable that technological drift will not, on the part of the Soviets, give them increasing accuracies as the years go by, and as Jeremy Stone mentioned, accuracy is the key to the ability to knock out fixed targets. Instead of holding on to a shrinking argumentative position, that is, that the Soviets cannot at this point threaten a large percentage for fixed land-based missile force, perhaps it would not do any great amount of harm to concede that point and to get on with the question of what, if anything, we ought to do about this, which is what the payoff question is.

And the reason that this question of what to do about it all is urgent and current, is because on the drawing boards and in train, and even with this present Administration, are some very expensive and possibly destabilizing proposals, in all categories of strategic arms, particularly the MX, that is, the replacement of mobile or multiple basing point replacing our present fixed land based missiles, not to speak of the B–1 and the Trident. And those decisions are going to have to be made very early in this Administration. In fact, they are being made now, and the basic stance of this Administration toward all of these programs is in the process of being determined.

If we're going to have a Congressional debate, or a national debate, about the so-called Soviet threat, the debate should be held in terms of the somewhat larger question, the real fundamental underlying function of what we want to do, what we propose to do in the world with our military forces.

We could actually reinsure our strategic stability for decades at lower levels of deployment and lower levels of spending. I don't intend now to put forward the details of such a proposal, but one way of doing this would be simply to do away with our fixed land-based missiles if the conviction of our military and intelligence people comes to be that they are becoming increasingly vulnerable to an accurate Soviet placement of missiles. And we could safely, even move to a diad of forces. We don't need all the redundancy that is built into the present triad. And if it came to a choice between it spending 30 or 50 billion dollars on a fleet of mobile missiles, the MX, or doing away entirely with our land-based missiles over a period of time, in an orderly way, then I think the latter is the direction in which we could go.

So the irony of the whole debate these days is that even if we were to concede that the Soviets now have the capability to threaten our missile force, we could actually remedy that situation at lower levels of deployment, lower levels of spending, rather than higher.

But I think that this also tends to illustrate, again, that the question is not the numbers game, it's not in any index, doesn't matter what it is, warheads deliverable, effective megatonnage, throw-weight launchers, or what have you. None of those measures, within extremely wide limits, mean anything. The logic of the threat and the logic of an exchange of nuclear missiles consists in the types of incentives that we create or that we discourage on the part of our adversaries ever to mount a preemptive or first strike nuclear attack upon ourselves. In designing the forces that we have in the future, creating negative incentives for the Soviets to do any such thing should be our primary concern, and this is not necessarily an expensive business, although we have to be careful about what kinds of moves we make.

Now if we were to do away actually with one leg of the triad, we would, in fact, save from 5 to 7 billion dollars a year, something on that order, depending upon the precise way in which we did this, and after necessary shifts were made to insure that we had sufficient capabilities in our other types of nuclear forces. We should not regard the strategic nuclear part of our defense budget as a rich source of budgetary savings. There is a very widespread misapprehension on the part of many of us that it is the strategic arms race that is costing all the money and that this provides the impetus for large real annual increases that we have been experiencing, and will continue to experience, unfortunately, it seems, in the next year or two, at least, in our overall defense budget.

In point of fact, out of about 123 billion dollars which might well be spent or requested in total authorizations next fiscal year, 1978, about 80% represents general purpose forces, and only 20%, about 25 billion dollars, including all overheads, represent the strategic arms budget. So if our concern shifts for a moment to the size of the defense budget, then the place that we ought to be looking for substantial savings and the place where we have to consider seriously the kinds of moves we would have to make to get those savings, would be in the conventional or the general force area, where, in point of fact, some 96 or 98 billion dollars are going to be spent in fiscal year 1978.

Now there are some further apprehensions about general purpose forces that come out of the rhetoric of the struggles of the last ten or fifteen years. We've become used to equating the large general purpose forces that the United States maintains around the world in terms of some kind of imperialist reach, some kind of urge to dominate. That bit of rhetoric, although it succeeded in generating a great deal of useful sentiment, however, is not strictly true. We must get our thinking straight on the subject of general purposes forces and what they cost and what they are, and where we keep them.

The Third World has nothing to do with the size of our general purpose forces. And they have nothing to do with any dreams of counterrevolution or opposing revolutionary movements or even autonomous movements in various countries. We could conduct a very useful discussion about American foreign policy in these Third World areas, but that has very little to do with the size of our general purpose forces.

Those general purpose forces are kept for the major contingencies that our present and most recent national leadership have felt might occur. And those, of course, are primarily in Europe. Europe costs about 55 billion dollars a year as a matter of American foreign policy concern. That is probably the highest number anybody here would want to put forward, and it is certainly higher than most of the numbers that we have heard from other quarters. But if you analyze and allocate all portions of the defense budget to their ultimate purpose, you will find Europe for 1978 is costing the United States about 55 billion dollars.

Now I hasten to say that that does not tell anyone what we ought to do about this, but it's well to keep these figures in mind. Asia, despite the withdrawals from Viet Nam, still costs 25 or 26 billion dollars a year. So I think that if we want to orient ourselves to the question of savings in the defense budget, a serious debate has to occur about our major commitments and, I would suggest—and this is entirely against the tide—about Soviet conventional threats.

We should probably still tackle the question of placing limits on the claims of our allies to our military support. Now, in that regard, and I'll finish on this note, the recent trip of Vice President Mondale to Europe was certainly regarded as heartwarming and reassuring by our allies. It achieved its purpose. But I would like to suggest that there is a price to pay for this kind of rhetoric. It's a price we're already paying and that price will grow. And a large part of that price is yet to be paid. I think that we have to keep those considerations very firmly in mind in looking at the total impact of our military forces on our national life.

Representative SCHROEDER. Thank you all very much. I appreciate the panelists trying to be brief in this very, very difficult area. One thing that I might point out in the general forces area and that all of you might be interested in watching here on the Hill, is the shipbuilding budget which is a very

large portion of the general forces in the weapons that we have to procure, because they're very expensive weapons.

One of the interesting things going on in the Hill is the suit that Les Aspin has and some of you might want to monitor it. In 1970 when Admiral Zumwalt was the CNO and the Russians were building up their fleet, they declassified the intelligence that we had on the Russian fleet, so that we knew what kind of ships they were building, and projecting to build, and they were laid out by classification. This year, the Russians really have cut back their shipbuilding, which is very interesting, and this year we can't get them to declassify the number of ships, so that we know that there are 231 surface ships, but we are unable to get declassified how many of those are frigates, and how many of those are destroyers, and so forth and so on.

Now Les Aspin has a Freedom of Information suit going, saying, How come it could be declassified when they were going up, but you can't declassify it when it's coming down. It's one of the fascinating things going on that you might want to monitor in your offices.

We'll open it up for questions for about 20 minutes.

Q. Mr. Cox, how were you estimating that West Germany has the finest military force in Western Europe and how much do they have?

Cox. The West Germans have now about a million men, a reserve force that can be called up in 48 hours. Their training is very effective, their equipment is as good as U.S. forces, but our military, and other military that I've talked to, NATO commanders, maintain that they have a readiness that is better than U.S. forces.

Q. I understand that we have about 110 ships being built that we never hear about.

SCHROEDER. We have an awful lot of ships in the pipeline that haven't come out the other end. Our shipbuilding industry is not one of the most efficient, to put it very, very mildly. That is one of the things that comes out of here, how many ships we have paid for versus how many ships we have had delivered, and that, I don't know that the number is exactly—110—I'd have to recheck that. There are an awful lot of ships that the American taxpayers have paid for but have never seen. We can only hope that someday we will see them.

SCOVILLE. One of the problems here is also not the numbers of ships, but the kind of ships. The U.S. shipbuilding program has been aimed to a large extent at very large, very expensive, and, particularly, to a large number of nuclear powered ships. This runs the bill up very, very fast. It might account for one reason why we are behind schedule. We might need more ships but it's not clear that we need more big ones. And I guess there is a step in the right direction, at least with the stopping of the large nuclear carrier program this year, but there still is an awful lot in there.

Q. Dr. Ravenal, you were saying before that thinking about these issues in terms of what our contentions were, in terms of what we want to do with our military forces. Could you be more specific about that in determining what force levels are necessary?

RAVENAL. Well, let me start by relating that question of the relevance of our own intentions to the size of our forces to the question that was asked before about ships being built. The United States Navy would like to reverse the decline in shipbuilding and the size of the number of principal vessels, combat vessels in the Navy, from about probably about 480 at this point to about 600. Well, 600 might not be enough, it might be too many, and it might be just about right, but the question is what are we supposed to be doing with our Navy in the world? That is the question that has to be debated.

There are a lot of misapprehensions about the uses of our Navy. But it is true that a large part of our surface naval forces and even attack submarines are devoted to the principal task of reinforcing and resupplying our forces in Europe in the event of a fairly extended conventional conflict in Europe. The basic question, therefore, about the size of our navy and whether 485 ships is enough or whether we need 600 or more, and what types of ships we ought to have, has to do with whether we intend to fight an intermediate lengthy conventional war in Europe. Whichever other direction we might go in, whether there should be a tactical nuclear defense, which I don't happen to think there should be, or whether there should be some kind of fall-back strategy.

The point is that these are the kinds of questions, what we're going to do with our force is quite adequate with the existing have to be ironed out in terms of the kinds of commitments that we continue to undertake. This is why I mentioned Vice President Mondale's trip. Because rhetoric is all very well to pacify European fears and to satisfy their demands for American reassurance of American protection. But there is a very serious price that has to be paid for this.

Q. Dr. Scoville, what is the significance of the minimum deterrence concept which President Carter is ordering the Pentagon to study?

SCOVILLE. I think it's a very encouraging sign. All of us, and I include myself, have far too long been engaged in the rhetoric of balancing off 8 or 9 thousand warheads versus 8,000 or 9,000 Soviet warheads. It's all really nonsense. That kind of war is just absolutely ridiculous. It's time we did get back to thinking about small, minimum deterrent forces.

However, having said that, politically it is not going to be that easy to get there, but at least it's an encouraging thing that we are thinking about it for the first time in many, many years. It is a very useful step forward.

Could I just comment on one other thing in connection with these counterforce weapons, and I'd just like to strongly agree that these are the really dangerous kinds of weapons. Some weapons you just waste a lot of money on, but things that make nuclear war more likely, like the MX and the Mark 12A warhead, which give counterforce capabilities, don't provide security, they just increase the risk that we're all going to be blown up one of these days. Those are the programs that don't look at the dollars as much as what they do, it is a very important criteria.

Q. Paul Mintz's latest idea is to have 3,000 deliverable megatons to combat Soviet civil defense. If we did that, what would be the fallout impact on the American people if those dirty and radioactive megatonnage were ever delivered?

SCOVILLE. Well, unfortunately, I don't think you've got a very good argument there. They probably wouldn't do all that much. There probably would be effects, and you would have some serious fallout in this country, I'm sure, but not in the sense that it would produce immediate casualties. It would probably produce longer term effects. I think that there are better arguments against Paul Mintz's plan than that one, I think, I don't think that you could probably argue that we're killing ourselves, in order to destroy the Russians.

There is no question that 3,000 megatons would make an awful mess of the Soviet Union as far as fallout. Actually, our present forces can already do that. We have plenty of megatonnage to make population casualties in the Soviet Union very, very large if that was our objective that we wanted to carry out. This is one reason why this whole civil defense nonsense really doesn't make any sense as far as spoiling our deterrent.

THE SOVIET-UNITED STATES MILITARY BALANCE—PART IV

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. DOWNEY. Mr. Speaker, I wish to join with my colleagues in adding to the text of the February 7 seminar on United States-Soviet military balance, a question which has important policy implications.

Part IV of the text follows:

PART IV

Q. In view of the current situation, the current national policy that is beginning in respect to NATO and to Europe, how can one rationalize the cutbacks of conventional forces with respect to the fact that so little is spent on preparedness?

Dr. RAVENAL. That outlines two possible interpretations of what the problem is. How can we even think about making cuts in our conventional forces in the current climate could be a political question, and I would agree on the conventional side with what Pete Scoville said on the question of reducing our missile forces to a small finite number. That is a very difficult political problem these days. As far as the other interpretation is concerned, whether we can even objectively think of reducing our forces in Europe, or in what other areas you might have in mind, but Europe is certainly the principal one. There is room for certain unilateral cuts in our forces. This is swimming against the political tide these days, but I think that it is no less valid to say that we can do it now than it was 4 or 5 years ago when it seemed to be much more popular and had a lot more political appeal. We could well ask what has happened in the meantime in the climate of opinion and why it is that all sorts of technical expertise on one side of the issue has somehow overwhelmed and overawed all the others. We have to recover our ability to do analysis. Far from having to reinforce our conventional forces expensively, which seems to be part of the program that is being urged upon us in this present Administration, I think that we could actually accomplish some of the cuts that various prominent members of Congress had tried to bring about over the last 5, 6, and 7 years.

Mr. STONE. I'd like to add something to the previous question that Pete Scoville was answering about the civil defense problem. As I tried to explain, the Russians are deterred from using this civil defense against us, and I think deterred from threatening this civil defense against us, for the different reasons I described: deterred from threatening because it could only be done once; and deterred from using it because it couldn't be used.

But the real cost of this alarm about Soviet civil defense is going to be to undermine the hopes that President Carter had for some kind of minimum deterrent program. Because it is all very easy for us to answer this civil defense alarm by saying, we have thousands of warheads and we've got three arms of our deterrent, and it is easy and in some ways opportunistic to answer the objections by explaining what enormous quantities of what are colloquially called "overkill" exists.

But if you want to turn to reducing this and you discover that you have inadvertently acquiesced in the notion that you need thousands of megatons with which to destroy the other side, then you will have problems to getting down to a sensible level. So the real danger of this alarm is not that it will panic Harold Brown into buying new

heavy megaton weapons that he wouldn't otherwise have bought. He's too sensible for that. He has already shown that in his statements. But it tends to put a higher floor under what we're doing than would have been before.

In the long run, I think the cost of this might be real cost to the human species. I want to point out that when the National Academy of Sciences did a study on what ten thousand megatons would do to the human race, they summarized it very badly. They concluded that they had no clear evidence that every single person would be killed by such a war. But if you looked at what in fact they said in the backup studies, there were massive uncertainties in many different areas about what would happen if so many thousands of megatons would go off. While they couldn't prove, because I don't think science can be expected to prove, that surely some single act would so perturb the climate or the ozone or the ecology as to kill the very last person, I can assure you they cannot prove the opposite either.

One of the most important reasons to bring the deterrent down to the levels we thought adequate in past years is to protect the species against the possibility that a nuclear war might just occur and leave not just the industrial world in ruins but the planet in smithereens.

Q. President Carter has made good statements about reducing nuclear weapons, but there is difficulty facing Paul Warnke in his nomination to be Director of the Arms Control and Disarmament Agency. Could you discuss this opposition?

STONE. I can say one thing that might be of interest. I think it is generally believed around Washington that there is no better champion of defense and arms control policy than Paul Warnke. Even opponents of his nomination, or those who have expressed some doubt, are, as a result of background conversations I've had, really irked by the fact that as the Evans and Novak column reported the other day, the right wing of the Democratic Party, the more Hawkish wing of the strategic analysts, have not gotten important positions in this Administration. It's turned out that President Carter has favored the Paul Warnkes over the Paul Mintzes. And this has been widely advertised in the papers. Those who are concerned about this trend, feel that their opportunity about making a point about what future arms control policy should be is to jump in on the Warnke nomination to see what they could do to express their view on that.

But as one who has read the entire set of past statements that Mr. Warnke has made, I've read them over the weekend—a whole stack of them—I can tell you that it is very difficult to make of them anything but a very sensible, humane and vigilant foreign and defense policy. I think he will be confirmed. By what margin I am not sure. But in any case, I think that the real action is not against him, but against the possibility that President Carter may try to get real deductions.

Q. Is Carter trying to save money or is he just trying to save money on nuclear weapons?

SCOVILLE. I think he really believes it's dangerous.

Q. Is there money to be saved?

SCOVILLE. Well, there's money to be saved. In fact, in that respect, I don't quite agree wih Earl Ravenal. I am not quite prepared to say you can't make real savings in strategic weapons as well. This year's budget calls for about 7 billion dollars on new strategic weapons. I can go through that list and I'm sure our security would be better than if we saved 2 billion dollars. And that's not chicken feed.

RAVENAL. I thoroughly agree with you. I was saying that if just proportionably even what is added to the defense budget every 12–13 billion dollars added every year, what can be saved even through the most well-placed and meticulous excisions of surgery on the strategic side is, unfortunately, going to be eaten up by months of inflation.

STONE. If I could add to it what my senior has just said. The real money to be saved is not in the money that could come out of the strategic force budget. 30 billion dollars could be saved if, in fact, we find through reductions of land based missiles, that it isn't necessary to go forward with the MX missile. Which I think, by the way, is unnecessary to do in any case because it would be counterproductive and would not solve the problem.

But you should understand that in strategic forces, we are faced with real dilemmas as to whether to go forward or back. If we have reductions in land based missiles we could save 30 billion in MX. If we have reductions that persuade us that the bomber force is quite adequate with the existing bomber force we have, we could save 100 billion dollars over the next 15 years by foregoing the B–1.

So the real question the Carter Administration is facing is whether to make enormous new outlays for strategic forces. The B–1 by itself over 10 or 15 years will cost the whole 1976 defense budget. And the MX will cost 30 billion just to build and you will find that in 10 or 15 years, I believe, that we face the same problem with land based missiles, the same on paper vulnerability, that we face now. So I think the real savings in reductions is going to turn out to be the unnecessity to modernize and maintain the otherwise larger and more changeable strategic forces we would have to have.

Q. Does recent Soviet military activity alter or change your estimation of Soviet intentions?

COX. In the conventional area they have increased the size of their ground forces to about 4.4 million men. But as I said in my remarks, a great deal of that is directed toward China. One of the difficulties you often see in the press when there is an estimate of the Soviet defense budget and the Soviet strength, is that it is reported as though all of that strength is directed against the United States and its allies. If you reduce that budget, by the proportion that is directed at China, you get a budget that is a good deal smaller than that of the United States and its allies. This you seldom see reported in the press.

Another thing that you seldom see analyzed is this so-called "panel A" and "panel B" debate brought out about the relative size of percentage of Gross National Product that goes into military spending. The recent CIA estimate jumped that from 6 to 8% in 1975 for the Soviets to 11 to 13% and the U.S. has something less than 6%. But the thing again that you seldom see reported to follow on is that the United States has a Gross National Product more than twice than the Soviets. And of course if you put in the Germans, and the British and so on, you have quite a different balance.

This kind of reporting, I have to maintain, is very sloppy and gives the average citizen an impression of tremendous Soviet growth which is inaccurate and unbalanced in terms of that kind of thing.

SCOVILLE. These new increased dollar values that are put on the Soviet military budget really don't mean they are getting any more military equipment out of it. All it is is just a different way of calculating dollars. So, if the situation has not changed one bit from where it was 2 years ago, they just have done it using a different method of making a calculation.

Now as far as the strategic forces are concerned, I have looked at all the numbers that are available, and I think that enough is available publicly so you can draw a conclusion. But I don't see anything new that is different in terms of Soviet programs over what was there a year ago or even 2 or 3 years ago. It is true they are now moving into MIRV missiles about 5 to 6 years after we did. I don't like it. I think it's a step in the wrong direction. But it doesn't come as a surprise. It's what we predicted except it is a little later than we predicted.

So I really don't see any evidence for a change in strategic posture.

STONE. We're going through a period analogous to the period when the Russian missile buildup was in numbers of missiles. We had already built up to a thousand land based missiles, producing 1 a day. They had for a while been producing 1 a week. And then all of a sudden they went into mass production. There was tremendous concern here about what did it mean. We are concerned now in the sense they must have been even more concerned when we built up.

Now the same thing has happened in the modernization side. They've gotten into in a certain sense mass production of modernization. Actually, it's not going that fast. They are modernizing about 15% of their missile force each year. And it obviously started years ago, so it has all been seen before. What it confirms in my mind, is not a change in their intentions, it doesn't change in my mind its intentions, but it confirms in my mind the fact that the Russians have always suffered from an unfortunate doctrinal lag in strategic thinking. They quite often get around to doing what we did just in time for it to be the wrong thing.

For example, in this case, they are spending $30 billion, it's estimated, to modernize one missile, the SS11, and spending about $15 billion to modernize the SS9s. That's a very large sum and at just that time, we have with 1 warhead, the MKL12A, in effect neutralized that land-based missile force even after it gets modernized. Now, of course they're hardening it more too, taking from 300 psi to 1000 psi. But if you look what these warheads could do, a 1000 psi won't be defense against it. So here they are in a kind of doctrine lag pouring even more money into land based forces at just the time we get the drop of those land based forces.

What is confirmed in my mind, and also something to worry about, is mainly the juggernaut spending in the Soviet Union in the defense ministry is probably as hard or harder to stop than our military industrial complex. It is probably quite difficult for the Politbureau or independent civilian analyst to reach into there and say "are you sure this is the stuff you really want"?

So the arms race might go on for a very long time, and in that sense you must be vigilant about what they're up to. But I don't think it confirms any basic change in their intentions.

I want to add one thing to this: On each side those people are trying to stop the armed services; are trying to explain with bureaucratic, social/cultural reasons why the other side is doing what, in fact, it's doing in ways that are acceptable to the hawks on their side to try and get them to cool it.

I was struck by this when I saw in the papers the other day that Abortov, the head of the U.S. Institute in Moscow, had written a paper in Isvestia explaining why, in fact, our fears were groundless and added, at the end of it, that one had to understand that the Americans who had 2 oceans at one time, had cultivated a desire for absolute security, and that they were indulging in it with the thought of having to blow every last Russian to bits and having to have all these large measures of security. I don't know if his analysis was right, but I could just hear him trying to explain inside the Soviet Union system the fact that they built all those

missiles doesn't mean they are about to fire them. They're crazy. They build more than they need, you see, and it's because of this 2 ocean thing, you see. So I'm not very sanguine that either he or us will proceed to slow the thing with those kind of metaphors, but I think it illustrates the problem.

NBC'S 3-HOUR SMEAR OF SENATOR JOSEPH McCARTHY

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. McDONALD. Mr. Speaker, on February 6, 1977, NBC presented a 3-hour fictionalized smear of Senator Joseph McCarthy during prime time.

The program entitled "Tail-Gunner Joe" began by poking fun at the fact that during World War II Senator McCarthy, a Marine Corps intelligence officer in the Pacific theater, volunteered to participate in combat missions with his buddies although he was a decade older than most of them. Now that our media has been working so hard to make heroes out of draft dodgers and deserters, it is not unusual for them to poke fun at a real hero.

Although it would be impossible to answer every lie and distortion presented during a 3-hour television program, I would like to share with my colleagues the facts about some of these lies.

One fictional character stated during the program that Senator McCarthy's investigation of the U.S. Information Agency's Overseas Libraries was a campaign to burn the books of Sherwood Anderson, Stephen Vincent Benet, Mark Twain, Louis Bromfield, Quentin Reynolds, Edna Ferber, and Carl Van Doren. A careful examination of the hearings and reports on this investigation reveals that none of these people or their books were mentioned in any way. In the course of a different series of hearings, Louis Bromfield was described by a witness as an anti-Communist, and another witness questioned whether it was good policy for Voice of America to broadcast criticisms of Texas in one of Miss Ferber's books.

Objectionable books were found in the Overseas Libraries. As a report of Senator McCarthy's permanent Subcommittee on Investigation said,

> State Department Information Service libraries abroad function with American taxpayers' money as part of the program to expose and combat communism. The purchase and use of works by authors who are either known Communists or who were long and consistent supporters of the Communist cause by these special-purpose libraries to combat Communist propaganda is obviously inconsistent with the legally defined purpose of these libraries.

According to the report, at least 12 authors who "have been in the past either identified under oath as having been involved or implicated in Soviet espionage or had acted in some important or confidential capacity in behalf of Soviet Russia" had written books found in the libraries. These included, Cedric Belfrage, Haakon Chevalier, Lauchlin Currie, Israel Epstein, Philip Jaffe, Owen Lattimore, Kate Mitchell, Harriet Lucy Moore, Andrew Roth, Agnes Smedley, Gunther Stein, and Victor Yakhontoff.

Another 13 identified Communist Party members had also written books found in these supposedly anti-Communist Overseas Libraries. These were James S. Allen, Herbert Aptheker, Earl Browder, Howard Fast, Philip Foner, William Z. Foster, William Gropper, Dashiell Hammett, William Mandel, John Reed, Morris U. Schappes, Anna Louise Strong, and Doxey Wilkerson. Report on State Department information program—information centers, January 8, 1954, pages 3–4.

One of the most dramatic as well as unfair segments of the program consisted of an interview with a possibly fictional character who was supposed to be the widow of Roger DeCamp, a Voice of America engineer, who committed suicide because Senator McCarthy had investigated him. No one by that name was mentioned anywhere in the hearings of the McCarthy Committee. The "widow," talking about the transmitters built by her husband, said,

> One on the North Carolina coast for Europe. One in Seattle to go the other way. And do you know who decided these were the best spots? M.I.T., the Bureau of Standards, the U.S. Army Signal Corps, that is who decided where to put them . . . McCarthy, and this is hard, it was such insanity, it's hard for me to believe it happened even now—McCarthy decided that the Seattle transmitter should be in California, not in Washington.

An examination of the hearing records showed that an investigation was conducted of the building of two transmitters, one called Baker West in Seattle, the other called Baker East in North Carolina. Expert testimony showed that transmitters at such locations would face the problem of the radio waves passing through a magnetic storm area in the auroral zone, resulting in a 50-percent loss of power 90 percent of the time. Although MIT had at first recommended the Seattle site, they soon changed their minds and recommended a site much further south. The Bureau of Standards had in fact issued a report critical of the Seattle site because of the previously mentioned technical difficulties. A memo prepared by a Voice of America bureaucrat suggested that they retain the Seattle site because, "If the decision is to move to California, we must be prepared to explain fully to the Congress and to the press our reasons for doing so. Such exposure may result in congressional investigation and would not be conducive to our obtaining additional construction funds in the near future." Report on Waste and Mismanagement in Voice of America Engineering Projects, January 25, 1954, pages 2–3.

One of the Senators who was particularly concerned about this example of waste and mismanagement was Senator HENRY JACKSON of Washington who despite his desire to have transmitters built in his home State, played a major role in obtaining the facts which showed that California was a better location. Hearings—State Department Information Program—Voice of America, part 1, page 7, February 16, 1953.

One segment opened with the actor playing Senator McCarthy mumbling a few words and then saying "members of minority groups who have been traitors to this Nation." Only by carefully listening to the words or by checking the typed copy of the notes given by Senator McCarthy to the local radio station at Wheeling, W. Va., would you realize that what he said was, "It has not been the less fortunate, or members of minority groups who have been traitorous to this nation—but rather those who have had all the benefits that the wealthiest Nation on earth has had to offer—the finest homes, the finest college education and the finest jobs in Government we can give." Presenting McCarthy's famous Wheeling, W. Va. speech in such a way as to make him sound as if he said that minority groups were traitors was consistent with a distortion that ran through the entire program. One fictional character supposedly an employee in Senator McCarthy's office referred to "Jewing down" the fee paid to a lecture agency. In fact, not only was Senator McCarthy's chief counsel, Roy Cohen, Jewish, but so was one of his most important advisers, the late Alfred Kohlberg. When Senator McCarthy was under attack a mass rally was organized in his defense in New York by Mr. Kohlberg and Rabbi Benjamin Schultz.

It is interesting to note that one of the heroes presented on this program was the late Senator Ralph Flanders of Vermont who was praised for his speech attacking Senator McCarthy and his introduction of a Senate resolution condemning McCarthy. What was not mentioned on the program was that Senator Flanders was the author of a constitutional amendment called the Christian amendment which would have made it impossible for Jews or other non-Christians to take an oath of office to support and defend the Constitution of the United States. See hearings on the Christian Amendment before the Subcommittee on Constitutional Amendments of the Senate Judiciary Committee, May 13 and 17, 1954.

A fictional character on the program complained that McCarthy suggested that Flanders was senile. Flanders in his speech attacking McCarthy had implied that McCarthy was a homosexual. The NBC propagandists not only saw nothing wrong with this slanderous charge against McCarthy, but participated in it by having the actor playing the sanctimonious old hypocrite Joseph Welch saying to Senator McCarthy during the Army-McCarthy hearings, "I should say, Mr. Senator, that a pixie is a close relative of a fairy." Welch in 1954 and NBC in 1977 were both playing to the gallery knowing full well that one of the leftist inspired whispering campaigns used against Senator McCarthy was one which falsely labeled him a homosexual.

A particularly stupid falsehood was presented on the program when the actress playing Jean Kerr—later Mrs. McCarthy—and the actor playing Sen-

ator McCarthy engaged in the following dialog:

JEAN KERR. Vice President Nixon called.

MCCARTHY. Did you talk to him?

KERR. Yes—you got it. You have been appointed Chairman of the Committee on Government Operations, and you are permitted, if you want, to become Chairman of its own permanent Subcommittee on Investigations.

Anyone who knows anything about the Senate is aware that chairmanships are given based on seniority and not by the Vice President of the United States. The use of Nixon's name in this context was to smear McCarthy by identifying him long after McCarthy's death. Nixon himself had been splattered with the mud thrown at McCarthy even though his critics knew that Nixon, instead of supporting McCarthy, had joined in the Eisenhower administration "dirty tricks" to destroy Senator McCarthy.

An interesting segment that would be clear only to those on the inside showed an actor playing a British writer who complained that he was deported from the United States because McCarthy demanded it. Only those persons fully familiar with the personalities active at that time would have recognized the character portrayed as Cedric Belfrage. Belfrage's name is never mentioned. But on May 16, 1953, one of the more hysterical British newspapers, The Daily Herald, headlined, "Briton Attacked by McCarthy Arrested". The story started: Washington, Friday—The witch-hunting Senator McCarthy today carried out his threat to have a British writer arrested for refusing to say whether he was a Communist.

The Briton, Cedric Belfrage, edits the leftwing New York magazine National Guardian. He was taken by immigration officers to Ellis Island for deportation.

Belfrage had appeared as a witness before the House Committee on Un-American Activities on May 5, 1953, and before Senator McCarthy's Senate Permanent Investigations Subcommittee on May 14, 1953. During the House committee hearings Belfrage was confronted with the evidence that he had been a Communist sympathizer in England and a Communist Party member in the United States. Martin Berkeley had identified him as a member of the Communist Party and Elizabeth Bentley had identified him as a member of the Soviet spy ring for which she had served as a courtier. This information was later used at an immigration hearing which resulted in the deportation of Belfrage. At the hearing of the House committee he had invoked the fifth amendment. Hearing—Investigation of Communist Activities in the New York City Area, part II, May 5, 1953, pages 1272–1301.

On May 14, 1953, when Belfrage appeared before the McCarthy committee a Senator said,

Well, I think personally if you have been over here for 16 years and have taken the advantages of the American way of life and are either afraid or ashamed to say that you do or do not believe in the overthrow of the American Government, the sooner you leave the shores of the United States the better it would be for the United States.

This was said not by Senator McCarthy but by Senator Stuart Symington. Hearings—State Department Information Program—Information Centers, part VI, May 14, 1953, pages 413 and 414.

The biggest lie of the program and the culmination of all the other lies was when one of the fictional characters said at the end of the program, "But he himself caught no Communists, found no traitors, uncovered no subversives, not one."

I could list many hundreds of Communists, subversives, and traitors exposed by Senator McCarthy. I will name just a few. Let us start with William Remington who was on McCarthy's original list of Communists in the State Department. Remington was later convicted of perjury when he denied being a member of a Soviet spy ring in the government. The evidence was overwhelming and witnesses included Elizabeth Bentley as well as Remington's former wife. Remington subsequently died in prison.

In the course of the McCarthy Committee investigations at Fort Monmouth, N.J., a number of security risks were identified. One of them, Aaron Coleman, admitted having been a member of the Young Communist League with convicted Soviet spy Julius Rosenberg. Although Rosenberg had admitted seeing Coleman at Fort Monmouth, Coleman denied this. However, Coleman admitted that he had been caught taking classified material off the post. He maintained that he had done this only because he was working on it at home. Army Signal Corps—Subversion and Espionage, parts I and II, October–December, 1953.

It was in the course of the same hearings that the famous Annie Lee Moss case took place. Mrs. Moss was a code clerk at the Pentagon. An FBI undercover agent, Mary Markward, had identified Mrs. Moss as a member of the Communist Party. After extensive testimony in which she denied her membership and attempted to say that she was being confused with someone else with the same name, Senator Symington stated,

If you are not taken back into the Army (employment), you come around and see me, and I am going to see that you get a job.

Army Signal Corps—Subversion and Espionage, part X, March 11, 1954, pages 443–462. Mrs. Moss had been suspended from her job with the Army pending a loyalty review board hearing.

During the course of her committee testimony, Moss stated that for a period of time she had lived at 72 R Street, Washington, D.C.

In 1958 the Communist Party, U.S.A. in an appeal to the U.S. Court of Appeals, District of Columbia, asked that the testimony of Mrs. Markward be stricken from the record of the Subversive Activities Control Board which had used her testimony to find the Communist Party to be an agent of the Soviet Union. They used as the basis for their request Mrs. Markward's allegedly false testimony in regard to Annie Lee Moss. The court ordered the production of the FBI files on the Moss case. These were inspected by the Subversive Activities Control Board which concluded:

The situation that has resulted on the Annie Lee Moss question is that copies of the Communist Party's own records, the authenticity of which the Party has at no time disputed, were produced to it (A. G. Exs. 499 to 511, inc.) and show that one Annie Lee Moss, 72 R Street, S.W., Washington, D.C., was a Party member in the mid-1940's. Yet, on several occasions before the Court of Appeals and the Board the Party charges that witness Markward had committed perjury before the Defense Department in the Moss Security Hearing in testifying to what the Party's own records showed to be the fact.

We conclude that upon production of the documents demanded by respondent, the Communist Party's charge that Markward gave perjurious testimony was not substantiated. Consequently, Mrs. Markward's credibility is no way impaired by the Annie Lee Moss matter.

Subversive Activities Control Board, Docket No. 51–101, Modified Report of the Board on Second Remand, page 4.

On the program the actor pretending to be Senator McCarthy attributed to Owen Lattimore the invention of the term "McCarthyism." Senator McCarthy would never have said that since he was aware that the term had been invented by the Communist Party newspaper the Daily Worker. According to the program Senator McCarthy apparently attacked Lattimore because he had written some books. In fact, McCarthy had accused Lattimore of aiding the Soviets and being involved in the sell-out of free China. In 1952, almost 2 years after McCarthy's charges were aired, the Senate Subcommittee on Internal Security, after taking 14 volumes of testimony on the Institute for Pacific Relations, found that, "Owen Lattimore was, from some time beginning in the 1930's, a conscious articulate instrument of the Soviet conspiracy." Senator McCarthy was not a member of that committee. Report—Institute of Pacific Relations, July 2, 1952, page 224.

There is much more that I intend to say about this distorted and unfair television presentation. I will continue discussing this matter after the recess.

TRIBUTE TO SPECIAL AGENT JAMES J. DEARY, FBI

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. GIAIMO. Mr. Speaker, the strength of our national commitment to law enforcement is found in the record of those charged with upholding the law. These past few years have seen many instances of willful abuse and infringement of the law by officials who should know better. This contempt for the public trust must not blind us, however, to the superlative achievements constantly and often unobtrusively performed by the great majority of our Nation's law enforcement officers. These brave men and women have taken on the most difficult and many times the most thankless task which our society offers, for the good of their fellow citizens, to insure that the transgressions of the few do not upset the peace and order of our

communities. For such dedication and selfless service, these citizens justly deserve our praise and loyalty.

Connecticut has benefited for the past 29 years in this regard from the distinguished efforts of Special Agent James J. Deary of the Federal Bureau of Investigation. This tireless and innovative leader in his profession has brought credit to himself and his organization by numerous acts of faithful, patient work in the criminal and security field. An active member of the Connecticut Chiefs of Police, Agent Deary has made notable contributions to the furtherance of respect for the law in my home State by his sponsorship of improved police training procedures and methods. His leadership in this area is truly outstanding. The present police training program in Connecticut owes virtually its whole substance to the unremitting labors of Agent Jim Deary.

Jim takes pride in having played a major role in obtaining the legislation to mandate police training in the State of Connecticut and in the establishment of the Connecticut Police Academy in Meriden. He has assisted in sending more police officers to special courses in Connecticut and to the FBI Academy in Quantico, Va., than any other representative in law enforcement.

I have been fortunate to have Jim Deary and his wife Norma and their four children live in Wallingford, which is in my Third Congressional District, for as long as I have been in Congress. With such neighbors, I could not feel more secure. Jim is respected by all who know him. Now, on the occasion of his impending retirement, February 11, 1977, after 33 years with the FBI, I wish to express my special thanks for a job well done to Agent James J. Deary. Men like Jim Deary are far too few among us, and it is with some pride and much respect that I join with his colleagues, family, and friends in wishing Jim Deary the best of everything for the future.

CALIFORNIA: NATIONAL GAS SUPPLIER TODAY; WHAT ABOUT TOMORROW?

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. ANDERSON of California. Mr. Speaker, this winter season, as we all know, is a harsh and severe one on the lives and livelihood of thousands of Americans. Not since the OPEC oil boycott has the need for sacrifices by the American people been so urgent.

My home State of California has suffered much less than the Eastern half of the country. Because of the warm weather, the Southern California Gas Co. and Pacific Gas & Electric Co. have together transferred some 12 billion cubic feet of natural gas to the East for essential heating purposes. That is enough to service approximately 1.2 million homes here on the East coast for a month.

California is happy to have been of help to the fuel short areas of the United States. Southern California Gas Co. and P.G. & E. deserve commendation for showing the ability to help out during the crisis. However, there is a real danger that California's own bleak energy outlook may be forgotten as we share apparent surpluses.

Within the next 4 to 5 years, unless new sources are tapped, California will lose about 25 percent of its supply of natural gas due to the loss of out-of-State suppliers. Alaskan North Slope gas will not begin to flow until 1983 at the earliest. In the meantime, deep concerns over the safety of liquefied natural gas may threaten the availability of that source of fuel. And, research into coal gasification has been stalemated.

Mr. Speaker, California's consumers have adequate supplies of natural gas today, but critical shortages are predicted for tomorrow. We in the Congress have a choice—we can ignore the warnings of future shortages, or we can take bold bipartisan action to assure that natural gas and other essential fuels are in abundant supply for all sections of our country.

California acted as a supplier this winter, but what about next winter, and the one after that. Unless the Congress acts, California will be hard pressed to service its own customers.

FEDERAL AGENCY PILOT TERMINATION AND REVIEW ACT OF 1977

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. HAMILTON. Mr. Speaker, on May 21 last I introduced H.R. 13947, the Federal Agency Pilot Termination and Review Act. The Honorable GARY HART of Colorado had introduced an identical sunset measure in the Senate on April 14. It is with great pleasure that I introduce a modified version of that bill today.

Most of us agree that we must tackle head-on the twin problems of inefficiency in Government and unaccountability in Government. Zero-base budgeting or other compulsory performance review procedures may help us do this. I am persuaded that the Federal Agency Pilot Termination and Review Act is a most promising and practical bill.

In the 94th Congress the greatest defect of most zero-base or sunset legislation was its scope. Many of the bills would have provided either zero-base budgeting or some other compulsory performance review for the entire Federal bureaucracy. As a distinguished colleague of mine, the Honorable JACK BROOKS, has said, Government-wide zero-base review would "lead to a paperwork process that is mind-boggling even by Washington standards." Mr. BROOKS has told David Broder of the Washington Post that "we don't have the capability" for a zero-base review of such magnitude. Because I agree with my friend my bill calls for a pilot project to review the performance of just three Federal agencies in 1 year and three more Federal agencies in the following year. Mr. BROOKS has also suggested the "restructuring and reequipping of the Office of Management and Budget so it will have the organizational capacity to reevaluate honestly and on a yield basis the programs and agencies now operating." My bill gives the Office of Management and Budget, the General Accounting Office and the Congressional Budget Office the experience they need to develop the capability for comprehensive performance audits.

Some people believe that the scheduling of a sunset, that is, the expiration of the mandate of an agency to exist, is too peculiar or drastic a way to eliminate waste in government. Such people may reconsider their view of sunset legislation if they but survey the past performance of Congress. They will see that Congress needs the sort of powerful incentive provided by sunset legislation if it is to undertake a serious, full-scale review of a Federal agency.

Let me explain how the proposed legislation works. Under the sunset concept embodied in it a Federal agency would face a fixed termination date. Congressional review of the agency's performance, undertaken in the light of the purposes for which the agency was established, would be mandatory. Not less than 15 months prior to the termination date the Office of Management and Budget, the General Accounting Office and the Congressional Budget Office would prepare assessments of the agency to be reviewed and would forward the assessments to the appropriate committees of Congress. Not less than 1 year prior to the termination date the appropriate committees of Congress would hold public hearings on the assessments. At the hearings the agency's director would be expected to defend his or her agency and make a case for its continued existence. Other interested individuals or groups would be invited to make their recommendations.

With all the evidence in hand, the committees of Congress could recommend that the agency be continued unchanged or with modifications for 6 years, after which period the review process would be repeated. However, the committees of Congress could recommend that the agency be terminated. If Congress concurred, then no further legislative action would be necessary: the agency would cease to exist on the termination date.

The Federal Agency Pilot Termination and Review Act has many features that distinguish it from other zero-base or sunset bills. First, it derives from the original sunset concept developed by Common Cause and enacted in Colorado with the support of political liberals and conservatives alike. Second, it provides for a pilot project involving only six Federal agencies: the Civil Aeronautics Board, the Federal Aviation Administration and the Occupational Safety and Health Administration would terminate on October 1, 1980, while the Federal Energy Administration, the Interstate Commerce Commission and the Federal Maritime Commission would terminate on October 1, 1981. Third, it would provide for equitable treatment of civil servants

on the rolls of discontinued agencies. Finally, the Attorney General would assume responsibility for any agency actions pending on the date of termination.

Mr. Speaker, in this year of a new President, a new Congress and a new century of American independence, I hope that we shall see the beginnings of increased efficiency in Government and increased accountability in Government. The Federal Agency Pilot Termination and Review Act could make a major contribution. I appeal for prompt and full consideration of this measure.

DR. SYBIL MOBLEY, SUCCESSFUL PIONEER IN BUSINESS EDUCATION

HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. FUQUA. Mr. Speaker, business is the lifeblood for a strong and healthy economy for our Nation.

There have been many innovative approaches to provide our youth with a good business education, but few as unique and as successful as a warm and dear friend, Dr. Sybil Mobley, founder and dean of the School of Business at Florida A. & M. University at Tallahassee, Fla., in the heart of my second congressional district.

I would like to present to my colleagues in the Congress an article published recently in the Orlando Sentinel-Star which tells of Dr. Mobley's remarkable success. It is an extraordinary story of an extraordinary person.

The article follows:

FLORIDA A. & M. INTERN SYSTEM PLEASES DOCTOR NAMED MOBLEY

(By D. G. Lawrence)

TALLAHASSEE.—There's a success story here in the mold of George Washington Carver.

Dr. Sybil Mobley, founder and dean of predominantly black Florida A & M's School of Business and Industry, has attracted national attention.

Carver had to beg and borrow to make Tuskegee the center for peanut and sweet potato research, in the process revitalizing the Deep South's dying agriculture.

A half century later, Dr. Mobley has achieved national acclaim for her school. But with a difference. National business leaders have been uncommonly generous with financial support.

In the past year, they've poured $500,000 into its operation.

"And I'll get another $500,000 before the end of this year," said a super-confident Dr. Mobley.

She took over the school's moribund business department in 1971 and three years later persuaded the regents to make it a full-fledged school.

Only a handful of whites are among the school's 1,100 students.

"We have not solicited white students because we feared they would enroll for some social reason, not for the education we provided. But our school is so good that soon we'll have more white students than we can handle, motivated only by a desire to participate in the best business education offered."

"The dozen whites we have now are all superstars."

All her pupils rank high scholastically.—A number have scored as high as 489 out of 495 on the 12th-grade placement tests.

"We not only have a rigorous, demanding program in everything that is standard in a business education, but we go the other mile—we add the extra things that the business world tells us not even the most prestigious universities supply."

No other school, she said, offers three internships to students during their four years in college.

"It's because of our broad business support that we can do it."

Business graduates each get from 15 to 18 job offers, and they are the most sought-after students in the country, she boasts.

She concedes some interest is spurred by industry and business fulfilling affirmative action by hiring blacks for management positions.

"In fact, Price, Waterhouse came here, they told me, because it is a black school. But they stayed with us because it is a good school."

Not too long ago, Price, Waterhouse, a national accounting firm, held a luncheon at New York's Rockefeller Center Rainbow Room so Dr. Mobley could tell the university's story to area business leaders.

The school's major contributors include the Alfred P. Sloan Foundation, $100,000; Price, Waterhouse, Ernst and Ernst, and Haskins and Sells, all national accounting firms, and General Electric, which each gave $75,000 and $60,000 from International Business Machines.

"Dr. Mobley has a very ambitious program," William Gifford, of Price, Waterhouse, said "She stands out among educators and the FA&MU program is one that deserves endorsement."

A spokesman for Ernst and Ernst agreed. "We were impressed with the fact they are relating their program to today's business world."

What impressed him was that most graduates have completed internships in three different aspects of their majors, often in three different parts of the country. Dr. Mobley has convinced a number of private concerns and government agencies to employ students for a quarter and pay them from $650 to $1,050 monthly to work in their major field.

Elliott Hobbs, a junior from Tallahassee, has just completed an internship with Chemical Bank of New York in Management information systems.

"It gave me a feel for business," she told Dr. Mobley.

She's a story in herself.

After graduating from Bristol College, Dallas, Texas (she majored in sociology) she came to Tallahassee, the only job she could get was as a clerk-typist at Florida A&M. That was in 1945. Fourteen years later she went back to school fulltime, earned her masters in business management from the University of Illinois, and then her doctorate at the prestigious Wharton School of the University of Pennsylvania. With her certified public accountant's license, she worked for Union Carbide, Price, Waterhouse, Chase-Manhattan Bank, the Internal Revenue Service, before coming back to Florida A&M.

She revitalized the school's curriculum so that a graduate is ready for every aspect of business leadership.

She calls it a leadership program, combining teaching of business principles with instruction in the social skills, memory and articulation, an awareness of social and political issues. Perhaps most important, she feels, is the internship program: Students getting actual business experience and being paid for it.

AMERICANS WANT CIVIL DEFENSE BOOST

HON. BILL CHAPPELL, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. CHAPPELL. Mr. Speaker, in recent months there have been several reports which indicate that the Soviet Union is continuing, on a steady basis, a large-scale civil defense program designed to protect the Soviet people and Soviet industry in the event of a nuclear attack. This has been occurring at a time when the American civil defense program has seen a period of rapid decline.

The results of a recently concluded Gallup Poll indicate that a sizable number of Americans are concerned with this issue and are in favor of an increased emphasis on civil preparedness and civil defense.

In light of recent Soviet actions with regard to civil defense I believe it would be appropriate to begin public discussion of this issue with an eye toward increasing our capability in this vital area.

Toward this end I am inserting in the RECORD the article detailing the results of this poll by George Gallup which appeared in the Orlando Sentinel Star on January 23, 1977.

The article follows:

AMERICANS WANT CIVIL DEFENSE

PRINCETON, N.J.—The American people reveal a glaring lack of awareness of the civil defense system in their communities, but at the same time vote in favor of stepped-up efforts to protect the populace.

Some civil defense experts believe it is high time the nation debate the so-called "survival gap" between the U.S. and the Soviet Union. Concerned over indications that the Soviet Union is conducting a massive program to protect its people and industry in the event of a nuclear attack, these experts believe the U.S. has no alternative but to undertake an all-out civil defense program of its own. It is argued that the U.S. must do so to preserve the "balance of terror" which is the heart of the mutual deterrance doctrine.

Experts believe that the Russians have been building underground facilities since 1952 in an attempt to provide protection for the entire population. It is pointed out that every industrial worker in Russia is required to take a 20-hour course in civil defense procedures. The Russian outlay for civil defense is believed to be several times the $80 million a year budget for the existing U.S. civil defense effort.

The Gallup Poll recently conducted a nationwide survey to learn what Americans know about the present civil defense program in the U.S., their state of preparedness in the case of attack and their views on ways to protect the populace. The findings show the following:

Nearly half (45 per cent) of all persons interviewed said they did not know whether or not a Civil Defense organization exists in their communities. The figure is even higher among persons living in the nation's largest cities.

Three in four (74 percent) say they do not know where the nearest public shelter, if any, is located. Again the figure is higher among inhabitants of large cities.

Although Americans reveal a lack of awareness regarding our civil defense system, considerable support is found for greater protection of the populace. More than four in

10 (44 per cent) think the U.S. should do more in this respect than we are now doing. Among the "aware groups"—those who know whether or not there is a Civil Defense organization in their communities or know where the nearest shelter is—support, for greater protection is even higher. The proportion is also higher among those who believe their communities are a likely target for nuclear attack.

Nearly four in 10 (37 per cent) would favor having every new house built in the United States required to have a bomb shelter, with the federal government paying most of the costs. Again, the proportion in favor is higher among the "aware" groups and those who believe their community is a likely target for nuclear attack.

TRIBUTE TO JAMES WESLEY BRYAN

HON. NORMAN D. DICKS

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. DICKS. Mr. Speaker, as a new Member of the House of Representatives, from Washington, I would like to take a moment to pay tribute to one of my predecessors, James Wesley Bryan, who was elected to this body 64 years ago. He was the grandfather of the present Kitsap County Superior Court judge, Robert J. Bryan.

James Wesley Bryan was elected to the U.S. House of Representatives as a Congressman-at-large from Washington State in 1913 on the Bull Moose—Progressive Party—ticket.

Bryan was born March 11, 1874, in Lake Charles, La., where he lived throughout his childhood. In his midteen years he attended Baylor University in Waco, Tex., graduating in 1895. A year of saving and borrowing permitted him to realize a dream of attending and graduating from Yale University Law School in 1897.

He practiced law for a few years in Louisiana, married Lorene Kearse, who blessed him with three children.

In 1904, Bryan moved his family to Bremerton, Wash., in the Pacific Northwest. He practiced law for a few years before he stepped into the political arena. He served 2 years in the Washington State Senate, then won his seat in Congress.

As a friend and supporter of President Theodore Roosevelt, this distinguished Congressman from Washington worked to the creation of legislation, much of which is part of our way of life today.

Among those accomplishments, are: the Merchant Marine; public transportation; income tax; 8-hour work day; minimum wage and child labor laws; public ownership of gas, water, and light; Government support for and development of Alaska; expansion of Puget Sound Naval Yard and protection and rights of its civilian employees; and national forest preserves and support of Gifford Pinchot's forest programs.

In a 1914 debate on the floor of the House of Representatives, Congressman Bryan urged his colleagues to extend the Nation's naval fleet to the Pacific coast:

> The people (of America) expect our Navy to retain its rank and place among the Navies of the world. It seems to me, however, that in the distribution of the fleet of this country the department has not given that consideration to the Pacific coast that ought to be given. All our battleships are kept on the Atlantic coast—As we consider the commercial operations and industrial enterprises of the future, we are bound to recognize that the great bulk of all of that progress and activity is going to be in the Pacific Ocean.—That is where we are going to be called upon to fight the real Naval battles.

That statement was made in 1914, and a very prophetic statement, indeed.

Congressranm Byran returned to his home in Bremerton, where he continued in politics after his term in the Congress. He was Bremerton city attorney and was county prosecuting attorney during prohibition.

Former Congressman Bryan died in Bremerton in 1956, after a most distinguished career in local, State, and national politics.

TELECOMMUNICATIONS SERVICES

HON. GLADYS NOON SPELLMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mrs. SPELLMAN. Mr. Speaker, a need exists for further committee hearings on various telecommunications bills now pending before Congress. This is due to the vast differences in opinion on the effects the proposed legislation would have on the communications industry as a whole and the A.T. & T. system in particular. Most importantly the economic and service efficiency impact of the bills on private and business users of the telecommunications services throughout the United States is as yet undetermined. That we have the best telephone service in the world today is undisputed. How to meet the needs of the future is a hotly contested issue.

The House Subcommittee on Communications held preliminary hearings in October 1976, inquiring into the controversial subject of competition in the telephone industry and the effects the proposed bills—including the A.T. & T.-sponsored Consumer Communications Reform Act, H.R. 12323—would have on this significant aspect. The rapidly expanding importance and ever increasing role which data processing and the interconnect industry play in telecommunications were also highlighted by the hearings.

The following points of debate and of issues raised which have come to my attention will illustrate a few of the conflicting views which must be aired and considered prior to the passage or rejection of major legislation directly affecting every user of the Nation's telecommunications services. With 94 percent of all American households possessing telephones and virtually all businesses relying on telecommunications as a lifeline to their existence, the essential question of whether the time is right for a congressional restatement of telecommunications policy cannot be answered until hearings enable the delineation of the many differing opinions.

A.T. & T., the largest proponent of the legislation, argues that the very nature of the phone industry and the Communications Act of 1934—the basic statement of America's national telecommunications policy—necessitates a natural monopoly of telecommunications. Backers of the legislation argue that increasing competition in the industry could force residential telephone rates up as much as 70 percent within the next few years.

Opponents to the proposed bills, the Federal Communications Commission, and other Government agencies claim there is no evidence that competition to date, or in the immediate future will force residential rates upward.

The 1968 Carterfone decision by the FCC allowed the "interconnection" industry to develop. Customers can now buy a variety of new terminal equipment and interconnect it to A.T. & T.'s lines and instruments. Many people are of the opinion that this limited competition has not adversely affected rates the typical consumer must pay for the telephone use and has helped businesses enormously by providing less expensive and more technologically advanced communications equipment that can be bought rather than leased. Bell contends such services which provide non-Bell equipment threaten the quality of the Bell system by producing technical problems which impair the quality of services, necessitate greater expenditures for maintenance, and ultimately will result in increased costs to the consumer.

Opponents to the bill state that no evidence of problems due to interconnect items exist and that the legislation is a tactic used by A.T. & T. to circumvent the FCC and recent court cases which allow competition in limited fields of the telecommunications industry.

The Communications Act of 1934 called for the development of an efficient, high-quality nationwide communications service available to all the people of the United States at reasonable costs. Was the intent of the Communications Act of 1934 that the Nation should be served by a single integrated telecommunications system? Those in favor of this legislation suggest that it was, and are seeking to "reestablish" that intent by passage of the bill. Opponents claim passage will have the effect or putting the newly founded and expanding interconnect and data processing telecommunications industries out of business, nullify the recent policies of the FCC, and insure a total monopoly of telecommunications in the United States by A.T. & T., a corporation which already controls approximately 96 percent of the telecommunications services in the Nation.

A.T. & T. claims the bill will not destroy the new interconnect data processing and satellite communications industry, but only stop the competitors from supplying the same services which A.T. & T. provides to its customers. Opponents to this view argue that limited competition already in existence has had the advantage of committing A.T. & T. to provide more diverse and more tech-

nologically advanced equipment to its customers.

Some legislators are discussing the possibility of rewriting the 1934 Communications Act in its entirety to keep the Nation's policies abreast of the technological leaps and bounds this country is witnessing in the communications field; a field which grows in importance yearly.

The New York Times Sunday magazine of November 28, 1976, in an article on the proposed legislation, quoted a member of the House Communications Subcommittee, as follows:

After two days of hearings we know we have a good system and nobody wants to destroy it. After that nobody agrees on anything.

Mr. Speaker, we can, at least, agree that more hearings must be scheduled, and for this reason I have introduced House Resolution 136. I urge my colleagues to familiarize themselves with the many complex aspects of this matter and to support additional hearings on the telecommunications policy of this Nation.

CAPITAL PUNISHMENT

HON. CHARLES E. GRASSLEY

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. GRASSLEY. Mr. Speaker, the news media has been flooded in recent months with stories about Gary Gilmore, who was convicted last summer of murdering two Utah residents and subsequently sentenced to die. For months, so-called citizens' groups tried to save Gilmore's life. Can you imagine that? One lawyer went so far as to argue that putting Gilmore to death would be cruel to other prisoners on death row.

The press made Gilmore something of a national hero. We almost forgot that he was convicted for the cold-blooded slaying of two innocent men. Finally, despite all the last minute intercessions, Gilmore was shot to death last week by a Utah firing squad.

Whether or not we believe in capital punishment, we can learn a good lesson from the Gary Gilmore case—that in all too many instances, we forget the victims of crime while being overly concerned with the rights of the criminals.

Crime is a problem that affects us all. We pay for it in higher insurance rates, higher taxes to support law enforcement, higher product prices to cover the costs of shoplifting, and vandalism. Sometimes we pay for it with our lives. In the few minutes I am talking to you today, across the United States there will be committed nine major crimes, like murder, robbery, rape, or assault.

What can be done to stem our rising crime rate? First of all we need to guarantee that people who commit crimes are punished. Mandatory prison sentences for specific crimes, with a minimum amount of time which must be served would provide that guarantee. Law-enforcement officials agree that the best deterrent to crime is the promise of swift and sure punishment. After all, imprisonment is designed not just for rehabilitation, but also for punishment.

We especialy need mandatory minimum sentences for persons committing crimes with guns, and for those who commit exceptionaly serious crimes and, of course, for repeat offenders. For the most serious crimes, we should consider capital punishment.

National columnist Patrick Buchanan once said, and I quote:

To suggest that the death penalty is simply legalized murder is as silly as suggesting that arrest and imprisonment are nothing more than legalized kidnapping and legalized slavery. Use of the death penalty in capital crimes, the ultimate punishment from which there is no appeal, is the mark of a society which holds dear the life of its citizens. It is the society which holds life cheap that imposes weak penalties for the taking of a life.

Seventy-four percent of the offenders released from prison in 1972 were rearrested within 4 years. Seventy-one percent of those released on parole, and over half of those out on probation committed crimes again resulting in their arrest. Therefore, it seems we need to examine our system of granting parole and probation and then make those privileges more difficult to obtain.

We also need to make it harder for criminals awaiting trial to be released. Frequently they commit further crimes before being brought to judgment on their first offense.

Even when criminals are tried, they may be encouraged to plead guilty to lesser charges. The American Bar Association has recommended phasing out plea bargaining. We should also reconsider the use of suspended sentences and concurrent sentences.

Finally, we must take a harder stand on juvenile crime, for that is where the real increase in crime is occurring. In 1975, juveniles accounted for almost half of all serious crimes in this country. Let us treat juveniles who commit serious crimes like adults.

Our lenient policies toward criminals in recent years have proven ineffective in reducing crime. In fact, the result has been just the opposite. Let us see what a get-tough attitude toward the criminal at the local, State, and national level—a real return to law and order—can do.

Perhaps then we will find that Gary Gilmore did not die in vain.

PERSONAL EXPLANATION

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. LEHMAN. Mr. Speaker, I was unavoidably detained in my office earlier today during the procedural vote to approve the Journal of yesterday's proceedings in the House.

I was meeting with officers of the U.S. Army Corps of Engineers concerning beach erosion and other environmental programs of great importance to my constituents.

Had I been present for the vote, I would have voted "aye."

THE PRESIDENTIAL PAY RECOMMENDATIONS OF JANUARY 17, 1977

HON. HAROLD L. VOLKMER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. VOLKMER. Mr. Speaker, perhaps I am being presumptuous as a freshman to come before you today to urge the members of the Post Office and Civil Service Committee to report out a resolution disapproving the pay increase for Members of Congress, the judiciary, and certain executive branch personnel.

The public is entitled to have a recorded vote on this issue. This Congress has made a commendable beginning in openness in Government. To prevent a vote on this proposal would be a backward step from above board, open Government and would confirm in many of the minds of the public the old image of Congress and would lessen the confidence of the public in Congress. Today, that confidence is needed more than ever.

I, for one, cannot say that I cannot use the money. I do not have much outside income and the high cost of living in Washington, where I have brought my family to live, along with the normal deductions for taxes, retirement, and insurance do not leave me with a great deal of spending money under the present pay raise.

However, I believe that we are at a time where there is a chance that we could hold down inflation if we could hold down the pressures for increased demands for higher prices and higher wages. As Members of Congress, we cannot ask others to do what we are not willing to do. We must be leaders and not followers, and we must lead both business and labor through the next 2 years to hold the line on inflationary increases.

As I have said before, I could use the money. I know, however, that there are many people in this country who are worse off than I am and inflation is dealing a severe blow to them at this time. Those persons on a fixed income, including private retirement, social security, railroad retirement, and veterans benefits are more in need of additional funds than I. Also, those people who are in a low-income group, working for a minimum wage or those working part time or drawing unemployment compensation are more in need of the money than I. If, because Congress permits the pay raise to go through, inflationary pressures are brought about to increase wages among all the other Federal employees and among private employers for their employees, these same retired and low-income people will be worse off than they are now.

Someone has to take the first step, and I believe it should be Congress, as the leader of the people, who takes the first step to say no. We will hold the line, we will make sacrifices that we feel are necessary in order to get the economy back on its feet.

As far as the judiciary is concerned, I am sure that very few Federal judges will retire, because they did not get the increased pay. Those who do retire will have well-qualified replacements in a very short time. Any member of the judiciary, Members of Congress, or the executive branch can be replaced with qualified people.

I do plan, in the very near future, to make a full financial disclosure of all my assest and liabilities. If there is any doubt that I could use the increase in pay, it will become readily apparent upon examination of the disclosure that I am not speaking as a person of private means or wealth.

The Members of Congress have a commitment. That commitment is not to other Members of Congress, your friends, and colleagues. That commitment is to the people of this country.

We must have a vote on this resolution and when we do I will vote against the increase in pay.

STAFF ALLOWANCES FOR EX-PRESIDENTS

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. ANDERSON of Illinois. Mr. Speaker, I am today introducing a companion bill to S. 646 introduced in the other body by the senior Senator from Illinois (Mr. PERCY) on February 4, 1977. This legislation would remove the present $96,000 statutory ceiling on staff allowances for ex-Presidents, beginning with former President Ford. It would also fix the rates of compensation for particular staff members. The purpose of this amendment to the Former Presidents Act is to permit adjustments in the staff allowances, according to need, through the appropriations process.

Mr. Speaker, the request for fiscal 1978 for former President Ford is $146,000 in staff allowances. The GAO has noted that the present $96,000 per annum ceiling represents a drastic reduction in force from the staff available to a President during the 6-month period following his departure from office. An outgoing President can now receive up to $1 million during this period. And yet, according to the 1975 GAO report on Federal assistance for Presidential transitions:

> The workload of a former President did not decline as rapidly after the first six months as the much-reduced staff level in the Former Presidents Act requires.

I think the Congress can responsibly adjust these allowances to more realistically reflect actual need through the annual appropriations process. Instead of an arbitrary ceiling, we would be making our decisions on the basis of the actual workload of a former President's staff.

WHY CONGRESS MUST VOTE ON ITS PAY

HON. LARRY PRESSLER

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. PRESSLER. Mr. Speaker, I testified yesterday before the House Post Office and Civil Service Committee's Ad Hoc Subcommittee on Presidential Pay Recommendations. I left the hearing room—after waiting 3 hours to testify—believing that my colleagues are unwilling to report one of the resolutions pending before it regarding the recommendations of the President with respect to congressional pay.

I have no quarrel with those who wish to accept the pay increase, but I do want those who favor or oppose this 28.9-percent increase to go on record as having voted "yes" or "no" on whether or not to accept this raise. Many people in my district in South Dakota ask me how I, or other Members of Congress, vote on pay raises. There is no way that I can direct them to look in the CONGRESSIONAL RECORD to find this information, because we do not vote to approve a pay raise.

At the subcommittee hearings yesterday, there was a discussion of whether this issue of pay raises for Congress is insignificant when compared to welfare reform, jobs bills, and reducing unemployment. It is not an insignificant issue, because our constituents have a constitutional right to demand—and expect—accountability from their elected officials. This responsibility to our constituents demands that we vote—yes or no—on the issue of congressional pay raises. This vote for the sake of accountability is just as important on this issue as it is for any other measure considered by Congress.

My constituents have indicated their support for a vote on congressional pay raises, and I have had calls and letters from Texas, California, New York, Maryland, Virginia, and other States supporting my efforts to get this issue on the floor for a vote. Many of the letters I have received from around the country object to the pay raise itself, but most of these letters also contain thoughts like this one, which I received from a woman in Kentucky:

> Isn't there a way to force Congress to record their votes individually? I want to know how my Congressmen vote.

What is our reply to those who ask this question? Many of us are trying to get this issue onto the House floor for a vote. We cannot be too confident that Congress will vote for its pay, however, because ever since the 1967 law which allows the pay increases to go forward automatically, 83 resolutions of disapproval of pay have been introduced in the House and no action has been taken to get them to the floor.

Those of us who wish to go on the record as having supported or opposed this pay increase should be given this opportunity. We have a constitutional responsibility to hold ourselves accountable to those who pay our salaries—the citizens of our country.

Mr. Speaker, to make clear my stand on this issue, I wish to insert the letter from the Washington Star, Tuesday, February 8, 1977:

> AUTOMATIC RAISES FOR CONGRESS?
>
> An Associated Press story in The Star on Jan. 21 accurately stated that I have a lawsuit before the Supreme Court, challenging the Congressional pay raise procedures. However, it inaccurately stated that I think Congressmen currently are overpaid.
>
> The purpose of my suit has nothing to do with the pay level. Rather, I want to have a vote on Congressional pay. The current automatic pay raise laws allow a Congressional pay raise to go forward automatically unless one house votes it down within 30 days after its proposal. Thus, the 1968 and 1975 pay raises went forward automatically, and the 1977 pay raise probably will go forward automatically—that is, without any roll-call vote.
>
> The Constitution requires a vote on Congressional pay. It does not specifically require a vote on civil service, military or judicial pay, but it does on the pay of Congressmen. Indeed, at the Constitutional Convention, James Madison settled the argument over having individual states pay members of Congress or having the Federal Treasury pay them by emphatically stating that there would always be a vote on Congressional pay so members would be individually responsible. As Farrand's Records of the Federal Convention of 1787 lucidly reveal, the founders intended that Congress would always vote on its pay.
>
> As a member of Congres, I want to fulfill my Constitutional responsibility and vote "yes" or "no" on the upcomnig 28 percent pay raise proposal. Also, in October 1977, another "automatic" pay raise for members of Congress will come under the annual cost-of-living adjustment. I want to vote on that raise, too.
>
> LARRY PRESSLER,
> *Member of Congress.*
>
> WASHINGTON, D.C.

KOREAN INVOLVEMENT NEEDS INVESTIGATION

HON. JERRY M. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. PATTERSON of California. Mr. Speaker, I want to express my support for House Resolution 235, authorizing the Committee on Standards and Official Conduct to investigate the improper influence of Members of Congress by representatives of the government of the Republic of Korea.

I am not making preliminary judgments regarding the guilt or innocence of any person and would not advocate that anyone else do so. I do believe, however, that the allegations that have been made are of such a serious nature that we in the Congress must take immediate action to ascertain the true facts, and if evidence warrants, discipline and punish those involved.

If we fail to act now, in an expeditious manner, we will raise grave doubts in the

public mind over the integrity of this Institution. At this moment we are in the process of writing a most stringent code of ethics. We must not fail to act on this matter which involves possible violations of the law. How can the House of Representatives which so efficiently, fairly, and judiciously investigated violations perpetrated by those involved in the Watergate scandal not have at least equal outrage over allegations of illegal activities involving Members of the House.

I am aware that the Justice Department and the U.S. Attorney's Office are currently conducting their own investigations of the allegations that have been made. My intention in supporting House Resolution 235 is not to deter or divert efforts away from that ongoing investigation. I support that investigation, but I also firmly believe that we in the House of Representatives have a responsibility, in fact an obligation, to enforce our own code of ethics and to demand that the Members of this body obey the law.

The charges involving bribery and influence peddling reach at the very foundations of representative government. We each have been elected and entrusted by our constituents with the duty to represent their concerns and interests. Collectively we must assure that this trust is not abused by unethical or illegal activities by any Member who takes the oath of office.

EPA ACTION IN HALTING AUTOMOBILE PRODUCTION IS PROBABLY UNCONSTITUTIONAL

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. SYMMS. Mr. Speaker, this morning the Washington Post carried a front page story announcing that the Environmental Protection Agency has ordered an immediate halt to the production of Ford Granadas and Mercury Monarchs, both manufactured by the Ford Motor Co. As I understand the report, about one-third of the entire production line of these cars will be shut down pending modification to their carburetors.

What is disturbing to me is that the laws under which EPA is taking this action might be unconstitutional. It seems that there may be a seventh amendment violation in that the EPA's action amounts to civil fine or penalty without due process. If, in fact, Ford Motor Co. is violating some law, then let the case be handled by the Justice Department and brought before a court of law. Unelected Government bureaucracies should not have the power to step in and shut down an assembly line of a private manufacturing concern.

On the light side, Mr. Speaker, I am sure that EPA's action against Ford Motor Co. had nothing to do with the fact that Henry Ford II recently resigned from the board of the Ford Foundation, even though the Ford Foundation has been one of the largest financial backers of environmental extremists groups.

FFA—AGRICULTURE'S NEW GENERATION

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. NATCHER. Mr. Speaker, the Future Farmers of America will be celebrating their National Week February 19 to 26 and it is once again a real pleasure for me to salute this unique organization.

FFA is open to any student who is studying vocational agriculture and has grown to a membership of over one-half million young men and women.

The theme for 1977 National FFA Week, "FFA—Agriculture's New Generation," is certainly fitting, for through this outstanding organization our youth prepare themselves to enter an exciting new world of agriculture. They will study the many facets of agriculture such as global expansion, technical advancement, economic strategy, environmental conditions, political confrontation, and consumer education. Through their involvement in these many areas the members of FFA will certainly develop the necessary skills and understanding to successfully meet and deal with the challenges that lie ahead of them in their chosen fields.

Perhaps one of the most challenging and difficult decisions facing the young men and women in FFA, as well as all of our youth today, is the important step of choosing a career. The Future Farmers of America is, no doubt, of great assistance to its members as it offers the opportunity to explore the many areas of agriculture through course work and real life experience.

The FFA principle of learning by doing not only provides an unmatched agricultural education but encourages self-development and responsible leadership, citizenship, and cooperation.

As an organization, the Future Farmers of America have consistently demonstrated their dedication to the production of food and fiber to meet the needs of our Nation and the world. There can be no finer testimony to the success of this organization than the many outstanding agricultural leaders of today.

In Kentucky, as well as many other States, FFA alumni chapters have been organized to support those who will be the next to lead. I take special pride in the many worthy achievements of the Future Farmers in Kentucky and am pleased to note that their membership has risen to a record number of 15,450 individuals.

Mr. Speaker, I would like to congratulate the Future Farmers of America for they are truly "Agriculture's New Generation" and I offer my best wishes for continued success in all of their future endeavors.

PLAIN TALK ON ENERGY, ENVIRONMENT, AND ECONOMICS

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. BROWN of California. Mr. Speaker, the need to synthesize energy, environmental, and economic policy is known to us all. However, few of us have the ability to do this, and we are skeptical of those who claim to possess this ability. The subject is simply too complex and confused to lend itself to easy analysis. In spite of this difficulty, we have to attempt the synthesis, and any help we can get in doing this is welcome.

One of the better writers in this field is Dr. Barry Commoner, who is probably known to every Member of this body. In a recent visit to Los Angeles, Dr. Commoner addressed the Los Angeles County Federation of Labor—AFL–CIO, and also wrote a short article for their publication, the Los Angeles Citizen. Because these two items are short, well written, and address the issues we are grappling with, I would like to share them with my colleagues. I believe this material is a real contribution to the understanding of the problems before us.

The articles follow:

[From The Los Angeles AFL–CIO Citizen, Jan. 7, 1977]

NEW ENERGY POLICY—KEY TO ENDING ECONOMIC WOES

(By Barry Commoner)

No one needs to be told that our cities are in crisis. Each year the quality of urban life becomes worse; the problems multiply; the costs escalate; bankruptcy threatens.

Despite their complexity, nearly all of the cities' chaotic troubles stem from only two, but enormously difficult, economic ones—unemployment and inflation. Lack of work generates most of the human misery that city agencies confront, and the rising cost of living limits what can be done to alleviate it.

But blaming the urban crisis on unemployment and inflation only seem to be the old maneuver of shifting the cities' problems to the federal government, where such economics issues are ordinarily dealt with. It leaves the cities in the familiar and frustrating position of pleading for federal help.

I should like to propose a new idea: that the key to the unemployment and inflation problems is a new energy policy, and that the cities can take the lead in creating it. While it remains true that unemployment and inflation must be curbed in order to solve the cities' problems at their root, this new approach would give the cities a way to tackle these problems on their own initiative.

To see the crucial links that connect energy, unemployment, inflation, and the fate of the cities, we need to know certain basic facts:

Nearly all (96%) of U.S. energy comes from petroleum, natural gas, coal, and uranium. These are nonrenewable resources; they get used up.

Although the supplies of oil, gas and uranium are indeed exhaustible, we are not likely actually to exhaust them. The real trouble with a nonrenewable energy supply is economic. As oil, for example, becomes scarcer, more energy, more capital and other resources need to be invested in producing it, forcing up the price of oil, adding to the rising cost of production, again driving the price of oil upward. So long as we rely on

nonrenewable sources of energy we will run out of our ability to afford it long before we run out of the energy itself.

Every source of energy is useful only after it is transformed into some appropriate form. The cost of the necessary energy-transforming machinery depends on its technological maturity. A nuclear power plant is a new and very complex technology which is still in the process of being redesigned. Because nuclear power plants have had to meet safety and environmental protection requirements that were not anticipated in the original design, their costs have increased by 130% in the last five years, and since waste and reprocessing problems remain unsolved the costs will continue to rise. That explains why nuclear power is the most expensive energy source.

Rising energy prices can only lead to economic disaster. According to conventional wisdom, energy has been "under-priced" and, as the price rises, the "free market" will see to it that less is used. But this conventional view overlooks a basic, overriding fact about energy: Unlike other scarce, high-priced goods (elephant tusks, for example) where it is needed there is no substitute for energy. As a result, as diminishing returns force the price of energy to rise, manufacturers let the increase "pass through" to the price of the goods they produce. Since energy is used to produce all goods and services, this means a general increase in prices. An energy policy that depends on nonrenewable resources and immature technologies means runaway inflation.

Inflation that is driven by the rising price of energy is certain to place the heaviest burden on the poor, the central city dwellers. The necessities of life, which make up most of a low-income budget, have become particularly vulnerable to the rising price of energy. To make matters worse, the use of energy has become grossly inefficient. We pay more for energy and get less out of it.

Because of these trends, the U.S. economy is now in an absolutely unprecedented situation: For the first time in history the relative price of energy is rising at a rapid and continuing rate. In the last 2½ years the price of energy, which in the previous 25 years has been essentially constant relative to general wholesale prices, jumped from an index value of 72 to 106. The rapidly rising price of energy drives all prices upward, creates uncertainties that delay new industrial investments, and forces economic dislocations that cost jobs. It is a prescription for inflation and unemployment.

Here, then, is the real meaning of the energy crisis. It is not the distant prospect of some day running out of energy. Rather, it is the immediate prospect of economic catastrophe.

Although it is convenient to blame the rising price of energy on the OPEC countries, in truth it is the inevitable result of U.S. energy policy.

Every step taken by the Ford Administration in the name of "energy policy" has been a move toward ever higher energy prices: It has attempted to stimulate domestic oil and gas production by means of business "incentives"; to speed the construction of nuclear power plants; to develop shale oil and synthetic fuels. For reasons already given, each of these actions drives the price of energy upward.

This is the energy policy that the new Administration will inherit. It is a policy that is rapidly carrying the country toward economic disaster. Until that policy is changed, there will be no escape from inflation, unemployment and the downward trend of the economy.

Cities are particularly vulnerable to the rising price of energy. If it continues to soar, people in the spread-out municipal areas will be forced to pay ever-increasing costs just to survive—to go to and from work, to go shopping, to visit the doctor. The rising cost of employes' travel between the suburbs and city businesses will give industry yet another excuse to flee the city.

What can be done? Is the energy crisis just another of the cities' insoluble problems?

Far from it. Once it is seen in its true, economic form, the basic strategy of solving the energy crisis, and the powerful initiative that the cities can take to accomplish it, become clear. The basic strategy is to take advantage of the rapid, unprecedented rise in the price of fuel, which gives a strong economic incentive for investments that cut down the use of fuel. In other words, precisely because our present energy sources have—for good reason—become the leading edge of inflation, an investment that reduces the use of these sources becomes a uniquely effective hedge against inflation.

There are two ways of doing just that, which—unlike offshore oil or nuclear power—can be readily available anywhere in the country: insulation and solar energy.

Here is one example: In the St. Louis area about $2,000 would be needed to insulate a conventional frame house with no present insulation, saving about $83 a year in present utility cost. But $83 will not cover the payment on a $2,000, 20-year loan. However, since the price of energy is bound to go on rising, in about five years the utility savings will in fact make the $2,000 investment worthwhile. The problem is that even with good prospects of an eventual net saving, few householders are likely to be in a position to take on such a debt and incur an immediate, if temporary, increase in their operating costs in order to save money in the future.

Solar energy offers a similar protection against inflation. One of the myths about solar energy is that it will be feasible only in the sunniest parts of the country. But the most and least sunny regions differ only by a factor two. Another myth is that it is too expensive. But one important solar technology—the collector—is already economical in many parts of the country, when properly combined with conventional energy sources.

A recent Washington University study showed that a St. Louis homeowner could cut his hot water bill, right now, by installing a solar collector to meet about 46% of the need, the rest being provided by electricity. Although the collector would cost $660 installed, amortized at 8% bank financing it would still reduce the overall annual total hot water bill by 10%.

Nationwide, 24% of all homes now use electric water heaters, which consume 16% of all residential electricity, second in demand only to refrigeration. By the St. Louis data, these homes could be equipped for about one-half solar water at a total cost of about $10.5 billion.

As a rough estimate, the nation could produce the same amount of hot water by investing $10 billion in solar collectors, or in nuclear power plants. But the solar collectors are likely to be much more reliable and certainly much less risky than the nuclear power plants.

These examples show that insulation and heating can be used to counteract rising utility costs, with future, and in some cases present, savings to the householder—if suitable financing can be arranged.

To illustrate what might be accomplished nationally in this way, here is a final example. It is based on President Ford's proposal to invest $100 billion of public funds to provide private entrepreneurs with capital for energy investments in nuclear power, shale oil and synthetic fuel—all of which would contribute considerably to the rising price of energy. If this money were used instead to provide loans for solar-heat installations (interest-free, but with the recipient required to pay back the annual savings in fuel, reckoned at a fixed, rather than constantly inflating price) after 10 years the following could be accomplished: Most single-family homes and commercial buildings in the United States would be using solar heat for 60% of their space-heating requirements and that part of their heating bill would no longer increase in price; the fuel saved could reduce national oil imports by about 20%; in the tenth year and thereafter; about $6.5 billion would be paid back to the government annually. With insulation loans added, such a program could be even more effective.

Without more detailed analysis these figures must be regarded as approximate. But they are precise enough to show that the rapidly rising price of conventional energy makes it feasible—in some places immediately and in most of the country within the next few years—to use investments in insulation and solar heat as powerful, cost-effective weapons against inflation. But none of this can happen without some kind of government intervention to facilitate the necessary financing. In return the country would receive very considerable advantages:

First, the soaring cost of energy would begin to be stabilized. To the degree to which insulation and solar devices reduce the consumption of oil, natural gas and nuclear power, the consumer will be freed of constantly rising utility bills.

Second, demand for fuels and electricity would be reduced; this would help to cut back the rate of increase in energy prices and inflation generally.

Third, insulation and solar heating are job-creating programs, involving carpenters, plumbers, electricians, glass workers, sheet-metal workers, and the construction industry as a whole. For example, the $100 billion 10-year program cited above could probably create nearly a million jobs, or enough to reduce the unemployment rate by one percentage point. And since the work is tied to housing and commercial building, cities, and suburbs would particularly benefit from the new job opportunities.

Fourth, by reducing fuel consumption, the program would diminish air pollution, again especially in the cities.

To implement such a program, what is needed is an agency which, for the sake of these considerable social advantages, would offer loans at favorable financial terms for insulation and solar heating in homes and commercial buildings. In order to match the highly local, decentralized nature of the necessary work, the agency ought to operate on a local, rather than national scale.

What is called for is not some new federal bureaucracy, but rather, in each city or metropolitan region, a kind of Urban Energy Bank, matched in size to the area that it serves and supplied with funds raised either in the bond market, or provided federally (or both). It seems to me that the appropriate administrative base for such an agency is the city.

Beyond the advantages to the cities themselves, such a program would begin to create a sensible national energy program. Previous proposals for a national energy program have been based on huge, costly, centralized facilities.

But now, with a new administration we could do things differently. President-elect Carter has already noted the importance of energy conservation and solar energy, and called for a critical look at the future of nuclear power. More important, he has called on the American people to rely less on the old, centralized bureaucratic attempts to solve their problems, and more on their own creative energy and initiative. Energy policy is a unique opportunity to make a start in this new direction.

The energy crisis creates both the necessity and the opportunity to strike at the

heart of our most disastrous urban and national problems.

It calls for a new energy program that addresses the economic impact of the crisis—inflation and unemployment—and for a new partnership between the people and their government.

It gives the cities the opportunity to lead the way toward these goals.

It gives us all the challenge to restore hope in the cities', and the nation's, future.

[From the Los Angeles Times, Feb. 6, 1977]

SOLAR ENERGY COULD AVERT CRISIS IN SOUTHERN CALIFORNIA

(By Barry Commoner)

(NOTE.—Barry Commoner, director of the Center for the Biology of Natural Systems at Washington University, St. Louis, is the author of "Science and Survival" and "The Closing Circle." His latest book is "The Poverty of Power: Energy and the Economic Crisis." This article is adapted from a recent speech at an energy conference of the Los Angeles County Federation of Labor (AFL-CIO).)

Even with their thermostats set at 65 degrees to help conserve natural gas for shivering Easterners, people in California have difficulty visualizing the extent of the energy crisis. But energy problems will increasingly affect the economy of the state, particularly in Southern California.

A report prepared recently by TRW, Inc., for the California Energy Resources Conservation and Development Commission paints a grim picture for Southern California.

Industry, most commercial establishments and homes depend heavily on natural gas.

The supply is dwindling, so that by 1980 natural gas will be denied to some industries and curtailed for residential users.

Any feasible substitute for natural gas, chiefly oil, would worsen the already serious air pollution problem in Southern California. The choices open to industrial managers facing the loss of their essential natural gas supply in the next few years therefore depend on whether they can expect relaxation or stringent enforcement of air quality standards.

If air pollution enforcement is relaxed to allow substitution of a more polluting fuel, the industrial manager will find that the cost of that fuel will determine whether his operation is still profitable. If the industry cannot afford to replace natural gas or to modify its operation, the only alternative is to shut down.

If air pollution enforcement is *maintained*, the only alternative is to delay action, presumably in the hope that the standards will eventually be relaxed as the threatened shutdown of the industry approaches.

This is a picture of the strategy that industrial management hopes to use to meet the expected depletion of natural gas supplies. The message of industry is clear: Relax pollution standards, or by 1980 industry in Southern California—and a few years later in the rest of the state—will be forced to go elsewhere.

When you examine all the facts about the energy problem, it becomes clear that we do *not* need to choose between jobs and environmental quality. There is a way to get the needed energy that will protect both the environment and the economy. In fact, a new energy policy that is guided by a proper understanding of efficient energy production and environmental quality is the one sure way to stabilize the economy, to reduce inflation and to increase employment.

The present natural gas supply for Southern California comes by pipeline from fields in Texas and California. It is a limited amount which will eventually "run out." And it is certainly true that substitution of oil for natural gas would worsen pollution; compared to natural gas, oil produces about 15 times more nitrogen oxides, 50 times more particulates, and 1,000 times more sulfur oxides.

With both oil and natural gas, the real problem is the eventual reality of "running out." But what does "running out" of an energy supply really mean? What determines the amount of oil and natural gas that will be produced and how long these supplies will last?

"The U.S. Energy Outlook," published by the National Petroleum Council in 1971, and subsequent Federal Energy Administration studies that were largely based on it, examined the cost of finding and producing the dwindling domestic supplies of oil and natural gas, their selling price, and profitability.

These reports show that if the price of domestic oil were held to $7 per barrel (in 1973 dollars), U.S. companies would be expected to produce about 70 billion barrels between 1975 and 1988. If the price were allowed to reach $11, the companies could afford to invest in more intensive exploration efforts and more costly production techniques and could then produce about 80 billion barrels in that period. Thus, the country could have an additional 10 billion barrels of oil—if we were willing to finance the extra production by paying an additional $390 billion for it. This amounts to $39 per barrel for the extra oil.

All these calculations are based on meeting the companies' need for profit, usually an expected 15% return on assets. When the price is too low to yield this profit, the companies lack the incentive to find and produce larger amounts of oil and natural gas. In other words, we are not so much running out of gas and oil as we are running out of the corporations' willingness to accept a declining profit, or the country's willingness to accept a higher price.

All this means that the industries of Southern California will "run out" of natural gas and face shutdowns when the price is higher than they are willing to pay. It also means that their willingness to substitute oil or some other fuel, rather than shut down, will depend on the cost of the alternative supply.

Switching to oil cannot solve the economic crisis resulting from the declining supply of natural gas—because oil too is a dwindling resource. Thus, the switch to oil would only worsen the environmental situation, without improving the economic problem—the rising price of fuel—which is the real measure of the economic crisis.

Another possible solution appears at first glance to solve the energy problem in Southern California without worsening air pollution—importing liquified natural gas (LNG) from Alaska or Indonesia. Again, we must examine the cost of the alternative to decide its feasibility.

The estimated price of LNG delivered to the Los Angeles area is considerably higher than the expected price of domestic natural gas. Moreover, because of its technological immaturity and the anticipated costs of minimizing the huge dangers involved in handling and using it, LNG will become an *increasingly costly* alternative to domestic natural gas. Like the oil alternative, LNG is not a viable solution.

To see a way out of this dilemma, we must return to the fundamentals of energy production: What we need is energy at a *stable* cost, and to accomplish this, the source must be *renewable* (and therefore not subject to diminishing returns) and the technology *mature* (and therefore not vulnerable to unexpected, increasing costs).

There is, of course, only one renewable energy source available to us—the sun. Can solar energy substitute for the intense use of natural gas in Southern California? Are the available technologies economically competitive and mature?

The answer is yes. Two solar technologies which are economically competitive with the expected price of natural gas in Southern California and which are technologically mature can already take care of most of the natural gas demand in the area.

The first is the production of methane (the essential ingredient of natural gas) from organic wastes. This is a solar technology because the sunlight that falls on California is photosynthetically transformed by plants into various kinds of organic compounds—cellulose and other constituents of wood, the sugars in fruit and other foods, the protein and fat of meat. All of these materials are easily and efficiently converted to methane, most of them by biological processes that have little or no environmental impact.

The advantages of methane production are many. It would help to reestablish ecological balance in California agriculture, and at the same time reduce agricultural costs, since the residual sludge from this process is an excellent, inexpensive nitrogen-rich fertilizer—which could reduce the present high rate of consumption of inorganic nitrogen fertilizer. Since this fertilizer is made from natural gas, the production of methane would help to relieve the demand for natural gas. Similarly, methane generation is an ideal, ecologically sound way to cope with two major urban problems—disposal of garbage and sewage.

The most important factor, however, is that the methane derived from all these materials, as well as sewage and manure, will constitute a *renewable* fuel. It will be available in about the same amounts from year to year.

How large are the potential resources for methane production in California? I estimate from the most recent report by J. A. Alich of the Stanford Research Institute that organic wastes now produced annually in California can yield about 200 billion cubic feet of methane. In 1975 this amount of methane would have supplied the needs met by natural gas for all electric power production in California and all of the major industrial uses of natural gas in the Los Angeles metropolitan areas.

But even if the price of solar methane were stable, might it be so high that it would be uncompetitive with the nonrenewable sources, such as LNG (with all the necessary precautions built in. and paid for) for a long time?

Cost figures worked out by the RAND Corp. for the production of methane from available organic wastes are in the range of $1–2 per 1,000 cubic feet. This compares quite favorably with the expected cost of Alaskan LNG, which RAND predicts to be $1.50-2.25. What about the large capital investment? Methane technologies are simple and mature.

The second method of meeting the coming natural gas crisis in California is the direct use of solar energy for heating now, and for cooling in the not-so-distant future.

One of the unfortunate myths about solar energy is that the necessary technologies are yet to be developed, and are simply too expensive to be practical. But the fact is that solar technology can help significantly and immediately to solve California's natural gas crisis. The simple solar collector, a metal or glass-covered box painted black inside, traps sunlight and converts it to heat, which can then be readily transferred to a moving stream of water or air and used for space heat, or hot water.

A few weeks ago the Energy Resource and Development Administration, which has been no great booster of solar energy, announced the results of a study showing that solar heat is, today, economically competitive with electric heat in a number of cities, including Los Angeles.

What would the widespread use of solar collectors mean for Southern California and the entire state? About 30% of the present uses of natural gas in California are for

space, heat and hot water, 60–70% of which can be handled by ordinary solar collectors. Therefore, substitution of solar heaters would reduce overall demand for natural gas significantly—by about 20% of the present total demand. The main problem to be solved is in financing the initial investment at reasonable interest rates.

Methane production from wastes could meet about 30% of the present natural gas demand, 55% using special fast-growing hardwood crops. Solar collectors for space heat and hot water could meet 20% of the demand. Together, these solar techniques could meet about 75% of the present demand for natural gas. With the addition of fairly simple energy conservation practices, the solar alternative could free California from the threat of economic catastrophe that is inherent in its present dependence on natural gas.

If the serious energy problems of Southern California could be solved by development of solar energy sources, why hasn't this alternative been pursued more vigorously? This is the same question that arises in connection with the absence of a sensible *national* energy policy.

Until now energy policy has been determined by industrial management. Industrial managers are motivated in the choice of product, the design of production technology, or the choice of fuel, by profitability. The present policies, which are characterized by the rising price of energy, have thus far yielded good profits to management. But these policies are short-sighted. While they have been profitable in the short run, they have led to the economically catastrophic escalation of energy prices. They have left industry, and the workers who depend on it, vulnerable to the disruptive effects of uncertainties in the future supply and price of energy.

It is perhaps not very surprising that industry has so badly mismanaged the energy problem. We already know how poorly industry has handled the environment problem—creating products and production methods that ignored the effects on the environment in the workplace and outside of it. In the terminology of the "free market" these are all considered "externalities." Such externalities affect workers, consumers, and society as a whole, but do not enter into the computation of profit, "the bottom line," until the damage is done and penalties mandated by legislation must be paid.

In this sense, the energy crisis is itself an externality—a fault imposed on society by the failure of the famous "invisible hand" of the free market to govern successfully the national production and use of energy.

Should we expect Washington to do the job? The federal government is accustomed to solutions to externalities—whether unemployment, environmental degradation, or energy problems—that only try to soften the worst symptoms—for example, regulations that attempt to "control" workplace hazards, long after the boardroom decisions that created these hazards in the first place have been made and built into the factory. But there is no way to patch up the energy crisis. It will rapidly turn into an economic disaster unless *fundamental* steps are taken.

I am convinced that the opportunity for a solar solution is not only technologically and economically sound; it is also politically realistic. President Carter has already emphasized the importance of solar energy and conservation and has been critical of excessive dependence on nuclear power. He has reminded us that we would do better to rely less on highly centralized, federal attempts to solve our problems and more on our own creative efforts and initiative.

The energy problem is a unique and enormously important opportunity to move in this new direction. And one place to start this new movement is right here in Southern California.

QUALITY OF POSTAL SERVICE IN SOUTHEASTERN WISCONSIN COULD STAND IMPROVEMENT

HON. ROBERT W. KASTEN, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. KASTEN. Mr. Speaker, over the past several years, I have become increasingly concerned about the number of complaints from constituents regarding the quality of mail service provided by the U.S. Postal Service.

Last March, I requested that the General Accounting Office study the quality of mail service in the Ninth Congressional District of Wisconsin. The GAO carried out an intensive, 6-month review of mail service policies and procedures, which included observation of processing operations, discussion of problems with local postal officials, and analysis of responses to my questionnaire on the quality of mail service.

In compiling this information, GAO found that the Postal Service in southeastern Wisconsin promises the people much more than it delivers.

DELIVERY OF FIRST-CLASS MAIL

The GAO report stated that the Postal Service measures quality of service primarily in terms of delivery performance on first-class mail, with emphasis on overnight delivery. Postal standards provide for 1-day—overnight—delivery within local areas, 2-day delivery within a 600-mile radius, and 3-day delivery for all other first-class mail. The Service's goal is to meet these standards 95 percent of the time.

According to the GAO report, Postal Service statistics show that first-class mail in southeastern Wisconsin was delivered overnight 97 percent of the time—exceeding the Service's goal of 95 percent. Although promised 2- and 3-day delivery met or exceed national averages, it did not meet the Service's 95 percent goal. The GAO report noted that inconsistency is a major problem, as some southeastern Wisconsin communities receive much better service than others. It also pointed out that in the area as a whole, 4.8 billion pieces of first-class mail are delivered late every year.

OVERNIGHT SERVICE TO 17 CITIES

The GAO report stated that in October of 1975, the Postal Service implemented, on a test basis, the service improvement program, which eliminated airmail and upgraded first-class mail service commitments. Under this program, Milwaukee mail was to receive overnight service to Chicago and 16 other cities. A map was placed in the Milwaukee Post Office promising 95 percent on-time delivery to these 17 areas.

However, GAO investigators found that during one 4-week period, only 40 percent of the mail to Chicago was delivered overnight.

The GAO concluded that unless improvements are made, "postal patrons may in time conclude that the postal service is advertising service that it cannot deliver, causing dissatisfaction and complaints."

SECOND-, THIRD-, AND FOURTH-CLASS MAIL

The GAO was critical of the Postal Service's performance on second-, third-, and fourth-class mail delivery. The report stated that although,

> The Service has established delivery standards for these classes of mail, it only measures performance for parcel post. We believe that postal patrons can expect inconsistent delivery service for most second-, third-, and fourth-class mail because it has the lowest priority—it is processed as time allows.

PARCEL POST DELIVERY

GAO investigators also rated the delivery of parcel post packages as inconsistent. During a 7-month period last year, promised overnight delivery was achieved only 83 percent of the time within the Milwaukee area.

The GAO report concluded that customers "have complained of parcel damage, and we believe such complaints have merit." Investigators who observed parcel handling in the Milwaukee Post Office reported that they saw "parcels jammed together on conveyor belts, dropped 12 to 15 inches from one conveyor system to another, smashed at the bottom of long chutes by other parcels, and tossed 5 to 10 feet into pouches." They also noted that parcels marked "fragile" were treated the same as other packages. The study found that over the last 18 months an average of 13,299 parcels per month required rewrapping by the Milwaukee Post Office.

SORTING

GAO investigators found that an average of 1.5 percent of the letters sorted by zip code in the main Milwaukee Post Office were missent to their destination within the area studied.

Of the 3,244 letters selected for a survey by GAO, 4.1 percent were incorrectly sorted by zip code. GAO then checked the error rate after 1,391 sorted letters were routinely double checked for accuracy by postal employees, and put in pouches ready for pickup by a mail truck. Two and a half percent of those letters were missent.

QUESTIONNAIRE RESULTS REVIEWED

To determine the views of postal patrons, GAO reviewed the results of a special Postal Service questionnaire that I had sent to 60,000 residents in the Ninth Congressional District. It also reviewed the complaints received by the Milwaukee Post Office during a recent 6-month period. Of the 4,174 consumer complaint cards filed, about 45 percent were complaints about delivery, primarily late delivery. But 37 percent of the complaints concerned the self-service postal units at shopping malls and similar locations.

GAO found that the main causes of mail delivery problems in southeastern Wisconsin were transportation difficulties—either mechanical or weather related—human error in sorting and dispatching mail, and processing equipment breakdown.

IMPROVING MAIL SERVICE

In a letter to the Postmaster General of the United States, I outlined the problems uncovered by the General Accounting Office investigation and urged that mail service in southeastern Wisconsin be improved. I requested that the Postal

Service stop making promises that it could not keep and stop advertising service that it could not deliver.

In his response to my letter, the Postmaster General, Benjamin Bailar, assured me that several efforts were being taken on both the local and national levels to correct the deficiencies cited by GAO investigators.

He explained that comprehensive analyses have been conducted at all of the bulk mail centers to identify local factors which contribute to damage and delay of packages. Plans for corrective action have been developed and implementation is underway.

On a national scale, Bailar said,

A special management project has been established to review and revise a number of policies and procedures which impact on the effectiveness of bulk mail operations.

In response to customer complaints about self-service postal units, the Postmaster General conceded that "some of the equipment is in need of replacement." Bailar said that steps are currently being taken to replace outdated and malfunctioning self-service postal units.

At my request, the service improvement program map was removed from the lobby of the Milwaukee Post Office. James D. Oster, Milwaukee postmaster, advised me that tests were made to the SIP cities, and as a result adjustments were made to the map to reflect the true facts.

Mr. Oster has said that if and when the Postal Service lives up to its promise of 95 percent ontime delivery to the 17 cities involved, the map will once again be amended.

Through the Federal investigation and with the help of Ninth District residents, we have been able to pinpoint some of the problems and we have taken the first steps toward correcting them. We have a long way to go before the people of Wisconsin receive the efficient postal service they want and deserve. But we have made a start.

I will continue to monitor these corrective efforts to insure that action is taken. We have listened to promises. We now expect results.

The Postal Service provides a prime example of one of the greatest problems Americans face today. Our Government has grown large, unwieldy and undependable; it promises the American people solutions and services that it cannot deliver. This practice cannot continue. We need and deserve a government that promises only what it can deliver, and delivers all that it promises.

LIMIT ON CONGRESSIONAL TERMS

HON. BERKLEY BEDELL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. BEDELL. Mr. Speaker, I have today introduced a proposed joint resolution to amend the Constitution of the United States to limit and change the terms of Members of Congress.

A Representative's term would be lengthened from the present 2 years to 4, but this resolution provides that no Member—Senator or Representative—can serve more than three consecutive terms. He would have to sit out a 2-year period following his third term before he would be eligible to run again. However, no Representative would be permitted to run for the Senate unless he resigns as a Representative effective January 3 following the date on which such an election is held.

Additionally, my resolution would divide the House of Representatives into two classes so that fully one half of the House is elected every 2 years.

I feel that a term limitation should be imposed on both Houses of Congress, just as we have on the Executive, which would prevent election to office from becoming a way of life, and contributes significantly to the demise of the seniority system.

The proposal which I have offered would allow continued use of the seniority system but the chain of seniority would be broken and this would permit greater flexibility in congressional leadership.

What the House needs badly is more turnover. It does not need a revolution every 2 years, but it does need a steady flow of new people, people who are fresh from their communities, people who will approach issues and problems with logic and imagination. It is precisely these kind of men and women, swept into office by the impact of Watergate and the economic downturn, who are reforming the House today.

WORLD WAR I PENSION ACT

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. LEHMAN. Mr. Speaker, veterans of World War I deserve an increase in their pensions. This legislation has provided too little to the veterans of World War I. For this reason I have cosponsored the World War I Pension Act, which will provide a $150 monthly pension to veterans of World War I or their spouses.

Unlike a veteran of a later war, the World War I veteran received no GI educational benefits. There was too little effort to aid these veterans in finding employment, nor was there a GI home loan program. Veterans hospitals like those of today were unheard of in the days of World War I veterans. Further, the social security system, which was created in 1935, did not aid most World War I veterans as they were already too old to build up maximum benefits.

Clearly, the veterans of World War I have been neglected. The World War I Pension Act would serve to partially compensate the veterans of World War I who are eligible for the wide range of benefits available to veterans of later wars.

Presently there are 834,000 surviving World War I veterans-94,000 less than at this time last year. The pension increase should get to the deserving World War I veterans now.

AN EXAMPLE TO US ALL

HON. DAVE STOCKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. STOCKMAN. Mr. Speaker, on occasion, one among us who is touched cruelly by the hand of fate rises to meet the challenge in a way that can serve as an example to us all. Tim Messner of Constantine, Mich., is such a person. The ongoing struggle he faces as he tries to regain the use of his limbs after a serious accident is a demonstration of what the human spirit can accomplish. The role of his family in helping him back to health is a demonstration of the continuing vitality and importance of the family to our American way of life. I insert in the RECORD an article, which appeared in the Kalamazoo Gazette, describing Tim's recovery at this point:

[From the Kalamazoo (Mich.) Gazette, Jan. 22, 1977]

CONSTANTINE ATHLETE WINNING HIS TOUGHEST TRIAL

(By Del Newell)

CONSTANTINE.—Tim Messner ranks right up with Constantine High School's finest all-around athletes.

A fierce competitor, he quarterbacked the football team, was the leading scorer as a senior in basketball and also participated in golf and track.

He met many challenges in the athletic arena—and conquered almost all of them.

Today, however, he's facing his biggest challenge. One that can't be overcome by throwing a long touchdown pass or swishing a jump-shot in the final seconds of a basketball game.

Tim, now 25, is battling back from a terrifying snowmobile accident that occurred three years ago, a mishap that threatened his life, left him paralyzed and had neurosurgeons shaking their heads, sadly announcing to his family, "You may never see Tim move any more than he is right now."

Tim at the time experienced no feeling. The snowmobiling accident had fractured some of his vertebrae and left his spinal cord looking like an "S." He was lucky to even be alive, so doctors said.

Tim, at the time of the accident, had been working in a bank in Shipshewana, Ind. Married for two years, his future looked bright. He was being groomed to become a branch manager.

"It will be 36 months, come Feb. 10, since the accident happened," Tim said recently.

On that day Tim and his brother Mike, currently a teacher and coach at Constantine and another of the school's former prep standouts, were snowmobiling on the track at the high school.

Tim went up a steep embankment attempting to depart the run site. While going down the other side he was thrown from the vehicle, sailed through the air and crashed head-on with sickening force into a light tower 30 feet away.

"I remember waking up and my machine was sitting next to me idling. It was strange. But I couldn't move or feel anything.

"Mike came along soon and when I continued to be unable to feel anything he called an ambulance and I was taken to Bronson Hospital in Kalamazoo," said Tim.

There the extent of the damage was discovered. The spinal cord had been severely pinched and vertebrae damaged. He spent 12 hours in surgery to correct the damage, which included having bone scraped from his hip and being used to form a protective splint to reshape his neck.

Hours later, more trouble developed. His neck began swelling. "It swelled up to 27 inches," mentioned Tim. "And that's bad."

Tim lost all feeling. His blood supply from the neck area to the brain was being cut off. He was whisked back into surgery, this time for a 10-hour operation.

For 13 days after that he had no feeling. He was to spend the next 38 days in Bronson Hospital.

Slowly feeling returned in the upper torso.

"But doctors told me that they could have cut me in half with a chain saw and I wouldn't have felt a thing," said Messner of those bleak days.

"Then I was able to move my big toe," says Tim proudly. "But doctors told my family there was maybe a 10 per cent chance that I would some day be able to sit up. That was about it."

But Tim, through the efforts of neurosurgeons such as Naim Koymen and Robert Fabi of Kalamazoo, Constantine's local physican Ray Zimont, and therapist Mike Mullin, was soon to make a miraculous comeback.

"I went to the Southwestern Michigan Rehabilitation Center in Battle Creek and soon they began to have me work with weights. Sixty-three days after entering, I was able to walk out, with crutches, of course."

Today, Tim, showing the same competitive zeal that made him a top-notch athlete as a prep, is continuing to battle back. So much progress has been made, in fact, that doctors have called it a 'miracle.'

"Dr. Koymen sat down and cried for 15 minutes when I walked into his office for the first time," said Tim. "He had never had a patient (in Tim's condition) able to walk again."

Tim today can walk short distances unaided, although he still has to use crutches most of the time. "The next step is using two canes, then one and then walking unaided," mentioned Tim.

"Muscle spasms are my biggest problem right now. I've fallen twice recently and hit my head on our coffee table. I'm getting tired of that."

Tim's not getting tired of the tedious routine of trying to return his body and limbs to a state of near normalcy, however. "My therapist doesn't want to see me anymore. He said I've gone way beyond what he ever expected," said Tim proudly.

"I was in probably the best shape of my life when the accident happened. I had been lifting weights and running. That helped my recovery."

Tim also credits his family with brightening his outlook and helping, both physically and psychologically, during the dark days of recovery and rehabilitation.

"My family visited me and massaged me and helped with my exercises all 101 days that I was hospitalized," said Tim. Eilene, his bride now of five years, was especially a help during the troubled times.

Mike and his wife, Cheryl, Tim's father and mother, Ray and Betty, and sister Melissa, plus the grandparents and many others in the closely-knit family all rallied to his side.

Tim last summer moved into a new home, built by his father, and he's becoming a familiar figure in the community driving a special-equipped golf cart.

"I can drive a car again now. But I still spend a lot of time in a wheelchair. The spasms are the big thing now," reflects Tim. "If they would stop I could be close to normal again very soon.

"Progress is still slow, never rapid," sighs Tim. "But when I look back to the way I was, then I do see the changes.

"I met a man who had a similar type of injury as mine. He was in a wheelchair for over 6½ years. Nine years after he was hurt, however, he's able to walk down a street and no one would know he was ever paralyzed. I'm way ahead of him."

SUPPORT CONTINUES TO GROW FOR MANDATORY SENTENCING BILL

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. ANDERSON of California. Mr. Speaker, on January 19 of this year I reintroduced legislation with 75 cosponsors that would provide for a minimum mandatory prison sentence for anyone convicted of committing a Federal crime with the use of a firearm.

As of today, the total of cosponsors is 100 and building with each passing day. We have recognized the urgency and the need to come to grips with this problem.

Mr. Speaker, I include in this RECORD several letters from county sheriffs, and law enforcement officials from my State of California.

I urge those colleagues who have as yet not cosigned this bill to do so. For us to sit idly while criminals cause law-abiding citizens to fear for their safety is an abdication of our responsibility and trust as elected representatives of the people.

Mr. Speaker, the letters follow:

SHERIFF-CORONER-PUBLIC ADMINISTRATOR,
Placerville, Calif., February 2, 1977.

Hon. GLENN M. ANDERSON,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN ANDERSON: I have looked into your bill, H.R. 1559, with a great deal of enthusiasm and I feel that it is a realistic approach to curb violence in the United States, and certainly hope your colleagues in congress will support it.

For the past twelve years I have been in public service, and I have heard and read a lot of rhetoric on how to reduce crime and prevent violence—and I feel that you have taken a sound approach to the problem. After all it is not the gun that kills and maims people, but the person who is holding it.

I wish you much success in the future, please keep me posted.

Sincerely,

RICHARD F. PACILEO,
Sheriff-Coroner-Public Administrator.

CITY PROSECUTING ATTORNEY,
Long Beach, Calif., January 25, 1977.

Hon. GLENN M. ANDERSON,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN ANDERSON: Your letter of January 12, 1977, to Mr. Leonard Putnam, City Attorney, transmitting a copy of your bill, H.R. 1559, has been forwarded to this office since we are responsible for prosecuting misdemeanors occurring within the City of Long Beach.

It is my opinion that this bill is a sensible approach to controlling the use of firearms by criminals since it makes imprisonment mandatory where a firearm is used in the commission of a felony. I am convinced that mandatory imprisonment is a deterrent to criminal acts, and it is this certainty of imprisonment which will deter criminals from using firearms.

If this office can be of further assistance in supporting this bill, please do not hesitate to call on me.

Very truly yours,

ROBERT W. PARKIN,
City Prosecutor.

SACRAMENTO SHERIFF'S DEPARTMENT,
Sacramento, Calif., January 28, 1977.

Congressman GLENN M. ANDERSON,
Congress of the United States, House Office Building, Washington, D.C.

DEAR CONGRESSMAN ANDERSON: Thank you for supplying me with a copy of your proposed legislation to amend Chapter 44 of the Title 18 of the U.S. Code.

This is exactly the type of legislation we need to enable us to remove violent offenders from our communities. I am convinced that the bill's provision for graduated sentences for subsequent convictions and its prohibitions against suspended, probationary, and concurrent sentences will cause a marked reduction in the number of felonies perpetrated with firearms. Our California Legislature recently enacted a mandatory sentencing law with the same general purpose.

The surest way to reduce the incidence of violent crime is to insure swift and adequate punishment. Violent offenders must be deterred by making the penalty for crime greater than the reward obtained from it.

I sincerely appreciate your asking for my comments on this issue. On behalf of law enforcement officers everywhere, I commend you for seeking the counsel of those who must deal with crime everyday, when and where it occurs.

Very truly yours,

DUANE LOWE,
Sheriff.

SHERIFF-CORONER DEPARTMENT,
Santa Ana, Calif., January 26, 1977.

Hon. GLENN M. ANDERSON,
Member of Congress,
Long Beach, Calif.

DEAR GLENN: Pursuant to your request dated January 12, 1977 to provide you with our thoughts on H.R. 1559, which is essentially the control, use and sentencing of criminals who use firearms during the commission of a felony, the following comments are offered:

The bill, as we understand it, increases the penalties for the use of, or carrying of firearms during the commission of a felony.

In addition, the prescribed penalties are predetermined and are specific in nature and will be consistent regardless of the judicial district.

As law enforcement officers, we are in favor of gun control, but not to the extent that such controls will infringe on the rights of citizens to keep and bear arms. House Resolution 1559, as we see it, puts gun control in its proper perspective, in that the bill is directed toward those persons who use firearms to violate the law and further mandates specific penalties be given to those violators.

In conclusion, we fully support your effort in helping make our community a safer place to live through effective legislation.

Very truly yours,

BRAD GATES,
Sheriff-Coroner.

SHERIFF-CORONER,
Visalia, Calif., January 21, 1977.

Hon. GLENN M. ANDERSON,
House of Representatives,
Washington, D.C.

DEAR MR. ANDERSON: Reference is made to your bill, HR 1559, calling for a mandatory five-year penalty for anyone convicted of

using a firearm during the commission of a Federal crime. I have always been of the opinion that the best remedy for controlling the use of firearms is a stringent penalty which is applied over and above the penalty for the crime and which cannot be mitigated by suspension or probation. Your bill includes all of these elements and, therefore, I heartily endorse it and wish you the best of luck with its passage.

Cordially,

BOB WILEY,
Sheriff-Coroner.

PUBLIC WORKS BILL FORMULA NEEDS TO BE REVIEWED AND REVISED

HON. JIM SANTINI

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. SANTINI. Mr. Speaker, the Governor of the State of Nevada, Mike O'Callaghan, recently testified before the Senate Public Works Committee on the Local Public Works Capital Development and Investment Act of 1976.

Nevada counties in sore need of Federal funding were left short and empty-handed because of the formula used by the EDA to distribute the title I funding. I insert the remarks of our Governor at this point in the CONGRESSIONAL RECORD as a reminder of the necessity to review and revamp the present formula.

REMARKS OF GOVERNOR MIKE O'CALLAGHAN, GOVERNOR OF NEVADA

TITLE I, LOCAL PUBLIC WORKS CAPITAL DEVELOPMENT AND INVESTMENT ACT OF 1976

In Nevada, more than 120 projects exceeding $110 million were submitted to the Economic Development Administration for funding under the Local Public Works Capital Development and Investment Program. EDA accepted 106 applications for ranking from Nevada, totalling $98,709,785. It selected only 16 of these, in the amount of $10,102,298, subject to final clearance.

Ten million dollars may seem like a considerable amount of money. However, given the way that EDA has spread these funds and the 11 to 1 ratio of requests to available funds, it is my opinion that this program has had very little impact on either unemployment or on solving the priority construction projects of state and local governments.

As you know, projects were first placed in three categories—1) those where the unemployment rate exceeded 7.4 percent, 2) those where the unemployment rate was between 6.5 percent and 7.4 percent, and 3) those where the unemployment was below 6.5 percent. Seventy percent of the funds made available were to go to the first category and the balance to the second and third categories; however, preference was to be given the second.

Projects were then ranked in each category on the basis of the combined score for the number of unemployed, unemployment rate, level of income and the cost per person-month of employment. Additional points were given to projects which were sponsored by general-purpose units of local government. Although this seemed like a logical way to evaluate projects, I would like to describe what happened in Nevada.

EDA accepted and processed one State application for the Southern Nevada Correctional Center located in Clark County. According to EDA, this project received a score of 70.9 and was ranked 60th in the 70 percent category. The unemployment in the project area was 9.0 percent during the months of July, August and September, 1976. However, EDA required state projects to use total statewide unemployment figures. In Nevada, this meant using a 7.7 percent rate rather than the local unemployment figures for the area where the project was to be constructed.

This, in my opinion, was a major reason why this project was not funded. It appears to contradict the purpose of this legislation, which is to provide "employment opportunities in areas of high unemployment through the expeditious construction or renovation of useful public facilities." Requiring the state to use statewide figures for unemployment, instead of the local figures for the area where the project was to be constructed, placed the State in an unfair position. The fact is that State-initiated projects can create local jobs in the same way as locally-initiated projects.

In addition to ranking projects in the state, EDA established a maximum dollar amount for each county. This maximum amount, or benchmark, was based on the number of unemployed in the county compared to the state total unemployed. The ratio of local to state total unemployment, multiplied by the total local Public Works dollars available to the State, yielded the benchmark for each county.

Douglas County, for example, had a benchmark of $206,776. This county, with an unemployment rate of 6.7 percent, was funded for a $1,058,500 project. Douglas County, also had the highest 1974 per capita income in the state, according to the U.S. Bureau of Economic Analysis. The per capita income in this county was 29 percent above the national average. Although EDA weighed the level of income, there was not enough consideration given to this factor since White Pine County which is 7 percent below the national average did not receive any funds.

In White Pine County, eligible applicants submitted two projects for a total of $9,470,636. The County had an unemployment rate of 22.3 percent during the months of June, July and August, 1976. According to the Nevada Department of Employment Security, this unemployment rate was the highest of any county in the state. Furthermore, White Pine County's extremely high unemployment rate was the direct result of action by the Environmental Protection Agency in forcing the closure of the smelter operations of Kennecott Mining Corporation which is the largest employer in the County.

In determining where to use Federal funds to ease unemployment, the Economic Development Administration gave no consideration to the fact that the unusually high unemployment in White Pine County was directly caused by another Federal agency. As a result, the projects for this county and city were not funded.

I realize it is hard to select projects and still stay within the benchmark. However, if this had been done in Clark County, which would have been possible, funds for White Pine County could have been made available. The benchmark for Clark County was established by EDA at $5,861,000. However, EDA funded projects in the amount of $6,276,000, exceeding the benchmark by $415,000. Although this may seem like a small amount, this $415,000 could have been made available to White Pine County to help alleviate the Federally-caused 22.3 percent unemployment.

The history of one Nevada project which was subsequently rejected for funding should be of interest to you. The county was required to have the project approved by the Department of Health, Education and Welfare before submission to EDA. The documentation for this was not submitted, and EDA should have rejected the application according to its own regualtions.

EDA did not do this, but instead relied upon a verbal approval from a HEW official who did not have the authority to grant such approval. The project was selected by EDA for funding and the error was not discovered until after the announcement was made. Then, EDA aggravated the situation by giving the county six working days to comply with the original submission requirement.

During these six days, my staff was told the project was approved, then denied, several times. In fact, I was personally advised within the space of six hours that the project was approved then that it was denied. In all my years of government, I have never seen such a case of mishandling of a project, much less an entire program.

I know Congress was well intentioned when it overrode the Presidential veto. However, without a major rewrite of the legislation, as well as a thorough investigation of the way in which the administering agency handled this program, it is my conviction the experiences I have just conveyed will only be repeated. I, therefore, urge your opposition to the request for additional funding for Title I of the Public Works Act.

If the program must be continued, I would urge that the following amendments be included in the Act: (1) funds should be set aside for each area of a state that has a major unemployment problem as determined by the State, not EDA, (2) the elected officials in that area should determine which projects will be constructed within the funding limitations established by EDA, and (3) a certain amount of funds should be set aside for use by each State in those high unemployment areas where the regular allocation procedures do not reflect the unique unemployment situations that exists in each state.

STATEMENT OF THE HONORABLE JOHN M. MURPHY ON A BILL TO PROMOTE THE ORDERLY DEVELOPMENT OF HARD MINERAL RESOURCES IN THE DEEP SEABED

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. MURPHY of New York. Mr. Speaker, today I have introduced a bill to promote the orderly development of hard mineral resources in the deep seabed. Known as deep seabed mining or ocean mining legislation, this bill is one of the most significant pieces of legislation to be considered by the 95th Congress. It is a reasonable and balanced effort to establish a licensing and regulatory system which will provide the Federal Government, acting in behalf of all the American people, an opportunity to protect the interest of American mining companies in international waters. It will establish a sound investment climate in which such companies will be willing to expedite the exploration and commercial recovery of important mineral nodules.

Manganese nodules are small potato-sized objects approximately one-fifteenth centimeters in diameter and average 5 centimeters across. The ocean floors around the world are literally covered with nodules in some areas, primarily the Pacific, Atlantic, and Indian Oceans. The mining industry estimates that there is approximately $3 trillion worth of nickel, manganese, cobalt, and copper present in the nodules, which are located at depths of over 12,000 feet.

In the last 15 years, the industry has spent over $100 million researching methods of recovering and processing the nodules. Although the existence of hard minerals on the deep seabed was discovered in the last quarter of the 19th century, their recovery has been delayed until this time because of the lack of technology and the excessive cost of recovery.

In addition to the dollar value of these nodules, there is a more compelling reason for the United States to encourage the development of this industry. The Department of the Interior has estimated that our current dependence on foreign sources of manganese, copper, nickel, and cobalt can be vastly reduced, if not totally eliminated, by 1990. Instead of importing 82 percent of our manganese needs, we could be virtually independent by 1990, and we could become totally independent in terms of nickel, copper, and cobalt, whereas we now import 82 percent of our nickel, 5 percent of our copper, and 77 percent of our cobalt. These are important minerals, and a valuable lesson can be learned from our dependence on foreign oil.

The advances made by the major American mining companies is impressive, to say the least. They have identified nodule deposits which could provide satisfactory mine sites. They have largely solved the metallurgical problems of winning metals from nodules. They have developed mining systems which have progressed from the drawing board and computer stage and away from simple laboratory tests to large scale at-sea experimentation. In general, there is no longer any doubt about the technical and economic feasibility of ocean mining.

The problem is the present lack of a stable national or international legal and political climate. Further investments in this important area will not be forthcoming unless the U.S. Congress takes action during this session to provide stability and predictability with respect to ocean mining operations.

In the last few years the argument has been made by many observers and by the recent administration that the Congress should allow the Law of the Sea Conference to negotiate an international agreement regarding deep ocean minerals. As we all know, however, the conference has been unable to reach any sort of definitive agreements with respect to a variety of issues and most particularly with respect to the issue of ocean mining. Even proposals put forward by Secretary Kissinger, during the most recent sessions in New York, were not accepted by the Third World countries. And, in my judgment, the Secretary was providing far too many concessions to make such proposals consistent with American national interest.

The underdeveloped countries continue to argue that the resources of the deep seabed are the "common heritage of mankind" and should not be exploited for the sole benefit of countries which have developed the high level of technology necessary for deep seabed mining. This, on the surface, sounds like an honorable goal. But it is clearly necessary to strike a more equitable balance between the developed and underdeveloped countries. Otherwise, any international seabed regime will find that no one is willing to develop the technology needed.

I have been particularly concerned about the State Department's position on this issue. They have not embarked on a course of rational negotiations, but on a course of preemptive concessions. The Department has repeatedly yielded to the underdeveloped countries in a headlong rush, and almost masichistic effort, to reach a settlement.

It is time for the Congress to act. While we have been waiting for some action by the State Department under the old administration, and while the industry has slowed down its pace, foreign competitors are rushing to catch up with the United States. Congress can no longer sit back and watch this erosion of our technical lead. We can no longer sit back and watch the State Department bargain away U.S. interests. We can no longer sit idly and watch as a secure source of minerals evaporates before our eyes. We must enact legislation into law to enable the U.S. ocean mining industry to proceed with the development of their technology in the recovery of manganese nodules.

There has been a great deal of discussion among knowledgeable people about the impact that deep seabed mining legislation would have on the Law of the Sea Conference. It is my conviction that such legislation, enacted into law at the earliest possible moment, is now the only way the Law of the Sea Conference can be spurred to a successful conclusion if, indeed, that is possible at all. Let me hasten to add, however, that not just any deep seabed mining legislation will contribute to the success of the conference. The underdeveloped countries must understand and be convinced that the United States is ready, willing, and able to mine the minerals of the seabed in the absence of an agreement at the conference. Any legislation which fails to deliver that message will hurt the conference because it will give the developing countries reason to think that the United States is afraid to go forward on its own and will therefore rely only on its negotiating option for as long as the conference lasts. Should this happen, our negotiators, despite their best efforts, will return with a treaty that will not command even a majority in this Congress.

Consequently, legislation will be necessary anyway. But, in this instance, the legislation may come too late, and our mining companies may abandon their investments rather than go deeper into debt. On the other hand, other industrialized countries like Japan, the Federal Republic of Germany, and the United Kingdom will not let their companies go under. We see increasing signs that these countries are actively subsidizing their companies to insure the future technological capability to mine the deep seabed. In other words, should our companies falter, there are others waiting in the wings to take up the lead.

The legislation that I have introduced does not follow the subsidy approach of these other countries. Rather, it tries to provide a stable investment climate to encourage a free and competitive atmosphere for American ocean mining companies who, I believe, will flourish in such an atmosphere without the need for subsidies.

I have reached the conclusion that the type of ocean mining legislation that I have introduced is essential for the future of the Law of the Sea Conference for the following reasons.

First, the third world erroneously believes that American priorities in this conference center around our military interest in freedom of navigation. They therefore feel that if they wait long enough we will eventually make further concessions on economic and natural resource issues in the interest of obtaining our military objectives.

Second, during recent years, the third world has watched the United States make concession after concession in these negotiations while those countries have made none. Each time an impasse is reached in the negotiations, we have capitulated.

Third, the underdeveloped countries, with the exception of only a few, have a broad ideological interest in deep seabed mining which is part and parcel of the north/south dialog. There is no reason to think that the Law of the Sea Conference, which is the leading edge of that iceberg, is the place the third world will make major compromises.

Fourth, most third world countries are now convinced that with the growth of customary law favoring a 200-mile economic zone, they can have what they want along their coasts without restrictions imposed on them by a treaty. In other words, they simply have no motivation to compromise their ideological positions on deep seabed mining because they feel that they are going to have plenary jurisdiction in the 200-mile economic zone.

There has been some debate in the Congress about alternative legislative approaches which would give American companies loan guarantees for the purpose of pursuing the necessary phase of prototype scale-up and testing during the next 3 years. Such legislation would not allow a company to register a claim to a mine site nor would it protect the $700 million each company will invest during the next 3 to 5 years.

Under that approach, a treaty could be negotiated in 3 years which would, in practical terms, expropriate the total investment of each of the companies that had been active. This approach simply cannot work.

It will be seen by the underdeveloped countries as another State Department trick played on Congress. The administration for years has been saying to Congress, "wait for the next session of the Law of the Sea Conference and do not pass legislation." If the Department of State now comes to us with legislation which does not grant companies the right to mine the sites they have spent millions exploring, nor provide investment guarantees in the event of a treaty expropriation, the Third World will see such legislation as a State Department attempt to pacify a restless Congress.

We will be used as foils for American negotiators and the Third World will see that they have at least another 3 years to negotiate for more concessions before Congress takes the issue up again.

The worst thing Congress can do now, indeed, the worst service that we could do to our negotiators would be to pass legislation that the Third World would feel was no threat to their guerrilla tactics in this new kind of bloodless warfare between the rich and the poor. I have no doubt that all of us in Congress would rather see the oceans governed by a written body of law than to run the risk of uncertain and possibly conflict-producing practices. But, sometimes it is necessary to take interim steps to bring about a constructive and useful result. Unless we take such steps, the Law of the Sea Conference will continue endlessly; our negotiating position will erode; our ocean mining companies will give up their technology to other countries who are prepared to subsidize their long-term interest and an independent source of materials; and the American people will be the losers.

We in Congress can prevent that happening and, at the same time, enhance the chance for the success of the treaty negotiations. But we will not convince our friends, whose support we need, and our adversaries, who must compromise, if they see this new American Government back away from the hard decisions incumbent on us to protect our national interest. The bill that I have introduced, a summary of which is attached to this statement, is a reasonable and balanced approach to the necessary stable political and investment climate for American mining companies and, at the same time, avoiding unnecessary and expensive subsidies to such companies. It is an interim program, which will be phased out upon successful completion of the Law of the Sea Treaty which is ratified by and binding upon the United States. I urge my colleagues to give prompt and serious consideration to this important legislation. I include the following:

SUMMARY OF H.R. A BILL TO PROMOTE THE ORDERLY DEVELOPMENT OF HARD MINERAL RESOURCES IN THE DEEP SEABED

(Introduced by Mr. Murphy (New York))

The bill establishes a licensing and regulatory system, applicable to United States individuals and business entities, to promote the orderly development of deep seabed hard minerals, found in the manganese nodules located on the seabed beyond the resource jurisdiction of any nation.

The bill establishes licensing procedures to be administered by the secretary of commerce and provides for the issuance of licenses for exploration and commercial recovery of the minerals. No commercial recovery may be authorized prior to January 1, 1978, and, after that date, no commercial recovery may be undertaken under a license except after a specific permit for that commercial recovery is granted. Eligible applicants are entitled to a license from the secretary upon meeting certain requirements and tendering a license fee to be prescribed by the secretary in his regulations. The fee may be no more than $100,000, and shall reflect the administrative costs of processing the license application.

The secretary is required to establish environmental criteria and standards under which license operations shall be conducted, and the issuance of the license is designated as a major federal action, as that term is used in the national environmental policy act, and the attendant requirements of that act relating to environmental impact statements are applicable.

The public is guaranteed access to certain information furnished by the applicant, so that it may evaluate and comment upon applications.

During the exploration activities under a license, certain minimum expenditures are required of the applicant, and at the time that a permit for commercial recovery is issued, the licensee must relinquish a designated part of the licensed bloc. Prior to the issuance of the permit for commercial recovery, the secretary is required to review the previous environmental impact statement and to refine it and bring it up to date in relation to prospective commercial recovery activities. In this regard, and state in which a part of the commercial recovery activities is located, specifically the processing activities, will be involved, pursuant to the provisions of the coastal zone management act.

If and when an international regime is agreed upon, which is ratified by and becomes binding upon the United States, no further licenses will be issued under the act, and to the extent that the international regime permits it, the United States is required to sponsor applications from licensees under this act for licenses under the international regime. In addition, should the international regime differ from the provisions of this act so that a licensee suffers a measurable loss of investment, that licensee is entitled to compensation from the United States for the loss. The compensation is to be limited to actual equipment and facilities utilized for exploration purposes at a licensed block and, after a permit for commercial recovery has been issued, shall also include loss of investment in equipment and facilities utilized for commercial recovery and processing. Research and evaluation costs of technology are not compensable. The amount of compensation will be determined in judicial proceedings in the appropriate United States district court.

The minerals recovered from the deep seabed are to be treated under export control laws, customs laws, tax laws and trade laws of the United States as if they had been recovered in the United States. Therefore, for instance, if export licenses are required for similar minerals recovered within the United States, they will also be required for those recovered under a license issued pursuant to this act. In connection with shipping laws, relating to the documentation and privileges of vessels, all vessels engaged in development activities at a licensed block and on vessels engaged in the transportation of minerals to or from the licensed block and a point in the United States shall be considered to be engaged in coastwise trade. Such trade is restricted to vessels of the United States. The minerals, recovered under the authority of the license, will be processed in the United States, or on board U.S. vessels.

The bill also recognizes the possibility of "reciprocating states", as designated by the President. These would include states with laws similar to the provisions of this act and willing to recognize, on a mutual basis, licenses issued under this act, and under the laws of the reciprocating state. The bill also recognizes the existence of consortium arrangements. Where any such consortium, involving a United States entity, qualifies as a licensee under this act, provisions of the act relating to a compensation for loss of investment and to the applicability of United States export, customs, tax and trade laws will be limited to that proportion of the consortium owned by the United States entity or entities.

The bill provides for both civil and criminal penalties, assessed on a continuing basis, for violations of the act or rules of regulations issued by the Secretary in implementation thereof.

No person subject to the jurisdiction of the United States may engage directly or indirectly in the exploration for, or commercial recovery of, hard mineral resources of the deep seabed except pursuant to the act, pursuant to a license issued by a reciprocating state, or pursuant to the provisions of an international agreement which becomes binding upon the United States.

THE BALANCE(S) OF POWER—PART V (I-A): U.S. ARMY FORCE DESIGN: ALTERNATIVES FOR FISCAL YEARS 1977–81

HON. JOHN BRECKINRIDGE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. BRECKINRIDGE. Mr. Speaker, while wars are fought with weapons of varying degrees of complexity, the ultimate component of fighting strength remains the individual who wields the weapon. It is with this concept in mind that we examine the problems that face both ourselves and our adversaries in seeing how the manpower problem facing the Armed Forces is solved.

The solutions of the United States and the Soviet Union are considerably different. Today's selection examines how the U.S. Army is attempting to meet the military requirements placed upon it within the fundamental constraints of budgetary limitations and the all-volunteer environment in an open society.

I do not argue that the system we are now using will meet the defense needs of the United States. It may, but then again, it may not. Such an assessment is largely dependent upon a fluid international situation—a situation to which we must be prepared to respond on relatively short order.

The information follows:

U.S. ARMY FORCE DESIGN: ALTERNATIVES FOR FISCAL YEARS 1977–81

TABLE 1.—*U.S. Army force structure and manpower levels—Selected years*

	End of Fiscal Year				
	1965	1968	1974	1975	1976
Active Army divisions	16	19⅔	13	14	16
Active military manpower (thousands)	969	1,570	783	785	785
Number of soldiers per division* (thousands)	60.6	79.8	60.2	56.1	49.1

* The increase in this ratio during the Vietnam war years reflects an expansion of training and logistical support units needed in wartime, but not necessary to maintain Army forces in peacetime.

THE ARMY'S ROLE IN NATIONAL SECURITY

Maintaining peace is one of the central objectives of U.S. foreign policy and, as an instrument of the defense establishment, the Army's role is to support that policy. Its forces are to be prepared for the contingencies thought most likely to occur in order to deter potential adversaries and to defeat them, should deterrence fail. However, the specific contingencies that may threaten the peace or other U.S. interests are not clearly foreseen. And, it is difficult to know how Army warfighting capabilities and peacetime deployments contribute to the achievement of foreign policy goals.

These uncertainties pervade force calculations for the entire military establishment, but they create particular difficulties in determining the size of general purpose forces, of which the Army is a part. In the Army's case, great uncertainties arise, first, from the variety of contingencies for which ground forces might be prepared (many of which would require very different kinds of forces); and, second, from the difficulty of measuring whether a given force structure is sized properly to control the worst threat.

Different kinds of contingencies require different kinds of combat formations. U.S. armored divisions, for example, are well suited to war in central Europe or the Middle East, but are virtually useless in jungle-infested regions of the world. Similarly, light infantry and airmobile units are effective in places like Southeast Asia, but would be vulnerable in desert warfare. Since organization, equipment and training once implemented are not readily changed, the choice of contingencies for which the Army prepares is an important long-term decision.

U.S. ground forces are sized, equipped and positioned to respond to three general contingencies:

Warsaw Pact Invasion of Western Europe. For this purpose, the Army maintains four armored and mechanized divisions in Germany, and five armored and mechanized divisions in the United States. In addition, three of the eight National Guard divisions are armored or mechanized. Thus, the total number of heavy divisions available for NATO defense is 12.

Invasion of South Korea. The Army maintains one infantry division in Korea and one infantry division in Hawaii. The Marine Corps deploys one division partly in Okinawa and partly in Hawaii.

Lesser Contingencies Elsewhere. Forces for this purpose would be drawn from the strategic reserve units maintained in the United States for reinforcement of NATO or South Korea as well as lesser contingencies. These forces consist of two active and one reserve Marine divisions, and five active and five reserve Army divisions (infantry, airborne, or airmobile). The Defense Department considers this force adequate to respond to either an attack on NATO and a simultaneous lesser contingency elsewhere, or an attack in South Korea and a lesser contingency elsewhere. It does not consider the force adequate to respond to an attack in South Korea and on NATO simultaneously.[1]

The major contingency against which the Army plans is the possibility of large-scale war in central Europe. U.S. and NATO strategy is based on forward defense, with units in position in West Germany to defend against a ground attack by the Warsaw Pact nations. The likelihood of a successful defense should war break out depends upon the amount of advance warning of an impending attack, the speed with which the United States and its NATO allies reinforce units already in position, and the uncertainty surrounding the use of tactical nuclear weapons.

There is some disagreement about the relevance of elaborate planning for NATO defense against Soviet ground attack. It is sometimes argued that the critical deterrent to Soviet attack in Europe is the prospect of U.S. nuclear retaliation—not NATO ground forces. This view would also permit an emphasis on seapower in view of growing Soviet naval capability, and organization of general purpose forces to project significant ground forces ashore in other parts of the world where U.S. interests might be threatened. Reliance on a seapower strategy might call for major U.S. investment in naval and marine forces and for emphasis on the Army's ability to provide a modest strategic reserve for lesser contingencies.

An opposing view is that power in international politics is strongly influenced by what nations perceive it to be. In Europe, increasingly fluid relations among the NATO and Warsaw Pact nations may depend in part on the perceived balance of conventional military power. From this point of view, elaborate scenarios about Soviet attack and NATO defense in central Europe provide a convenient means of measuring what the local military balance is. Should the calculations point to an obvious and persistent wartime advantage to one side or the other, peacetime political influence could follow.

In the past, U.S. technological and nuclear superiority was generally accepted as an effective counterweight to Soviet superiority in forces and military manpower. But recently Soviet investment in modern technology for its general purpose forces may be undermining that assessment, raising the possibility of a perceived military imbalance in Europe. If the Soviet Union is perceived to have equipment as good as or better than that of the United States, its traditional superiority in numbers may take on new military significance.

From this point of view, recent changes in the Army's combat power and readiness for battle in Europe are a matter of renewed interest. If there is or soon will be a Soviet military advantage which could be decisive in a conventional ground war in Europe, the United States would probably choose to correct the imbalance, regardless of how unlikely the possibility of such a war seemed to be. Further, if detailed calculations about what would happen in a highly unlikely war contribute to perceptions about military power in Europe, and, if such perceptions constitute an important source of political influence, then the Army's warfighting capability in Europe is important for peacetime foreign policy reasons as well.

These two views are complementary if the Army maintains the mix and level of forces for both. At present, the 16-division force structure, which comprises in the provision of forces for both strategies, may or may not be large enough for both (a question beyond the scope of this paper). But in any case the force may be insufficiently supported, particularly for NATO reinforcement. This point can be made most clearly by examining alternative force structures in detail; exploring how each might contribute to either a NATO or worldwide strategic reserve strategy, or both; and looking at the costs involved. In what follows, Army doctrine for the use of its forces in combat is briefly discussed; the impact of technology on procurement of weapons is analyzed; the Army's transition from 13 to 16 divisions is explored in detail; and alternative force structures are presented.

THE ARMY'S ORGANIZATION FOR COMBAT

Army units are structured hierarchically, with large units made up of two or more smaller units—each of which is in turn is made up of two or more even smaller units. Standard formations are shown in Table 2.

TABLE 2.—*Standard Army combat formations*

HEADQUARTERS, SUBORDINATE UNITS, AND MANPOWER STRENGTH

Theater Command: Two or more corps, plus supporting units, 250,000+.

Corps: Two or more divisions, plus other combat and support units, 50,000–100,000.

Division: Three brigades, plus other combat and support units, 16,000.

Brigade*: Two or more maneuver battalions, plus supporting artillery and other combat units, 3,000–6,000.

Maneuver Battalion: Four or five tank, infantry or mechanized infantry companies, 850–1,000.

Company: Three or four platoons, each made up of infantry squads, tank crews or weapons teams, 140–240.

*Reinforced brigades and armored cavalry regiments (roughly equivalent), often operate independently of divisions, under the direct command of corps headquarters.

Typically, the senior army command in a war theater directly controls two or more corps headquarters, each of which controls two or more divisions. The allocation of divisions among corps is deliberately varied, and depends on missions, the array of opposing forces, and the terrain over which the corps must fight.

Divisions, however, are relatively standard in basic organization, consisting of a division headquarters, three subordinate brigades (among which are allocated the division's 8 to 12 maneuver battalions), a division base of combat support units (engineers, artillery, communications, etc.) and logistical support units (supply, maintenance, medical evacuation, etc.). The Army division is an integrated combat formation, combining infantry, tanks, artillery, air defense and aircraft. The Army views its divisions as the principal organizational building blocks for the conduct of combat operations.

At present, the Army has five kinds of divisions, each consisting of about 16,000 men and organized basically in the same way, but with different kinds of subordinate maneuver battalions, and therefore different capabilities. The differences in divisions are summarized in Table 3. Just as a theater commander adjusts the assignments of divisions to his corps commanders as their missions change, a division commander also typically shifts maneuver battalions among his brigades, depending on their current mission assignments. Thus, a brigade conducting the division's main attack, for example, might have assigned to it five maneuver battalions, while another brigade given a secondary role would be assigned only two battalions.

While the allocation of resources among units engaged in battle is flexible and changes with circumstances, the basic design of the Army's combat force as a whole is largely fixed and is based on detailed formulas for the number and kinds of units required to support divisions in combat. These formulas are based on past experience, modified in light of new technology, doctrine, and specific requirements generated by contingency plans as such as those prepared for NATO defense. Although the formulas themselves are manipulated by computer models, the general dimensions of combat zone force design can be summarized in a simple concept called the division force equivalent (DFT). The DFE can be defined as the average number of troops required to man a typical Army division and its supporting units in sustained combat.[2]

[1] Donald H. Rumsfeld, *Report to the Congress on the FY 1977 Budget and Its Implications for the FY 1978 Authorization Request and the FY 1977–81 Defense Programs* (Jan. 27, 1976), pp. 133–134.

[2] The weakness of this concept is that it fails to account for the variations in supporting forces which would result from tailoring them to specific situations in Europe, the Middle East, Southeast Asia, or wherever

TABLE 3.—TYPICAL U.S. ARMY DIVISIONS

Division and maneuver battalions [1]	Tanks [2]	Armored personnel carriers [2]	Aircraft [2]
Armored: 6 tank; 5 mechanized; infantry	320	350	55
Mechanized: 4 tank; 6 mechanized infantry	220	420	55
Infantry: 1 tank; 1 mechanized infantry; 8 infantry	55	70	55
Airborne: 1 light tank; 9 airborne infantry	55	----------	165
Airmobile: 10 airmobile infantry	----------	----------	420

[1] Standard maneuver battalion allocations; for specific missions, a division may be given a larger or smaller number of battalions, or a different mix.
[2] Approximate numbers, based on Department of the Army unit tables of organization and equipment.

Currently, the DFE is defined as shown in Table 4.

TABLE 4.—*Division force equivalent*

COMPONENT, FORCES TYPICALLY INCLUDED, AND MANPOWER SPACES

Division Combat: All division units, including maneuver battalions, division artillery, engineer, signal, cavalry, headquarters and frontline logistical support units, 16,000.

Nondivision Combat: Corps-directed assets, including additional artillery, engineer, cavalry, aviation, air defense units, and separate infantry and armored brigades 12,000.

Tactical Support: Supply, maintenance, medical transportation and administrative units which provide support to combat units, 20,000.

Total Division Force Equivalent: 48,000.

For example, if the Army committed ten active and ten reserve component divisions to battle, it would need 320,000 division combat troops, 240,000 nondivision combat troops, and 400,000 tactical support troops, for a total field force of 960,000. The remainder of the Army's military manpower would belong to the base structure (located mainly in the United States), which supports training, recruitment, research and development, and procurement. Later in this paper, the DFE is used to measure the balance of alternative force structures.

The Army designs its combat force in terms of both active and reserve component units, and typically assigns to reserve component units a large share of nondivision combat and tactical support requirements. The assumption is that enough support units to sustain the first divisions in combat are on hand, and large-scale deployment of Army forces in a war overseas would probably involve mobilization of reserves in any case.

Reliance on reserves has important budgetary consequences. Reserve units and personnel cost less to maintain in the force structure than active units and personnel, and one way to moderate Army budget growth is to shift more of its force structure into the reserves. However, reserve units typically require more time to prepare for overseas deployment than active units, and therefore the effect of shifting units into the reserves is a delay in their availability for combat.

If active forces are sufficient for the most important contingencies, then reliance on reserves is unimportant one way or the other. However, in central Europe, the magnitude of Soviet investment in its ground forces and the Soviet doctrinal emphasis on speed and violence in armored attack, increase the significance of initial efforts to defend Europe. Since no NATO country (including the United States) is willing to maintain active forces in defensive positions sufficient to guarantee successful defense, the role of active and reserve component forces in strategic reserve becomes more significant.

U.S. forces might have to fight. But for planning purposes generally, the concept is considered valid.

CHEMICAL WEAPONS ARMS CONTROL

HON. RICHARD T. SCHULZE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. SCHULZE. Mr. Speaker, yesterday I submitted for the RECORD a resolution on the question of chemical weapons arms control. Inadvertently, however, the text of the resolution was omitted from the RECORD. I would now like to submit that resolution which would encourage the rapid conclusion of an international treaty banning chemical weapons:

HOUSE RESOLUTION 268

Whereas the policy of the United States is not to make first use of lethal and incapacitating chemical weapons in war; and

Whereas in 1972 the United States signed the Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction, which declared that, "each State Party to the Convention affirms the recognized objective of effective prohibition of chemical weapons and, to this end, undertakes to continue negotiations in good faith with a view to reaching agreement on effective measures for the prohibition of their development, production, and stockpiling and for their destruction"; and

Whereas in 1975 the United States ratified the Geneva Protocol prohibiting the use of chemical and biological weapons in warfare; and

Whereas the United States supports the continuing negotiations being conducted by the Conference of the Committee on Disarmament toward this end of an effective chemical weapons treaty: Now, therefore, be it

Resolved, that it is the sense of the House of Representatives to—

(1) urge the President to issue a statement of policy declaring a moratorium on the further United States manufacture of lethal and incapacitating nerve and mustard agents and the so-called binary agents, for a period of three years; and

(2) request that the President, as a sign of good faith to all the world, order the destruction of some 3,000 tons of lethal chemical mustard agent from existing United States stockpiles over the same period of three years; and, invite interested international organizations, such as a delegation from the CCD, to view the destruction process; and

(3) issue an open invitation to the Soviet Union and other nations which possess quantities of lethal chemical weapons to indicate their sincerity in seeking a chemical weapons treaty by following the example of the United States; and challenges the third-world nations to refrain from seeking the introduction of chemical weapons into their arsenals; and

(4) urge the participants of the Conference of the Committee on Disarmament to rapidly conclude an international treaty banning the manufacture and possession of lethal chemical weapons. This treaty, in order to be meaningful, should provide for the destruction of existing stocks and production facilities in a phased manner over a specified period of time. The treaty must also provide a process of verification of the disposal of stocks and facilities through independent, international procedures. And, the treaty must establish an international mechanism for investigating suspicious activities, including provisions for challenge and on-site inspections.

OUR CHANGING CLIMATE

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for February 9, 1977, into the CONGRESSIONAL RECORD:

OUR CHANGING CLIMATE

The winter of 1976–1977 is the coldest since the United States began keeping weather statistics. It is the winter of all-time low temperatures, a genuine crisis in the natural gas industry, massive lay-offs of workers from plants shut down by fuel shortages, the closing of thousands of schools, and a plea from a new President to turn down thermostats to 65 degrees. It is also the winter that froze the Ohio and Mississippi rivers from bank to bank for long stretches and the winter that has hurt the economy and brought suffering and tragedy to many Americans. To make matters worse, the forecast is for more of the same.

The meteorologists agree that the immediate reason for the bitterly cold winter is the high level westerly winds in the upper atmosphere which are cutting across the Rockies much farther north than usual and dipping farther south than normal. Pacific storms have picked up the winds, resulting in heavy snowfalls from the Rockies eastward.

Whether the big freeze of this year is related to long-range trends is uncertain. Scientists are not sure whether the earth is actually trending towards a new ice age or is getting warmer. A considerable body of scientific data can be induced to support either trend and only time and more research will tell which is correct. Scientists do agree that the earth is entering a period of increased variability, with weather patterns fluctuating more dramatically than in recent decades. Changes in these patterns could wreak havoc in food production, which is intimately linked with fluctuations in weather and climate. Intensive research is going on to understand the weather patterns better. Some scientists allege that excessive white particulate matter from pollution may be cooling the atmosphere by reflecting the sun's radiation away from the earth. Other scientists contend carbon dioxide, which is released when fossil fuel is burned, keeps the heat radiation produced by earth from escaping to outer space, thereby warming the atmosphere.

All of these climactic developments have not escaped the notice of the Congress. Last year the first steps were taken toward a program of weather modification with the passage of the National Weather Modification Policy Act. This legislation provides for a year-long study of the practice of weather modification in order to get a firmer grip on its possible benefits and misuses. The program is designed to develop a national weather modification policy and program, and to determine how weather modification can decrease the adverse impact on agriculture and economic growth. The objective of the legislation is to develop a framework

within which we can use our technological capabilities to modify weather without hurting each other. Other bills have been introduced in the Congress to establish a climactic warning system and to develop a global monitoring system for climate.

Almost every federal department is involved in some type of weather related activity: the Department of Defense needs specialized weather services in support of military operations, the Department of Transportation's Federal Aviation Administration uses weather information in operating its air traffic control system and other meteorological programs are conducted by the Departments of Commerce, Agriculture, Interior and State. This year federal expenditures for weather operations and both applied and basic research will exceed $782 million.

The first half of the 20th century was the best period for food production in the last 1000 years—but our luck with the weather could change. If it does, there are a number of approaches which can be taken to reduce the effects of adverse weather on food production. Primarily, we must proceed with research to obtain more accurate climate forecasts. With more intensive research we may be able to project rainfall, temperatures and droughts a season in advance, allowing the experts to suggest planting patterns to maximize yields. On the theory that a prudent policy plans for difficulties, we can use water more efficiently, control wind and water erosion, develop irrigation systems, develop tougher crop varieties, improve plant species and crop and livestock management techniques, and provide information to farmers on climate and how they can reduce the impact of bad weather. We can also continue to explore weather modification techniques and how they can affect specific agricultural practices.

Even small attempts at weather modification can have overwhelming results, both positive and negative. Weather experts have warned that weather modification techniques can cause floods, tidal waves and drought, and could be engaged in secretly, often without the awareness of the affected population. A recent CIA report has outlined possible economic and political upheavals almost beyond comprehension because of changes in the earth's climate.

Positive benefits on food production could also result from small climate alterations, and prospects are good for increased improvement in our ability to modify the weather by increasing rainfall at critical times, decreasing hurricane winds, and reducing damage caused by wind and hail. These improved techniques may be widely utilized during the next five to ten years provided a major research effort is supported and encouraged.

WELCOME ABOARD FOR NEW NAVY SECRETARY

HON. JAMES G. MARTIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mr. MARTIN. Mr. Speaker, as a new administration settles in and as we on the Hill seek to assess its personnel, we are fortunate to get some help in that process from constituents. I would like to share with you and our colleagues the recollections of my close friend, William K. Van Allen of Charlotte, N.C., about his friend, W. Graham Claytor, our new Secretary of the Navy. I would add to his comments my own observation that Mr. Claytor's leadership at Southern Railway resulted in it making Dun's Review's list of the five best managed companies. In a world where it just will not do to have only one of the world's five best navies, he can count on a lot of support for insuring that ours always is No. 1.

NAVY HEAD'S NAVIGATION GOOD, CHARLOTTEAN SAYS

Under a sunless autumn sky in 1941, the Navy submarine chaser USS *Opal* steamed north out of Miami carrying sailor William K. Van Allen, now a Charlotte lawyer.

"We go out of Miami, and it's rough outside," Van Allen of 132 Cherokee Rd., recalled Friday. High seas slapped the ship so hard, he said, they knocked its old compass out of commission.

A young navigator rounded up a radio, Van Allen recalled, and tuned in stations in West Palm Beach, Jacksonville and Savannah. Calculating the Opal's position from the strength of the signals, the navigator guided the ship for 60 miles, finally declaring: "I believe Charleston light should be dead ahead."

"It was," Van Allen said. "He did it all with a portable radio."

The Opal's navigator on that blind voyage was W. Graham Claytor Jr., an ensign from Roanoke, Va. Wednesday, Claytor, 64, was picked by President Carter to guide the Navy again, this time as secretary of the Navy.

"I think he'll make an outstanding secretary," Van Allen, 62, said of Claytor, chief executive officer of Southern Railway Co. since 1967. "I don't think President Carter could have made a better choice."
